VOL. V.] HONOLULU, OAHU, H. I., NOVEMBER 18, 1847. [No. XXII.

The Poet's Corner.

For the Friend.

TO THE MEMORY OF THE REVEREND HENRY DICKSON,

Who died at Sydney, in 1839, on his way to jointhe mission at Samoa. Addressed to a fellow student.

A stranger in a stranger's land,
His dust to dust was given;
But he is blest, so we're resigned;
He's happy now, in Heaven.
He left his home and native land,
Though pained at separation;
And forth to distant isles he bore
The message of salvation.

When from his cheek we saw displayed
Health's blood-red banner streaming,
And from his eye, so calm and bright,
Saw love and mercy beaming,
We fondly hoped Heaven had desgined
Him for some useful station;
A burning and a shining light
To some benighted nation.

But all our hopes are withered now,
In his decline they faded,
And in the confines of the tomb,
By death, are darkly shaded.
We feel our loss, but will not grieve;
With kindred spirits shining,
He's happy now, we'll dry our tears,
And quiet all repining.

Yet to his youthful tomb we come,
As friends, we claim connection;
And o'er his early grave we'll rear
A tribute of affection.
No sculptured tablet can we raise;
But wild flowers may we weave;
And gently hang upon his urn,
This little fading wreath.

FRIENDSHIP.

Many sounds were sweet,
Most ravishing, and pleasant to the ear;
But sweeter none than voice of faithful friend,—
Sweet always, sweetest heard in loudest storm.
Some I remember and will ne'er forget.
My early friends, friends of my evil day,
Friends in my mirth, friends in my misery too;
Friends given by God in mercy and in love.
My counsellors, my comforters and guides,
My joy in grief, my second grief in joy;
Companions of my young desires; in doubt
My oracles, my wings in high pursuit.
Oh! I remember, and will ne'er forget
Our meeting spots, our chosen and our sacred bours;
Our burning words that uttered all the soul;
Our faces beaming with unearthly love;
Sorrow with sorrow sighing, hope with hope
Exulting, heart embracing heart entire,
As birds of social feather helping each
His fellow's flight, we soared into the skies,
And cast the clouds beneath our feet, and earth
With all her tardy, leaden-footed cares,
And talked the speech, and ate the food of Heaven.—
[Pollok.

The Seamen's Friend.

THE MARINER'S LAMP, OR THE DEVOTED MAIDEN.

A TALE OF SCIO.

In one of those little bays, or rather inlets which indent the coast of Scio and the other Greek Islands, lay during a breathless calm, a graceful and elegant schooner. This vessel, of the character usually used in the trade of the Archipelago, was sufficiently superior in her appointments to attract notice. Her long, low hullofan uniform black,rose not more than three feet from the water's edge, including the diminutive bulwarks, while her raking masts were disproportionately high. Her huge main-boom showed what a vast amount of canvass was packed on her, while a square sail, flying topsail, foresail and jib proved her fully appointed for fair or foul weather. Her rigging was taut and neat, while the ends of her flying gear lay coiled on the deck with an attention to order which spoke volumes for the discipline on board. Her jib alone, of all her sails, was loose, and that hung lazily over her long protruding boom, shaken only by the motion of the never resting billows. The anchor chain had been hauled in so as to be right up and down, proclaiming that the wind, alone, was wanting to send the schooner to sea.

Before a cottage door, a few hundred yards from the beach, and in a position to command a full view of the entrance of the bight, was a young man, who, from his costume, might have been readily supposed one of her crew. It was in reality her commander. Zetzos Zeulonghi owned the schooner that floated on the water like a duck, and fixed his eye in all that admiring gaze which a sailor ever bestows upon a vessel that he rules. Zetzos was calling the attention of a young girl, the owner of the cottage, to the beauty of the Clio—so he called his schooner after the maiden who stood by his side.

Clio was an orphan and an heiress. That is to say, she owned the cottage she lived in, enough land to yield her an income and to enable her to support an aged female domestic. It may be supposed, therefore, that Clio had numberless suitors, and the suppsition was but a part of the truth, for they came in shoals, which is very often the case when a girl is pretty, rich and amiable. There was something in the frank, manly, though somewhat wild character of the sailor, which won upon her heart, despite her dislike to his calling, which was that to speak in soft language, of an unlawful trader. It is wonderful how the many sympathize with the bold smuggler. This is a mistaken sympathy. The law which they evade, may or may not want relaxing; but a life of constant violation of the laws is one which is sure to to engender more of evil than of good. So thought Clio, and Clio had vowed to wed Zetzos, only when he had ceased his violation of the laws, and added to his store as a legal merchantman. Moved by this determination, the Clio was now to sail for the last time with a rich cargo, and in future to be a schooner trading between island and island, with the consent and approbation of all constituted authorities.

"Is she not lovely, like her mistress?" said the enthusiastic sailor, gazing affectionarely on his vessel, "and may not a man be proud of owning two such sweet creatures?"

"You speak boldly of both, Zetzos," replied Clio, sadly; "were you as fond of one Clio as the other, you would not make this voyage."

"The last, the very last," said the young man gayly, "and then my Clio will give me a right to say they are both mine."

"I have so promised, and my word was ever true," continued the beautiful Greek girl, more sadly still; "but I have my fears. Zetzos, I would wed you in an hour," added she impetuously, "to spare this voyage. I speak as I thought I never could have spoken; I see death in this enterprise."

The young man's brow was overcast for a moment, and then he cried, "'Tis hard to dally with such an offer; but see, the wind gently stirs; I feel it fanning my cheeks warmly from the hills. Adieu, my Clio, for a few days, and then farewell my trade, and all for thee."

The sailor embraced his weeping mistress, and then hastened down to the beach, leaped into a light skiff, and shortly stood upon his deck, where he waved his cap in another adieu to his promised bride. Then the merry sound of the sailor's song was heard, the anchor was tripped, the main and foresail were hoisted up and bellied to the wind, when the light schooner, under her captain's steerage, headed for the open sea, and gently glided out of the harbor.

Clio was a charmed spectator of all this. Every manœuvre was watched with an anxious eye, and one, too, that understood the handling of every sail, and the object of every rope; for Zetzos had, with delight, taught his mistress all that gave him so much pleasure. At length the schooner rounded a point, and was lost to view, just as the evening began to fall upon the scene. The day had been serene and lovely, the sky was blue and cloudless, with all the mellow

sweetness common to the Mediterronean; but the night promised otherwise. The sun set in an angry bank of vapor in the west, the wind scattered mare's tails in profusion over the heavens, and in about an hour after sundown, began to howl fitfully around the lonely cottage. Clio's sensitive heart took the alarm; she stood at the threshold, and with intense anxiety, watched the progress of the storm. It increased; the dark volumes of vapor which at first rose in the east, spread with awful rapidity over the heavens, and canopied them in black; a rumbling sound of thunder was heard in the distance, while the faint glimmer of lightning came fitfully upon the startled scenes. Afar off on the waters, at a distance vast, immeasurable, a gentle lighting up of some dark fringe of cloud, hanging on the skirts of the horizon, showed that the electric fluid was at work on the bosom of the deep. Clio shuddered. She was too well versed in the signs of warning which nature gives of her convulsions, not to know that a fearful tempest was brewing, and would sweep grimly o'er that night. So sudden is the advent of a gale in the Mediterranean, that ere she thought it, it was upon her, and Clio retired trembling to her cottage.

Her first thought was that Zetzos would again try to enter the bay he had left; and with this fancy in her head, she sprang to a shelf, and taking therefrom, two antique and valuable lamps, and lighting them, placed them at a window, in charge of her aged domestic. Then wrapping herself in her cloak and hood, she hurried down the beach, to see if they gave sufficient light to be remarked. Her heart beat with joy when she saw that they burned in such a way as to leave no doubt of their being seen by any vessel endeavoring to make the harbor. Returning to her cottage, Clio now felt somewhat relieved. She had the satisfaction of feeling that the little in her power had been done. Still hours passed, and the storm abated not, and no sign was seen or heard of the schooner. Again the girl became alarmed, and presently, during a fearful gust of wind that threatened to shake the tenement she dwelt in about her ears, fell on her knees, and vowed that if Heaven would spare her lover, every night during her life, would she, for the mariner's sake, place two lamps at her window, and feed the during the hours of darkness. Clio rose from her knees relieved, and though still racked with care and anxiety, the tedious hours passed, and morning at length came. At dawn of day, the Greek girl was upon the beach, gazing with straining eye upon the main. Not a sail was in sight, save, afar off, a square-rigged vessel engaged in furling the sails that had been handed during the storm. The tapering spars of the Clio were no where visible upon the horizon.

The day passed and many other days, yet no tidings of the schooner or her master. Deep was the affliction of the lovely young Greek, the more that, if her lover had perished, it was while pursuing an unlawful trade. But Clio was true to her vow; every night at even tide, the lamps were lit and well filled, while Clio, ever anxious, would, in the still watches of the night, rise and replenish them, least their brightness should fade. She, too, would cry with Byron's Medora—

"Still would I rise to rouse the beacon fires,
Least spies less true should let the blaze expire."

And great was her reward. Many a fishing bark belonging to the village hard by, was, by the timely apparition of Clio's lamp at night, piloted safely into port, when otherwise, perhaps the boat had foundered, and all had perished. Far and wide spread the fame of this pious and delicate act of the despairing Greek girl. Many a vessel made that little bay their port, that otherwise would never have entered it. The village increased in importance — the inhabitants blessed Clio—but Zetzos came not; he for whom the task was first begun, and the faint hope of seeing whom, it made light and pleasureable. Three, six months, a year passed—two years and yet no tidings. Clio at length gave herself up to helpless despair, and yet patiently did she persevere in her self allotted task, and for many restless hours out watch each star.

One evening, about two years after the departure of Zetzos, another storm, almost equal in fierceness to that which followed the schooner, burst upon the waters of the Mediterranean; and Clio, who was ever faithful to the memory of the horrors of that night, attempted not to retire to rest, but sitting up beside her lamps, carefully trimmed them, and looked with anxiety for the morning, thinking of long ago. At length, wearied by sitting beside her tiny beacons, she wrapped herself warmly in her cloak, and caring not that the chill blast blew upon her head, walked down to the beach. The heavens were once more closed in pitchy black, and the hollow moaning of the waves sounded ghastly in her ears. Turning back, the cheerful glimmer of her beacons alone looked hopeful in the whole scene around, and they twinkled star-like, in a whole heaven of darkness. Poor Clio, her thoughts centred on one dear object, walked along the beach, heedless of the wild fury of the wind, and of the foaming billows at her feet, when a sound met her ear, to which on such nights, it had long been familiar—it was the swinging of the yards of a large vessel, at no great distance, in the bay. She listened—the storm seemed to drown every sound, and then again, the flapping of sails, the creaking of yards, and then the swift hurrying of the chain cable through the hawsehole, showed that a vessel was about to anchor. The faint outlines of a large ship now caught her eye, and again Clio thanked Heaven that she had thought of the mariner's lamp, for without it, surely no vessel could have entered that bay at night during the gale, much more have dared to anchor.

The lovely Greek girl listened with charmed senses to all that passed, and presently had the satisfaction of seeing the brig, for so it proved, riding at anchor under bare poles. A loud order was now given to lower away the boat, which, under the lee of the land, was no very difficult undertaking; and presently, a party having entered it, began to pull for land. The task was no easy one. The sea was tolerably smooth, but the wind blew with terrific violence, and yet did the superiors urge the men to persevere. The rowers lay to their task, and at length the exclamation, "in oars," proclaimed that her keel had touched the bottom. In a few minutes, six sturdy rowers were in the water, and running the boat upon the beach. Two men now left the cutter and landed. They spoke, their language was modern Greek, though one used it but badly.

"That lamp proved a mighty lucky thing, I must say. I do believe but for it, we should never have got into these snug quarters; for how a ship is to find its way in the dark, is a mystery to me."

"Heaven be thanked for that light, which, if I mistake not, comes from a cottage I know full well; though what the girl can want up at this time of night, is more than I can say."

"Never mind, Heaven bless her, for she has saved our lives," said the other.

She was rewarded now, and oh! how richly! She had been proud of saving lives before, but now she had saved her lover.

"Zetzos!" she cried, "Zetzos! Have I then brought him back to life?"

"Clio!" the astounded mariner replied, "on the beach at this hour!"

"Yes, Zetzos," the girl shrieked rather than said, as she hung upon his neck, "and it was no accident saved your life. That lamp has burned for you during two long years—for two long years has Clio watched, and you have come at last, and been saved by me."

"My Clio" said the young sailor, deeply affected "let us go to the cottage, and there we can mutually explain. My friend and supercargo will accompany us."

Clio, with a proud, grateful, glad, bursting heart led the way, and when the first burst of joy and delight was over, what an exquisite Clio she was, and how she attended to the comforts of the wearied sailors, how she would provide them with warm food and drink ere a word was said, were all in admirable keeping with her character. Zetzos followed her movements with proud and moistened eyes, and no sight could be more pleasing than that rough sunburnt sailor, softened as a woman under the influence of

happiness and love. They supped, the men having returned to the ship ; and then their stories were told. That of Clio is already known. Zetzos, on the night of the old storm, had been wrecked, the schooner striking on a rock. On this the crew saved themselves, and were in the morning picked up by an American vessel, bound from Leghorn to New York. Having when a lad, served in English and United States ships, Zetzos, who had lost his all, took service His talents as a seaman, were at ence appreciated, and he found ample employment. His conduct giving universal satisfaction, he was at length intrusted with a brig to Leghorn, accompanied with a supercargo who knew the sea well. Overtaken by a storm, the young captain had run for shelter to Scio, trusting to his knowledge of the coast to enable him to run into his favorite bay. What he could do with his quick schooner, was not so easily done with the square rigged vessel, and Zetzos was about to turn her seaward when the Mariner's Lamp caught his eye, and, guided by the welcome light, he reached the desired haven.

A happy woman was Clio, and a happy man was Zetzos, who, having taken his vessel to Leghorn, resigned his command, returned to Scio' and wedded his faithful mistress, becoming a plougher of the land, instead of a plougher of the deep. They prospered, and prosper still ; nor did Clio forget her vow, as her husband each day blessed, so do many others the Mariner's Lamp.

A Revival among Seamen in the Port of London.

The circumstances which demand notice this month, are connected with an interesting —we may say, extraordinary work, now in progress, among our Yorkshire sailors.

Till very recently, the men engaged in this trade, have, to a great extent, been distinguished for indifference to religion, and a criminal disregard to its claims. But a change is passing over them, as sudden and rapid, as it is decisive and unquestionable. If ever there was a revival among American and British churches, there is, at this present time, a revival in progress among the sailors to whom we now refer :—a work too, which, while it displays the sovereignty of divine grace, also illustrates the uniform plan of the divine procedure in acting through the instrumentality of the church, and by use of means. Brought by an irresistible power to yield themselves to Christ, the men who have experienced the change are as zealous and active in the service, as they are happy in the new found peace, and, until now, the unknown liberty and joy. The little leaven spreading from heart to heart, and from vessel to vessel, is leavening the whole lump—and that, too, in a manner so gracious and mighty, that some of those who have been most notorious for wickedness, have been brought under its influence and constrained to yield to its power. These circumstances occasion full and yet delightful employment to our missionaries, in receiving the new converts at their houses—attending them at the Bethel meetings—in directing, encouraging and strengthening them in their course, and in co-operating with them in bringing others under the truth. At meetings held by Captain Prynn, four or five at a time have been assembled who were under deep convictions of sin and were earnestly seeking for mercy. Our other missionary, Capt. Lowther, who has recently been called from that trade to the work of God, and who is known to almost all who are engaged in it, and exerts a powerful influence among them, has drawn up a brief statement of the change that has passed upon several of them. He says that in three or four minutes he placed on paper, the names of thirty captains, of whose conversion he can entertain little or no doubt ; the greater part of whom have experienced the change within the last two months. We give a few cases, merely omitting the names of the parties—all of whom are friends or acquaintances of our missionary.

Case I. Captain ——— received spiritual good in November last. His wife also experienced a gracious change, nearly at the same time, but not at the same place ; neither of them were acquainted with the work of grace in each other's mind. The wife told me that, a short time before this, her husband was in a state of intoxication, and that she thought he seemed resolved on losing his soul. He never attended any place of worship, in any place excepting at home, and then only to please his friends. He is now a worthy man and valiant for the truth.

Case III. Captain received good about the latter end of October or beginning of November. He has been a very dissipated character until about two years ago, when he was prevailed upon to take the pledge. Before this he was put out of his ship for bad conduct. His owner, who was a relation to his wife, had built him a ship, and promised if he saved any money, that he would double the sum. This he did to reclaim h m, but to no purpose, being obliged again to unship him. When, however, he became sober, and remained so, he built him another vessel : still, there was no work of grace on his mind, until the time alluded to. It is said that when his wife received a letter from him, respecting his change, the joy occasioned by the news was too much for her. A letter from her husband was an unusual thing—and that, containing tidings so unlooked for, had so great an effect upon her, that she was taken ill and never recovered. Our friend is as simple as a child, and appears astonished that he has not been cut off in his sins ; wonders how divine love could bear with him so long. Having kept the lowest company and run to the greatest wickedness and excess, the change is the more conspicuous, and must convince all that the work is of God.

"Policy has been defined to serve God in such a manner as not to offend Satan."

Here is thought for the thoughtful and thoughtless. Many endeavor to do what our Blessed Saviour said could not be done. "Ye cannot serve God and Mammon." Many expediency-loving, policy-working and time-serving people, are most wofully deceived, if they imagine that God will accept their hypocritical services. Satan can ask for no more faithful servants than a half-and half, politic manœuvering pretended disciple of the Lord, who obeys the commands of God just so far as suits his convenience and harmonizes with his policy. !

The Old Averick become the young Maria Helena.—Several moons ago, it matters not when, we chronicled the wreck of the American Whale Ship "Averick" at Raiatea, Society Islands. Cargo and Ship were sold for some $3,000. We had supposed the old hull long since knocked in pieces, but far from that, the fortunate purchaser after slight repairs sent her off to Valparaiso, where she was refitted and created into a merchantman. Under her new flag she has made several voyages, and now appears in our harbor looking *almost new*, although well-nigh twenty years ago she brought to these shores near a score of passengers—missionaries, viz Messrs Armstrong, Alexander, Emerson.

☞ The new Mechanics' and Workingmen's Washingtonian Total Abstinence Society, finds great favor amongst those of our citizens from whom it derives its name. The first meeting was held on the evening of Monday week, when rising twenty-eight signed the pledge. It takes the Mechanics and laboring men to do the thing up in style. They make our houses, our clothes, all our necessaries in fact, and they can make Honolulu a temperance city ; for whoever knew them to fail when they took hold altogether ! Success to them, say we.—[S. I News.

Legerdemain.—Or how to get a whole suit of clothes into a junk bottle ! Every time you feel like taking a 'horn,' drop the price of a 'nipper' into the bottle, and take a glass of pure cold water. Repeat this until the bottle is full, then break it and carry the contents to a good tailor ; and within a month you will find yourself encased in a new suit of clothes without any trouble or expense to yourself.

THE FRIEND.

HONOLULU, NOVEMBER 18, 1847.

The Seamen's Chapel.

It is just fourteen years the present month, since the Chapel was completed. The dedication took place on the 24th of November, 1833. It has been repaired from time to time, so that the building should suffer no material injury beyond the necessary effects of time. For sometime past it has been apparent that extensive repairs were necessary, at least that the building required to be shingled. In consideration of these facts, and the narrow accomodations which the upper room afforded as a place for Public Worship, the Chaplain, gave the following

"NOTICE.

"All persons resident in Honolulu, and accustomed to worship at the Seamen's Chapel or interested in the support of the Chaplaincy, are requested to assemble at the Vestry Room, on Tuesday evening Oct. 5th, at 7 o'clock, to consult in reference to the repairing and enlarging the Bethel, and the appropriation of a portion of the same to private use.

"All Masters, Officers and Seamen, in port, are also invited to attend this meeting."

At the appointed time, a meeting took place, and Judge Andrews was called to the chair. The object of the meeting was then stated by the Chaplain. Three several plans were proposed and discussed by a number of gentlemen present. Messrs Wyllie, Judd, Wood, and others took part in the discussion. Once and again the Chairman invited a full expression of opinion upon the subject. Captain Fales, of the Solomon Saltus expressed his view that the "closeness" of the Chapel as it then stood was most uncomfortable, and that in some way the defect of the "low ceiling" ought to be remedied. In his view the object of the Institution should be carefully preserved, in any alteration which should be proposed, but that as Seamen did not occupy the entire building, it would not be opposed to the principles of the institution, that the Foreign Community should be accommodated.

Captain Walker, of the "A. H. Howland" remarked, in addition, that the principle of FREE SEATS should be maintained, so that the chapel should not be permanently alienated from Seamen, and that in any arrangement which should be made, the rights of Seamen should not suffer any encroachment.

Several residents spoke fully approving of these sentiments, and otherwise showing that they fully coincided in the opinion that the design of the Institution, should be preserved. The full discussion of the subject resulted in the adoption of the following resolution, which was proposed by Mr Wyllie.

RESOLVED, That a Committee be appointed to cooperate with the Rev. S. C. Damon, in considering the best mode of repairing and enlarging the Bethel Chapel, and of raising the necessary funds, and to report upon the same at some future meeting.

The following gentlemen were successively nominated and elected members of the Committee.

Joel Turrell, Esq., Consul U. S.
Capt. Fales, Master of "Solomon Saltus."
Capt. Walker, do "A. H. Howland."
Rev. Samuel C. Damon,
His Hon. Judge Lee.
Mr. J. H. Wood.
Dr. R. W. Wood.
R. C. Wyllie, Esq.

The Chairman allowed Judge Lee, to withdraw his name on the ground of his inability to attend.

The meeting, then adjourned until Thursday Evening at 7 o'clock.

ADJOURNED MEETING.

At the said meeting Judge Andrews, was again appointed to the Chair. The following report was then read, together with the proposition of the Chaplain:

REPORT OF THE COMMITTEE.

We the undersigned, appointed a Committee to consider three several plans for the repairing and enlargement of the Bethel Chapel, at your General Meeting of the 5th inst., have the honor to report, as follows:—

Your Committee unanimously agree in recommending you to adopt the plan of shing ling the Chapel, and of furnishing it with galleries inside. They have obtained the estimate of respectable house-carpenters, that this can be done for the following sums, viz:—

Shingling the Chapel,	$ 250 00
Erection of Galleries, etc.	800 00
Additional house for vestry and reading room 1000, Mr. Damon, thinks that by using old materials, a deduction of $300 may be calculated upon,	700 00
Total	1750 00

Your Committee further unanimously agree, in recommending to you the plan for raising the funds, suggested by Mr. Damon, and which will be explained to you.

Propositions, of S. C. Damon, Seamen's Chaplain to the Committee, appointed to report upon the expediency of repairing, and enlarging the Seamen's Chapel:—

1st. To assume all the necessary expenses, as agent of the Am. Sea. Friend Society.

2d. Set apart a portion for free seats, amply sufficient to accommodate Seamen, and in every respect preserve the original design of the Chapel.

3d. Lease the remaining seats, annually, at a lease rent of —— and offer the choice of seats at auction.

4th. All monies arising from leases and sale of choices, to be devoted to repairs upon the Chapel, and necessary expenses of the Chaplaincy.

Your Committee have unanimously rejected the plan of enlarging the *lateral* dimensions of the Chapel up-stairs, because it is condemned by the respectable house carpenters, (that have been consulted) as unseemly, inadequate to afford the desired accommodations, and not likely to be permanent. One of the carpenters consulted brought in an estimate, that it would cost $1,621,00 but only $129 less than the other plan which your Committee, consider of no moment whatever, when so many superior advantages are to be secured.

Your Committee have ascertained that the erection of a New Church, to accommodate, say 400, would cost from six to seven thousand dollars, and therefore they do not recommend that project, especially, as by the proposed galleries, about 130 additional settings will be provided, and the present situation of the Bethel Chapel is superior to any other that can be obtained.

(Signed) J. TURRELL, Esq.
Chairman of the Committee.
NATHANIEL FALES,
Whale Ship, Solomon Saltus.
WASHINGTON T. WALKER,
Whale Ship, A. H. Howland.

Samuel C. Damon.
R. W. Wood.
J. H. Wood.
R. C. Wyllie,

Honolulu, Oahu, H. I., October, 7th, 1847.

The Chairman, (after the reading of the Report,) invited all present to offer remarks, state objections, or make suggestions. A free discussion followed, and necessary explanations made. Finally it was unanimously resolved that the report of the committee, be received and adopted.

☞ As soon as arrangements could be made, the work upon the Chapel, was commenced by Messrs Bent, & Co., and is now in rapid progress. It is confidently hoped that the Chapel, will soon be opened, much improved and in every respect more suitable for Public Worship.

OBITUARY.

It is with emotions of deep sorrow that we announce the death of the Rev. William Richards, the tried, faithful and sincere friend of the Hawaiian Nation. His name and active labors are most intimately associated with the religious and political annals of this nation for the last quarter of a century. His labors as a Missionary of the American Board commenced in the spring of 1823. The immediate scene of those labors was at Lahaina, where he was brought into connection with the aboriginal chiefs of the Islands. By the King's invitation, in the year 1838, he was dismissed from the Board, and entered the service of the Government.—Since that period his labors have been even more arduous than they were while acting as a Pastor amongst the people and as one of the translators of the Bible into the Hawaiian language. His first efforts as a servant of the Chiefs, were to furnish the nation with a Constitution and Code of Laws. However imperfectly some may think this work was executed, yet it will remain a lasting monument of his untiring labors for the good of this people. It was accomplished under circumstances of embarrassment that few can adequately appreciate. His next effort was directed to obtain the acknowledgment of this, as an independent kingdom. Aided by others, this object was finally achieved.—Since the return of Mr. Richards from his embassy to the United States and Europe, he has not relaxed his exertions for the temporal and spiritual welfare of this nation. It may confidently be asserted, that no one has more fully enjoyed the confidence of the King, or been ready to undergo greater sacrifices for his welfare. As Minister of Public Instruction and in various other public offices he has shown that he was a faithful public servant. For many years it has been his favored lot to enjoy almost an uninterrupted measure of health. His final sickness is believed by competent judges to have been occasioned by an over-exertion of his mental faculties. A *post mortem* examination showed thut his brain was seriously affected. His obsequies were performed on Saturday, Nov. 13, and his remains deposited in the royal Tomb. He has left a widow and family of children to mourn his death by whom as husband and father he was most tenderly loved. The English funeral discourse was preached by Rev. Mr. Dole, on Sabbath morning, Nov. 14, a copy of which will doubtless be furnished the public.

Editorial Correspondence.

British Brig, Laura Ann.
Honolulu, Nov. 12th, 1847.

Dear Sir,—With the bearer I have the pleasure of sending you thirty-two dollars, (the half of which amount was cheerfully contributed by my crew,) to assist in defraying the expenses of the enlargement of the Seamen's Church, at this place.

It has been a source of much gratification to me, to witness the ready willingness with which *they all* assisted in proportion to their means, to second what the good and charitable in the United States have done for them, and Seamen generally.

That abundant success may attend all your benevolent labors for the moral and spiritual improvement of Seamen, and your hearers generally, will be the sincere desire and prayer of my dear sir,

Yours very sincerely,
L. H. THOMAS.

Rev. S. C. Damon,
Seamen's Chaplain, Honolulu.

[Reply]

Honolulu, Nov. 12th, 1847.

Dear Sir.—With much pleasure, I acknowledge the reception of Thirty-two dollars, from yourself and your crew, for the Seamen's Chapel, now undergoing repairs. Will you do me the favor of communicating to them the expression of my sincere gratitude, for their generous donation. The value of your donation, is enhanced from the circumstance that you sail under a national flag, differing from that protecting "the good and charitable in the United States," who commenced and have mainly sustained the efforts for the improvement of Seamen, visiting the Port of Honolulu.

I can assure you that the friends and patrons of the Am. Sea. F. Society, "know neither sect or nation in this cause." So far as I have been able to carry out their views, I have endeavored to extend my labors among Seamen, irrespective of their nationality. My Flag is inscribed Bethel, with a dove in one corner, bearing an olive branch. It is now just thirty years since this flag was hoisted on the waters of your own favored Island. It already floats over Seamen's Chapels in every port of any importance in the United States. It has been hoisted in several foreign ports, and I rejoice that your crew, have so cheerfully come forward to keep it waving in this Port.

In conclusion, I must be allowed to express the happiness which I have experienced in witnessing the order and regularity which has marked the conduct of your crew, while in Port. I doubt not you are richly rewarded for all your efforts to promote their welfare. With sincere esteem I remain,

Your friend,
SAMUEL C. DAMON.
Seamen's Chaplain.

Capt. L. H. Thomas.
Eng. Brig Laura Ann.

Worthy Action.—It affords us great pleasure to be able to chronicle acts like the following:—

One of the cold, rainy nights during the last week, some of the members of the Mechanics Washingtonian Total Abstinence Society found a man in the gutter, intoxicated, and nearly drowned by the torrent of water that was rushing over him. They took him into the Thespian, and by great exertions succeded in restoring him to sensibility. He was furnished with comfortable quarters for the night, and in the morning, fitted out with clean clothes, and sent on board his ship. The man, we understand, belonged to the whale ship —— and is, doubtless, grateful to his kind benefactors.—[Polynesian.

☞ It appears from the following communication that we have in the opinion of Capt. Purrington and his Officers, given currency to a false report, that was in circulation, at Lahaina last spring, respecting a sailor that was discharged from the Sarah. The notice of his death was forwarded, with several others, for publication and was inserted without serious reflection. We insert the communication as it comes to hand:—

SHIP SARAH, PORT OF HONOLULU, November 16th, 1847.

RESPECTED SIR.—Since my arrival in this Port, I with sincere regret have noticed the announcement in the Friend of May 15th last, of the death at Lahaina of Henry Williams, a young man discharged there from my ship last spring. It would have been sufficiently distressing to me to have learned the fulfilment of my worst fears for the fate of an individual of my crew, who had been for several months the subject of my constant care and watchful solicitude. But the terms in which it seems to have been designed by you, or your correspondent to inform the world, and more particularly my friends and the friends of the diseased, of the melancholy termination of a disease, which neither my cares on shipboard nor medical skill on shore could arrest, inflict a wound deeper than the feelings of natural sympathy; inasmuch as they reflect most undeservedly and cruelly upon my character, both as a man, and as one whose profession renders him responsible for the well being of others. The notice of the young man's death, is in the following words. "In the U. S. Hospital at Lahaina, March 23th 1847, Henry Williams, 19 years and 7 months of age, from Pittsfield Berkshire county, Mass., where his parents reside. He left the ship Sarah only six months from home, sick with dropsy, of which he died, said to be caused by hard usage on board,"—— The facts of the case are simply the following. It was the first sea voyage of Williams, and after leaving our home port he was taken unusually sea sick. He stated to me that he had been ill before leaving his friends, and that they had advised him to take a sea voyage for the benefit of his health, and asked indulgence on that account. I at once took him into my cabin, and nursed him through a protracted illness, and indeed sustained him in the light service of the cabin until some time after he appeared to have entirely recovered his health. I then put him in his place forward with the crew, in order to give him an opportunity to learn practical seamanship, for his own sake as well as for the sake of the greater value of his services. He shortly afterwards became ill again, and disclosed symptoms which I thought indicated dropsy in the chest, consequently, I immediately took him into the cabin and gave up to him my own cot for his comfort, and administered to him such medicines as I thought adapted to his case and rendered to him my personal attention by night, and by day, as carefully as I could have done had he been one of my own family. On his account I made all possible dispatch to the port of Lahaina, as being the nearest port at which I was sure of medical aid, and immediately after my arrival, sought the physician of the U. S. Hospital, and had the man at once placed under his care; in fact I made this provision to him my first and only case, till it was available to him. The doctor's opinion of the nature of his disease, confirmed that which I had adopted, and he told me that his recovery was very doubtful. Up to the time that I sailed from Lahaina, I gave the young man all my personal attention, and made every provision for his comfort which were practicable to me. I have been particular in this statement of facts, partly for my own vindication, but more particularly for the purpose of rebuking the disposition when ever it has been felt, either on the part of the reporter of the case to you, whom I understand to be the Rev. Mr. Forbes, or on the part of the publisher, to alter publicly such representations of the conduct of Ship Masters to their disparagement, as may be derived from the few discontented and incorrigible, whom they are obliged to punish and discharge. I have often been grieved and have known others to be so, to notice a morbid propensity in those who claim to be respected as moral reformers, to pass their censures upon the supposed faults of men, without taking the pains necessary for knowing whether their censures are just. And it seemes to me desirable that public men, and a public journal professedly devoted to the interest of truth among seamen, and making constant appeals to that class of men for support, should be especially removed from all exposure to charges such as I have felt impelled to allege of offensive and injurious misstatements upon matters of Truth.

I remain Sir with due respect
Your most ob't. servant,
ISAIAH PURRINGTON.

Rev. S. C. DAMON, Editor of the Friend.

The undersigned Officers of the Ship Sarah, hereunto subscribe their names in attestation of the truth of Capt. Purrington's statement of his treatment of Henry Williams.

WILLIAM MERITHEW.
GEORGE FOLGER.
PAUL ASHLEY.
E. SMALLEY.

FORGIVENESS.—A more glorious victory cannot be gained over another than this; that when the injury begins on his part, the kindness begins on ours.

DIED.

On the 11th April, 1847, at Hazelbank, Parish of Dunlop, county of Ayr, Scotland, Mrs. WYLLIE, mother of the Minister of Foreign Relations, in her eighty-first year, with all her mental faculties unimpaired, after a serious illness of two weeks

PASSENGERS.

In the A. H. Howland for New Bedford—Rev. C. Forbes, lady and four children, Mrs. Bibble, Miss M. Bibble and three children, and Master Emerson, missionaries of the American Board.

In the Currency Lass for San Francisco—Messrs. Christie and A. G. Abell.

In the Brutus for New York—Mr. J. F. B. Marshall, Peruvian Consul, and Master E. Ten Eyck.

In the Georgian for Tahiti—Mrs. Kelly, Mrs. Walsh and Miss Walsh, and Mr. Hawes, American Consul for Tahiti

In the S. S from Tahiti—Mr. Louis Germain.

In the Natalia from Valparaiso—Senor Francisco Estevan Nunes and Juan Manuel Luco, supercargo.

In the Maria Helena from Monterey—Messrs. G. B. Post, Mr. Beers, and Mr. Wm Hobson, supercargo.

In the Angola for California—Mr. H. Hawes, U. S. Consul for Tahiti

MARINE INTELLIGENCE.

PORT OF HONOLULU.

Arrived.

Oct 27—H. B. M's S. Juno, Capt. Blake, fm windward. Sailed on the 5th for Valparaiso.

Oct. 28—Haw. schr. S. S., Molteno, 20 ds fm Tahiti, with merchandise to J. J. Caranave and others.

Am whale ship Triton, Spencer, New Bedford, 14 mos, 550 wh, 100 season.

30—Am whale ship Philip 1st, Case, Greenport, no report.

Am whale ship Hercules, Beetle, New Bedford, no report.

31—Am whale ship Garland, Crowell, New Bedford, 29 mos, 650 sp, 300 season.

FUNERAL SERMON,

Preached at Honolulu, Nov. 14th on the occasion of the death of the REV. WILLIAM RICHARDS, MINISTER OF PUBLIC INSTRUCTION; by REV. D. DOLE.

[Published by request.]

"For he was a Good Man."—ACTS, xi: 24.

"An honest man's the noblest work of God," is a sentiment often quoted with commendation. But the *good man* is placed by the sacred writers in a higher rank than the honest, the righteous man. "For scarcely for a righteous man will one die; yet peradventure for a *good man* some one would even dare to die." (Rom. :v 7.)

The honest man has the strictest regard for the rights of others, nor would he, on any consideration, injure his neighbor in his property or reputation. The good man has all the good qualities of the honest man, and superadded, a benevolent, sympathizing heart. His own happiness is advanced by his efforts to make others happy. In relieving the distresses and driving away the sorrows of others, he forgets his own sorrows. The principle that actuates him is God-like. It is Love. He loves Him, who is infinite in all his perfections with all his heart; and he loves the creatures of God especially those who were created in the image of God. With his brethren, whose hopes and fears stretch onward beyond this life, he feels the most tender sympathy. When they rejoice he rejoices with them. When they weep, he mingles his tears with theirs. His thoughts, his prayers, his plans, his efforts, all have a bearing upon the welfare of his fellow men. To alleviate their sufferings, to remove their sorrows, to promote their highest happiness is his meat and drink. He has put away from him all bitterness, and wrath, and malice, and evil-speaking, and has become kind and tender-hearted, forgiving others, even as God, for Christ's sake, hath forgiven him. Thus is he an imitator of God as a dear child, (Eph. iv: 31, 32; and v: 1,) a follower of Him, who went about doing good.

And we are called, this day, by the providence of God, to mourn the departure of such a man. For the deceased *was a good man.* He appeared on these islands and his path was radiant with light. He poured the light of life into many dark minds, and persuaded them to renounce the hidden works of darkness, and to shine as lights in the world.

His labors are now ended; he has entered his rest, and he needs no eulogy from us. Could any praises of ours reach him, they would not add to his felicity. He would not recieve them. Yet it may not be altogether in vain to spend a few moments in a rapid glance at some of the principal events of his life.

He was born in Plainfield, Mass., Aug. 22, 1793. When fifteen years old, he became hopefully pious, and from that time, he set himself to learn of Him, who was meek and lowly and benevolent. This, as he understood it, was what was implied in becoming a disciple. At the age of 22 years he entered Williams' College, where he remained four years. He then devoted three years more to theological studies at Andover, and in a few weeks after the completion of this course, he was married and on his way to the Sandwich Islands as a Missionary of the cross. He arrived at Honolulu in April, 1823, and the next month found him at Lahaina, living in a grass house without floors or windows. Three months after his arrival at Lahaina, he wrote in the following strain: "The field for usefulness here is great, and I have never, for a moment, since I arrived, had a single fear that my usefulness on these islands will be limited by anything but my own imperfections. If I can be useful anywhere, I can be useful at Lahaina. I see no evidence that I have been, or that I shall soon be instrumental in converting any heathen. But I think I do see a work going on, which will issue in the conversion of thousands." After alluding to their need of a more comfortable house, he proceeds; "But situated as we now are, we are all contented and happy. Our work is, indeed, a pleasant one. I envy no man his employment, though he may be surrounded by a thousand temporal comforts of which I am deprived. It is enough for me that in looking back, I can see clearly that the hand of Providence pointed me to these islands, and that in looking forward, I see some prospect of success and of lasting usefulness. All my anxiety arises from the fear that the whitening harvest will not be gathered."

The indications for good which Mr. Richards saw, did not deceive him. The King's mother soon gave evidence of having passed from death unto life; but she lived only a short time, to recommend the good way unto her people. She died with a hope full of immortality. But she was not the only one who became interested in religious things. One and another and another came to the missionary to inquire after the way of salvation. Soon his house was thronged with inquirers. When he awoke in the morning, he found people waiting at the door to converse with him on the truths of the scriptures. When they left, others took their places, so that the house is not empty till the doors are closed at night. And even then, he was interrupted by calls, and not unfrequently was he awaked at midnight, by those who wished to ask questions. This was in the spring of 1825.

These circumstances, so gratifying to his feelings, would have been irksome in the highest degree, if he had not been a good man. To be surrounded with ignorant, filthy heathen from morning till night, to listen to the relation of their thoughts, to answer their numberless questions, and to have this continued from day to day, and from week to week—surely this would have been hard for flesh and blood to bear. And it is no wonder that many, who claim for themselves, a high degree of benevolence, should fail to sympathize with missionaries in these things. In efforts to render the heathen industrious and intelligent, to induce them to build comfortable houses, and to procure for themselves comfortable clothing and wholesome food, and in efforts to render them honest and virtuous; you have the countenance and support of this class, but they do not understand about saving the souls of the heathen; perhaps they ridicule the idea. In such circumstances, however, the good man is in his element. Like the Savior, when he seated himself by Jacob's well, he may be wearied, but he has meat to eat that the world knows not of. Precious, unspeakably precious to him is the opportunity of guiding sinners in the way of life. When tempted to remit his efforts, the thought, that in heaven, there will be time enough for rest and enjoyment, but no time for saving souls, urges him on to increased exertions.

But while Mr. Richards was made glad in seeing such a religious interest, as, six months before, he did not anticipate for a whole generation, he was severely tried by the conduct of men from Christian countries. To enforce their nefarious demands, they threatened his life and the lives of his family. But none of these things moved him. He did not count his own life dear, nor the lives of his wife and children even, when compared with the cause he had espoused. His was the serene firmness of one, whose trust is in God.

If these trials and dangers had any influence on his conduct, it was to render him more diligent in warning and teaching every one in season and out of season; for he had been made to feel that his opportunities for saving souls, might cease suddenly, unexpectedly.

Years pass and so far from being tired of his work, he loves it more and more. So far from being disgusted with the degraded natives, who throng around him and wishing himself in the cultivated society of his

father-land, his love to them increases and he lays himself out more and more to promote their welfare. Some through his efforts are converted, and for them he feels the affection of a father. Others are inquiring the way to heaven. For these he is deeply solicitous. He sees them near the kingdom of heaven, standing at the gate: he perceives the danger of their turning away, and being lost forever, and he urges them by every motive to agonize that they may enter in. He is patient towards their stupidity, he bears with their waywardness, he instructs their ignorance, and leads them to the Lamb of God.

Others, and among them the young king and some of the chiefs, though assenting to the truth and approving the good way, often yield to temptation and quaff to its dregs the inebriate's bowl, thus rendering their final salvation fearfully improbable. These he faithfully warns and affectionately entreats to break off their sins, and when he finds that his warnings and expostulations have been in vain, he weeps in secret places over their wretchedness, their darkening prospects, and the ruinous influence which they are exerting over their people.

Among the sick, he is the tender-hearted physician, administering medicine for their bodily maladies, and urging them to call upon the great physician of souls to heal their spiritual maladies.

All classes of his flock were accustomed to come to him for advice in all their difficulties, and they all found him the same kind, sympathizing friend. It being his great object to do good,—to do good in every possible way, he brought his efforts to bear upon the physical, the social and the spiritual welfare of the people. He felt that he was doing God service, while teaching them to plan, to construct and to furnish their houses; while teaching them to cultivate their land, and while teaching them the rudiments of those sciences, which tend to expand the mind and elevate the thoughts.

Thus he toiled on for nine years and a half, often cast down in consequence of seeing many of his most sanguine hopes blasted; but oftener praising God with joyful voice, for the degree of success which had been granted him.

The education of his children requiring time, which he cannot devote to them, he feels that they must be separated from their parents and accordingly he took passage with his family to the United States, where he arrived in the spring of 1837. During the five or six months which he spent in the land of his birth, he did much to increase the interest already awakened in the cause of missions, and having provided for the education of his children, he bade them farewell and returned with Mrs. R. to his loved people, and loved employment at Lahaina.

And gladly would he have spent his days among them, but duty called him to another sphere of labor. The king and chiefs invited him to become their chaplain, teacher and interpreter, and with the hope of increased usefulness, he accepted the invitation. But his feelings remained unchanged, and his efforts to do good in every possible way were unremitted. Through his influence the king and chiefs give a constitution, and a code of laws to their people; and through his influence the king and many of the chiefs pledge themselves to abstain from ardent spirits, a proceeding which has been followed by the happiest consequences.

In 1842 Mr. R. embarked for the United States and Europe, in company with Haalilio, for the purpose of obtaining the recognition of the independence of the Hawaiian kingdom, from the governments of those countries. This object having been accomplished he returned to these islands, arriving at Honolulu in the spring of 1845. Haalilio died on the passage. His end was peace.

From this time until his last sickness, Mr. R.'s labors were incessant. He allowed his mind no rest. He generally held two meetings on the Sabbath, and during the rest of the week, from morning till late at night, he was engaged in deliberations, consultations, translations and in attending to all the multifarious items of business and benevolence, that seemed to have a claim upon his time. But all his cares and anxieties did not drive him from the throne of grace. His prayers, his conversation gave evidence that he was advancing in the divine life,—that he was becoming more spiritual. His interest in the eternal welfare of his associates in office and in all around him was deep, and it was evidently increasing. As might have been expected, his health failed under this incessant excitement and mental activity, and death came to call the good man to that world, "where the weary are at rest."

His long and painful sickness was borne without a murmur, and he seemed perfectly resigned to the will of God. A few days before his death, the hymn which contains these lines was sung:

"And here my spirit waiting stands
Till God shall bid it fly."

Here he distinctly articulated, "Like me,"—meaning that these words were expressive of his feelings. These were his last words. His hope was like an anchor to the soul, sure and steadfast: it was full of immortality. He took his departure sabbath forenoon, Nov. 7, for the Paradise of God.

Such was the life, such the death of this good man. While on earth, he turned many to righteousness, as we trust; and in the blessed world to which he has gone, he will shine as the stars, forever and ever. O! happy day, on which he finished his course and obtained the victory over his last enemy! Rejoice with him, ye whom he so tenderly loved; for he is now at rest. The sufferings and sorrows of earth can never reach him more. Heavenly felicity is his. And but a small space, a little moment separates you from the world where he is so happy. Yet your loss is great. Those who have not endured the agony of a like bereavement, cannot estimate it. But the thought that your Heavenly Father has called him to Himself, must bring with it the richest consolation.

And those associated with him in the administration of the government, have met with great loss; for they not only enjoyed the benefit of his rich experience and sound judgment; but also, of his fervent prayers in their behalf.

In his death, the King has lost his best friend. No one could feel a deeper interest in his temporal, or his spiritual welfare. No one could more sincerely desire that he should be just, "ruling in the fear of God;" and that the nation under his sway, should rapidly advance in intelligence, in virtue and in prosperity. For these objects he labored so incessantly, that he sacrificed his life.

And we all have been bereaved. There is no one acquainted with the departed, but feels that he has lost a friend. Our Elsjah has been taken from us. Oh! that a double portion of his spirit, as a doer of good, may rest on every individual of this assembly! For the good die in peace and their immortality is crowned with felicity.

For the Friend.

Dangerous Reef.

Rev. S. C. Damon, Dear Sir:

For the information of ship masters you will please insert the following in your invaluable paper.

A dangerous reef ½ of a mile in extent was discovered September 9th, 1847. Copper Island bearing S. E., distance 12 miles, S. E. point of Bhering's Island bearing S. W., distance 18 miles. Ships cruising in that vicinity should be cautious as the reef breaks very heavy when there is a large swell and sea running; in smooth weather the reef is not visible, quite probably there is from 3 to 5 fathom, although not having an opportunity to make the necessary examination, the above is submitted to the consideration of those who cruise at the above Islands.

Repectfully yours,
JAS. R. TURNER.

[For the Friend.]

Mr. Damon, Sir:—As a piece published in your useful paper (The Friend) signed Blue Water, seems to give rise to some dissatisfaction, I wish to say, I wrote it to amuse a leisure hour, and only regret the mistakes arose in printing. I wished to discourage running away and abuse, and if Stephen N. Potter, wishes an explanation, I am ready to give it, and in my opinion no one else has any reason to notice it.

W. H. WHITFIELD.

TO WHOM IT MAY CONCERN —Any person contributing the sum of $50,00, or more, to the Seamen's Chaplaincy, his name will be enrolled as a Life Director of the American Seamen's Friend Society, New York. The sum of $20,00 will entitle the donor to the privileges of Life Membership of the same society. The names of such persons will be duly reported by the earliest opportunity.

☞ We furnish such subscriptions as have been reported. Others are now in progress on board several ships in the harbor. Many of the masters and officers have shown a most commendable zeal in promoting this work. Every donor will be furnished with a receipt of the amount of his subscription, signed by the Chaplain.

☞ This morning, Dec. 2, the Thermometer, at sun rise, stood at 62°. It was quite chilly, and woolens not uncomfortable.

THE FRIEND.

HONOLULU, DECEMBER 2, 1847.

The whole Chapel remain Free.

In our last number we published the report of a Committee, recommending an enlargement of the Chapel, and the annual renting of a part of the same, after setting "apart a portion for free seats, amply sufficient to accommodate Seamen, and in every respect preserve the original design of the Chapel." The money derived from rents was to be devoted to the repairs upon the building, and other necessary expenses of the Chaplaincy.

This measure does not appear to meet the views of many Ship Masters, who have recently arrived in Port, in as much as they think it would "be likely to deter Seamen from attending the Chapel." It will appear from the following communication that a request has been made for the Chapel to remain free, as in times past.

HONOLULU, Nov. 26th, 1847.

To THE REV. S. C. DAMON;

We the undersigned Shipmasters, now in this place, at a meeting held at the Mansion House, Wm. H. Whitfield being appointed chairman, did appoint a Committee of seven, viz: J. C. Rice, A. Cox, W. H. Whitfield, C. W. Gellett, J. R. Merrihew, J. R. Corwin, and P. S. Wilcox, to meet and determine what course it was best to pursue, in regard to the Bethel Chapel, now undergoing alterations.

The said Committee, as appointed met at the rooms of Capt. J. C. Rice, and chose Capt. A. Cox, as Chairman, and P. S. Wilcox, Secretary. After due consideration, it was unanimously agreed, that Capt. W. H. Whitfield and Capt. P. S. Wilcox draw up a petition to be signed by the shipmasters that approved of it. The Committee approved of the petition, which reads as follows:—*Believing, that if the view of a former meeting should be carried out, it would deter Seamen from attending the Chapel, we do request that the whole Chapel remain free and unadorned or cushioned; unless the whole lower part of the house be adorned and cushioned in a uniform manner, and we most cordially invite the Foreign Residents of Honolulu, and any persons visiting here, to meet with us and worship in the Chapel, and occupy any seat they may please, or find vacant.*

[REPLY.]

HONOLULU, Nov. 27th, 1847.

GENTLEMEN.—I would most respectfully acknowledge your communication of yesterday's date. It is a source of unfeigned gratification to me, that you have taken sufficient interest in the affairs of the Chaplaincy to hold repeated public meetings for consultation and deliberation respecting the seats in the Chapel. It also affords me pleasure to see attached to your communication, the names of some of the oldest and most respected shipmasters in the Pacific, several of whom have been frequent visitors at this Port, and one of whom commanded the whale ship, on board of which, the frame of the Chapel was brought to the Islands more than fourteen years ago.*

I would now inform you, gentlemen, (representing as you do the sea-faring community,) that I shall endeavor fully to carry out your request in regard to the Bethel Chapel. All things carefully considered and duly weighed, I am fully of the opinion that the plan of FREE SEATS will be the best, giving more general satisfaction, to all classes of worshippers.

Since the reception of your communication, I have conversed with individual members, whose names are annexed, and I would most respectfully invite you all, to meet at such time and place, as will suit your convenience, for the purpose of mutual explanation and consultation, so that the affair may be left *exactly right.*

Before closing I must express the satisfaction which I feel, in view, of the candor and good sense so apparent upon the face of your communication, I feel myself strengthened in the discharge of my duties towards the numerous class of men, which you represent.

I cannot but hope that the decisions which you have made will meet the cordial approval of all candid men, and friends of the Seamen's cause, here and elsewhere.

With sincere esteem I remain your's &c.

SAMUEL C. DAMON.
Seamen's Chaplain.

To Capt. A. Cox. and other Shipmasters.

Agreeable to the suggestion of the Chaplain, a meeting of the ship masters was held at the Chapel, 3 o'clock P. M., Saturday, November 27, Capt. W. H. Whitfield was appointed chairman. The foregoing documents were read and approved of. While there was great unanimity of feeling in regard to the subject of *free seats*, all were most unanimous in extending a cordial invitation to foreign residents, and others, to meet at the chapel for public worship. In all the discussion of this subject, we are not aware as any other sentiment has been expressed.

On motion of Capt. Cox it was voted that funds be appropriated for cushioning in a uniform manner, the lower part of the chapel and the singer's seats. This will be carried out and whenever the funds of the chaplaincy will allow, the whole chapel will be cushioned.

It was also voted to authorize the chaplain to draft a suitable subscription paper, and cause fifty copies to be printed and circulated among masters, officers and seamen, in port, for the purpose of raising funds to defray the expenses of repairs now in progress upon the chapel.

At the close of the meeting Capt. Whitfield remarked that not knowing as such a measure would be generally adopted, he had already circulated a subscription paper among his ship's company, and that he was then ready to pay over the amount subscribed, which the reader will see reported in another portion of our columns. The meeting then adjourned.

In our offorts for this object among the seafaring community, we have met with a reception, rarely falling to the lot of an applicant for funds, to carry forward a benevolent enterprise. May all who feel willing to aid forward this cause realize in their own experience the truth of that saying of our Saviour, "It is more blessed to give than to receive."—Acts xx. 35.

* Capt. J. C. Rice, now master of the "Isaac Hicks, and in 1833, of the "Mentor."

Honolulu a quiet Sea Port.—To what it is owing that the past shipping season has passed off so quietly, we will not stop now to enquire. The fact is somewhat surprising, but most pleasant to contemplate.—During the last few weeks from 200 to 500 seamen have been daily enjoying liberty on shore. They have come on shore in the morning and returned at night in a most quiet and orderly manner. To see a sailor intoxicated in our streets has been the exception. We have never witnessed any thing to compare with it in former years.—This fact reflects great credit upon the respective crews that have been in port, as well as upon the police regulations of the town. Should the same happy state of things continue, great credit will be due to all parties, seamen and landsmen.

The Best Sailor.

In one of S. T. Coleridge's essays, to be found in his celebrated work called "The Friend," are some very interesting observations upon sailors. He is remarking upon the character of Sir Alexander Ball of the Royal Navy. This distinguished officer it appears was induced to enter the navy at the age of twelve from a perusal of Robinson Crusoe. Sir Alexander was once heard to say that "*The best sailor* he had ever had, first attracted his notice by the anxiety which he expressed concerning the means of remitting some money which he had received in the West Indies, to his sister in England; and this man was never heard to swear an oath, and was remarkable for the firmness with which he devoted a part of every Sunday to the reading of his Bible."

☞ Our readers may perhaps reccollect that a communication appeared in the columns of our last number, signed by the master of the Sarah, we now say, what perhaps should then have been said, that we seriously regret that the notice of the death of Capt. Purrington's sailor, appeared in the form that it did. It was originally published without serious reflection, and we presume that our correspondent the Rev. Mr. Forbes, wrote the notice without attentively considering the impropriety of forwarding such a notice to a public journal.

Japan.

In the columns of the last Polynesian, we find a most interesting account from Capt. Jackson of the "Inez," respecting a late visit to the almost unknown shores of Japan We regret that our limited space precludes the insertion of the entire communication.—We copy an account of his last day's visit.

Friday, May 7th.—At 9, A. M., the wind ahead and very light, I took my boat and went on shore, where I found the inhabitants all prepared to receive me. The chief officers were in full military dress. Two of them had on coats of mail made of pieces of cast iron, in various shapes and sizes, neatly polished and connected by means of steel net work of small rings, one through the other. The head was covered with a glazed cap. The face was bare, but their arms, hands and whole body, down to their feet, was protected. They carried no arms, but each had a fan in his hand. There were about 200 men that were armed, some with short rifles, very heavy and of large calibre, and some with a short sort of blunderbuss, about 2 feet long and 4 inches in diameter, mounted in a wooden stock much like one of our horse pistols, and all fitted with match locks; but I believe there were none of them loaded, for they allowed me to examine them, and I found no match or priming. A great part of the soldiers wore swords, and the officers two. The dress of the officers I cannot describe. There were no two of them dressed alike; but some of them were very richly decorated with silk and wollen cloth of a bright scarlet color. After I had bowed and kneeled in the presence of the chief officer, who was sitting on a camp stool—which was carried by an attendant, when the officer rode, which he always did when he went from one place to another—he was very free and familiar, and wanted to know where I came from and where I was going. I went and got the American Ensign and my charts, and pointed out to him the way I came and where I was going. He took great notice of the Ensign, and counted the stars and stripes.

I forgot to mention that when I went on board for the Ensign, that one of the under officers went with me; but I had to leave two of my men on shore as hostages. He was very curious in examining the ship, and I think he had never seen glass, for I took him into the cabin, and he was very much surprised at the windows; and when I gave him a piece of glass he accepted it, and showed himself a little roguish at once. He pulled off his clothes, ripped them open and put the glass, a silver dollar, a small map of the world, and some other small things, into them. He then placed his hand upon his mouth to me, as much as to say mum. When I got on shore with him, the officers formed three sides of a hollow square, open next the water, where we landed, and in the centre was mats spread on the ground. He walked directly to the mats, kneeled down and bowed himself to the ground and then rose, loosened his clothes and shook them, to let them see that there was nothing about him. He then came and conducted me to the same place, and made signs to bow, which I did. I was then permitted to approach the chief officer, but not to stand before him. I had to remain on my knees or sitting on my feet. He was very proud of his dress and superior appearance, and seemed pleased to have me examine it. He wore a large sash—scarlet on one side and gold and silver were worked in on the other, which he seemed very proud of. It was some time before he could make me understand to tell him the name of my country, and when I did he and many others repeated it over a great many times. They had a number of colors, one of which I believe was their national standard, as the chief officer pointed to it when I made him understand what our Ensign was. It consisted of a square piece of white cloth, with a circle in the centre, formed by a black streak 4 inches wide, and in the centre of that there was three small square black spots, and a thing made of flat or round brass wire, wove quite open, that looked like a gourd with the neck down, placed upon the top of a bamboo staff about 12 feet long.—The flag was on one side of it sewed to a stick and the middle of the stick attached to the staff, just below the ball. They had several other colors and spears, with ornamented sockets, and rings and red pendants hanging to them where they were attached to the staves. The chief officer had some rice brought to me, in a paper, and asked me if I wanted it. I told him I did. He then asked me, by signs, if I would go away. I told him I would go as soon as the wind came fair; but that did not satisfy him. He gave me to understand that he wanted me to leave before. I then laid down and had a nap. The chief officer had about three bushels of rice and a keg of spirits brought. He then pointed towards the ship, and told me that I must take them and go. Although the wind was directly ahead, I promised that I would go on board and leave directly. They then had some cold boiled rice made up in balls, about a pound each, and some pickles brought in the square and placed on the mats, and made signs for us to eat. One of the subordinate officers took some and ate it, and requested me to do the same. I sat down on the mats with my men and made a dinner. We had nothing but our hands to eat with. They gave us water and spirits to drink. Before offering us anything to eat or drink, they always partook of it first themselves. When we had done eating, they made signs for us to go and get under way and proceed to sea. To put them at ease, I went on board and got under way with a head wind and tide.

Japanese Junk picked up.—On the 21st of April last, the Bremen whale ship Otaheite, Capt. Wieting, in lat. 35 N., 156 E. lat., fell in with a Japanese junk, which had lost her rudder and had been driven off the coast in a gale in November, 1846, and had been drifting about for 5 months. He took off her crew—9 men—and took out of her 12,000 lbs. beeswax, some iron, copper, tools, molasses, sugar, rouge, &c. Her lading was chiefly writing paper. The crew reduced to one quarter of rice and were then without water. She was of about 80 tons, belonged to Osako and was bound to the north.—They had seen one whale ship which steered for them and then went off, without speaking. Capt. Wieting kept them with him four weeks and then put them on board a junk in the straits of Matsmai.—[Polynesian, Oct. 27.

Oregon.—By the Mary Dare we learn that 4,000 emigrants have arrived; and that owing to the late drought, the crops have failed and provisions are scarce. The Hudson Bay Co.'s bark Columbia, for London, and the Toulon, Crosby are daily expected.—[Ibid.

For the Friend.

Visit to Gregan Island.

Friend Damon,—To show you how useful your paper, (the Friend,) is to us whalemen, and also to contribute my mite to make it more so, I send you the following:

You no doubt recollect that I have, whenever I had an opportunity, procured a copy of all the back numbers of your Seamen's Friend. On my last passage from Honolulu to Guam I read, amongst other news, an account of Capt. Brown's visit to Gregan, one of the Ladrone Islands. I felt interested in the account of the natives, as I happened to know of their being there landed the first voyage I came into the Pacific Ocean.—When I learned that Capt. Brown left hogs there I concluded not to mention the circumstance to any one until I was out of Guam, bound on Japan, and then stop there, if possible, hoping, if I went alone, to get a good stock of hogs. I left Apea Harbor the 7th of April, sighted all the Islands as I went along, and saw nothing worthy of remark unless it was a large rock, not laid down on the charts, and situated between the Isle of Sariguan and Torus Rocks, and also to state that Alamaguan does not exist, but what is laid down as Alamaguan and Pagan Isle are all Pagan Islands. I made Gregan on the 10th, and at 4 P. M. sent a boat on shore, at 8 P. M. the boat returned with the two white men, from whom I obtained the following account: The natives were landed by Capt. Worth on the Isle of Pagan, where they remained several years and where the two white men joined them. But as the white men had been at Gregan and knew it to be the best soil, after much toil, constructed two canoes, and went over to Gregan, leaving before day and landing just at night.—There had been but five children born.*—The children were mostly girls, the oldest of which was nine years and ten months, they number in all fifteen souls. The hogs left by Capt Brown had rapidly increased. Their progeny was said to number about 400 hogs and pigs, and I have no doubt it came up to at least 300. The best hogs for ship's use I ever saw. I took more than 40 hogs and pigs, and was to have had more, but I found the youngest of the two whites was trying to get some of my men to run away, and as I could take no more that day, left the Island. From the last boat that went on shore, one man, (John Werden,) did runaway. The landing is just to the leeward of the S. E. point of the Island. Now I will merely add that I hope it will be a long time before there is any rum carried there for sale.

Yours, BLUE WATER.

* See Friend, Sept. 1, 1846.

Education.—"A sober education naturally inspires self-respect. But he who respects himself will respect others."

California.—By the 'Mary Ann,' Capt. Rossum, we have received a file of the 'Star,' but we cannot glean any important news. Political affairs of the country remain quite unsettled. San Francisco had been visited by numerous whale ships for recruits, but they were disappointed. Potatoes scarce. "Wood and water" were all that could be obtained.

We are glad to learn, from a private source, that our friends Messrs. Lyman and Douglass find good encouragement as surveyors. As a scientific man Mr. Lyman ranks high, and his attainments will eminently fit him to furnish accurate surveys, so important in a new country.

O. C. School.—The annual examination took place on Wednesday. A highly respectable company of visiters was present. The recitations and deportment of the pupils reflected great credit upon the laborious and indefatigable exertions of their teacher, Mr. Hatch.

DIED,

By drowning, in August 1847, by being carried out of a boat by a line, Anton Fortan Port, native of Fayal, Boatsteerer, belonging to the Ohio.

Of the scurvy, Nov. —, Henry Thompson, colored, aged 28, of Staten Island, Cook on board whale ship Portland, of Sag Harbor.

Fell overboard and was drowned from ship Robin Hood, Jose Sylva, a Portuguese. He was lost Sept. 22d, off the entrance of the Okotsk Sea.

In Honolulu, Nov. 25th, Mr. William Loe, aged 36, a native of Norwich, England. He has resided on the islands between eleven and twelve years.

On board ship Sheffield, of Sag Harbor, Oct. 12, Scudder Abbott, of Cold Spring, Long Island.

PASSENGERS.

In the Laura Ann for California—R. C. Janion, Esq:

Per Globe—Mrs. West and an infant 9 days old.

Per Inez—Capt. Deslandes, M. Dealet, Surgeon, 3 officers, and 33 of the crew from the Fr. whaleship Fanny, wrecked.

THE FRIEND.

VOL. V.] HONOLULU, OAHU, H. I., DECEMBER 16, 1847. [No. XXIV.

The Poet's Corner.

For the Friend.

THE DRUNKARD'S DOOM.

Behold yon poor wretch as he totters along,
Almost on the brink of the grave,
Alas! he's one of King Alcohol's throng,
His health to that demon he gave.
For what? why, for that liquor, that poisonous draught
That stings as it sweetly goes down,
Full many a gallon of rum he's quaff'd,
Enough, perhaps, a bullock to drown.

Behold how his eye in wild phrensy doth roll,
How unnerved his once powerful arm,
The poison hath struck to his innermost soul,
Yet doth not its victim alarm;
A deep burning thirst is now scorching his frame,
In vain to allay it he tries,
At the poisoner's store he takes one more horn,
See, he staggers, he falls, ah he dies.

Oh! ever, my friend, of the poison beware,
'Twill blast all thy prospects in life,
'Twill cause thee to sink in the depths of despair.
'Twill ruin thy children and wife,
'Twill hurl thy poor soul from yon glittering skies
And cause thee with devils to dwell,
If thou hast, from ruin oh quickly arise,
Renounce it and all shall be well.

HAULTAUT.

The Seamen's Friend.

Mary Wood, or the Sailor's Daughter.

That seemed an ill wind which blew her father from the end of the spanker-boom into the middle of the broad Atlantic, and left him to sleep there till the sea shall give up its dead. She was not then old enough to understand the meaning of the word 'orphan,' but she was old enough to weep with her mother, in the dark, stormy night, as the rain pattered against the glass and the wind rattled on the roof, and they talked about father. But we cannot always tell whether the wind blows ill or well. To the crew of Christopher Columbus, steering into an unknown ocean, the wind which drove them from their homes and friends, and daily involved them in deeper gloom and greater peril seemed to them ill. No wonder the impatience of the sailors rose to absolute mutiny. No wonder they determined on throwing their commander overboard and returning home. But that wind soon opened to their astonished eyes and gladdened hearts a *new world*.

What might have been the fate of Mary Wood, had not her father been lost at sea, is not for us to know. It might have been better—it might have been worse. What it really was the sequel will show.

In April, 1827, the Packet ship Britannia, Capt. Charles H. Marshall, sailed from New York for Liverpool. Wood was one of the sailors. He had borne away the best wishes and blessings of his wife and little daughter; and had, doubtless, more than once spread an additional sheet of canvass *with a will* that the good ship might return him the sooner to the loved ones at home. One day, about mid-ocean, the weather being fine, and the passengers mostly below, in the performance of his duty he went out on the spanker-boom, when the strap of the topping-liff broke, let the boom suddenly fall, and precipitated him into the water. The cry of "A man overboard," sent a thrill through the ship. The boat was instantly lowered. It could not have been more than five minutes before the brawney arm of a shipmate was extended to pull him on board. But that arm lifted only his hat. Poor Wood had gone down to rise no more till the last day. Suddenly as ever a squall sprung up in the tropics, did gloom and sorrow pervade all parts of that ship. In the forecastle they talked and talked of their departed shipmate; and as the first evening drew on, their imaginations heard him crying for help, or saw his spirit in the mizzen-top, or flitting across the troubled waves. So deep was the sensation in the cabin, that a subscription was raised for the sailor's widow and orphan, amounting, before the voyage closed, to about two hundred dollars. Capt. Marshall was appointed trustee of this fund to dispense with in such a way as might best benefit the bereaved. On his return to New York he sought them out, and from time to time judiciously ministered to their necessities. Months, and voyage after voyage passed away, and the captain did not forget his charge. At length, on returning, he found that the widow had married, sickened and died; leaving the orphan daughter alone, penniless and friendless. Not entirely friendless, however; for a family, by the name of F——, in Dover Street, took her in. Thus provided for, the captain left the sailor's daughter, an interesting child, of about five years, sitting by the fireside; and sewing carpet rags. The balance of the funds, in his hands, he deposited to the credit of Mary Wood, in the Seamen's savings bank.

When he returned from the sea, he went to visit his little Mary. But she was gone. The F—— family had removed nobody could tell where. Some eight years passed away, and though he often inquired, no tidings could he get of Mary. He advertised for her in the newspapers and another year passed, without bringing to light any Mary Wood, daughter of a sailor lost from the Britannia in 1827.

In the meantime her deposite in the bank had increased to a handsome sum, and the captain thought he would try the virtue of one more advertisement. It was published in the New York Sun. Not long afterwards, a gentleman from Connecticut came into Captain Marshall's office in Burling slip, New York, informing him that Mary Wood had been brought up on an equality with his own children; in his family; that she was an excellent girl, and wanted to know why any body should feel an interest in her so as to seek her out through the agency of a newspaper. Up to this time she had known nothing of her little deposite in the Savings Bank, and when informed, she let it remain till the hour of need. The other day she came herself to the city, and went to the captain's office. He at once saw the picture of her father in her expressive face. He gave her her Bank book, with which she went and drew her deposite, amounting, now to the pretty sum of *three hundred and fifty-eight dollars, and seventy cents.* And further, Mary Wood is now married to a respectable mechanic, lives in good circumstances, and cheerfully carries the name of Mary Bardwell of New Canaan, Ct.

Sir Alex. Ball and Lord Nelson.

It is a most melancholly fact that oftentimes persons are unfriendly to each other who ought to be bound together by the strongest ties. It is still more melancholly to contemplate the oftentimes foolish and insignificant causes of their alienation. When a reconciliation is effected an entirely different feeling pervades the mind of the beholder. The following narrative of alienation and reconciliation, between two distinguished Naval officers is worthy of perusal:

"At the close of the American war, Captain Ball was entrusted with the protection and convoying of an immense mercantile fleet to America, and by his great prudence and unexampled attention to the interests of all and each, endeared his name to the American merchants, and laid the foundation of that high respect and predilection which both the Ameircans and their government ever afterwards entertained for him.

Shortly after the general peace was established, Captain Ball, who was now a mar-

ried man, passed sometime with his lady in France, and, if I mistake not, at Nantz. At the same time, and in the same town, among the other English visitors, Lord (then Captain) Nelson, happened to be one. In consequence of some punctilio, as to whose business it was to pay the compliment of the first call, they never met, and this trifling affair occasioned a coldness between the two naval commanders, or in truth a mutual prejudice against each other. Some years after, both their ships being together close off Minorca and near Port Mahon, a violent storm nearly disabled Lord Nelson's vessel, and in addition to the fury of the wind, it was night-time and the thickest darkness. Captain Ball, however, brought his vessel at length to Nelson's assistance, took his in tow, and used his best endeavors to bring her and his own vessel into Port Mahon.—The difficulties and the dangers increased. Nelson considered the case of his own ship as desperate, and that unless she was immediately left to her own fate, both vessels would inevitably be lost. He, therefore, with the generosity natural to him, repeatedly requested Captain Ball to let him loose; and on Captain Ball's refusal, he became impetuous, and enforced his demand with passionate threats. Captain Ball then himself took the speaking-trumpet, which the fury of the wind and the waves rendered necessary, and with great solemnity and without the least disturbance of temper, called in reply, "I feel confident that I can bring you in safe; I therefore must not, and, by the help of Almighty God! I will not leave you!" What he promised he performed; and after they were safely anchored, Nelson came on board of Ball's ship, and embracing him with all the ardor of acknowledgment, exclaimed "a friend in need is a friend indeed!" At this time and on this occasion commenced that firm and perfect friendship between those two great men, which was interrupted only by the death of the former. The pleasing task of dwelling on this mutual attachment I defer to that part of the present sketch which will relate to Sir Alexander Ball's opinions of men and things. It will be sufficient for the present to say, that the two men, whom Lord Nelson especially honored, were Sir Thomas Troubridge and Sir Alexander Ball; and once, when they were both present, on some allusion made to the loss of his arm, he replied, "who shall dare to tell me that I want an arm, when I have three right arms—this (putting forth his own) and Ball, and Troubridge."

An Angel's Visit.—A young angel of distinction being sent down to this earth on some business, for the first time, had an old courier spirit assigned him as a guide.—They arrived over the sea of Martinico, in the middle of the long day of an obstinate fight between the fleets of Rodney and De Grasse. When, through the clouds of smoke, he saw the fire of the guns, the decks covered with mangled limbs, and bodies dead or dying, the ships sinking, burning, or blown into the air, and the amount of pain, misery and destruction the crews yet alive were dealing around to each other, he turned angrily to his guide and said, "you blockhead, you are ignorant of your business; you undertook to conduct me to the earth, and you have brought me into hell." "No sir," answered the guide, "I have made no mistake; this is really earth, and these are men. Devils never treat one another in this cruel manner; they have more sense, and more of what men call humanity.—[Franklin.

Most Beautiful.—*The Resurrection.*—Drelincourt, in his essay on Death, has the following beautiful passage in illustration of his views of the world, and the resurrection of the body:—"Shall I say what is impossible with man is impossible with God? He has already created the world by His word, and he is able to restore it again by the same. Art has found out methods to make beautiful vessels of melted ashes; and shall not God's hand unto which all the skill of art and all the strength of nature are as nought, be able to gather up the ashes of the earth, and to make of it a body full of light and glory?"

True Every Word.—We want less form, and more power; less circumlocution, and more heart devotion. We pray too long, and with too little unction. A few warm and stirring petitions, proceeding from a heart full of love, are of more value to the life of a church, than a thousand lengthened petitions to the Deity, where devotion dies upon the lips of the suppliant, and where every one longs for the close of an unedifying service. It is life, and power and unction, that we want in our social prayers; something to rouse, to animate, to cheer, and to fill the heart with love and joy.

Business Engagements.—They are of far more importance than people generally suppose. By men who are thrifty and successful in making money, they are always promptly attended to; and when you know a man to be in a constant state of excitement, and always "hard pushed" for the "dollars needful" you may be sure that he seldom keeps an engagement. Promptness in keeping them and not competition, is the life of business. Often have we known a poor but honest man establish his credit merely by going to dine with his friend at the *appointed hour;* and we have known more than one busines man to lose his credit by thinking more of his cigar than the engagement he has made.

☞ The Roman Advertiser of December 26, in an article compiled to show the impossibilities of St. Peter's at Rome being over crowded, gives the following curious statistics as to the comparative capacity of the most celebrated churches in Europe:—

	Persons.	Sq. yds.
St. Peter's,	54,000	13,500
Milan Cathedral,	37,000	9,250
St. Paul's at Rome,	32,000	8,000
St. Paul's at London,	25,600	6,400
St. Petronio at Bologna,	24,400	6,100
Florence Cathedral,	24,300	6,075
Antwerp Cathedral,	24,000	6,000
St. Sophia's at Constantinople,	23,000	5,750
St. John, Lateran,	22,900	5,725
Notre Dame at Paris,	21,000	5,250
Pisa Cathedral,	13,000	3,250
St. Stephen's at Vienna,	12,400	3,100
St. Dominic's at Bologna,	12,000	3,000
St. Peter's at Bologna,	11,400	2,850
Cathedral of Siena,	11,000	2,740
St. Mark's Venice,	7,000	1,750

The piazza of St. Peter's, it is added, in its widest limits, allowing twelve (persons) to the quadrate meter (square yard,) holds 624,000; allowing four to the same, drawn up in military array, 208,000. In its narrower limits, not comprising the porticos of the Piazza Rusticucei, 474,000 crowded, and 138,000 in military array.

Sale of Japanese Curiosities.—The sale of curiosities, &c., taken from the Japanese junk by the Bremen ship Otaheite, of which we gave an account in No. 28, came off on Wednesday. There was a large attendance of our townspeople and strangers. The bidding was very spirited, particularly for the beautiful specimens of japaned ware, inlaid work, metallic vases, spittoons, curious china ware, tea-kettles, and other paraphernalia of Japanese domestic life, which all brought large prices. Besides these there were many curious things to give one an idea of Japanese handicraft, such as boxes of carpenters' tools; razors, scissors, hardware, shoes, paints, drugs, &c. Unfortunately there were no dry goods, books, &c. The junk's cargo appeared to consist of "notions" as Yankees would say. Their copper, brass hoop, composition, iron wire and iron were all of superior quality. There was also some excellent glue, white lead, ginger and cinnamon. This sample of Japanese merchandise was sufficient to show that they have many articles that could be profitably exported and that their own skill and comfort could be materially increased by a foreign trade. The amount of the sale was $1300.

Captain Wieting takes his beeswax, amounting to 12,000 lbs., to Europe.—[Polynesian.

☞ How different is the human character according to the difference of place. In our passions, as in our creeds, we are the mere dependants of geographical situation. Nay, the trifling variation of a single mile will revolutionize the whole tides and torrents of our hearts. The man who is meek, generous, benevolent, and kind, in the country enters the scene of contest, and becomes forthwith fiery or mean, selfish or stern, just as if the virtuous were only for solitude, and vices for a city.—[E. L. Bulwer—Pelham.

☞The conquest of California and New Mexico extends the boundary of the United States on the west coast, from the forty-second to the thirty second parallel of north latitude, and produces a great alteration in the territorial possession of the belligerent powers. The comparative size of Mexico and the United States, in 1836, was as follows:—

		SQUARE ACRES.
United States territory,		1,408,000,000
Mexican territory,		1,081,600,000
We have now to deduct from Mexico and add to the United States:		
Upper California,	240,860,160	
New Mexico,	187,472,000	
Texas,	123,904,000	
		502,236,160
Left to Mexico,		579,963,840

In 1836, the possessions of the various powers on this continent were as follows:—

Russian,	480,000,000
British,	1,792,000,000
United States,	1,408,000,000
Mexican,	1,081,600,000
Central American,	119,040,000
Total, (7,626,000 miles,)	4,880,740,000

Deducting from Mexico and adding to the United States 502,236,160 acres, and deducting from the United States and adding to the British possessions 32,000,000 acres, ceded to Great Britain by the Oregon treaty, the possessions of the various powers on the North American continent now stand as follows:—

1846.	MILES.	ACRES.
Russian,	750,000	480,000,000
British,	2,850,000	1,824,000,000
United States,	2,934,744	1,878,236,160
Mexican,	905,256	579,363,830
Central American,	186,000	119,040,000
	7,626,000	4,880,640,000

By the conquest of New Mexico and California, there has been added to the Union a population estimated at 300,000 souls, mostly Indians. We estimate California at 100,000 and New Mexico at 200,000. New Mexico contains the best gold mines on the continent; also, silver, copper and iron mines. Agriculture is carried on by extensive irrigation, for which the mountain streams afford great facilities. California is said to contain valuable mines of coal, iron, zinc, gold and quicksilver; but for agriculture and grazing purposes, its importance has been overrated.—[N. Y. Sun.

ACCIDENT.—On Friday morning 10th inst. the government wharf — a wooden pier, supported by stone pillars — fell in and launched overboard a large amount of oil, bricks, anchors, wood, casks, &c., which had just been landed from the Bremen ship Patriot that was preparing to heave down. Damage not ascertained.–[Polynesian.

THE FRIEND.

HONOLULU, DECEMBER 16, 1847.

End of Volume V.

This number closes the fifth volume of the Friend. We would acknowledge our indebtedness to all who have contributed mentally or in a pecuniary way for the support of the paper. It serves as a rich reward for all our toils, to learn that "The Friend" has been welcomed and read by the increasingly numerous class of sea-faring men visiting our shores. We have received many assurances of its usefulness among the tenants of the forecastle. They are in much greater want of useful reading than those who dwell in the after part of the ship, hence, we have made special efforts to furnish them with a good supply of our paper as well as of other reading matter. Nearly 1,000 copies have semi-monthly gone abroad among the 10,000 seamen touching at the ports of the Sandwich Islands. In reviewing the past we see many "rocks" that we have barely escaped. We trust that past experience may serve to make us keep better reckoning and a brighter look-out in future. It will still be our honest endeavor to make our small sheet a useful and entertaining "Friend" among seamen and landsmen.—Vol. VI., No. 1, will be punctually issued on the 1st of January, 1848.

☞ All persons having money in their hands belonging to the account of the Friend are respectfully requested to remit the same at the earliest possible opportunity. Subscribers who have enjoyed the reading of our paper the last 12 months, and have not as yet paid their subscriptions, it is hoped will do so on or before the first of January, '48.

California needs Gospel Ministers.—According to the frequent reports we hear respecting the moral and religious condition of California, good and efficient gospel ministers are much needed. We have just received a letter from a mechanic in San Francisco, stating that he had not enjoyed the privilege of attending public worship for the last 12 months. In all newly settled countries there will of course exist much to lament, and many years must elapse ere the institutions of education and religion will fully meet the wants of the people. We find it so here, and we presume it may be still more the case there. Happy changes and beneficial reforms will not be accomplished by loud denunciations; steady, persevering and self-denying exertions are much needed. We hope the day is not far distant when a faithful company of God's ministers shall be located in that gospel harvest field. It is a noble field for usefulness. The elements of society may be in a chaotic state, but the leaven of the gospel will produce order and regularity. Let a few, bold, talented, energetic and noble minded ministers enter that field preaching the gospel, establishing schools, advocating temperance, and otherwise giving a healthy tone to public sentiment, and very soon would their influence be felt. We believe their labors would be appreciated by not a few of the residents and settlers. San Francisco is now, we believe, almost entirely destitute of ministerial labor. It ought not so to be. But where are the men so much needed? Some, we hope, are on their way thither, and others soon to follow. It is a reproach to the Protestant church of Europe, and the United States particularly, to have that beautiful country becoming settled without an Evangelical ministry forming a part of the community.

P. S. Since writing the foregoing remarks, we have read a most excellent letter published in the columns of the last Polynesian. It was written, we understand, by our friend Mr. Lyman, now "surveying" in that country. He appears to be taking an accurate moral survey of California, as well as ascertaining the exact number of acres in the extensive *ranchos*. The views which he has taken of the country fully corroborate our statements in regard to the need of an Evangelical gospel ministry. He remarks thus, "from what I have seen and heard I have no doubt a competent Evangelical Minister would find a fair support on the spot, either at San Francisco or Monterey." We earnestly recommend our readers to peruse that letter, if they desire correct information in regard to California. We hope Mr. Lyman will not allow his pen to rest until the world shall be extensively benefitted by his observations upon that almost *terra incognita*.

Japanese Junk.—On the 7th of May, the "Francis Henrietta," Poole, fell in with a Japanese Junk, of about 200 tons, N. lat. 42°, E. long. 152°, near 300 miles from land. Out of a crew of 17, only 4 survived. The vessel had been about 7 months at sea. She was on her passage from Osaka to Jeddo, when she was dismasted, after which she was driven about at the mercy of the winds and waves. After the provisions on board were all exhausted, the crew cast lots, for the purpose of selecting some one whose flesh should serve to protract the lives of his comrades. He was dispatched in this manner. Two, according to lot, were compelled to fight each other, until one should be killed. At the time the vessel was discovered one was found lying nearly dead with several dirk-wounds about the head. They were taken on board the Francis Henrietta, kindly treated for 30 days, when they were landed on the Island of Niphon. Nothing of much value was found on board the Junk. After Capt. Poole had taken all that he chose to bring off, he set fire to the wreck.

Large Families.—Captain Sandford, of ship "John," remarked, in our hearing, recently, that two of his brothers had families numbering 44 children. David 23, and Thomas 21, and all lived to mature years. Not one of the whole number ever became intemperate. Thomas, the father of the largest number of children, died at the age of 72, having commanded a ship 40 years. He runaway from his parents at the age of 14, and at 19 returned home, master of a beautiful ship. No one need be surprised at these facts, for he was never known to use intoxicating drinks, even to drink a glass of wine! Capt. Sanford added that more than 100 persons, children and adults, now called him Uncle!

An English sailor called at the Chaplain's study recently, who remarked that he was one of a family of 15 sons and 3 daughters, and that once, and only once, all were together.

There is a family on the east end of Long Island, numbering 18 sons and 1 daughter. Several of the sons are engaged in the whale-fishery.

For the Friend.

Ladrone Islands.

Friend Damon,—As it was your wish I should furnish for your readers some account of the Marianas, or Ladrone Islands, I send you the following:—

The Islands composing the Group, or Chain, are eight larger, and a number of smaller ones, besides two Volcanic Islands farther to the North, one of which Volcanoes is still in active operation. They lay in nearly a North and South line, and in longitude of 156° East, and latitude from 13 to 19° North. The Southern Island is called Guam, the next Rota, both of which are inhabited, and under the Spanish Government. Tinian, the next to the North, is occupied as a penal settlement, and Saypan, still farther North, is inhabited by natives from the Caroline group of Islands, and Gregan, the most Northern part of the chain, by some King's Mill group natives, and two white men, runaways. The Islands are excellent to recruit a whale ship, either before or after the Japan or North West season. Guam affords an abundance, every thing a whale ship wants, (repairs excepted,) and at a cheap rate. It has been the usual practice of ships bound to Guam, for refreshments, to anchor a day or two at Umata Bay, to take on board what water may be wanted, as it is much easier getting it there than at the harbor; but it can be got at the harbor, and with as little trouble as at many places where whalers often water. Sometimes, also, ships in want of hogs stop a day at Rota, or Tinian, as they are getting rather scarce at Guam. The harbor is called Apra, and is easy of access, being formed by a coral reef and a small Island, and it is perfectly safe, unless in the season of typhoons, August, September and October, when it will be more safe to haul into the inner harbor. The only port charges are $6,50, and are to be paid at but one place. There are no duties on any thing you may have to sell. The harbor lays on the West side of the Island, and if a pilot is wanted one will always come off, provided the customary signal is made. Pilotage in and out, $12,00. The principal city is situated five miles from the the harbor, and contains about 2,500 inhabitants. The whole Island contains 8,000, and Rota 500. Formerly they contained a great many more; report says when first discovered, the 4 Southern Islands, Guam, Rota, Tinian, and Saypan, alone, contained 60,000, the descendants of which have intermixed with the Spaniards, and are now reduced to about 8,500 souls. Good wood can be had for $3,00 per cord, cash, or $4,00 trade. Beef rather poor, 5 cents per pound. Yams $1,00 per hundred pounds. Sweet potatoes 75 cents per hundred pounds, Oranges 25 cents per hundred. The Government is good and entirely supported by old Spain, at the expense of about $8,000 per year. The inhabitants have to make their own roads and bridges, and I believe pay one tenth of the produce of the land, which eventually goes to the Priests, five of which reside on Guam. They are Catholics, but of what order I cannot say.

Yours,

BLUE WATER.

Bad Company.—The associations young men are apt to form in large and growing cities, result in disgraceful and melancholy ends. Bad company is the pest of society, and while it ruins thousands, it likewise brings pain and misery to many a fond and affectionate parent. Young men who are easily weaned from once loved homes, must be ignorant of the deceits of the world; would they but listen to the voice of experience, and be more willing to obey the wishes of their fathers, bitter remorse would be a stranger indeed to their abode, and joy and comfort would reign in its stead. It is surprising how soon young men become infatuated with the doings and sayings of persons of doubtful character, knowing, as they do, that such beings are never respected where good morals predominate; and nothing is more painful to behold than a youth boldly entering the haunts of crime, fearing no one, and ridiculing the admonitions of a virtuous friend; inevitable ruin is his reward; an early grave his portion. To the hardened and depraved, whose years have been but wasted time, are the mass of young men indebted for their reckless acts, and for their own stubborn will are they in a measure to be censured. Let friendly advice and plain-spoken truth always command respect and attention, for it is the food that nourishes the body, and saves many a soul from ruin and disgrace.—[Nat. Press.

The way to Heaven.—How poor you are, if you have no heaven but this world. You have nothing but a little part of this clod of earth, and what is it all worth? If you have a little more land than some of your neighbors, or if you are in a way to make more money than others; if your accommodations are better than others, and you have more worldly conveniences and pleasures than others, or if you are promoted a little higher among men than some others are—what a poor portion is this, and how miserable are you who have no better happiness that you can call your own! How happy do these things make you? What satisfaction do they yield you? Are such things as these the "rivers of pleasure" that you choose for your portion? O, how miserable! When a few days are passed, you must go to the grave and into eternity, and then your glory shall not descend after you. Then how wretched are you, if, when you have done with worldly enjoyments, it may be said that you have received consolation! Luke iv., 24.—[President Edwards.

The Test of Faith,—Do you fetch your joys from earth or heaven? things future or present? things hoped for, or things possessed? What garden yieldeth you your sweetest flowers? Whence is the food that your hopes and comforts live upon? Whence are the cordials that revive you, when a frowning world doth cast you into a swoon? Where is it that you repose your soul for rest, when sin and sufferings have made you weary? Deal truly—is it in heaven or earth? Which world do you take for your pilgrimage, and which for your home? I do not ask where you are, but where you dwell? Not where are your persons, but where are your hearts? In a word, are you in good earnest when you say you believe in a heaven and hell? And do you speak, and think, and pray, and live, as those that do indeed believe these things? Do you spend your time, and choose your condition of life, and dispose of your affairs, as a man that is serious in his belief? Speak out; do you live the life of faith on things unseen, or the life of sense on the things you behold? Deal truly, for your endless joy or sorrow doth much depend upon it. The life of faith is the certain passage to the life of glory; the life of sense on things here seen, is the certain way to endless misery.—[Baxter.

How to be Happy.—If we would be happy, we must glide along through life as the river does between its banks: expanding here and contracting there—now in noisy shallows, and then in deep, still pools; accommodating itself all the way to the sinuosities of its surface, and the winding humor of its banks,—and yet having every rock and every projection, and clothing the very borders which so rigidly confine it, and compel it to double its length to the ocean, with green leaves and luxuriant flowers, from the beginning to the end of its course. But if, on the other hand, we want to be miserable, and make all about us miserable too, we have only, porcupine like, to erect our double-pointed quills, and then roll ourselves up in them, with a dogged obstinacy, and we shall goad others, and be goaded ourselves, to the utmost degree of our wishes. O, there is nothing like "lowliness, and meekness, and long suffering, forbearing one another in love," to lubricate the ways of life, and cause all the machinery of society to go without jarring or friction.—[Blake's Sermon.

How to test the weight of Gold Coins by a comparison with Silver.—The following test, says *Thompson's Reporter*, is with American silver, except in the case of the half eagle, when two dimes and a fair Spanish shilling are used:—

Half Eagle is equal in weight to	32 1-2	cts. silver.
Sovereign is equal in weight to	30	"
Napoleon is a shade lighter than	25	"
Doubloon is equal in weight to	$1,00	"

☞ The acknowledgment of donations in this and our last paper shows that there is a deeper interest among seamen for the maintenance of the Chaplaincy than we had supposed really existed. These free-will offerings of seamen before the mast are an index of good. The sum of $10,00 from the master of a ship is a valuable donation, but $10,00 given by ten or fifteen sailors is a more valuable gift, because it shows that more minds are favorably disposed to a benevolent enterprise. One master in paying the contribution of his ship expressed the liveliest satisfaction, and remarked, that he did not think $5 could have been collected, while in the "forecastle" alone more than $20,00 was subscribed. That ship's company gave $18,50. Every man on board putting down something, with the exception of the kanakas. Other ship's companies have done equally well, nearly every person contributing his mite.

Hawaiian Festivals.

It has become quite common to accompany school examinations among the natives with festive entertainments. It is really delightful to witness the troops of children, with their teachers and parents. No one who is not personally observant of these scenes, can appreciate their real importance in the promotion of civilizing influences among the native population. The following minute detail of one of these festivals is copied from the Elele, a semi-monthly extensively circulated throughout the Islands:

Furniture and Eatables provided for the Temperance Feast, November 12th, 1846.

Tables, 537; table cloths, 537; chairs, 672; plates, 798; knives, 850; forks, 864; bowls, 759; spoons, 857; water pitchers, 253; tumblers, 251; tin mugs, 139; earthen mugs, 139; tin tureens, 54; tea pots, 352; tea kettles, 352; frying pans, 96; silver plates, 6; silver pitchers, 7; silver cups, 16; silver spoons, 23; water calabashes, 119; hand bells, 2; wooden calabashes for food, 974; calabashes for salt, 986; calabashes (not wooden) for food, 1814; pigs, 153; fowls, 469; geese, 215; ducks, 96; turkeys, 104; fish, 2907; poi, 310 calabashes full; potatoes, 85 baskets; pies and cakes, 690; milk, 56 bottles; biscuit, 442; bread, 849 loaves; pies, 570; pork, 621 lbs; beef, 792 lbs.; rice, 51 lbs.; sugar 148 lbs.; coffee, 649 lbs.; water melons, 205; musk melons, 192; oranges, 577; limes, 40; bananas, 84 bunches; kulolo, (a dish made of kalo and coco-nuts,) 16; koelepalau, (made with sweet potatoes and coconut milk,) 30 calabashes; coco-nuts, 284; eggs, 996; kahilis, 537; mats, 540; Niihau colored mats, 59; China mats, 25; royal standard, 1; national flag, 1; temperance banners, 20; feather tippets or cloaks, 5; kapu stick, 1; drums, 2; wind instruments, 4.

☞ During the week ending Dec. 12, a strong southerly wind detained several vessels in port, which were ready for sea. The regular "trades" commenced blowing quite strong on the 13th, when six vessels sailed, but it has since blowed so strong that masters have been fearful about leaving port.

DIED,

By the upsetting of the boat, George Pierson, Boatsteerer, Columbia, April 29, 1847, on the North West coast. He belonged to Bridge Hampton, Long Island, and was the brother of Capt. Peirson, of the ship.

Drowned, 6th June, by the line becoming foul, 3d officer and two seamen belonging to the Otaheite of Bremen.

PASSENGERS.

In the Mary Ann, from San Francisco, Messrs. M. Griffin, J. H. Brown, and Thomas Lester.

☞ Money advanced on liberal terms for Bills of Exchange on the United States, England and France. aug28 6m.

F. RODRIGUEZ VIDA

WILL keep constantly on hand a general assortment of Ship Chandlery, Provisions, &c. usually required for whale ships touching at this port for recruits; and will supply them at the lowest market prices for cash or Bills of Exchange on the United States, England and France. my22 tf

REGULAR PACKET FOR LAHAINA.

THE Clipper Schooner KAMEHAMEHA III., Captain ANTONIA, having fine accommodations, will run regularly between this port and Lahaina, except when required on His Majesty's service Her days of departure from Honolulu, as near as can be calculated upon, will be Monday, at 5, P.M.; from Lahaina, on Thursday evenings. She will carry mails and take freight and passengers, but will not be accountable for damage sustained by freight.

Apply to Captain on board or to J. PIIKOI.

my 22 tf.

GEORGE RISELY,

BUTCHER AND GENERAL MEAT SALESMAN, begs leave most respectfully to inform the residents of Honolulu and shipmasters generally, that he has taken the stand owned by Mr. French, and lately occupied by Messrs. Robinson & Co., where he is determined to sell none but the best of meat, and trusts that by cleanliness and strict attention to his business he may merit a share of public patronage.

G. R. trusts nothing shall be wanting on his part to give satisfaction to those whom he may have the honor to serve.

N. B. Ox Tongues and Corned Beef cured in a superior manner. my22 1y.

NOTICE.

JAMES ROBINSON & CO. having opened their new Butcher Shop on the new wharf opposite the Custom House, respectfully inform their friends and former customers, that they will be able to supply them with the best BEEF the islands afford, at the usual prices. my22 1y.

SPELLING BOOKS, &c.

A FRESH quantity of "Webster's Spelling Books," have been received by the Seamen's Chaplain. Also, the "Union Spelling Book.'

At the Study of the Seamen's Chaplain may also be found a fresh supply of Religious Books, published by the American Tract Society, for sale and gratuitous distribution.

Bound volumes 1, 2, 3 and 4 of "The Friend," and the present vol. to the last No. published, for sale at the Study of the Seamen's Chaplain.

November 18—tf

STORAGE.

THE large Yard adjoining the premises of the subscriber is offered to the public for the storage of lumber, spars, &c. Also, a part of the Shed now being erected on the premises.

oct23. tf. F. RODRIGUEZ VIDA.

SUGAR AND MOLASSES.

THE subscriber is constantly making, and has on hand, a superior quality of molasses and brown sugar, for sale cheap for cash or approved credit. Apply to WM. A. McLANE, or to *Makawao*, Maui, 1846. J. T. GOWER.

EVERETT & CO.,

IMPORTERS, will keep constantly on hand an assortment of English, French and American GOODS, suitable for Oregon, California and these Islands, which will be sold at low prices. my22 tf

WANTED

A GOOD Sign and Ornamental Painter, of steady habits, to whom constant employment and liberal wages will be given, on application to I. H. WRIGHT.

S. H. WILLIAMS & CO,

General Commission Merchants,

HONOLULU, OAHU,

S. H. WILLIAMS,
J. F. B. MARSHALL,
WM. BAKER, JR. } HAWAIIAN ISLANDS.

Exchange on the United States and Europe, taken on the most favorable terms.

The Poet's Corner.

For the Friend.

KALAI, Molokai, Aug. 21, 1848.

Mr. Editor,—Some days since I made a missionary journey alone to one of our beautiful valleys on the north side of the Island, and spent three days there. During the interval of services having no English book or means of study along, and being girt on three sides by scenery of great grandeur, and on the fourth by the sea, whose soft murmur as it broke on the pebbly shore filled my ear, my thoughts poured themselves forth in the following stanzas.

GOD DOETH ALL THINGS WELL.

Thy works, O God! around us lie,
In varied grandeur, earth and sky
Proclaim thy love, thy wisdom tell,
And say "Thou doest all things well."

The mountain peaks in rugged lines,
On which the earliest sunlight shines,
Girded by clouds, in glory tell,
O, God! "Thou doest all things well."

The restless ocean, spread around,
Our Island home, with comely sound
Breaks on the shore, a tale to tell
Of Him who "doeth all things well."

The valley, clad in richest hue,
With verdure fresh and flowret blue,
Chimes with the rest, like sweet toned bell,
The Maker "doeth all things well."

The fish, that play in ocean deep,
The birds, that make their airy sweep,
Each in their way are prompt to tell,
O, God! "Thou doest all things well."

Shall man alone, of all the train
That fill the earth, the air, the main,
Silenced by Satan's sinful spell,
Not say, "Thou doest all things well"?

Polynesian Sketches.

For the Friend.

A Sketch of Guam,

ONE OF THE LADRONE ISLANDS.

BY L. A. B.

Harbor, — Scenery, —Capital,— Churches,— College, — Government, — Taxes, — Customs,—Religion,—Products,—New Governor,—&c.

After spending two days at Rota, or Taopane—for the island is known by either name—we proceeded to Guam, distant only a few hours sail in a S. S. W. direction.—The harbor of Guam is in lat 13° 32 N. and long. 144° 16 E. It is a safe harbor, but not very convenient, there being many shoals about the shores which make it bad landing for boats, and it is destitute of water, which ships have to go to another anchorage at Umata to procure. The ship proceeded direct to the last named place, and going on shore there, I accompanied the harbor master, Capt. Roberts, back to Sumah, his residence at Port Apra. The country through which we passed presents much variety of surface, and is picturesque in its general character, and by no means destitute of fertility in the valleys, which are well watered, and the hills clothed with a fine herbage. Indeed the general character of Guam is that of exuberant fertility, and under an enlightened and energetic government it is capable of becoming a very valuable appendage to any country, but Spain merely holds without in any way improving it.

The chief town, called Agana, is situated about five miles from the harbor, on the sea coast, in a tract of richer fertility and more plentifully supplied with water than is to be found directly in the neighborhood of the bay. The generality of the houses are such as I found at Rota, viz: slight structures of bamboo, elevated a few feet from the ground on supporting posts, and roofed with thatch, though there are a few built of coral stone, in a clumsy and dungeon looking style, and mostly without glazed windows. The government buildings consist of a church, college, palazza, guard-house, jail, commissariat, two depots of artillery, and two ruined forts, all of which are in a most miserable style and condition, and plainly bespeak the utter imbecillty of the government. The first had lately received some repairs, and on entering a visitor is surprised at the extent of its decorations, not however arising from their real worth, for it is in truth but a miserable, tinseled attempt at splendor, but the absence of all architectural ornament without, and the utter poverty of every thing else about the town leads you to form corresponding expectations here. There are three altars, all highly if not richly ornamented; four or five tall plated candlesticks, (at least they have once been plated, but much of the silver is worn off) of a very pitiful appearance, and a number of images, dressed in colored glazed calicoes and decked with tawdry worthless trinkets. The roof of the building is supported by two rows of wooden pillars, dividing the body of the church into a wide centre and two narrow side aisles; these pillars are just the rounded trunks of trees, some of them not even quite straight, and none finished off with any degree of neatness. They are whitewashed, and ornamented above and below with colored figures and scrolls in distemper, with which the tie beams of the roof are colored to correspond. There are two long wooden benches, or settees with backs, placed facing each other on either side of the centre aisle, which are the only seats in the cnurch. On the right hand, and immediately over one of these seats, stands the pulpit, ornamented in a style to correspond wiih the pillar against which it is placed; and from this, sound moral discourses, as I am informed by Capt. Roberts, are generally delivered to the people.

The other buildings which I have enumerated are undeserving of a more extended notice, unless the college, and this certainly not for the building itself, which occupies three sides of a square, but that I may mention the *very superior education* imparted to the pupils within its walls. These number about fifty boys, who receive a gratuitous education in the Spanish language, in reading, writing, a very little arithmetic, and church music. The establishment is under the direction of a native born teacher, and the principal object which appears to be aimed at is to ensure a supply of persons capable of undertaking the office of deputy governor or alcalde in the different islands and villages, for which purpose two boys (from five to seven years old) are chosen from each village in rotation as vacancies occur in the college.

In front of the commissariat store, is a large open space, devoted to the purposes of a cockpit, and where every *Sunday* afternoon this cruel sport is regularly engaged in; the head priest himself being one of its principal supporters and encouragers. Gambling, as a necessary consequence, is a constant attendant, and is practiced to a considerable extent, the priest in this also enjoying a bad preeminence. This man has often as many as forty or fifty game cocks at one time in training for this sport.

The government of the Ladrone or Marianna's Islands, of which Guam and Rota only are inhabited, is a mild despotism, in the hands of a governor, who is himself responsible to the supreme authority of Manila, from whence he is appointed, at a salary of £360 a year, and which government kindly

looks after this, its not very distant dependency, once in three years, at which periods a ship is sent down with the necessary supplies. The commissariat officer is also appointed from Manila, and like the governor, for a period of six years. These gentlemen, with the priests, are the only Spaniards on the islands. The several deputy governors of the different islands and villages, are all natives, and receive their appointment from the governor. Rota and Tinian, which last is used only as a place of banishment, and to that extent only inhabited, each have a governor sent from Guam; and each village has its own alcalde, a native generally of the place over which he presides, assisted by a deputy and constabulary force.

The government exact no taxes of any description from the people, who are in fact generally too poor to pay any, but, in lieu thereof, a personal service of 40 days in a year is required from every adult male on the island, for the purpose of keeping the roads and public works in repair; those however who hold, or have ever held any office under government are exempt from this service. At other times, also, whenever the government may require their services, every one is necessitated to render it, unless incapacitated by sickness, no other excuse being allowed; but on these occasions they receive pay at the rate of one shilling a day for an ordinary laborer, and one and sixpence a day for a mechanic, which sum being fixed by law for the government, has become by custom the standard for all other parties. The hire of a bullock and dray, together with its driver, has also become fixed by the same means at one dollar (four shillings) a day.

The customs of the people have nothing very peculiar about them. Their marriages are generally the result of inclination rather than interest, and a daughter is seldom thwarted in her choice, unless the character of her favored suitor should be objectionable. Primogeniture is not much regarded among them, but at the death of the head of a family the property is commonly divided among the children. If these happen to consist of one son and one daughter only, the former by custom inherits the land and stock, and the latter the house and household chattels of their deceased parents. But land is not here a permanent and saleable possession, but is considered the property of him who clears it, and is held during occupation; and the uncleared land, or such as has been suffered to relapse into a state of nature by its former occupant, is open to be taken possession of by any one who chooses to go to the labor of clearing it, without any cost, let or hindrance whatever.

The people are very attentive to the forms and observances of their religion, and having never heard of a purer creed may charitably be supposed to be sincere in that which they profess. They are told by their priests that the English and Americans who annually visit them, are not good Christians, and their conduct unhappily, but too generally authorizes and confirms the descriptions, while the real differences of the Protestant and Romish worship they of course know nothing of. Alas! is the conversion of our seamen a hopeless task? Would not a part of the labor and part of the funds (if other cannot be obtained) which is at present devoted to Missionary enterprizes among the heathen, be better employed, even as regards the heathen themselves, if it were diverted to urgent endeavors towards evangelizing our own seamen? I say it would be better as regards the heathen themselves, among whom the reception of the gospel is fearfully retarded, and the exertions of the Missionaries paralyzed by the immoral and unchristian character and conduct of men, who, as a class, (though there are a few bright and happy exceptions) disgrace and profane the sacred name by which they call themselves.

The natives of these islands cannot be praised for possessing too much industry or forethought, yet show sufficient quickness and ingenuity to warrant the expectation, that if under a more liberal and enlightened government, to develope their energies and encourage their exertions, they would make rapid progress in the scale of advancement. The islands possess in themselves, a fertile soil and luxuriant climate, every requisite to encourage and reward the exertions of an industrious people. Sugar, coffee, cocoa, cotton, tobacco, indigo, and many medicinal plants, might all be cultivated here to great advantage; some are already known upon the islands, and those which are not might readily be obtained from places at no great distance, as Singapore and the neighboring countries.

Since the preceding pages were written I have again visited the Marianna's Islands, and find considerable changes. The old governor is gone away and his place supplied by another, an active and stirring man of business, who is laboring diligently to infuse a spirit of industry, punctuality and activity into every department. The roads and bridges, utterly neglected by the late governor, are now undergoing repairs, and he is about to commence collecting beche le mer at the islands, a department of iudustry which was formerly carried on here to some extent. He has also established a school in every village, and strictly enforces upon all families the attendance of their children at these seminaries, where they receive the same instruction as at the so called college, in all except the church music. The masters are supported by the government, and several of them are transports from Manila, having been engaged in the insurrection, or patriotic movements of the native population of that island, and though not themselves possessed of much learning are yet greatly superior to the people of Guam generally.

Runaway seamen are now more harshly dealt with than formerly, being kept at work on the public roads instead of sending them to enjoy a life of idleness at Tinian. The governor had also brought with him very strict orders from Manila, not only against receiving any foreigners to reside in the country, but even to send away those who were now resident there, many of whom had in consequenco been compelled to leave, and a few of the more respectable had petitioned to remain on account of their families and in faith of the permission which they had formerly received. The object of these orders, which were direct from the home government in Europe, was ostensibly to preserve the people from heresy, but in part also most probably, to guard them from the introduction of liberal principles, which might be detrimental to the safety of Spanish interests. Thus cautious are they to preserve the people as much as possible in ignorance. And this leads me to mention a circumstance which, though it occurred at the period of my former visit, has only recently come to my knowledge, and is a lamentable instance of the despotic rule which is still dominant in the hands of the Romish priesthood in places where they are free from the controlling force of external causes. A Spanish seaman, Jose, a native of Guayaquil, arrived here in an American whale ship and left her at the island; he was possessed of a New Testament in the Spanish language, and lending it to the people of the house where he boarded, it excited much curiosity to see the word of God "in their own language, wherein they were born." The book passed from one to another, and at length came into the possession of the priest, who sent for Jose, and gave him very strict orders that if ever he came to Guam again he should bring no more SUCH BOOKS with him! nor would he return to Jose the copy he was then possessed of. Jose afterwards joined the ship in which I left Guam myself, and thus I became acquainted with the fact; but he was obliged to sail without his bible, which the priest refused to restore! Oh that protestants would rightly prize and duly improve the unspeakable privilege of freely possessing the scriptures of salvation.

A NEW ERA IN NAVIGATION.—*Or a vessel leaving Chicago, Ill. for England.*—Although the great American Lakes have for years past been navigated by hundreds of vessels, that navigation has been confined to those inland seas. The falls of Niagara totally prevented those vessels from finding their way to the Atlantic. But in these days of wonders, enterprise accomplishes what had been considered impossibilities. And a navigable passage seems at last to be opened from Erie to old Ocean. The Buffalo Courier says—'A few days since the three masted schooner New Brunswick, loaded with 18,000 bushels of wheat at Chicago, and cleared for Liverpool. She goes by the way of the Welland canal and the St. Lawrence. This is the first clearance of this kind ever made from the inland waters of the great lakes for an European port.'

As Victoria's Custom House Officers doubtless have some inkling of what has been going on, when they examine the New Brunswick's papers they may form some idea of where Chicago is located, and not be so sorely puzzled as one of their fellows was, a few years since, when an American vessel exhibited papers of clearance taken at a Custom-house in Pittsburgh. The poor fellow declared there was no such port in the world; not thinking of going some two thousand miles back into the country to look for a seaport.—[*Am. paper.*

COVERING FOR ROOFS.—An Am. paper says, that immense quantities of straw pasteboard are manufactured in that country and sent to England, to be used, after preparation, as a substitute for tiles and shingles.—It is laid on the roof, then saturated with tar and coated with sand. This forms a perfect roofing, and more stable and enduring than any other article used.

Correspondence.

California.

The attention of the public being now directed to California, the following extracts from a private letter recently received from the "Chaplain to the citizens of San Francisco," may not be uninteresting, especially as he touches upon other topics than the all absorbing one of gold. We have been favored with several other interesting epistles from that quarter, extracts from which we should be glad to insert in our columns, did we not feel that the writers might think we were taking too great liberties with their communications. All agree in their testimony respecting the richness of the mines, the facilities for acquiring wealth, the high prices now paid for goods and labor, and the desirableness of a more settled state of affairs.

"San Francisco, 6th Nov., 1848.

"Seventeen days from land, our fast sailing clipper dropped her anchor on the bar of San Francisco. The loom of the mountains had all day darkened the eastern horizon, while the increase of land birds told us we were fast approaching their resting place. Long before it was visible to his passengers the experienced eye of Capt. Newell traced above the hazy horizon the outline of Mount Diablo, a moderately elevated range to the North of the entrance to the Bay. About 3 P. M. we passed the rocks which are stationed as sentinels about 15 or 20 miles opposite the mouth of the harbor. These consist of three clusters of two or three rocks each, rising abruptly from the ocean to the height of from 20 to 200 feet. We passed them to the South of us about 2 miles. They appeared white in the sunlight, probably from the guano deposited by the innumerable wild birds that are forever flying and floating on the adjacent waters, and wheeling around and alighting on their summits. We approached the main land gradually with a light and dying breeze. But our disappointment at not entering the bay that P. M. was relieved somewhat by the phenomena both of the sea and sky. Pelicans, crows, shags, wild ducks and geese, and innumerable black-birds filled the air, while seals, porpoises and whales sported and plunged and spouted in the smooth sea. The sun, exhibited a singular phenomenon. I then bade adieu to sunsets, for here it sets behind the hills long before it hides itself beneath the waters. That night--Saturday—we anchored off the entrance, waiting for the morning breeze. It was perhaps eleven o'clock, A. M. of the Sabbath before a sufficient breeze came in from the sea to enable us to weigh anchor. Indeed a wind before that would have availed us but little, for during the night a heavy swell had set in, which rolled and broke furiously on the bar. By the time the breeze awoke these had so subsided as to roll over without breaking. The confusion attendant upon getting under way and approaching our port, forced us to dispense with our usual Sabbath services. The widest part of the passage through the neck is from 5 to 7 miles, lying between two ragged rocky points. As we drew in towards the narrowest part, the breeze stiffened, and we rapidly passed through the throat into the beautiful Bay. To the right of this narrow pass—3-4 of a mile wide—"Fort Bluff," with the remains of an old Spanish fortification upon its flat summit, lifted itself, a strong and natural bulwark for the protection of the Bay. No enemy could possibly enter were that bluff properly mounted and manned. As we passed between it and the high hills opposite, the tide was ebbing, and the agitation of the waters as they drew through the neck to the open ocean resembled the whirls and eddies af the famous "Hellgate." The day was a remarkably clear one for this coast, and except where the waters of the Bay form to South a horizon with the sky, the whole circuit of hills by which this beautiful sheet of water is surrounded were distinctly visible. The Islands with which it is dotted seemed to float upon its surface, and added not a little to the beauty of the scene. One of them in particular attracted our attention. It was as white as a chalk heap, from the guano deposited by the birds, thousands of whom we saw all over its slopes. From this circumstance it is called *Bird* Island. Before reaching this, we passed Sousolito, or Whaler's harbor, on our left, where we saw the hulk of a vessel half built, but which the discovery of the gold mines had robbed of its builders. As we approached Bird Island we saw to our right and near the shore the barracks of the American regiment stationed here, also a road leading over the summit of a hill, beyond which lay the town. That rounded, a few scattered dwellings on the brow of another announced to us the suburbs of San Francisco. Soon the shipping rounded out to us, omong the first of which was His Majesty's schooner Kamehameha III. As we approached, the town was gradually developed, extending from the wharf, back and up the sides of the hills, on whose slopes it is built. The appearance was better than I had anticipated, there being many more substantial houses, both stores and dwellings than expected to find. On coming to an anchor, Capt. Carter, of H. H. M.'s schooner saluted us with seven guns. We were soon boarded by dwellers on shore, and from what I soon saw and heard, I judged that whatever else there might be desirable in California, there was certainly no Sabbath. One of the first things I heard—an item of intelligence too, that shocked me—was the murder of Mr. J. R. Von Pfister, recently from Honolulu. It was perpetrated in cold blood at Sutter's Fort on the Sacramento.

Another item of intelligence affected me quite as deeply, though it brought up a very different class of feelings. I was told that I would be *welcomed* on shore as a minister of the gospel, and that an invitation was about to be sent to me, offering the Chaplaincy of San Francisco. I was glad also to learn that Capt. Thomas, of the English schooner Laura Ann, whom you know, had for several Sabbaths read the English service and a printed sermon, much to the acceptance and edification of those who attended.

Yours truly,

T. D. H.

The Ark and the largest Ship-of-War.—Infidels have objected to the account of the ark, and have asserted that it is quite absurd to suppose that ever there could be a vessel constructed large enough to hold all the creatures that must have been placed in it, together with sufficient food (it may be, for six or twelve months)—corn for the four footed animals, seeds for the birds, and so on. Now we will take the dimensions of the ark from the record of Moses, and calculate them on the lowest possible scale.—There are two definitions given of a cubit—one that it is eighteen inches, or a foot and a half, the other that it is one foot and eight inches; we will take it only at the lowest. Moses states that the ark was 300 cubits long; this would make it 450 feet long, or about the length of St. Paul's Cathedral. The breadth of it he states to be 50 cubits; we have it then 75 feet in breadth. He states it to be 30 cubits high; so that it was 45 feet in height. In other words, it was as long as St. Paul's Cathecral, nearly as broad, and about half as high. The tonnage of the ark, according to the calculation of modern carpenters, must have been about 32,000 tons. The largest ship of war—the Britannia, for instance, which is of a size altogether unimaginable to those who have never seen it—is 2,300 tons burthen; so that the ark must have been equal to *seventeen first-rate ships of war*, and if armed as such ships are, it would have contained much beyond 18,000 men and provisions for them for 18 months. Now Buffon has stated, that all the four-footed animals may be reduced to 250 pairs, and the birds to a still smaller number. On calculation therefore, you will find that the ark would have held more than five times the necessary number of creatures and more than five times the required quantity of food to maintain them for twelve months. So that when we bring arithmetic to bear upon the question, we will still find the triumphant result evolved, that God's word is true.—[Sermon of Rev. John Cumming, or, objections to Scripture answered.

THE FRIEND.

HONOLULU, JAN. 1, 1849.

Volume VII.

Agreeable to an intimation in our last number, our vessel is "ready for another cruise" on this, the first day of January, A. D. 1849. With this year commences the seventh volume of the Log Book of "The Friend." It is Monday morning, and the first day of a new year; what more fit occasion to wish our readers, on ship and shore, a happy new year,—happy may be its beginning, progress, and end. In glancing an eye over our last year's Log, what mighty changes and revolutions, do we find recorded for the year 1848. It has been a year to be remembered and referred to, in the world's history. The year commenced with France a kingdom, and ended with France a Republic. The enthusiastic and sudden shout of "vive la Republique," "shook the nations from Rome to the Orkneys. Sovereign, citizen, and peasant started at the sound." The Mexican war has ended, but near half her territory has been annexed to the United States. *Poor* California has become *rich* California. During a single year was there ever a more signal and emphatic verification of the passage found in holy writ, "Thus saith the Lord, Remove the diadem and take off the crown: this shall not be the same: exalt him that is low, and abase him that is high. I will overturn, overturn, overturn." Nations have been overturned, families broken up, and multitudes in public and private life passed away. Most have gone, leaving no foot-prints on the shores of time which the hurrying tide of life will not soon efface. Not so with one memorable individual. The name of John Quincy Adams, will be remembered so long as one is found to appreciate genuine patriotism, and love true liberty. But we must not linger to speak of individuals who have fallen in the battle of life, though memory treasures up precious recollections of some, who once gladdened the circle of private friendship. How true,

"Each moment has its sickle, emulous
Of Time's enormous scythe, whose ample sweep
Strikes empires from the root: each moment plays
His little weapon in the narrow sphere
Of sweet domestic comfort, and cuts down
The fairest bloom of sublunary bliss.

Foreigners and aborigines can testify, that almost each moment, one after another has dropped out of the family circle, on our shores, and among our limited popoulation. Many families will doubtloss be visited during the commencing year. Let all heed the Saviour's exhortation, "Watch, therefore, for ye know neither the day nor the hour wherein the Son of man cometh."

We enter upon another annual cruise, more than ever impressed with the solemn responsibility that attaches to the office of an editor. Our sheet and our subscription list may be comparatively small, but not so the number of our readers, or our paper's circulation. Our generous donors and worthy patrons enable us to scatter our monthly sheet broadcast among the thousands of readers in the Pacific. Our friends cordially approve of this plan as regards the seafaring community. We shall spread the usual amount of canvas, and permit our terms to remain the same, hoping our voyage is so wisely planned that the outlay will not certainly exceed our income. Beyond that, we do not make any calculation.

During the year we hope to vary our cruising ground, so as to procure a series of instructive and entertaining "Polynesian Sketches." Our locker marked "Correspondence," we trust will contain some valuable communications. The principal part of our cargo we shall endeavor to make up of good arguments and sound reasoning, in support of truth and righteousness, temperance and morals. Those fond of "small stores," will usually find a good supply in that part of our cargo marked "Marine Intelligence." Six years ago this month, we hoisted our colors, and run up the tee-total signal, and never as yet, have we been disposed to strike the one, or lower the other. We carry no sealed instructions, or maintain principles which we are afraid or ashamed publicly to defend, Most unhesitatingly we acknowledge the Bible our chart, an enlightened conscience our compass, sound reason our helm, common sense our ballast, a firm faith our sheet anchor; hoping to take the Saviour as our pilot, and make Heaven as our final port. During the current year's cruising, we expect to fall in with many vessels. We shall extend to all a friendly salutation, and if not bound on the same course with our good ship "The Friend," we shall not fail to give them an invitation to join us. Our invitation is couched in the words of Moses unto Hobab, "Come thou with us, and we will do thee good, for the Lord hath spoken good concerning Israel." No one, either landsman or seaman, we think will ever regret leading an honest, sober, righteous and godly life. We shall especially aim to induce all sea-faring men to ship under the Bethel Flag, and wherever they sail be friends of the tee-total signal.

"Then let the wildest storms arise;
Let tempest mingle earth and skies;
No fatal shipwreck need we fear,
But all our treasures with us bear."

☞ The Almanac for 1849 is unavoidably omitted until our next No.

Ireland.—*Mr. John Mitchell's Trial.*—In May last, Mr. Mitchell, editor of the "United Irishman," was tried, condemned, and sentenced to 14 years banishment to Spike Island. In a late Liverpool paper, we find the following remarks respecting said island:

"The government is about to establish a convict penitentiary at Spike Island, Cove—one of the four establishments intended for Ireland: together with two for juvenile delinquents—one male and one female. The depot at Spike is to accommodate 800 convicts. All civilians are to be removed from the Island, and the convicts employed in embanking, forming basins, improving the ports, and other works of a similar character."

The trial of Mitchell occasioned great excitement in Dublin, as he was a prominent agitator in favor of revolutionary principles. His sentence was based upon numerous paragraphs published in his paper, and decided by the jury to be of a seditious, revolutionary, and treasonable nature. The following are specimens. Addressing the ladies of Limerick, Mr. M. remarks in one of his speeches, "No lady is too delicate for the culinary operation of casting bullets. No hand is too white to make up cartridges." And again, "My friends, we have no enemies here save the British Government and their abettors." The following appeared as editorial in the "United Irishman." "I tell you frankly, that I, for one, am not 'loyal.' I am not wedded to the Queen of England, or unalterably attached to the House of Brunswick. In fact, I love my own barn better than that House. The time is long past when Jehovah anointed kings. * * There is no divine right but the sovereign people, and as for the 'institutions of the country,' I loathe and despise them."

It was apprehended there would be bloodshed should the Government proceed with the execution of the sentence, but happily the affair had a more favorable termination. The excitement among a certain class was greater in London than in Dublin. A handsome and generous subscription was raised in Ireland for the wife and family of the unfortunate Mitchell.

A Chance for a Yankee.—Some years ago, Judge Jeffrey, editor of the Edinburgh Review, remarkrd that should a prize be offered for a new translation of the Septuagint Old Testament Scriptures, the work would be undertaken and the prize obtained by some Yankee, who understood not a word of the Greek language when the prize was offered. This was certainly a high compliment in favor of Yankee linguistical skill. We have just obtained some manuscript sheets in Japanese, which are at the service of a Yankee or any one else desirous of putting his linguistical powers to the test.

"It may safely be asserted, that there are now more than a million of people descendants of New England ancestry, living free and happy, in regions which hardly sixty years ago were tracts of impenetrable forest. Nor do rivers, or mountains, or seas resist the progress of industry and enterprise.—*Ere long the sons of the pilgrims will be on the shores of the Pacific.* The imagination hardly keeps up with the progress of population, improvement and civilization."—[Extract from Daniel Webster's address at Plymouth, Dec. 22, 1820.

The sons of the Pilgrims are already upon the shores of the Pacific. Some have found their way thither across rivers and mountains, while others have taken the ocean route. But they have only just begun to people those vast regions whose waters empty into the Pacific. We saw it recently reported in the public prints, that the man was still alive who felled the first tree in the wilderness of Ohio, and that the man still walked the streets of Cincinnati who built the first house in that Queen city of the West. It is not improbable that the child may now have been born who will live to see cities as large and flourishing, and a population as dense, west of the Rocky Mountains as are now to be seen East of the Alleghanies. At no very distant period, "the voice of acclamation and gratitude, commencing on the Rock of Plymouth, shall be transmitted through millions of the sons of the Pilgrims, till it lose itself *in the murmurs of the Pacific seas.*"

Suicide.—A catholic priest near Boston lately refused to perform the church burial services at the funeral of a man who had died from intemperance, classing it as a case of self murder.—[Exchange paper.

No doubt the drunkard, dying in consequence of his excesses, is guilty, but would not the maker and vender of intoxicating liquors come in for a share of the guilt?—Would the priest have refused to perform the burial services over the body of a rich rumseller? The world is growing wiser, actions are coming to be called by their proper names. He is a suicide, who destroys his life by the rope, or by the knife, or by brandy. Whether a professed minister of the gospel has the right to refuse to attend the funeral of the suicide, we are not prepared to decide in the negative. We are prepared however to pronounce rum-making, rum-selling and rum-drinking, bad business—and those engaged in the first, second or third will eventually regret we think that they had any thing to do with them. The way of trausgressors is hard.

P. S. It may seem somewhat remarkable, but it is nevertheless true, while engaged in the very act of penning the above remarks, a gentleman called to engage our services as a gospel minister to attend the funeral of one who undoubtedly met his end in consequence of drinking intoxicating liquors.

Honolulu Seminary.—We sincerely congratulate those parents who have children of a suitable age to attend school, that Mr. Fuller has decided to remain for a season in Honolulu. Prompted by our own sense of what is praiseworthy, we most cheerfully recommend this school, and hope such an institution may never fail in Honolulu for want of patronage. In our humble opinion Mr. F. has many very correct practical views upon the subject of school teaching. His pupils appear interested in their studies.—Ere long we hope, he may find a more commodious school-room. A suitable building-lot, we understand, has been given by the King. Would that some able friend of education might be found, who would endow an English and classical academy in Honolulu!

Foreign Intelligence.

United States.—The whale ship "Chandler Price" arrived via Tahiti the 28th ult., having left New Bedford 3d July. One hundred whale ships were in N. B. harbor fitting out. The majority would sail for the Pacific. The government was chartering vessels to convey the "army" from Mexico to the U. States. It was estimated that 1,100 officers, 26,000 soldiers, and 5,000 teamsters, would embark from Vera Cruz. A motion was before Congress to continue the pay of both soldiers and officers, for three months after they landed in the U. S. "In support of the measure," writes a correspondent of the N. Y. Journal of Commerce, "Mr. Webster made a very feeling and eloquent appeal."

The most important item of intelligence, relates to the Treaty which has been negociated between the government of the U. S. and that of New Grenada. The Treaty secures very important advantages to the commerce of the U. S. But the most important feature of the Treaty refers to a passage across the Isthmus of Panama. The President makes a special Message to Congress upon the subject. From that Message we quote the following: "It will be perceived by the 35th article of the Treaty, that the New Grenada government proposes to guarantee to the government and citizens of the U. S. the right of passage across the Isthmus of Panama, over the natural roads, and over any canal or rail-road, which may be constructed to unite the two seas, on condition that the U. S. shall make a similar guaranty to New Grenada, of the neutrality of this portion of her territory, and her sovereignty over the same."

His Excellency, J. J. Roberts, President of the new Republic of Liberia had arrived in the U. S.

An extensive fire had taken place in Norfolk, Va.

We glean most of the foregoing particulars, from the N. Y. Journal of Commerce for June 17. The Washington correspondent of that paper states, "The mere nomination of General Taylor for the Presidency has done a vast good to the country."

France.—The anniversary of Protestant Religious Societies took place in May, at Paris. May 8th, was held the 25th anniversary of the "Paris Tract Society;" 9th, the anniversary of the "Evangelical Society of France." The treasurer announced that the debt of the Society was 32,000 f., whereupon an English clergyman present stepped froward and laid upon the table 6,500 f.. to aid in liquidating the debt. 11th, the anniversary of the "Society for Evangelical missions among the unevangelized Nations" took place. South Africa is the principal field of the Society's operations. It was stated that the Society's debt was 12,000 f., whereupon 4,500 f. was subscribed! 12th. On this day took place the anniversary of the "French and Foreign Bible Society." M. de Gasparin, an ex-peer of France, presided. 23,000 Bibles distributed during the year. Besides this number, more than 100,000 Bibles have been distributed by other Bible Societies. The American Bible Society has appropriated $10,000 to aid the Bible cause in France. "France needs religion — the religion of the Bible." We much prefer reporting the triumphs of benevolent enterprise, to detailing the accounts of bloody insurrections!

Tahiti.—By a late arrival from the Society Islands, we learn that the "gold fever" was there raging, and that soon several vessels would sail for California.

Persons in the employ of the French government at Tahiti, do not seem to relish the economical principles of "la Republique" manifested in the redncton of their salaries.

California.—By a late arrival from the coast, we learn that gold continues as plenty as ever. Many were leaving the mines for the town, where they find living enormously high, and it is impossible for all to obtain comfortable lodgings and a good table.

"Groan under gold, yet weep for want of bread!"

We hear respecting several who went from the Islands, that they have done remarkably well, and will ere long return.

The "Star" and "Californian" are united. Under date of Dec. 9, we see it announced that Capt. Stout has been successful in contracting for coal, and that the steamers may be expected the last of January or first of February.

Commodore Jones and Governor Mason have been taking steps preliminary to calling delegates to assemble in a Convention for the purpose of establishing a provisional government.

The Seamen's Friend.

Pray for Seamen.

The thoughtless and unbelieving world has much to learn in regard to the nature, importance and benefit of prayer. A practical infidelity among men, excites a smile of incredulity, if not of derision, when the praying Christian speaks of *really* receiving an answer to his petitions to Heaven. The Bible is full of encouragement upon this subject. The testimony of the most devoted and exemplary Christians is clear and satisfactory upon the point, that prayer is not a vain, useless and foolish practice, but one fraught with unspeakable blessings, in favor of both those who pray in faith, and those for whom the prayer of faith is offered.—This is a subject of vital importance to Seamen. Amid the disclosures of another world it will undoubtedly appear, that many a signal blessing, and remarkable deliverance, has been experienced in answer to prayer. So far as seamen especially are concerned, it is no unmeaning assertion that, "Prayer moves the arm that moves the universe." All things and beings, physical, mental and spiritual are under God's control. "All my springs," says the Psalmist, "are in Thee." God can cause our cup of joy or sorrow to overflow. It is the frequent remark of those whose "home is upon the deep," that amidst the circle of their friends, they have a godly, pious and praying wife, or mother, or sister, or father, or other relative. It is a powerful motive, operating upon the mind of a master, officer or other seafaring person, to lead him to serious reflection and a religious life, that he has some near relation who is known to be daily praying for his conversion. We write understandingly upon this subject.—Facts illustrative of this point have come under our personal observation, not a few of which we can now recall to mind. Most confidently we believe, prayer has been offered in America and England for absent friends far off upon the waters of the Pacific, which has been heard and answered. Striking instances might be cited, although the subject is one that demands great caution; yet it partakes of a cheerless skepticism and a heartless infidelity, to dismiss or pass over all these examples as unworthy of notice. If it was in our power to communicate with the praying wives, sisters, mothers and fathers, who are accustomed daily to remember in secret, and at the family altar, their absent husbands, brothers and sons, we would address them in the words of Paul to the Thessalonians, "Pray without ceasing;" you may expect your prayers will erelong be answered, knowing they must be heard. Read the Savior's account of the importunate widow, and that of the man who importuned his neighbor for bread. Luke, c. 11, 5—8 vs.

The facts narrated in the following paragraphs, extracted from the "N. Y. Evangelist," may not be uninteresting as illustrative of our remarks. We take the more pleasure in making the extract, from the circumstance that we are personally acquainted with "that son who had been made the subject of such agonizing prayer." He visited the Islands during the last shipping season, and has sailed again for the U. S. The statements may be relied upon as true.

"On the east end of Long Island are two aged pilgrims, who have been the parents of eleven children. Three are not, and one of the living eight is thought to be "just on the verge of heaven." They have hope that after the separations of earth shall have ended, they shall all meet again, an unbroken family in heaven. One of the sons has his home on the deep. He is now master of the whale ship ———, of ———. His voyages have varied in length from one to three years. On his last voyage save one, he sailed around the world, and in just one year from leaving home returned with his ship full, and without having dropped his anchor during the whole voyage. His visits have necessarily been short at home. His aged mother did not let them pass without repeated admonitions respecting the "chief concern." He would turn all off by the reply, "Oh, mother, we can't have religion at sea." When he left home for the voyage abovementioned, the mother's heart was unusually anxious. In remembrance and prayer she followed her beloved E. in his long and trackless way; and often (as she says) was so burdened in spirit that it seemed to her she must die. In none of the former voyages had that son been the subject of such agonizing prayer. When the ship had been gone a year, a neighbor, who also had a son in the same ship, came in to bring the news that she had been unsuccessful, and had gone to the North West Coast. This was sad news to the parents. They sat up till a late hour, talking of the absent ones; and when they lay down, it was to think and pray.

Two hours after midnight, the mother heard a footstep in the entry-way. The door opened, and some one entered. "Who is there?" No reply; but the footsteps approached the parent's bed-room. "Who is there?" A well-known voice replied "Edwin." In a moment the aged mother's arms were around the neck of her sailor son.—Her first words of greeting were, "Edwin, have you found the Saviour?" Let the pious parents who have long wrestled for the conversion of an impenitent child, imagine how the heart of that yearning mother throbbed, when her Edwin replied, "Mother, I trust I have."

There were tears of sacred joy shed in that house. The prayers of many years had not been unheard, nor forgotten. The Prayer-hearer had waited until importunity had become great. In the best time he gave the gracious answer. The son found that it was possible to enjoy religion on the sea. His soul found peace when the ship was on her homeward voyage.

PILGRIM."

THE BEST SEAMEN.—Capt. Parry of the British Navy, the well-known commander of the Polar expedation, at a public meeting in 1826 spoke as follows:

"I have had the honor, and I may truly say, the happiness of commanding British seamen under circumstances requiring the utmost activity, implicit and immediate obedience, and the most rigid attention to discipline and good order; and I am sure that the maintenance of all these was, in a great measure, owing to the blessing of God upon our humble endeavors to improve the religious and moral character of our men. In the schools established on board our ships during the winter, *religion was made the primary object*, and the result was every way gratifying and satisfactory. It has convinced me that true religion is so far from being a hindrance to the arduous duties of that station in which it has pleased Providence to cast the seaman's lot, that on the contrary, it will always excite him to their performance, from the highest and most powerful of motives; and I will venture to predict, that in proportion as this spring of action is more and more introduced among our seamen, they will become such as every Englishman would wish to see them. To this fact, at least, I can on a small scale bear the most decided testimony; and the friends of religion will feel a pleasure in having the fact announced, that *the very best* seamen on board the Hecla—such, I mean, as were always called upon in any cases of extraordinary emergency — were, without exception, those who had thought the most seriously on religious subjects; and that if a still more scrupulous selection were to be made out of that number, the choice would fall, without hesitation, on two or three individuals possessing dispositions and sentiments eminently Christian."

"I CANNOT STAND THAT."—And what could not the sailor "stand?" He had stood the beating of many a storm. Often had he mounted up to heaven and gone down again into the depths. Many a time had his soul been melted because of trouble. Yet he has rode out the storm, trod the billowy deep boldly, and given his trouble to the winds. But now he meets something which he "cannot stand." What is it? He can stand the perils of a storm. He can bear being a night and a day on the deep. He can buffet the hardest gale that ever blew off the "Horn." He can do and endure more severe labor and hardship than any other man; but, now he knocks under. It is the picture, on the cover of a tract, of a woman teaching a child. "Oh!" said he, "I cannot stand that; it reminds me of my poor dear mother; it is just the way she used to teach me: but she's gone;" and he burst into tears.

Mother! there are no human teachings like your own. Call your boy to your side and give him instructions warm from a mother's heart. And should that boy break away from his home, and become a rover on the deep, some little incident may rocall the scenes of his early years. He, too, may be reminded of his "poor dear mother," who used to call him to her side.

INTERMENTS IN NUUANU VALLEY CEMETERY.

Date of Death.	Names.	Age.	Residence.	General Remarks.
1842, Nov 14	Hiram Frances Grimes		Honolulu	Infant children of Mr. Hiram and Mrs. E. C. Grimes.
1843, Aug 4	Elizabeth Webster Grimes		Honolulu	
1844, Nov 24	—— Wolley		South Hampton, N. Y.	Died at U. Hospital, belonging to American whale ship "Josephine."
1845, Jan. 25	A Gay *Head* Indian		Massachusetts, U. S.	Died on board U. S. S. "Brandywine."
Feb 11	Nelson O. Hall		Concord, N. H.	A Printer, discharged from whale ship "Hannibal."
" 27	William Day		Halifax, N. S.	Died at British Hospital.
March 11	Thomas Day	29	Hallowell, Me.	Whaling master Hanoverian ship "Crown Princess."
" 22	Lozen J. Moller	44	Nueborg, Denmark	Master Belgian brig "Indefatible."
" "	John Dewey		Hudson, N. Y.	Second officer American whale ship "Splendid."
May 5	Gilbert Jenney		New Bedford, Mass.	Master of "Governor Troup."
" 28	ThomasPratt		London, England	Resident for many yenrs on the Islands.
July 3	John B. Gregory		Philadelphia, Pa.	For many years a resident at Marquesas Islands.
" 10	Thomas *H.* Marshall	10 mos.	Honolulu	Infant son of J. F. B. Marshall, Esq. The remains removed to the United States.
Aug 15	Thomas Johnson		New York City	Died at the U. S. Hospital.
Sept 11	Benjamin Pitman	54	Boston, Mass.	Resident for many years on the Islands.
Oct 18	James Bryant		Connecticut	Died at the British Hospital, disharged from an English ship.
Nov 4	Thomas Dwyer		Ireland	" " " "
1846, Feb 18	Emanuel Gomez	29	Calcutta, India	Left English whale ship "Java."
March 1	Edward Williber		England	Died at British Hospital.
" "	Thomas Rendols		Massachusetts	Death occasioned by severe burn.
April 4	—— Sweet		Rochester, N Y.	Died at Waialua, Oahu.
June	Anthony Wilkinson	64	Lincoln, England	
" 22	Thomas Aylett	65	Rochford, "	Resident for 29 years on the Islands.
July 5	James Lucas	22	Philadelphia, Pa.	Discharged from the "Lydia."
" 15	Orren H. Smith	11 mos.	Honolulu	Infant son of Mr. Smith, passenger of "Brooklyn."
" 28	Mrs. Eunice H. Marshall,	28	Charlestown, Mass.	Wife of J. F. B. Marshall, Esq.; her remains removed to the U. S.
Aug 11	J. D B. S. Townsend	14	England	Cadet H. B M.'s ship "Grampus."
" 24	Clement Norton		Martha's Vineyard, Mass.	Master Bremen whale ship "Gustave.',
Sept	John Wilbur		United States	Died at U. S. Hospital.
" 8	John Smith	10	England	Belonging to H. B. M.'s ship "Juno."
Oct 1	Percival Lester		Jonestown, Pa.	Died at U. S. Hospital.
" 27	Martin Schneeman		Schaneback, Hanover	Carpenter Hanoverian ship "Crown Princess."
Nov 5	Mrs. H. F. Ten Eyck	31	Michigan, U. S.	Wife of U. S. Commissioner; her remains removed to the U. S.
1847, Jan 3	William Sumner	61	England,	For 41 years a resident on the Islands.
Feb	John Niles	27	New York City	A Printer.
"	Russian Seaman		Russia	Drowned, belonging to bark "Alexander."
" 24	J. B. Waterhouse		Marsden, England	Died at U. S. Hospital.
March 16	John Kedzlie	53	Scotland	Many years a resident on the Islands.
April 4	A. S. Taber		United States	Carpenter whale ship "William Tell."
" "	Maria Wheeler		Honolulu	Wife of Mr. John Wheeler.
" 7	John Glandthorp		Bremen	Left Bremen whale ship.
" 22	James Cheazy		Bristol, England	For 20 years a resident on the Islands.
May 1	Dr. Richard Ford		Madely, England	Many years a physician in Honolulu.
"	D. C. Higgason		Richmond, Va.	Many years resident on the Islands.
June 3	William Thompson		England	" " "
July 10	Amos Ford		Boston, Mass.	
Aug 24	Isaac C. Brewer		Honolulu	Infant son of Mr. C. Brewer, 2d.
Sept 2	John Freos		Lima, Peru	H. B. M. S. Juno.
Oct 31	Henry Griswold		Weathersfield, Conn.	Master American whale ship "Audley Clarke."
Nov	Henry Thompson	28	Staten Island, N. Y.	Belonging to ship "Portland."
" 25	William Loe	36	Norwich, England	
Dec 16	David Lyons	60	England	For forty years a resident on the Islands.
1848, Jan 26	John Knights		Greenwich, England	Died at British Hospital.
"	—— Lewis		England	Left an American whale ship.
March 2	Kamohai	19	*Honolulu*	Wife of Mr. Joseph Booth.
" 4	Margaret Harris	26	N. Y. City	Wife of Mr. John Harris.
April 1	E. G. Terrey		Sweden	Died at U. S. Hosptial; left "Samoset."
" 14	George Grant		Nantucket, Mass.	" " " "Sarah Parker."
May 5	Betsey W. Meek	41	*Honolulu*	Wife of Captain John Meek.
" 14	Patrick Hays		Cork, Ireland	Died at U. S. *Hospital*.
Aug 5	Kekuaaihue	54	*Honolulu*	Relict of the late Captain William Sumner.
Sept	—— Campbell		Argyleshire, Scotland	Master of schooner "Sri Singapura."
Oct 26	Samuel A. Reynolds	26	Charlestown, Mass.	Died at Luhaina; his remains brought to Honolulu.
" 28	John Smith			Drowned; belonging to English whale ship "James Stewart."
Nov 7	Subent		Lisbon, Spain	Belonging to ship "Neva."
" 7	George Chapman		Tahiti	Son of Mr. Chapman, formerly Acting U. S. Consul at Tahiti.
" 9	Alice Adele DeFiennes		*Honolulu*	Infant daughter of J. B. DeFiennes, Esq.
" 9	John Meek, Jr.	27	"	
" 18	James Harley		United States	Died at U. S. Hospital.
" "	Elyneas Case		Shelter Island, N. Y.	Died on board ship "Gem."
" 19	Joseph		Guam	
" 21	W. C. Cram		Bath, Me.	Third officer of ship "Formosa."
" 26	Charles Brockway		East Lyme, Ct.	Drowned in Honolulu harbor; belonging to ship "Friends."
" "	A Tahitian Sailor		Tahiti	Discharged from ship "Corea."
" 27	Caroline Louisa Paty	1 y 10 mos	*Honolulu*	Youngest child of Captain and Mrs. John Paty.
" 29	A native of Guam			Died at U. S. Hospital.
Dec. 2	Jemima Heath	3	*Honolulu*	Daughter of Mr. and Mrs. *Heath*.
" 6	Thomas Jackson	53	Green Port, N. Y.	Died at U. S. *Hospital*.
" 8	W. F. Summers	25	New York City	Died off Honolulu narbor, passenger from California.
" 11	Elias Trafinion		Russia	Died in harbor, on board Russian bark "Atka."
" 12	Margaret Branks	3	*Honolulu*	Daughter of Mr. Robert Branks.

The subscriber was appointed at the last meeting of the "Nuuanu Valley Cemetery Association," to prepare a list of the interments which had been made, and to keep a register of future interments. As nothing of the kind had been done, it was with some difficulty and labor that the foregoing was compiled; and upon examination, it may be found in some respects erroneous. If such should be the case, the subscriber will esteem it a favor to have the error pointed out, that a correctiou may be made.

The importance of keeping a full and correct register will appear obvious. A majority of the interments are those of strangers, respecting whose death and burial, enquiries may be made in after years. This is already the fact. In some instances, surviving friends may wish to erect monuments; should this be the case, how necessary to be able to identify the spot where the interment was made, and to ascertain the date, etc., when the death took place.

Whenever interments may be made, the parties concerned are respectfully requested to forward a written report to the subscriber.

SAMUEL C. DAMON,
Secretary and Treasurer, N. V. C. A

Honolulu, December, 1848.

FUNERAL SOLEMNITIES.—On Saturday, the 30th ult., took place the funeral of the late WM. PITT LELEIHOKU, brother-in-law of the King, of the late young chief MOSES KEKUAIWA, son of His Excellency Gov. Kuanuoa, and of Kaiminauuao, ward of the Queen. A procession, composed of King, Chiefs, King's Ministers, Foreign Representatives, and Consuls, together with numerous officers of the Government, and private citizens, marched from the house of M. Kekauanohi, to the Stone Church, where religious exercises were performed. The procession being re-formed, attended the deceased to the Royal Cemetery, where their remains were interred with military honors.

☞ With the new year, a fresh hand is announced as having commenced playing the 'Government Organ.' The Reading Public may expect some 'original airs.'—We have not forgotten an unpublished address upon 'little men,' delivered by the gentleman, which evinced a quiet humor, originality and talent.

FOR THE FRIEND.

HILO, Nov. 20, 1848.

Mr. Editor,—Some months ago I sent you a list of donations received from the U. S. S. Preble, in favor of the Seamen's Chapel at Hilo. Having just learned that you have not received that communication, I now transmit a duplicate, which you will please publish for the information of all concerned.

Yours truly, T. COAN.

Commodore D. Geisinger,	$5,00
Lieut. E. Ward, Jr.	2,50
Sergeon J. F. Brooke,	5,00
Ass't Surgeon J. L. Burtt,	3,00
Purser H. Wilson,	5,00
Passed Midshipman E. Binley,	1,00
Commodore's Secretary, F. Schlezy,	2,50
Midshipman W. McGunnegle,	1,00
" E. Brodhead,	1,00
" W. F. Shunk,	1,00
Carpenter T. Coleman,	1,00
Cash,	2,50
Total,	$30,50

Additional Donations for the Chapel at Hilo.

Capt. Seabury, ship Minerva,	$8,00
Capt Swift, ship Maria Theresa,	3,00
A. N. Butts, "	1,25
H. Haskins, ship Wm. Thompson,	1,00

PASSENGERS.

In the Tepic for Valparaiso—Mr. Charles E. Hitchcock.

Per Josephine, from Kamschatka, Mr. Samuel Hillyan English traveller, from England via St. Petersburg and Siberia.

Per Chandler Price, from Tahiti, Horace Hawes, Esq.

Per Cowlitz, Capt. Mott and Mr. Stewart.

Per Correo de Cobija, W. S. Holden, J. Flanders, J. Stone, G. Graham, D. McQueen, N. Travers, J. McDuff, E. Brown, T. Metcalf, —— Apin, W. Sumner, John Joyce, J. O. Davis, and three Hawaiians.

DIED.

In this town, on the 10th ult., Ellen Amelia, youngest daughter of Rev. L. and Mrs. A. W. Smith, aged 1 year 8 mos. and 28 days.

At San Francisco, California, Eliab Grimes, aged 69.

In this town, 12th ult. Margaret Branks, daughter of Mr. Robert Branks.

In Honolulu harbor, 12th ult. on board Russian bark Atka, from Sitka, Elias Trafimou, a passenger.

At U. S. Hospital, 25th ult. Mr. Thomas Ennis, belonging to Batavia, N. Y.

Killed by a whale in the Ochotsk sea, in August, Ammon C. Case, of ship Pocahontas, and formerly of ship Portsmouth. He belonged in Delhi, Delaware Co, N. Y.

Off Honolulu harbor, on board schooner "Thomas Martin," from California, Mr. Wm. F. Summers, belonging to New York city. He came out on board the "Uncas," and about one year ago, was discharged sick, at this port. During the summer he partially recovered his health, and went to California, and while there he acqnired some property. According to his "Last Will and Testament," the balance of his property was to be disposed of for charitable purposes, after his debts and funeral expenses should be paid. A gentleman in Honolulu was appointed his executor. By said executor, the sum of $90,00 has been equally divided between the "Oahu Charity School" pnd the "Seamen's Chapel."

The remains of Mr. Summers were brought on shore and interred in the "Nuuanu Valley Cemetery." A marble stone is to be erected to his memory.

Drowned, Sept 4, in the Ochotsk sea, by upsetting of the boat and getting entangled in the line, William King, aged 22 years, blacksmith of ship "Josephine." He belonged to East Hampton, L. I., and leaves a wife and child to mourn his untimely end.

MARINE JOURNAL.

PORT OF HONOLULU.

Arrived.

Nov. 25—Am whale ship Portsmouth, Munroe, Warren, 4600 whale.

28—Eng brig Spencer, from Liverpool, with mdse. to Starkey, Janion & Co.

Dec. 3—Hawaiian schooner Mary Ann, from San Francisco—reports the Undine from New York, and a Chilean ship going in when she came out. The Starling had arrived at San Francisco—Haalileo not arrived. The U. S. store-ship Southampton was going in when the M. A. left. The Lexington was soon to sail for the United States direct.

Dec. 9—Hawaiian schooner Haalilio, Smith, 13 days from San Francisco.

Dec. 24—whale ship Josephine, Hedges, from Kamrcatka; wanting 400 bbls to complete cargo.

28—H. B. Co.'s bark Cowlitz, Weynton, from Oregon.

Am whale ship Chandler Price, Taber, 6 mos from New Bedford, via Tahiti, 300 w. Reports the Tsar, arrived at Tahiti, all well.

30—Chilean brig Correo de Cobija, Solhouse, 13 days from San Francisco.

Sailed.

Dec. 7—American schooner Honolulu, Newell, for San Francisco.

Nov. 26—Peruvian brig Pacifico, Miller, for San Francisco.

27—Hawaiian schooner Julian, Moran, for San Francisco.

During the week whaleships Huntsville, and Mt Wollaston home direct. Several other whale ships have sailed to cruise.

In port—schooner Honolulu, Newell, for San Francisco, on Tuesday; brig Tepic, Luce, for Liverpool via Valparaiso soon; brig Spencer, unloading.

Dec. 15—English brig Tepic, Luce, for Valparaiso.

Dec. 19—Am whale ship Portsmouth, Monroe, homeward bound.

21—Hawaiian schooner Catharine, Treadway, for San Francisco.

PORT OF LAHAINA.

Nov. 11—Am whale ship Warren, Evans, Warren, 11 mos out, 300 whale, 300 whale this season.

12—Am whaling bark Pacific, Arden, New Bedford, 40 mos out, 500 sperm, 1100 whale, 500 whale this season.

20—Am whale ship Portsmouth, Monroe, Warren, 30 mos out, 4000 whale, 1300 whale this season.

22—Am whale ship Ontario, Brown, from Hilo.

23—Am whale ship Henry Thompson, Holmes, from Oahu.

24—Am whale ship Marcia, Ellison, from Hilo.

27—Hawaiian schooner S. S., Taylor, 17 days from San Francisco.

Subscription,

For the benefit of the Seamen's Chapel, recently having undergone extensive repairs; and the support of "The Friend," Newspaper, one thousand copies of whihh are circulated gratuitously among seamen in the Pacific.

DEBT ON THE CHAPEL.

In balancing the account of the Chapel, it is found to stand thus, at this date, December 28, 1848.

Original cost of repairing Chapel, erecting Reading Room, etc., (See 'Friend' for March)	$2,944,41
Paid,	2,151,45
Present debt	792,96

The incidental expenses of the Chaplaincy, for the current year, including Sexton's salary, lighting chapel, repairing walls, etc.. etc., $207,75

This amount has been paid from the acknowledged donations for 'Chaplaincy'.

The Chaplain would return his sincere thanks to all who have, in any way, aided the 'American Seamen's Friend Society' in maintaining and supporting this Chaplaincy. He hopes the benefits, direct and indirect, which result to the seafaring and foreign community, are a satisfactory compensation for the numerous donations made to the institution. In all cases, the subscriber has most scrupulously aimed to appropriate the various sums which have been contributed, agreeably to the wishes of the donors.

SAMUEL C. DAMON,
Honolulu, Dec. 29, 1848. Seamen's Chaplain.

NOTICE.

TO SEAMEN AND STRANGERS.—*The Seamen's Chapel* is open for Public Worship every Sabbath, at 11 o'clock, A. M., and 7½, P. M. SEATS FREE.

Religious services will be held at the Vestry Room every Thursday evening. Usually, there will be a Lecture delivered.

The Seamen's Concert for Prayer is held at the Vestry Room the third Monday evening each month.

Seamen belonging to vessels (of all nations) visiting this port are invited to call at the Chaplain's Study, where they will be gratuitously supplied with copies of the Friend and other reading matter. It will be most convenient for the Chaplain to receive calls from Seamen between 2 and 4 o'clock, P. M.

Public services at the Native Churches, on the Sabbath, commence at 9½, A. M., and 2½ P. M.

The Seamen's Reading Room is open at all hours of the day. Strangers arriving and having late foreign papers, are respectfully invited to aid in keeping said room supplied with useful reading matter.

☞ Donations are respectfully solicited for the support of the Chaplaincy, and the publication of 'The Friend'. An anuual report of all donations is made to the American Seamen's Friend Society, in New York. Any person contributing the sum of $50 is entitled to become a Life Director of the Society, and by $20 to become an Honorary Life Member.

SAMUEL C. DAMON,
Honolblu, April 1.—tf. Seamen's Chaplain.

A Card.

The Seamen's Chaplain would gratefully acknowledge a large and beautiful 'Bethel Flag', presented to the Chapel by Capt. Gellett, ship 'Uncas', November, 1848.

Return Borrowed Books.

The subscriber desires all persons having books in their possession belonging to him, or the 'Seamen's Library, to return them immediately. Some valuable books are missing.

☞ Some weeks since, the subscriber loaned the 'Memoirs of General M——' to some one in Honolulu, who has neglected to return the volumes. He is requested to so immediately.

SAMUEL C. DAMON,
Jan. 1, 1849. Seamen's Chaplain.

Lahaina Chaplaincy.

Divine service will be held in the Seamen's Chapel, every Sabbath, at 11 o'clock, A. M. Seamen, residents, and visiters, are kindly invited to attend.

The office of the Chaplain is a short distance from the Chapel, on the same street towards the sea. All persons wishing to converse with him, procure the Holy Scriptures, or religious publications, books, etc., will be always welcome, between the hours of 3 and 5 P. M.

T. E. TAYLOR, Chaplain.
Lahaina, July 29, 1848.

The Friend, Bound.

The Friend, bound, for one, two, or more years, can be obtained at the Chaplain's Study. ☞ A few entire sets remain unsold. A deduction will be made from the subscription price to persons purchasing more than one volume.

*** Seamen will never be charged more than the actual cost of the publication and binding.

The Poet's Corner.

[Selected for the Friend.]

OUR SEAMEN.

BY MISS ANNA LOWELL SNELLING.

Oh, remember ye the sailor, when by the social hearth,
Ye enjoy the countless blessings God has shower'd on the earth;
He is tossing on the ocean amid the billows' roar,
But his heart is with his loved ones, upon his native shore.

Oh, remember ye the sailor, in the darker hours of night,
When without the wind is raging, and the storm is at its height;
Ye on your downy pillows, lie sheltered from the blast,
Whilst he perhaps is rocking on the high and giddy mast,

And the dark clouds above him sending down sulpherous fire,
On the inky waves beneath him, as on a funeral pyre,
While the deep and hoarse-toned thunder is like a solemn bell,
Tolling o'er the gaping waters his requiem or his knell.

How the distant signal cannon his senses must appal,
Whilst the discordant sea-bird is answering to the call,
And amid the roar of waters, comes up the last faint cry
Of some drowning wretch, for mercy and pardon from on high.

Remember ye the sailer, at the silent hour of prayer,
As ye kneel before the altar, his soul remember there;
For thus has taught your Saviour, when on the stormy deep,
He smoothed the stormy billows, and lulled the winds to sleep.

Whose hand is ever open, whose heart is ever kind?
Who, when our peace was perilled, the bravest did we find?
Not he who rolls in luxury, the child of wealth and pride—
But the poor, hardworking sailor, whose home is on the tide.

Oh, remember ye the sailor, whose ill-rewarded toil
Has filled your teeming coffers with fruits of every soil;
When your ships, through some great danger, have safely
reached the strand,
How poorly ye repay him for the labor of his hand.

Or, when escaped from danger, your thanks abundant flow,
And on the ship's commander gifts and praises ye bestow,
Do not forget the sailor, who has greatest courage shown,
And saved your lives and fortunes at the peril of his own.

Who does not love the sailor, the hardy and the bold!
His heart and soul as truly cast in Nature's finest mould;
While our country waves a banner, or the ocean bears a prow,
Long live our gallant sailors, our pride and glory now!

While the trump of fame is sounding for many a victory won,
And our land swells forth the praises of many a gallant son—
Whilst the wreath is twin'd for valor, and merit claims its due,
W've a song for our brave sailors, who ride the waters blue.

Polynesian Sketches.

For the Friend.

Sketch of Strong's Island.

BY WILLIAM L. JACKSON,
Master of American whale ship "Inez."

Ship Harvest ashore—crew disorderly—Capt. Lakey's management—Ruins on the Island—King and Royal Family—Religion—Deity—Annuto—number of inhabitants—their knowledge—idea of the English language, &e., &c.

January 7, 1848. This day I anchored in the N. E. harbor of Strong's Island, finding the entrance easy and harbor good.—Two English whalers, and the American bark Harvest, Lakey, Matter, were lying at anchor. Captain Lakey, in entering the S. W. harbor, in consequence of not having a good pilot on board, got his ship on the reef and injured her bows so that it was with difficulty he kept her afloat until he could get her ashore on the beach, where at low water he was to batten the leaks with boards, so as to be able, with the assistance of the natives, to work her around to the N. E. harbor.

I learned from Captain L. and other sources, that at the time his vessel was in the lee harbor and in danger of being lost, a part of the crew refused to work, unless he would pay them daily wages. Capt. L. represented to them the impossibility of complying with their demands, as he had no money on board, and there was none to be got at the Island. He informed them however, if they would work, and succeeded in getting the ship off, that they should be paid when they arrived at some port where an investigation could take place, and it should be judged proper and right that they ought to be paid for their work. This however did not satisfy their minds! Capt. L. then stated the case to tne King. (At this time there was no vessel but the Harvest in port.) The King replied that if the sailors would not work, he would furnish some of his own people that would, and that he would "tie up" Capt. L.'s men until the vessel was ready for sea, when they should be put on board. Capt. L., however much against his will, compelled to resort to *force*, and deal with his men according to their natures! All then went to their duty.

There being no conveniences for heaving a ship out at the lee harbor, he brought her around to the weather harbor, although leaking badly. The natives rendered him impertant assistance. The King furnished houses for the storing of the cargo, and as many natives as he wanted to assist in discharging the same, also guaranteeing (so far as the natives were concerned) for the safety of every thing landed.

Jan. 26. Capt. L. has got his ship repaired to his entire satisfaction, but he has had a great deal of trouble with his crew. Last Sunday evening seven of them took a boat and left for the Island of Ascension, and the probability is they will all be lost, and if they are, I cannot think otherwise but that it will be their just desert for their ingratitude.* Being intimately acquainted with Capt. L., I know him to be a man who abhors ill-treatment to seamen, and that he sailed from home on the present voyage with a determination of governing and treating his men as reasonabte and rational beings. He publicly declared that it was his opinion, seamen could be better governed by addressing the *rational* than the *brute*.—He made it his personal dnty to look after their comforts and physical wants. Among other duties, he imposed upon himself the duty of going three times each day to the galley, to see that their food was served out to them in proper order and in "generous quantity." I heard one of his men say, that they always had enough and that which was good and wholesome. He however had not been long at sea, before he discovered that there were some among his crew who could not bear to be treated as rational beings, and their influence over the others was such as to frustrate all his ideas of reasoning with them.

Feb. 5. Capt. Lakey has got his vessel nearly ready for sea. The Rowena, of Fall River, came in to-day, so we now have five vessels in port, more than the natives ever saw here at one time. Since I have been here, I have endeavored to learn a little about the Island and its inhabitants. The natives are of the Caroline Island origin. The Island appears at a romote period, to have been the strong hold of the Buccaneers, or else the present generation have wonderfully degenerated; for the fortifications, walls and stone works at present to be seen, could not have been built by the present race. Large blocks of stone, 10 or 12 feet in length, with one end fixed in the ground, and opposite openings in the walls, as if expressly intended for mooring ships. The present generation of people can furnish no information how they came there. These are sacred to their deity, Annuto. [Not Snate, as stated in the Friend.]†

The King is about fifty years of age, as I could judge, but the Queen is younger, a very small but good featured woman—the mother of eight children, six of whom are living. The eldest, Prince Royal and heir to the throne, is a low, designing scoundrel,

* If the reader would learn the fate of that boat's crew, we would refer him to the Friend for October 1, 1848. Only one of the seven now survives, and his preservation was quite miraculous.—[Ed. Friend.

† See article on Strong's Island, in Vol. III. No. 9, May 1, 1845.

and I believe none too good to commit any crime, so eager is he for the throne. Elixah, the next, is a noble and amiable youth, about fifteen years of age. The other two that I saw were Princesses, one about six, and the other three years of age. The King is a man of good sense and sound judgment, possessing a large share of *Indian* cunning and craftiness; for instance, when I talked with him about their religion, and smiled at some of their superstitious customs, he winked and said it was the fashion of Strong's Island, giving me to understand that he knew better! They believe in a future state and the immortality of the soul—that the spirit is buried with the body, but that during the following night Annuto comes, which is known by certain noises, such as rattling the bushes, and breaking of small sticks. It is their belief that the soul of the departed is taken to another Island, there embodied and made to serve its time, according to the pleasure of Annuto, afterwards it passes into another body, and still another, and so on through eternity.

As near as I could learn there are about 12 or 1500 inhabitants upon both Islands, though I had no opportunity to ascertain correctly. They are in a deplorable condition. There is a general sickness prevailing, a species of fever. They also have a *foul* disease raging among them, together with their other maladies. Some were dieing daily, and I think unless they have some relief, all the inhabitants must in a few years be swept away. The King told me that he did not want sailors to stop on the Island, and to prevent it he will deliver up all runaways, free of expense, and insists that masters of ships shall take them off. He wishes, and so do many of his subjects, that a missionary would come and live with them He told me that if a good man would come, and teach his children and people to read and understand as white people did, he would build for the missionary a house, and furnish him with as good food as the Island afforded. Nearly all I talked with upon the subject expressed the same opinion.—They have learned about the improvement of the people of the Sandwich Islands, and feel anxious to be enlightened themselves. Nearly all can now speak the English language* very distinctly, which singular circumstance, I think is owing to their dialect. I employed two boys to row my boat about the harbor, as is the custom at Honolulu, and in a few evenings I taught one of them the whole English alphabet, every letter of which he pronounced, clear and distinct, except v, which he called *we*. There would be no necessity for a missionary to learn their language. I could not learn as they worshipped but one deity, and that one invisible. They viewed him as not always favorably disposed towards them, but when he is *sulky*, (as they express it in English) the King propitiates his favor with various delicacies. I saw no appearance of idolatry, though many things are viewed as sacred to the deity, and the people would on no consideration touch them.

* The fact that the inhabitants of Strong's Island can speak the English language with tolerable correctness, we have heard stated by numerous visitors. It is certainly very remarkable, and quite anomalous.—[Ed. of F.

EMBERS.—Nov-*ember* and Dec-*ember* are the last *embers* of the dying year.

Extracts from Late Papers.

IRELAND. *Trial of Smith O'Brien.*—In our last we noticed the trial and sentence of John Mitchell. By the "Dale," intelligence has been received that another Irish agitator has been arrested, tried, convicted and sentenced.

FREEDOM GIVEN BY THE SOIL OF FRANCE. *Important Decision.*—A slave belonging to Louis Alme Pigneyguy was yesterday declared to be free, in consequence of having been taken to France.—[N. O. Picayune.

This is in accordance with decisions which have frequently been made here, and with which the South has never been satisfied. If a slave be brought by his master, voluntarily, into this State, his shackles fall off at once. Slavery cannot exist here for a moment. And it is so with every free State, and with every country where slavery is not recognised. The decision in New Orleans goes further, however, than our decisions have or can go. It establishes the important fact, that the freedom which a slave thus acquires, by the voluntary act of his master, shall avail him permanently; and that if he, of his own choice, shall afterwards return to a slave State, he shall not again be subject to bondage.—[Boston Transcript.

☞ The N. Y. Evening Post says, "We understand that the British Government has requested ours to remove the wreck of the Missouri from the bay at Gibraltar. It lies in the way of vessels visiting that port.—Very excellent offers have been made to the Navy Department to do this, but for some reason or other they have not been accepted."

CAPT. DU PONT AND THE CYANE.—The return of the Cyane from the Pacific we have already noticed; the Union makes the following remarks upon the cruise:

The U. S. sloop of war Cyane, Com'r S. F. Du Pont, just arrived from the Pacific squadron, in a very short passage of sixty-two days from Valparaiso, has had a most active and brilliant cruise. She sailed from the United States in August, 1845, and her crew have been particularly distinguished throughout the war; no crew have ever had the good fortune to perform so much service in a single cruise. The Cyane was on the west coast of Mexico when the war broke out, and only left there after the receipt of the news of peace. This ship's company participated in the taking of Monterey, and garrisoning the town—the first offensive operation on that coast. They were in the fights of Com. Stockton at the Mesa and the Rio Gabriel; they destroyed the gun boats of the enemy at Guaymas, cut up their shipping in the Gulf of California, blockaded the ports of San Blas and Mazatlan, and were a part of the force of Com. Shubrick when he took that place; and two of her officers, Lieuts. Rowan and Selden, had the command, one of the shore party and the other of the water party that surprised and routed a large body of the enemy at Urias. The ship's company also garrisoned in part La Paz and San Jose, Lower California. It was Capt. Du Pont, with 100 of his crew, who so gallantly landed at San Jose, in the face of an overwhelming force of the enemy, and forced his way two miles through a perfect ambuscade, and under a constant and heavy fire, to the town of San Jose, to relieve our garrison under the command of Lieut. Heywood, who had been twenty days surrounded by the enemy, and in great distress. Capt. Du Pont afterwards mounted seventy of his men, under the command of Lieut. Selden, and pursued the enemy in the interior of the country.

Lieut. Selden was successful in entirely breaking up the insurgents, bringing back and depositing on board the ship their commander-in-chief and twenty of his people as prisoners. It will also be recollected that it was the boats of the Cyane, under Lieut. Harrison, that cut out the enemy's brig Condor, in the port of Guaymas, under the fire of their musketry; and also while the ship was blockading Mazatlan, her boats signally defeated the enemy's boats sent off to defend a vessel attempting to run the blockade, and landed and spiked all the enemy's cannon at San Blas. Her crew have been remarkable for their discipline and good conduct, acting as soldiers, both infantry and mounted men; and they have been in seven fights on shore, and their loss has been one officer and one man killed in battle, with a large number wounded. Some of the crew have been wounded in several different engagements. After this long, successful and meritorious conduct of Captain Du Pont, and the officers and men of this ship, they have arrived home—their service was performed so far away, that very little is recorded; so that the relatives of these brave and devoted patriots scarcely know of their deeds of patriotic daring. No promotion, no brevets await them, as it is unknown in the navy. It is to be hoped that some distinguished mark of esteem may be shown Capt. Du Pont and his officers and crew, so worthy and deserving, and that their services will not be unappreciated by their fellow citizens. These noble tars, having served as foot and dragoons, cannot be tamely received by their countrymen.

FRANCE AND THE UNITED STATES.—The London Morning Chronicle remarks of the attempt to introduce the principles of republican government according to the American model, into France, that Carel was right when he said: "Tell me the constitution of America suits the people of America, and you tell me that it does not suit the people of France. If a Republic takes place in France it will be a military and a literary Republic, as that of America is destined to be a peaceful and commercial one."

GREAT PACKET SHIP.—A New York letter says: "The keel of the largest merchant sailing vessel that ever was built in the world, was laid a few days since by Messrs. Westervelt & M'Kay, at their ship building yard on the East River. She will be of the tonnage of sixteen hundred tons, but will carry much more. The Ocean Monarch, which was recently destroyed by fire off the coast of England, the New World and the Constitution, were the largest vessels of this class afloat, but the new vessel which I have mentioned, will be twenty feet longer than any of them. She is intended as a packet ship, to ply between here and Liverpool, and will take her place on Robert Kermit's line in about four months. It was supposed, when the problem of ocean steam navigation was satisfactorily solved, that in a few years our packet ships would be driven off the

track, but they are flourishing now as much as they ever did, and new ones are being built almost every week."

Ocean Steamers.—We read in the N. Y. Journal of Commerce of the 22d, that the line of mail steamers between New York and New Orleans, by way of Havana, with its branch to Chagres, will soon be in operation. The arrangement is to connect with the mail line on the Pacific, from Panama to the Columbia River. This service is to be performed by a steamer touching at San Blas and Mazatlan, in Mexico, and at some of the principal ports in California, until it arrives at San Francisco. Thence another steamer takes the mails and passengers to the Columbia. The whole distance from N. York to Oregon, between five and six thousand miles, will be performed in little more than thirty days. Some of the government steamers are now fitting out for the Pacific, to extend the mail communication to the Sandwich Islands, and it is contemplated ultimately to comprehend China in the sytem. It is supposed that the Sandwich Islands may be reached in forty days from New York. The service will be arranged with reference also to a connection with Wheelwright's line of British steamers on the Pacific coast of South America.

The Government pays $490,000 a year for a monthly mail by this route between N. York and the Columbia river, and a semi-monthly mail between New York and New-Orleans, by way of Charleston, Savannah and Havana. The contract is for ten years. The steamers are all constructed under Government inspection, with a view to their employment, when required, as vessels of war.

One of the Pacific steamers is in such a state of forwardness, that she will be despatched to her destination in October next, and two more will follow her successively at intervals of one month each. The whole line between New York and Oregon is expected to be in operation next January.

The Journal justly remarks that the magnitude of the project and the expedition with which it has been carried out, reflect the highest credit on the enterprise and energy of New York merchants. It has involved the expenditure of nearly two millions of dollars, all of which has been furnished by New Yorkers, with the exception of one year's mail pay advanced by Government in small instalments, to be refunded out of the first year's mail service.—N. O. Pic. Sept.4.

Wreck of the "Maine."—We regard the wreck of the whale ship Maine, on the night of the 23d ult., upon the "Shark spit" at the mouth of the Columbia river, as one of the most serious misfortunes which has ever befallen Oregon. The loss of the "Shark," produced an impression abroad, that the mouth of the Columbia was exceedingly dangerous of entrance—such is not the fact, and it is extremely unfortunate that almost the first attempt since the wreck of the Shark, by a whale ship to enter the mouth of the Columbia, should result in a wreck. We understand that the Maine was one among a number of ships clearing from Fairhaven, Mass., which were directed to enter the mouth of the Columbia for supplies, if practicable. The appearance of the Maine off the Columbia bar was an experiment, and it is a pity that it proved one so unfortunate.

It appears from the statement of James Douglas, Esq., that Mr. Hawkes, who was then acting as pilot, was prevented from reaching the Maine in consequence of the roughness of the water between her and Baker's bay. We understand that the Maine, although without a chart, had entered the channel, keeping her boats in advance, sounding the way, and would have entered the bay in perfect safety, without a pilot, had not the wind failed her while in the channel. The anchorage in the chanuel of the river, near its mouth, is bad—insufficient to hold a ship against a heavy sea--hence, the Maine was thrown upon the spit.

We understand that Capt. Netcher now states, that he should entertain no apprehensions of danger in again attempting to bring a ship into the Columbia. The truth is, that the mouth of the Columbia affords a good channel for the ingress and egress of ships; no such mighty river, passing through such a country, up which the tide sets for one hundred and twenty miles, can pass into an ocean, over a bold iron-bound coast, without a channel sufficiently broad and deep to admit of a safe and easy entrance of ships of the largest class—the only difficulty consists in knowing where that channel is. It is an old saying, that "it is an ill wind that blows nobody good;" this is verified, to a certain extent, in the unfortunate loss of the Maine. The first and third mates of the Maine, both intelligent men and able seamen, have consented to remain in Oregon, qualify, and act in the capacity of pilots.

There are but two difficulties which attend the entrance of vessels into the Columbia—one is, that the sea is sometimes rough—the other, that the wind cannot be depended upon in the neighborhood of the sun's rising and setting. The first of these exists everywhere, to a certain extent—the second may be avoided by entering the river at other times than those of about sunrise and sunset. Both of these difficulties may be mainly overcome by such means as an efficient pilot may put in requisition—and entirely so by the aid of a steam tug.

Letter of Capt. Netcher—statement of James Douglas, Esq.—Card of Capt. Netcher.

August 25, 1848.

To James Douglas, Esq.,

Sir—I have to inform you that my vessel lies a total wreck on the south sands of the Columbia bar, and beg you will have the kindness to represent to the authorities of Oregon the same; and hearing that you were an eye-witness of my signal flag for a pilot, I beg that you will do me the favor of having the circumstances published in the Oregon Spectator. I beg to thank you for the kindness we received from Fort George, which, I understand, was done by your orders, in case the vessel you saw should be wrecked, or require any assistance. My cargo consisted of 1,400 barrels of whale oil, 150 of sperm oil, and 14,000 lbs. of bone—24 months out. G E. NETCHER,

Late Master of ship Maine, of Fairhaven, Massachusetts.

Fort Vancouver, Aug. 30, 1848.

George Abernethy, Esq.:

Sir—I hasten to enclose for your information, a letter received last night from Captain Netcher, of the late whale ship "Maine," which was unfortunately wrecked in attempting to cross the Columbia bar, on the 23d inst. The Hudson Bay Co.'s brig "Mary Dare," on board of which I was a passenger, entered the river the same day, a few hours before Capt. Netcher attempted to run in with the "Maine," and we could distinctly see the signal flag flying at the mast head for a pilot. There was, unfortunately, no pilot at the time in Baker's bay. Mr. Hawke's branch pilot being, as we afterwards discovered, at Fort George, where I arrived the same afternoon, and hastened to inform him that a large ship was waiting for a pilot off the bar. He almost instantly proceeded on his return to Baker's bay, but unfortunately, from the roughness of the water beyond that anchorage, he found it impossible to reach the "Maine" that night, and before the morning of the 24th, she had become a total wreck, nearly on the same spot which proved fatal to the barque Vancouver, and at a less recent date to the U. S. schooner Shark.

These particulars I have communicated to you for publication in the Oregon Spectator, at the request of Capt. Netcher, and further beg to suggest that it would be for the advantage of the country, that some measures were taken by the public authorities for the protection of the valuable property, a great part of which may be expected to drift on shore from the wreck.

I have the honor to be, sir,
Your most obedient servant,
JAMES DOUGLAS,
C. F. H. B. Co.

Mr. Editor,—Permit me, through your valuable columns, to return thanks for myself, officers and crew, to the inhabitants of this territory, for their extreme kindness.—We landed entirely destitute, from the wreck, and if we had not received hospitality from the settlers, must have suffered much—as it is, we have wanted for nothing that it was in their power to provide, for which we again offer our heartfelt thanks.

Capt. GEO. E. NETCHER.

Oregon City, Aug. 31, 1848.—[Oregon Spectator.

Deaths of Eminent Men.—The Northern papers announce the deaths of the Hon Jeremiah Mason and Mr. Wm. Lawrence, both of Boston. Mr. Mason was one of the most eminent lawyers the country ever produced. He was for many years U. S. Senator from New Hampshire, but for twenty years past has resided in Boston. He was formerly President of the United States Branch at Portsmouth, N. H., and Mr. Biddle's refusal to remove him has been considered the origin of Gen. Jackson's antipathy to the bank.

Mr. Lawrence was the brother of Amos and Abbott Lawrence, and, like them, distinguished as a high-minded merchant.

Mr. Mason died at the age of 82; Mr. Lawrence of 65.—[Am. paper.

The Irish Patriot, Duffy.—The London Times says: "We are positively assured that Mr. Duffy, the great literary support of the Nation newspaper, has made an unqualified submission to the Government, and intends to plead guilty and throw himself upon the mercy of the Crown.

THE FRIEND.

HONOLULU, FEB. 1, 1849.

Conscience.

This monitor in man's bosom, prompts oft times to strange, worthy and noble deeds. If a man has done wrong, and has not "seared" his conscience, how restless he will be for days and months. He may try to quiet her by administering opiates, and endeavoring to forget what he has done, but all in vain; he finds no peace but in the exercise of sincere repentance and the repair of the wrong so far as it may be in his power.—The following we copy from an American paper. The letter originally appeared in the N. Y. Journal of Commerce.

"Mr. ———

"A long time ago I had occasion occasion to go into your office in W—— street. It was vacant, and your pocket-book lay in the draw exposed—the Devil prompted me, and I took it. I now return its contents to you, and may God forgive me.

"Yours, REPENTANCE.

"Albany, April 25, 1846."

The letter was mailed at Troy, and enclosed was one hundred dollars, which was stolen in May, 1840.

The next extract we copy from an old English periodical, and although the events occurred several years ago, yet the moral lesson which these facts inculcate, remains the same. Its re-publication may serve, perhaps, as a useful hint to some delinquent and less scrupulous merchant. In the commercial world, it is of the very first importance to maintain a high tone of mercantile integrity. This will be the result when merchants consult their consciences as well as their purses. *Honesty is the best policy*, in transactions commercial, political and religious.

A noble Deed.—A mercantile house in Birmingham, Eng., had lately the gratification of rrceiving a letter, of which the following is a copy, doing honor both to the individual and to his country.

"Philadelphia, Oct. 16, 1826.

"Messrs. ———: In the year 1816, your house shipped to ———, an invoice of hardware, which we refused to receive, in consequence of its coming out of the season for our sales. I have now some doubts whether there were sufficient grounds for refusing to receive them. I have, therefore, individually, remitted to you the first of a set of bills for exchange for £225, to meet the loss on the above goods. I am yours, &c.,

———."

Reader, trifle not with conscience. Heed her warnings, and attend to her suggestions. Does she tell thee, "Go discharge that long delayed obligation"? Obey instantly. Does she warn you in terms like these, "Beware how you overreach that man in trade"? Despise her not. Does she say, "Be strictly honest"? Hesitate not a moment to comply. Does she reprove thee for past dishonesty? Repent, and make restitution, so far as may be in thy power. Does she prompt thee to perform some noble act, or generous deed? Show thyself her obedient and manly servant. Art thou in doubt what course to take? Seek for information, and ever follow an enlightened conscience. Go where she directs, and happiness here and hereafter shall be thy everlasting portion. No words can fully describe the real dignity and genuine worth of a truly honest and conscientious man.

"The Almighty from his throne, on earth surveys
Nought greater than an HONEST, HUMBLE heart.
An humble heart His residence! pronounced
His second seat, and rival to the skies!"

Such an heart will be, in the highest and best sense, *conscientious*. Its value above rubies, its worth above price.

An Appeal from a Man-of-War's Fore Top.

U. S. Ship Dale, Jan. 16, 1849.

Mr. Editor,—If you consider the following lines worthy the space they will occupy in your paper, you will confer a favor by inserting them.

It is the aim and object of many good and worthy men to suppress the use of ardent spirits. Now I am one of a man-of-war's crew that visited your town on "liberty," as it is commonly called; and I intend to propose some measures which I think will aid the cause of temperance not a little in Honolulu. I could not find a single house where good refreshments were to be had, except it was a grog shop or a hotel. If there was a house kept on temperance principles and in good order, it would be more respectable, and in the end I think more profitable. Suppose they kept Ice Creams, Soda Water, Lemonade, Spruce Beer, Segars, and a great many other trifling "notions,"—and I would also recommend music. A sailor can dance and enjoy himself as well in his sober senses as when he has rum aboard. Some people have an idea that where a fiddle is, there, as a matter of course, must be rum; but I have been in places where men enjoyed themselves in eating, drinking and dancing, without there being a drop of "liquor" made use of. The expense of fitting up such a house could not be much, and I hope to hear of one being in existence soon. If ever I visit your port again, I shall not fail to pay it a visit.

Yours, FORE TOP.

(U. S. Ship Dale.)

If all seamen were of the character of the unknown writer of the foregoing, they would very soon work a revolution in sailor boarding houses. During the last fall shipping season, a house somewhat similar to the one recommended, was kept near the Seamen's Reading Room. It was well patronised, but the excellent keeper caught the gold fever and shut up shop. His success, we trust, will encourage some one else to undertake the enterprise. We would here remark that there have been found some difficulties in sustaining such houses in Honolulu, which do not exist elsewnere. Our shipping season continues only a part of the year.—Persons of the proper character for keepers could find more profitable employment in some other occupation.—It must also be remembered that the temperate, the sober, and the best of our seamen do not scatter broadcast their hard earned wages, like multitudes of their ship-mates, who will squander in a few hours or days the savings of a long cruise. These latter are the men who build rum mansions and gin palaces, and support a class of men whose regard for their customers commences and ends with their money.

Money is all.— When the drunkard has money in his pockot, he is "a jolly good fellow," and is accosted with "what do you want, *Sir*?" but when all his money is spent, he is "a brute," and, brutish like, is kicked into the gutter. Strange, that "free-born Britons" will endure such treatment.

Yes, "money is all." We copy these remarks from a late English paper. We would add, strange, too, that "free-born Americans" will endure such treatment! More strange that either "Britons or Americans," will condescend—will stoop to grow rich on the drunkard's earnings! But what is most strange of all, that men professing to have a regard for the good of society and the morals of the community, will advocate the license and sale of intoxicating liquors, except for medicinal purposes, considering the immense evils their use inflicts upon the world. Let us cheer up, and believe a better time is coming. Wise legislators are now advocating the passage of laws, making the vender of strong drinks responsible for the evils he inflicts, for example—support the wives and children of their ruined customers! This would be right and just.

A London Editor's Scribbling upon California.—In a late No. of the London Mail, we find a long article upon the Yankees' occupying California. The writer in a serio-jocose style makes some sensible remarks. He speaks of it as something very "amusing" that a nation like the Americans should be turned loose into such a huge, mysterious, unexplored region! The quicksilver mines he makes the matter of joke; in that he is probably rather hasty, but what will he say when he hears about digging up "ounces" and "pounds" of real solid gold 23 carats fine! He must not treat this as a

joke! Let him speak for himself, in the following extracts:

"There is really a great deal of interest to be acquired in the siezing of California, just taken by the U. S. We mean there is something very amusing in the spectacle of the most inquisitive and tenacious people in the world turned loose into a huge, mysterious, unexplored region. It is something beyond Denon and his brother *savants* in Egypt, and is almost equivalent to a meeting of the British Association in Japan, with the free run of the Islands. It is certain that at this moment no human being of Caucasian origin has any conception of what may be discoverable in the 10° of the globe's surface between the Rio del Norte and the N. Pacific Ocean, and it is almost as certain that in two year's time there will be a railroad right across the province, and boarding houses at every station. It is something in these dull times to have a *terra incognita* in store, with Americans for adventurers. * The work of discovery has already commenced. At present the great attraction seems rather in the bowels of the earth than on its surface, and hundreds of independent citizens are at work with pickaxes. Quicksilver is the main object of search, and we are told, in a semi-official and perfectly serious report, of one mine, about 13 miles from St. Francisco, 'so rich that a gentleman who surveyed it under directions of the government, was so much affected by salivation that his mouth was sore for a period of ten days after he had concluded the survey,' &c."

The Oahu Charity School.—The annual meeting of this Institution was held at Mr. Thompson's Auction Room, on Monday evening the 15th ultimo. The Treasurer presented his report, showing that after all demands were settled the sum of between $30 and $40 remained in his hands. Mr. Hatch presented his resignation as teacher, much to the regret of the friends of the School. A vote was unanimously passed, tendering the thanks of those present to Mr. Hatch for his zeal and fidelity, during the period which the school has been under his charge. Other important business was transacted relating to the school, and the following gentlemen were chosen officers for the current year, viz:

F. W. Thompson, Secretary.

S. Reynolds, Treasurer.

W. L. Lee,
R. W. Holt,
R. G. Davis,
J. Meek,
E. L. Hatch,
} Committee.

Before the meeting closed, rising $150 was subscribed for the support of the Institution.

The School was re-opened on Monday the 29th ultimo, Mr. H. H. French, Teacher.

Honolulu Seminary.—The examination of the 1st quarter of this interesting School took place on the morning of the 17th ult. It was our privilege to be present, and we take pleasure in bearing our testimony in favor of the Teacher's fidelity and the proficiency of the pupils. It was gratifying to witness so many parents and other spectators present. The Teacher practices in the management of the school, the principle of "self-government;" i. e., allowing the pupils to keep their own record respecting punctuality, tardiness, good, bad and indifferent recitations, good and bad behavior, etc. A weekly certificate is filled out and sent home for the parent's or guardian's inspection and signature. At fiirst view, this system might seem open to *gross* abuse on the pupil's part, but it must be remembered that a company of twenty or thirty scholars exercise a vigilant watch over each other, and wo betide the luckless tyro that should be discovered in making false entries!

At the close of the interesting exercises, some very appropriate remarks were offered by the Minister of Public Instruction, urging upon the pupils the sentiment "perseverantia vincit omnia," which were followed by some equally appropriate, by the British Consul General, inculcating the sentiment, that not only was it necessary to exercise *perseverance*, but also to cherish an inviolable regard for *truth*.

Foreign Intelligence.—*New Zealand.*—By the whale ship "Margaret" which left New Zealand Dec. 4, we have intelligence that there has been an earthquake at Port Nelson, which alarmed the people and did some damage. The occurrence led to some sparring between the editors of the "Nelson Examiner" and the "New Zealand Spectator." In concluding some remarks upon the earthquake, the editor of the Spectator observes, "We cannot conclude this hasty and imperfect sketch without acknowledging in this visitation the finger of God." This strain of remark wonderfully arouses the editor of the Examiner, and calls forth a severe rebuke. He thinks such remarks not calculated to do much harm, "otherwise than as they may contribute towards the sophistication of the public mind, and the perpetuation of vulgar and unworthy notions of God's providence." His brother editor draws a sigh of pity over the man who can discover in these events nothing but "the demonstrations of physical processes."—We go for the Spectator's idea!

☞ Capt. Fales, of the "Margaret," reports that he read in a New Zealand paper, the report of the loss of 17 whale ships in the month of May last, off the coast of Cochin China in a typhoon. We shall anxiously wait to receive further particulars of their loss, or a contradiction of the report.

California.—We would acknowledge a file of the "Californian & Star," per the Rhone, and learn that said paper is to close with 1848, and be followed by the "Alta California." From a private source we learn that several printing presses have already been ordered from the U. S., and as soon ar they arrive, we shall expect newspapers will be issued at every important place in the territory. Perhaps golden types may be employed, if not, the old fashioned will doubtless serve to make known to the reading world stories about gold, that will almost awake the Incas from their tombs, yet all be true,—for we have ceased to discredit any reports we may hear from California, about gold or gambling, money-making or murder. We regret to learn that C. E. Pickett, Esq., U. S. Indian Agent, should be charged with a crime of a dye so deep as that of murder. It may be recollected that he visited these Islands during the summer of 1847.

Oregon.—We would acknowledge a file of the "Spectator." In another part of our columns will be found an account of the whale ship "Maine," lost at the mouth of the Columbia. The Oregon people stoutly maintain that the mouth of said river is not difficult of navigation, yet one noble vessel after another is there wrecked. The authorities of the Territory should do all in their power to secure good pilots, and see that they are upon the ground. Perhaps a system of "lights" has been established. If not, might it not be well to have it done immediately?

Almost the entire male and a part of the female population of Oregon, has gone gold digging in California. The remainder seem determined to find the real gold nearer home. This is noble, but they will, if they will work their saw and grist mills, sow and reap their extensive wheat fields! Such will bring into the territory a better harvest of gold than going to California! But stop—what good will result from moralizing to the Oregonians, if people nearer home are uninfluenced.—Every body there, and here, and elsewhere, seem to be going to California.

News has been received from Tahiti, and several ports along the coast of S. America, that but the one idea of digging gold in California absorbs the public mind. If such excitement prevails here and in other parts of tne Pacific, will it not be even greater in the United States and Europe, when they trumpet through the public prints notices like the following, clipped from a late American paper:

☞ Profitable Digging.—Two Irish laborers who hired a lot of ground at Dahlonega, in the State of Georgia, to dig for gold, have realized $15,000 for their ore within four years.

We make no hesitation in publishing the statement that more than a score of diggers have each realised more than $15,000 during the last season, in California.

The Teetotaller's Budget.

Vain Boasters.—Of such that boast they can drink a great deal of wine and yet be sober, I would say, let them hearken to Seneca, who saith, "Let such men say that by drinking of poison they shall not die; and by taking of poppies they shall not sleep; and that by drinking of helleborus they shall not cast forth whatsoever is in the inward parts."—[Peter Martyr.

Water contains in it full thirty per cent. of *pure atmospheric air*, the very agent that nature is every moment employing to purify the blood. On the contrary, Alcohol contains in it fifty-two per cent. of *carbon*, the very element which nature is every moment laboring to throw out of the blood. He, therefore, who drinks pure water, drinks that which must purify the blood; while he who drinks alcoholic drinks, whether beer, wine or gin, drinks that which pollutes the blood.—[Anti-Bacchus.

Results of Unnatural Stimulation.—Persons addicted to drinking suffer in the intervals of sobriety, and near the return of their accustomed indulgence, a faintness and oppression, *circa præcordia*, which exceeds the ordinary patience of human nature to endure. As the liquor loses its stimulus, *the dose must be increased* to reach the same pitch of elevation or ease.—Paley.

Pledging not Slavery.—For a Christian man to say that he will not pledge himself to abstain from wines and strong drinks, because the pledge would *enslave* him, is to demonstrate that he is a slave already, and voluntarily submitting to the slavery of a taste for liquors which have done more to desolate the Christian church than Nero or Dioclesan.—[Rev. B. Parsons.

Aqua Vitæ is the name very absurdly given to alcohol, when used as an intoxicating beverage. It has been the *Aqua Mortis*, the water of death, to myriads of the human race; and will probably, ere long, destroy the native tribes of North America and Australia.—[Dr. Ure.

Partial Intoxication.—No man, says an eminent physician, who has taken only a single glass, has all his faculties in as perfect a state as the man who takes none.

Insidious Destruction.—Leaving drunkenness out of the question the frequent consumption of a small quantity of spirits gradually increased, is as surely *destructive of life* as more habitual intoxication; and therefore the gin-shops are spreading disease and death to a degree that is frightful.—[Dr. Gordon.

When is a Man Drunk?—The following is Cotton Mather's definition:

"Whenne a manne fallethe offe hisse beaste, or essayethe too light his pipe at ye pumpe, he is too bee esteemed drunkenne."

A Child's Logic.—'Papa, does the world turn round?' 'Yes, my dear, it turns on its axis once in twenty-four hours.' 'How often is that?' 'Why, once a-day.' 'Well I thought so, for Mr. ——— goes down to Bondsville most every day with a jug, and before he gets home, he has to stop and lay down beside the road, and hang on to the ground to keep him from falling off."

COMMERCIAL STATISTICS.

We are indebted to William Paty, Esq., Collector General of Customs, for the following Commercial Statistics for the year ending December 31, 1848.

Statement of Imports, Exports, Duties, etc., at the Port of Honolulu, Oahu, Hawaiian Islands, for the year ending December 31, 1848.

	Gross invoice value.	Gross duties.	Value exported.	Return duties.	Nett amounts	Nett duties.
Goods paying 5 pr. ct. duty,	538,731.47	26,941.49	11,531.73	460.32	527,199.74	26,481.17
Spirits, Wines etc.,	24,887.34	115,416.24	14,019.82	78,437.95	10,867.52	36,978.29
Imported by Consuls, Missions, etc., free of duty,	28,263.79				28,263.79	
By whale ships, under the $200 provision—Free,	13,736.13				13,736.13	
	605,618.73	142,357.73	25,551.55	78,898.27	580,067.18	63,459.46
Deduct spirits, wines, and goods, etc., now in bond, and which will probably be exported, estimated at			8,000.00	11,250.00	8,000.00	11,250.00
	$605,618.73	142,357.73	33,551.55	90,148.27	572,067.18	52,209.46

Imports *for the year ending December* 31, 1848, *amounting, as per table, to* $605,618.73—*were* Imported *from the following countries, viz:*—

United States,	$211,973.59
England,	138,177.14
Valparaiso,	129,410.25
China,	49,577.38
Manila,	19,970.27
Columbia River,	14,986.57
California,	12,788.25
Mazatlan and San Blas,	9,620.52
Central America,	4,547.20
France,	4,446.07
Tahiti,	3,907.44
Sitka,	2,395.50
Guymas, Christmas Island, Bremen Sea, etc.,	3,818.50
	$605,618.73

Exports* *for the year ending Dec'r* 31, 1848,

Native Produce—

Sugar,	499,533 lbs.,	valued at	$22,828.93
Molasses,	28,978 gals..	" "	7,369.53
Coffee,	58,065 lbs.,	" "	5,943.75
Salt,	4,570 bbls.,	" "	4,570.00
Goat skins,		" "	6,800.00
Hides,		" "	3,943.00
Cattle,		" "	900.00
Arrow Root, Tallow, Pulu, Mustard, Vegetables, etc., etc., etc.,			14,464.22
			$66,819.43

Foreign Goods—

Claiming drawback,	25,551.55
Not claiming drawback,	426,499.42
	$518,870.40

*This table is not pretended to be exact, but is offered as an approximation to the truth. Outward Manifests, for the first half of the year, (until the new Law came in force, July 17, 1848) did not give values, consequently they were only to be obtained by such estimate as could be made from a list of packages.

Gross Receipts at the Custom Houses of Oahu, Maui, Hawaii, and Kauai, for the Year ending December 31, 1848.

Cabin Boy's Locker.

Rope Yarns.

BY FLUKE.

'Brother, what is yarn?' said a little cherry-cheeked child to her brother Jack, just returned from sea.

'Come, I'll tell you,' said Jack, taking her on his knee; 'its a sailor's story, every word true, but you must not believe all of it.'

'And wont you tell me one?'

'Yes, certainly; but remember, the one I tell you is all true. We had been off soundings quite a spell, our steward was rather crabbed, and we had got out of eggs—'

'Eggs, brother—do you have eggs in ships?'

'Bless you, to be sure. Did you never hear of Mother Carey's Chickens? The eggs they lay are peelers, I tell you, and plenty enough in very high latitudes.'

'But where do the chickens come from, Jack?'

'Why, Cherry, they come over in great flocks, and light all around us.'

'Well, go on, Jack.'

'We'ed got out of eggs, as I told you, and to tell the truth our butter was rank—'

'Butter! butter!—'

'You put me out; don't interrupt Cherry; butter, to be sure. If you were to see our dinner table—'

'Table!' says Cherry, 'I didn't know—'

'No, poor child, of course; you never were at sea, and how should you know *anything*? I say we happened to be out of butter and eggs—and I'm sure there is no lie in that—when one morning we waked up with a whale alongside of us, a cosy old chap that was rather near sighted, and having left his specs at home, did not spy our craft till he was close aboard.'

'Whales don't wear spectacles,' whimpered Cherry.

'Not that I know of; however, we said good morning to the old fellow; and our captain, ses he, 'Matey, get out a boat, will you, and pay respects to that fellow.' Well, while they were getting ready, Jim Ratlin and myself leaped overboard and smam for the whale. The captain bawled after us, but we made as if we we were deaf. Our plan was to make a slip noose over his smeller and steer him into port, but as soon as we got snug aboard of him, the old fool began to scramble to windward; he sounded two or three times, but we held on to his ears: finally I got a chance, and jabbed my penknife into him, and after running a while, at last he turned up. We had lived upon him about a week, and had given up all hope of seeing our ship again, when one afternoon I was awakened with the cry of 'Whale ahoy!' 'Halloo!' 'Where yer bound?' 'Bound to ship, if we can find one.' 'Tackle on, then;' and they threw us a line. They soon came up with us, and you can judge of our surprise at finding that it was a boat from our own good ship Napoleon. They took us alongside and we commenced cutting in our whale, and we stowed down 160 barrels of as good oil as ever was put into a 'riah.' What do you think of that?'

Jack ended his yarn; but poor Cherry was fast asleep.—[Yankee Blade.

How to Prosper in Business.—In the first place make up your mind to accomplish whatever you undertake; decide upon some particular business—persevere in it. "All difficulties are overcome by diligence and assiduity."

Be not afraid to work with your hands, and diligently too. "A cat in gloves catches no mice."

Attend to your own business, and never trust it to another. "A pot that belongs to many is ill stirred and worse boiled."

Be frugal. "That which will not make a pot lid." Save the pence and the pounds will take care of themselves."

Be abstemious. "Who dainties love will beggars prove."

Rise early. "The sleeping fox catches no poultry." "Plough deep while sluggards sleep, and you shall have corn to sell and keep."

Treat every one with respect and civility. "Every thing is gained and nothing lost by courtesy." "Good manners ensure success."

Never anticipate wealth from any other source than labor. Especially never place dependence upon becoming the possessor of an inheritence. He who waits for dead mens' shoes may have to go a long time barefoot. "He who runs after a shadow has a wearisome race."

Above all things never despair. "God is where he was." "Heaven helps those who help themselves."

Follow implicitly these precepts, and nothing can hinder you from accumulating.—[Portland Tribune.

☞ Gen. Cass, has never tasted spirituous liquors in his life. From 1806 to the present time he has been intimately connected with public life, in the field, the camp, the court, and through every variety of social military and political relation, and yet Lewis Cass has never broken the abstemiousness of his life in this respect. Hence the vigor of his constitution and the clearness of his unclouded intellect.—[Am. paper.

Religion is the cement of civil union, and the essential support of legislation.

Some men seem most severe when they are in reality most affected, as snow turns to ice when on the point of melting.

A CARD.

The Pastor of the 2d Presbyterian Church in Honolulu, together with his Church Members, take this opportunity to express their gratitude to Foreign residents and others, who have very cheerfully contributed to the amount of 450 dollars to aid them in purchasing shingles for their meeting-house.—They had raised seven hundred dollars among themselves, when the recent epidemic broke forth among them and carried off a hundred of their number. Many of the survivors are sick, nigh unto death; and the church as a body are very much disheartened.

This timely aid has enabled them to purchase the shingles, for which they feel very grateful to their benefactors.

Sailed.

Jan. 4—Am whale ship Bingham, Scovell, for San Francisco

Jan. 12—American whale ship Nassau, Weeks, to cruise.

13.—American whale ship Josephine, Hedges. for Hongkong.

Jan. 18—U S sloop of war Dale, Commander Rudd, for San Francisco.

Am. merchant bark Mary, Parker, for San Francisco.

Am. whale ship Chandler Price, Taber, to cruise.

Jan. 19—Am. whale ship Mount Vernon, Covell, homeward bound.

Jan. 20.—Br. Hudson's Bay Co's bark Cowlitz, for London.

Notice to Lahaina Subscribers.

The Rev. Mr. Taylor will now act as Agent for the "Friend," at Lahaina, and the irregularity which has attended the forwarding of your papers, it is hoped, will no longer be experienced. Mr. T. will employ a carrier, who will deliver the paper.

History of the Hawaiian Islands:

Embracing their Antiquities, Mythology, Legends, Discovery by Europeans in the sixteenth century, re-discovery by Cook, with their Civil, Religious and Political History from the earliest traditionory period to the present time. By JAMES JACKSON JARVES. Third edition. For sale at Chaplain's Study. Price, $1,00.

Bibles! Bibles!!

At the study of the seamen's Chaplain a supply of Bibles and Testaments is constantly on hand and for sale. At present the assortment comprises those in the English, French, German, Spanish, Swedish, Portuguese, Dutch and Welsh languages.

☞ By a late arrival, some elegantly bound Family Bibles have been received from the depository of the American Bible Society, New York. Prices from $1 to $7

NOTICE.

To Seamen and Strangers.—*The Seamen's Chapel.* is open for Public Worship every Sabbath, at 11 o'clock, A. M., and 7½, P. M. Seats free.

Religious services will be held at the Vestry Room every Thursday evening. Usually, there will be a Lecture delivered.

The Seamen's Concert for Prayer is held at the Vestry Room the third Monday evening each month.

Seamen belonging to vessels (of all nations) visiting this port are invited to call at the Chaplain's Study, where they will be gratuitously supplied with copies of the Friend and other reading matter. It will be most convenient for the Chaplain to receive calls from Seamen between 2 and 4 o'clock, P. M.

Public services at the Native Churches, on the Sabbath, commence at 9½, A. M., and 2½ P. M.

The Seamen's Reading Room is open at all hours of the day. Strangers arriving and having late foreign papers, are respectfully invited to aid in keeping said room supplied with useful reading matter.

☞ Donations are respectfully solicited for the support of the Chaplaincy, and the publication of 'The Friend'. An annual report of all donations is made to the American Seamen's Friend Society, in New York. Any person contributing the sum of $50 is entitled to become a Life Director of the Society, and by $20 to become an Honorary Life Member.

SAMUEL C. DAMON,
Honolblu, April 1.—tf. Seamen's Chaplain.

Return Borrowed Books.

The subscriber desires all persons having books in their possession belonging to him, or the 'Seamen's Library to return them immediately. Some valuable books are missing.

☞ Some weeks since, the subscriber loaned the 'Memoirs of General M——' to some one in Honolulu, who has neglected to return the volumes. He is requested to so immediately.

SAMUEL C. DAMON,
Jan. 1, 1849. Seamen's Chaplain.

Lahaina Chaplaincy.

Divine service will be held in the Seamen's Chapel, every Sabbath, at 11 o'clock, A. M. Seamen, residents, and visiters, are kindly invited to attend.

The office sf the Chaplain is a short distance from the Chapel, on the same street towards, the sea. All persons wishing to converse with him, procure the Holy Scriptures, or religious publications, books, etc., will be always welcome, between the hours of 3 and 5 P. M.

T. E. TAYLOR, Chaplain.
Lahaina, July 29, 1848.

The Friend, Bound.

The Frieud, bound, for one, two, or more years, can be obtained at the Chaplain's Study. ☞ A few entire sets remain unsold. A deduction will be made from the subscription price to persons purchasing more than one volume.

*** Seumen will never be charged more than the actual cost of the publication and binding.

Just received and for Sale,

At the Chaplain's Study, a fresh supply of the publications of the American Tract Society.

Also—A complete sett of the "Christian Library," in 45 vols. Price, $25,00.

The Poet's Corner.

For the Friend.

PEACE, BE STILL.

When old ocean foams and rages,
And the tempest works its will;—
One soft phrase the war assuages,
Peace, be still!

When wild thoughts put forth their blossoms,
And the soul with passion fill,
Jesus whispers to our bosoms,
Peace, be still!

'Tis thy voice, O Lord of Ocean!
Soothes the storm, arrests the ill;
Fears are hushed in calm devotion,
Hearts lie still!

O when on death-beds we languish,
Let the same soft sounds distil;
Whispering to the soul's last anguish,
Peace, be still!

New London, Conn. F. M. C.

For the Friend.

THE TRIUMPHS OF THE GOSPEL.

Christ the Lord is King in Zion,
Bow, ye Nations, to his sway;
Israel's hope, and Judah's Lion,
From the strong shall take the prey;
Sons of Abraham,
Hail with joy the glorious day.

From the heathen's blood-stained temple,
Foil'd the powers of Hell take wing:
Moslems on their Koran trample,
And Immanuel's praises sing;
Turk and Pagan,
Own your Prophet, Priest and King.

Freed from Papal superstitions,
Burdens grevious to be borne,
Thousands o'er their lost conditions
With unfeigned sorrow mourn;
Search the Scriptures,
And to Christ for pardon turn.

Christ the Lord is King in Zion,
Christians tune your harps again;
The Root, the Branch, the Lamb, the Lion,
O'er the earth triumphant reign;
Hallelujah,
Jew and Gentile join the strain.

Pitcairn's Island, 1848. G. H. N.

Polynesian Sketches.

For the Friend.

A Sketch of Rarotonga, one of the Hervey Islands.

BY A FORMER RLSIDENT AT LAHAINA.

Departure from Sandwich Islands—Distant view of Rorotonga—Landing—Cordial reception by the Engtish Missionaries—Effects of the dreadful Hurricane in 1846—*Visit to Mr Pitman's Station—Decrease of Population—the Rev. Dr. Gill's missionary labors, &c.*

In continuing our "Polynesian Sketches," quite unexpectedly an interesting account has fallen under our inspection, of Dr. W——'s visit at Rarotonga, on his voyage to the United States. We are quite confident that it was never intended for publication, but on that very account the testimony herein given is the more valuable. Would that every reader of Herman Melville's caricatures and misrepresentations, (in his late work entitled "Omoo") of English Missionaries in the South Pacific, might glance an eye over this sketch of a writer's first impressions at Rarotonga:—

"We sailed from Niihau the last of the Sandwich Islands, on Friday P. M., the 26th of November, 1847. We have had pleasant breezes, but light and far to the eastward. It was impossible to reach Emeo and we could reach no island more eastward than Rarotonga. On the 24th of December, we discried the lofty outlines of Rorotonga, forty miles distant. As we approached, it became a beautiful object to look upon, rising sudden and lonely—green and umbrageous from the shore to the mountain top,—so pleasant and sunny did it appear, like an emerald set in silver on the bosom of the blue sea. Rarotonga is twenty miles in circumference, nearly round, and is so constructed, that it much resembles Tahiti. It is 3000 or 3500 feet high perhaps, of basaltic structure, and looks more like a great body of land that had been sunk, than like a distinct volcanic mass projecting from the bottom of the ocean. On inspecting it however, you see numerous signs of volcanic action on the sides of the island,—as if the lava and conglomerate had been forced above water or near its surface. The peaks projecting here and there, among the more round and rugged summits of the island, were barren, moss-grown, weather beaten and needle-shaped. Those and all other mountainous parts and vallies indicated the action of the elements from an unspeakable age of antiquity.

About one o'clock P. M. of the day that we made the island, the Captain took us all on shore, and would not entrust the steering oar to any hand but his own, as he said, if we should be upset in the surf, he should never forgive himself. There was a high breaker on the reef (which is only 200 or 300 feet from the beautiful broad shore of coral white sand) which partook of the magnificent and awfully grand, as the wind was high and the spray was driven by it wildly and furiously. We made the Rev. Mr. Pitman's station, at first on the N. E. side of the island, but as it was too rough to land there, we coasted the low cocoa-nut shore along for five miles—not more than a mile from it, rounding a point approached Mr. Buzicotts's station which is at the bottom of a small bay. This was not deep enough to break off the full force of the trade winds, but there was an excellent opening in the reef 200 feet wide, where, curious to *see* or *say*, not even a roller or rough wave was visible to impede our smooth, comfortible and safe landing. We were scarcely on shore before we were surrounded by the islanders who seized all the children in their arms to bear them where we might be going This they all objected to with one *accord*, and Maria with much *discord*, till they were set on their feet. They had felt pent up long enough, and now on land wished once more for liberty of spirits and limbs.

I had hoped to see the Rev. Mr. Buzicott, but learned that he had been gone to England nearly a twelve month. I knew him well by reputation, and was aware of his acquaintance with me in the same manner and had intended to lay claim to his hospitality for my family. The Rev. Mr. Gill however was at Mr. Buzicott's station. I had never heard particularly of him, but presuming on Anglo-Saxon, or rather on Christian civilization, I made good my way to his house and was received by him and his lady in the most cordial manner, and as an old acquaintance too,—for I found that they had for a long time heard of me, and were expecting me there on my passage home. Some ships had touched there a few days before, and had reported me soon to leave the Sandwich Islands, and that the "Atlantic" would probably touch at Rarotonga on her way home. In all my wanderings I have never known such a hearty and cordial hospitality—and all so simple and homelike too—as was extended to me and mine at Rarotonga. We spent one night on shore and embarked the following day at 4 P. M. During this time the enjoyment of a month was crowded into a day.

Soon after our arrival a messenger was despatched to Mr. Pitman's station with information of it. The next morning he came over to see us—just as Mr. Gill and myself were about mounting horses for a ride to his

station. I wished much to take a look at the island, and after Mr. Pitman had rested we started. The path led through a forest of mangoes, bread-fruit, papaia and banana, and a scene of other umbrageous evergreens. Sometimes we were completely shaded from the fierce rays of the sun,—in other places huge trees were lying prostrate near the path. The country appeared devastated so that the sun and trade winds had an opportunity to contest their powers together.—This devastation was occasioned by the hurricane in the spring of 1846. The effects of which were disastrous in every direction. Huge trees, five and six feet in diameter, torn up by the roots, cocoa-nut trees, with their thin heads torn off, were visible, and hundreds of cocoa-nut trees were pressed over many feet from their perpendicular position, and hundreds more were levelled to the ground and their heads taking a new turn upwards. Mr. Pitman told me this path was completely shaded before the gale, so that the sun barely reached the traveller on it,—now it was open long distances together. Though the island appeared charming to me, he said its beauties were all destroyed. He spoke in mournful tones on this subject.—Whole villages were swept away. The destruction of houses aad the great and beautiful churches at Mr. Buzicott's and Mr. Pitman's station, were painful to behold. New villages however had risen up, almost to appearances, by enchantment, but the natives of this island are very industrious, and it was pleasant to see what an amount of labor they had accomplished in eighteen months.

I made a hasty excursion to Mr. Pitman's station. His situation though pleasant, is not so pleasant as Mr. Gill's. Both Mr. and Mrs. P., are out of health, and Mr. P. looked to me too feeble to live very long, unless he should improve. He is lean to an appalling degree, but says he bears great exercise very well. His account of the hurricane and the escape of himself, wife and household, was extremely interesting, and thrilling. My hair stood erect at their perils. I was pleased with my whole visit at Rorotonga. We rested after a month spent on the ocean, and we could have been no better treated by our own fricnds. We shall look back long and often to this spot with real enjoyment and satisfactien.

Our stay was necessarily short, but I have not time to tell you now of my observations, though they were numcrous and mostly agreeable. One remarkable fact however, I will not omit to mention, and that is the rapid depopulation of the island, which operates in such a manner that the excess of marriageable males over the females of similar ages is nearly as two to one. The excess of deaths over all increase has been one hundred annually, for many years.—Twenty years ago the population of Rarotonga, exceeded 6000, now it falls short of 3000. * * *

Send to the Rev. Mr. Gill, by way of Tahiti, to the care of the English Consul, or some missionary at Tahiti. Vessels frequently pass from Tahiti to Rarotonga. Mr. G. is a fine fellow, and understands the objects of his business very well. He has a great deal to do—a Seminary of twenty young men under his care preparing for missionaries to the unchristianized islands of the Western Pacific,—a printing office and book bindry under his care—the mechanical arts to superintend and much other business which I have not time to name. He is well and thoroughly educated, possessing much urbanity of manners, well adapted for winning and retaining the love and confidence of the natives, which he appears to have secured. He wished much to receivc communications from the missionaries at the Sandwich Islands. He had received an Hawaiian Bible, &c., &c.

P. S. Since transcribing the foregoing for our columns, the following translation of a speech of a native of Rarotonga, has fallen under our observation, in glancing over a late file of the "Day Spring." We think its perusal, in this connection, cannot but prove interesting to many of our readers:—

CHANGE IN RAROTONGA.—"Not long ago we were savages, while you were a civilized people. We them took delight in killing each other, and cutting off each other's heads. As soon as a head was obtained, we left the trunk to twist about, and the head was presented as a sacrifice to our gods. It was the custom not only to kill each other, but our taste was so depraved, that we thought more of human than of any other flesh. When a group assembled, they would begin to talk among each other as to how they would gratify their horrid appetite for human flesh. One would propose that they should eat their own younger brothers; and those who were moved with compassion for them, would take them out of the way.—There seemed to be no principle of love; they were without natural affection.

Formerly we considered that we were in an isolated condition, that ours was the only land in the world, and that a little way off, the sky and seas met; and when the foreigners first came to us, we thought that they had broken through the sky to visit us.—When we observed their clothes, we thought it was their skin; but we thought it was a very convenient skin, for you had a number of holes where you could put away your property. When we looked at the legs of the foreigners with their large trowsers, we thought they were all afflicted with elephantiasis, and when we looked at their feet we supposed they were toeless. We did not know their feet were inside of their shocs. I have but little time left, but if I had a whole day I could make known some of the customs of the heathen.

When the word of God came, we were very much surprised when we listened to what the teachers told us. They spoke to us about salvation; and when they said, that those who believed in Christ would pass into everlasting life, while those who believed not would be lost, these seemed strange things to our ears. After a little time God was pleased to carry on his work with greater power, and those were conquered by the truth who were never conquered before. In the times of darkness, everything was bad; bad food, bad clothes, bad people, bad chiefs, and bad everything; but, in connection with the word of God, everything wears a different aspect, everything is ameliorated. My word of exhortation is, let us hold fast to that which will endure forever. Let us be concerned to send the gospel to lands still in darkness, that darkness may flee from them, as it fled from Rarotonga."

The Two Whalers:

OR THE ISLANDS WITH AND WITHOUT A BIBLE.

F——, Mass., July 3d.

In the year 1835, a whale-ship left the harbor which lies before my open window, for the Pacific Ocean. While sailing along one of the beautiful isles of that sea nearly under the equator, a large number of natives came off for the purpose of trade. No treachery was suspected, and all for a while went on amicably. But, upon a signal from a chief, the natives sprang for the harpoons, whale-spades, and other deadly weapons at hand, and a desperate contest immediately ensued. The captain was killed by a single, stroke of a whale spade; the first mate also soon after. The second mate jumped overboard and was killed in the water, and four seamen lost their lives. A part of the crew ran up the rlgging for security, and the rest into the forecastle. Among these last was a young man, the third mate, by the name of Jones, the only surviving officer. By his cool intrepidity and judgment, and after a long and fearful encounter, the ship was cleared, the chief killed and many of his companions, both of those on board and those who came alongside to aid in securing the ship. Mr. Jones now became their captain, buried the dead, dressed the wounded and made sail for the Sandwich Islands, from whence the ship was sent home to this port—the voyage, for the want of necessary officers, being completely broken up and thousands of dollars lost to owners and underwriters.

The blessed gospel had never shed its influence on this benighted island, and there was no power to weaken the ferocious passions of men. Had the gospel been there, how different would have been the scene.

Somewhere the survivors of that massacre must find an asylum. Weeping over their slain companions, in the anguish of their own wounds, and in the disappointment of their broken-up voyage, they must hasten somewhere for refuge. But what made their asylum at the Sandwich Islands so welcome and so desirable? The gospel was there! Missionary influence had made the island a fit and a safe resort. The downcast mariner knew that where the gospel banner waved there was safety.

Let us now contrast with the bloody outrage abovc recorded another scene. Some two years ago, another whale-ship sailed from this port. In pursuing her voyage she arrived among the Hervey Islands in the month of November last. In a dark and squally night, the strong current had carried the ship beyond the captain's reckoning, and she struck on a coral reef a few miles from the shore of the island of Aitutaki.—The masts were immediately cut away to relieve the ship, but she soon began to break to pieces, thumping on the reef with dreadful violence at every surge of the sea.—Here were all the horrors of shipwreck. The crew took to their two remaining boats—three out of five having been dashed in pieces,—saving nothing but the clothes they had on at the time the ship struck. They must perish if they remained with the ship. But what had they to expect from yonder island that opened on their vision as the morning broke? How many wrecked mariners, escaping from the fury of the sea, had fallen before the fury of savage men. But go

they must: and with anxious hearts they ply the oar to reach the land. Had the gospel gone there, or had it not? On that question hung their destiny. The affirmative would fill them with joy; the negative with despair! They reach the shore drenched with water, cold, fatigued, having lost their all. And what new disaster was to cap the climax of their woes!

But the gospel had been there! They were *not* to be the prey of ferocious men. Their first interview with the natives showed them they might dismiss all their fears. An English missionary was there, and he and the natives vied with each other in showing all hospitality and kindness to the distressed mariners. When the captain left the island the chiefs presented him a document written by one of their number in a fair hand. The same identical paper lies before me. It gives in their own language a brief account of the wreck. "Eta ma e te Bu o te pai," &c. On the other side is a translation by the missionary as follows:

'Sirs,—The owners of the ship wrecked. This is the likeness of the ship wrecked here. We rose early in the morning, and the ship was a total wreck. We went with all haste to the aid of the crew, and found that they were all safe. A part only of the cargo was lost, and a part we saved. This is the amount of what we saved: 251 casks of oil, &c. * * The word of the chiefs to the owners of the ship is finished. May you obtain salvation from the Lord.

Ko Valma Rangi.
Class Chiefs: Ko Tamatoa,
Ko Umkura,
Manaa Tangi.

Aitutaki, Dec. 17, 1857.'

Under what obligation were these suffering mariners to that wisdom and benevolence which had caused the gospel banner to wave on that island ere that ship went to pieces on its shores! What a fate might have been theirs had Zion never said—

'Wake isles of the South,
Your redemption is nigh!'

This island first received the gospel through the agency of Rev. John Williams, that burning and shining light among the Pacific Islands. Accompanied by two of the native teachers, whom the church at Riatea had chosen, Mr. Williams reached Aitutaki in Oct 1821.

A letter from the captain of the wrecked ship lies before me, from which I quote:

'During my short stay on the island, I stopped at the house of the English missionary, whose name is Henry Royle. His kindness toward me was more than I could reasonably have expected from any individual. As regards his christian character, he is a man truly devoted to God. The interest he manifested to those under his care is more than I have witnessed at any other missionary station. Every morning it was his practice to rise at daylight to teach his scholars. The natives are a kind and hospitable people. I have never seen any more so. They have a large stone church which will contain from eight hundred to one thousand people, and it was well filled every Sabbath while I was there. They have likewise a large stone school-house and about twenty-five stone dwelling houses. As regards civilization the natives of Aitutaki have made as great advancement as those of he Sandwich Islands.'

Who can contemplate the facts stated in referance to these two ships without seeing that the diffusion of the gospel among the pagan islands of the sea is an unspeakable blessing to the interests of navigation and commerce, in the protection of life and property, as well as in preparing immortal souls for the bliss of heaven.—*N. Y. Observer, July* 22, 1848.

Correspondence.

For the Friend.

New York, Aug. 15, 1848.

Just think of it! Two steamers, each of 2,250 tons burthen, are nearly completed, to run between New York and New Orleans, touching at Charleston and Havana in less than *seven* days. They are to be put on the route the 1st of October and two more are to be added by the 1st of April. The same company have a contract with the government to run steamers from Hevana to Chagres, on the Isthmus of Darien, twice a month. Thence the overland route to Panama on the Pacific is only twenty-eight miles; and from this place steamers of 1000 tons burthen under contract with the U. S. Government run regularly to Astoria.—From Panama to Valparaiso the British have a line of steamers, which with the American line make some 6000 miles of the Pacific coast thus navigated. Add to this that we have now weekly steamers from Europe, making the passage in less than two weeks; so that a passenger may leave Liverpool, and be at the mouth of the Columbia in less than six weeks! Don't this look like bringing the ends of the earth together!—And will it not be literally so when a steamer shall regularly ply between your Islands and the American coast. *Many shall run to and fro and knowledge shall be increased.* If not a fulfilment of this prophecy, these swift winged messengers certainly furnish a very good commentary.

The facilities for internal communication in this country are very rapid and easy. It is but four days to Cincinnati, five days to Chicago, and eight to St. Louis, from New York! While Portland, New Orleans, St Louis, Chicago, Buffalo, and all the prominent intermediate cities, are not one minute apart by our incomprehensible lightning communication! What are we coming to! or rather what is coming to us? I have just returned from a trip of 3500 miles through a portion of the great valley. O, the vallies covered over with corn, and the fields of wheat and oats stretching away and away like your own Pacific. Bread enough to feed the world: and a considerable portion of the old world is coming here to aid in producing and eating it. The current of immigration is unchecked, and will doubtless increase very much if the political agitations in Europe continue. We are getting however a better class of her population than formerly; viz: those who have industry, character, and a competence of property, together with some of the wealthy. Not a little money is brought over by them, and what is far better, good morals with a disposition to make good American citizens. Well, let them come—the poor and all—so that they are disposed to be and do right; we have room enough, and unwrought wealth enough to give them industrious habits, healthful morals, and a comfortable living.

Politically, just now the United States are what the sailors would call a chopped sea; and where we shall bring up on such a surface our shrewdest navigators find it impossible to tell. Gen. Taylor, Gen. Cass, Mr. Van Buren; which shall be the next President? is the question. Mr. Van Buren has just received a united nomination by an immense convention assembled at Buffalo, and will carry with him all who earnestly insist on *not another inch* of slave territory. He is understood now to be committed to this free principle, and multitudes of both political parties will give him their votes on this account. How the matter will go time must determine; while thousands of hearts pray that the burden of American slavery may be reduced to a point rather than enlarged an iota. Freedom for a world! J. S.

The Young Harpooner.—The Monthly Rose tells the following very good story of a young whaler in Nantucket. No wonder the hardy seamen of that island can handle a harpoon with such singular dexterity, when they begin to practice so early in life:—

"Passing through Nantucket last summer, we stopped at an out-of-the-way house for a glass of water. As we approached the half-open door, we beheld the following scene, which excited our risibility at the time to a considerable extent.

An urchin, some six years old, had fastened a fork to the end of a ball of yarn which his mother was holding, which he very dexterously aimed at an old black cat quietly dozing in the corner. Puss no sooner felt the sharp prick of the fork than she darted off in a jiffy, while the experimenter sung out in high glee, "*Pay out, mother, pay out, there she goes through the window.*"

A Student of the Bible.—Among distinguished Bible students may be mentioned the late venerable John Quincy Adams, who recently stated that ever since he was 30 years old, he has been accustomed, among the first things, to read the Bible every morning. With few interruptions, he has followed the practice over fifty years. He has read seven different versions, in the German, French, Greek and Latin languages, beside English translations.

☞Elihu Burritt, the learned blacksmith, we see, is addressing crowded audiences in Exeter Hall, London, on the Philosophy of Labor, and kindred subjects.

THE FRIEND.

HONOLULU, MARCH 1, 1849.

Books, Books.

The "Serampore" came freighted with some choice invoices of "books, that are books," from New York and Boston Publishers. Probably no vessel ever brought into the North Pacific a better selection of standard and miscellaneous literature. Such an intellectual banquet has long been desired, although the foreign community at the Islands was tolerably well supplied with intellectual nutriment before this arrived.—Those who haee and read good books, will ever be ready to increase their libraries. Sales, we are glad to learn, have been very good, and we hope book publishers will be induced hereafter to keep our market well supplied, not merely with ephemeral works and novels, but works of real value. Hitherto books, shop-worn and unsaleable in the United States, have been consigned to the Honolulu market, and the publishers did not probably realize their invoice-prices. When we have looked over catalogues of some former consignments of books, the thought has crossed our mind, that book merchants in the United States must think that English readers at the Sandwich Islands were peculiarly fond of treatises on the "swine," "canine," if not the "feline" species, for, in verity, works of this description have most abounded. If book publishers desire to sell such books in Polynesia, they should secure their translation into the Hawaiian, Marquesian, Tahitian, or Fejeean dialects. Anglo-Saxon mind is operative in these regions, and we want standard authors in English and American Literature. The book market in Honolulu is not extensive, yet should there be opened a depot for Standard, Historical, Legal, Theological, and Literary works, we believe it would return a handsome profit. There are not a few resident on our shores and to be found among the numerous visitors here, who can echo back the eloquent words of the lamented Channing: "God be thanked for books. They are the voices of the distant and the dead, and make us heirs of the spiritual life of past ages. Books are the true levellers. They give to all who will faithfully use them, the society, the spiritual presence, of the greatest of our race. No matter how poor I am—no matter though the prosperous of my own time will not enter my obscure dwelling. If the sacred writers will enter and take up their abode under my roof, if Milton will cross my threshold to sing to me of Paradise, and Shakespeare to open to me the worlds of imagination and the workings of the human heart, and Franklin to enrich me with his practical wisdom, I shall not pine for want of intellectual companionship, and I may become a cultivated man though excluded from what is called the best society in the place where I live."

☞ Strangers and visitors will find a choice collection of books at the Polynesian office, in Merchant street.

Our American "Exchanges."

Per "Serampore" we acknowledge files of newspapers from the following offices:—New York "Observer" and "Evangelist," Boston "Recorder," "Puritan," "Youth's Companion," "Wellspring," "Dayspring," "Congregational Visitor," "American Messenger," "New Orleans Presbyterian," "Missionary Chronicle," and "Herald," "Whalemen's Shipping List," and "Nantucket Inquirer," (2 copies.) In behalf of seamen, we would thank the publishers of the Boston "Recorder," "Youth Companpanion," and "Nantucket Inquirer," for having sent files of their papers, gratuitously for years, for the benefit of seamen visiting Honolulu. Speaking in behalf of hundreds and thousands of masters, officers and sailors, belonging to New Bedford, New London, and Sag Harbor, now abroad in the Pacific, multitudes of whom annually visit this port and Lahaina, we have a complaint against the various newspaper publishers in those ports (the publisher of the Shipping List excepted.) Some time ago we were accustomed to receive the New Bedford Mercury, and one other newspaper published there, but neither has come to hand for at least two years New London, and Sag Harbor publishers have never condescended to exchange with the "Friend," while the "clippings" from our humble sheet have been neither "few" nor "small," for their columns. As opportunity has offered, we have uniformly sent our paper to the offices of the several newspapers published in all the whaling ports of the United States. We presume no two copies of the Nantucket Inquirer are read by so many Nantucketmen, as the two sent to our office. New Bedford, New London, Martha's Vinyard, and Sag Harbor papers, would be read, (if sent) by very many belonging to those places, who are always anxious to obtain the latest intelligence from their friends and families. It is not so much on our own account that we complain of a want of editorial courtesy on the part of those publishers, as on account of their neighbors and fellow-townsmen, frequently calling at our office for "home" papers. It has not escaped our recolection that some years since, the editor of a New Bedford paper sent us word that he would send *his* paper to us, if he *could be assured* of a "quid pro quo." Now we do not pretend to place our "7 by 9" sheet upon a par with American mammoth weeklies and dailies, still we have the satisfaction of noticing that some of those whaling papers make not unfrequently about the same disposition of our "small fry" that a certain fish (the name of which is not unknown to New Bedford editors) made of the prophet Jonah.

☞ Exchange papers sent to our address, at the office of the Am. Seaman's Friend Society, No. 82, Wall street, New York, or Mission House, Boston, will be forwarded the earliest opportunity. Should any of our American exchanges, or subscribers, have occasion to complain, that our papers are irregularly received, they must bear in mind, that mail packets and steamers, do not, as yet, play upon the Pacific.

Decrease of Polynesian Races.

By the epidemics (whooping cough, measles and influenza), which have raged among the Hawaiians, during the last 12 months, it is estimated that not less than 10,000 have been swept away or about one tenth of the population. An account found in another part of our columns shows that at Rarotonga, in the South Pacific, a rapid decrease has been in progress for many years. Captain Jackson's Sketch of Strong's Island, published in our last number, showed that there a depopulation was in progress. The same melancholly fact has long been apparent at the Ladrone Islands. (See sketch in January No. of our paper.) We recently met with an intelligent young man, who had resided several months on the Gambier Islands. He remarked that depopulation there was fearfully rife. It is believed, that in no part of Polynesia, can the native tribe be referred to, that is now upon the increase. It has appeared to us, that, as yet, adequate causes for this general depopulation had not been assigned. Some of the causes which have been assigned, cannot be true, to the extent, which some have imagined, for it will be readily seen, by referring to the map, and statistics, that this depopulation is progressing, both where missionaries have labored, and where they have not; where there are Catholics, no less than where there are Protestant missionaries; where there are no foreigners, as well as where there are many. The increase of the Pitcairnians, stands most manifestly in striking contrast with the decrease of pure Polynesians.

CONTENTMENT.—Contentment produces, in some measure all those effects which the alchymist usually ascribes to what he calls the philosopher's stone; and if it does not bring riches, it does the same thing by banishing the desire of them. If it cannot remove the disquietudes arising from a man's mind, it makes him easy under them.

Pitcairn's Island.

From Captain Luce, ship "Margarett," we had obtained a few items of recent intelligence respecting the Pitcairnians, but we are glad to obtain something additional from Mr. Buffett (one of the three foreigners residing there), who came as passenger on board the "Dover," Captain Jeffery. At present the inhabitants enjoy remarkable health, and are generally prosperous. They number 147, the respective sexes about equally divided. During the last five years, only two cases of death have occurred, one of those was a small child, who died in consequence of a burn, while the other was a youth, whose death was the result of an injury received in his foot. The number of births during this period has been twenty-five, or one sixth of the entire population. Mr. Nobbs still officiates as school-teacher and conductor of their religious services. Nearly every family maintains family worship, and "grace is said" at their meals. The Pitcairnians are in the fullest sense of the term, Democratic Republicans. Females as well as males, all vote for Chief Magistrate, being entitled to exercise the elective franchise at the age of sixteen years! The current year, Mr. Simon Young is Chief Magistrate, and Arthur Quintal Chief Counsellor. When cases of difficulty arise, requiring an appeal to the goddess of justice, she presides over a regularly constituted court. Trial by jury, is by no means an unheard of method of deciding cases among the people of Pitcairn's Island. Pecuniary fines are the usual punishment inflicted.—From all we are able to learn from visitors, and a correspondence of some years with them, it is our full belief, that they are living as comfortably, quietly and peaceably, as the same number of people in any part of the world. We would call the attention of whalemen to the notice in another part of our columns.

Melancholly.—We regret to learn that on Monday morning, February 19th, three seamen belonging to the "E. Freith," took a ship's boat, and started, as is supposed for California. They supplied themselves with a compass, watch, clothing, bread, water, &c. Up to this date, nothing has been heard from them, except a boat under sail was reported the following day off Dimond Head. Serious fears may be entertained respecting their fate. Their names we learn to be, William Lapham, Wisconsin, John Gorman, an Irish lad, belonging to New York, and William Collier, New York.—The family of the latter, is reported to reside in Nassau street, near Fulton. Should we hear good or ill report, respecting them, it will be reported.

XXth Annual Report of Am. Seamen's Friend Society.

The twentieth anniversary of this Society, was celebrated in the Broadway Tabernacle, May 8th, 1848. From the report there presented, we learn that the Society was never more prosperous than at present. During the last year several new chaplains were commissioned to preach among seamen in foreign ports, viz., at Canton, China; Lahaina S. I.; Havana, Cuba; Marseilles and Bordeaux, France; while all their old chaplaincies have been sustained. The report also shows that more than ever is doing for seamen, at home. At New York, five Bethels are sustained, and at Boston four, while at every port, from Maine to New Orleans, the Bethel flag waves. At the principal points along the lakes and canals, Bethels have been established. Much is doing for seamen, in the way of Sailor's Homes. The amount of funds acknowledged by the Treasurer, is much larger than at any former annual meetings, being $24,179,74.

The Honolulu chaplaincy is one of the oldest on their list of foreign chaplaincies, having been established in 1843. It will be sixteen years the first of May ensuing, since the Rev. Mr. Diell landed at this port.

☞ For the information of seamen, we would give notice that, per "Serampore," a fresh supply of books has been received, for sale and gratuitous distribution. If any sailor leaves Honolulu, without a good supply of useful and entertaining reading, it will be because he does not call at the study of the Seamen's Chaplain. If any one will call belonging to a vessel lying "off and on," he can obtain a supply for the ship, as well as himself.

War Against the Grog Shops.—A woman in Cincinnati, whose husband was in the habit of drinking at a neighboring tavern and then coming home and abusing her, requested the landlord to give her husband no more drink. The landlord refused the woman's request; she followed her husband, and as he was in the act of drinking, made an assault upon the glasses, decanters, and other rum conveying devices. The landlord flew to the protection of his property, a crowd gathered around, sympathised with the woman, assaulted the house, gutted it completely, and then proceeded round to the destruction of other coffee houses in the city. By this time the police arrived and stopped the progress of temperance reform in Cincinnati, where, in a legal way, it seems to be most particularly needed.

A Motive to Virtue.—Allowing the performance of an honorable action to be attended with labor, the labor is soon over, but the honor is immortal: whereas, should even pleasure wait on the commission of what is dishonorable, the pleasure is soon gone, but the dishonor is eternal.

The Seamen's Friend.

Encouragement to Labor for Men-of-War's Men.

A Sweedish Sailor restores 700 Rix Dollars—Good effects of placing religions books on ship-board—Vessels of War shoutd be supplied with Chaplains—Ward-Room officers read the Episcopal Service, &c.

In the Appendix of the last Annual Report of the American Seaman's Friend Society we find the following statement:

G. A. S., is a native of Bjorneboro, Finland. He spent his early youth in that city in the employ of a merchant. Becoming unsteady and dishonest in his habits, he fled his country, and six years ago he was hunting along the docks of London for a sailor's berth in some vessel. He succeeded, and came to America, where he shipped in a U. States vessel bound to China and the Pacific Ocean. In the Chinese Sea he was sick both in body and mind. A fever had seized the former, while some words fitly spoked by a pious mariner had greatly affected the latter. On the way thence to the Sandwich Islands he read some of the volumes of the "Christian Library," by which his convictions for sin were increased. He arrived at Honolulu, and was conveyed to the hospital a wretched man. Here the Rev. Mr. Damon, the seaman's chaplain, made his acquaintance. * * *

Gradually his health returned; and about the 1st of April last he came to New York, and on Sabbath to the Floating Bethel, to hear from the Rev. Mr. Hedstrom words whereby he might be saved. * * *

He had saved his money, and now came up the question of making amends for the dishonest deeds in his native city. He went to his minister, and with him to the Sweedish Consul, through whom he got a draft for about seven hundred rix dollars. This he has sent to his mercantile employer, with penitent confession, to pay him principal and interest, and with the request that with the balance he will serve some others in the same manner. At the same time he wrote a letter to his relations, telling them the story of God's merciful dealings with him.

Glad are we to read so interesting an account of a sailor whose visit at Honolulu will not soon be forgotton by those who be came acquainted with him: twice glad to learn that he still maintains a consistent profession as a disciple of Christ; and thrice glad that he should embrace the earliest opportunity to make restitution to a defrauded employer. In doing this, he has done no more than his duty, yet under these circumstances it was a noble and praisworthy deed. He once asked our advice upon this very point, and it is a source of unfeigned joy, that our recommendation has not been disregarded.

A few additional facts may not be uninteresting respecting this conscientious Sweedish or Finnish sailor. He was discharged, at Honolulu, from the U. S. S. Constitution, in November 1845. At that time, neither the Surgeon of the Frigate or the Hospital Phy-

sician entertained any expectations that he could recover. At his own request he received the sacrament, and with the utmost calmness and christian composure awaited his end; but as stated in the above mentioned report, he gradually recovered. At one of our visits upon him, he referred to the circumstance that he had assumed a Purser's name, (a very common practice among men-of-war's men), and that he wished me to understand that "William Winson" was not his real name. From a brief record which we have preserved of that interview, we are able to inform our readers of his true name which corresponds with the initials at the commencement of the above extract. "November 26th, [1845.] About noon visited the Hospital,—saw the pious Sweedish sailor whose name I learned to be Gustavus Adolphas Silfversten, of Bjorneboro, in Finland. While there I met Captain Percival, who came to visit the same person. He has manifested, I am happy to learn a kind and benevolent feeling in regard to any of his men whenever they have been sick."

In the month of April, 1846, he made a public profession of his faith as a christian, at the Bethel Chapel in Honolulu. On his examination for church membership, when asked upon what he was building his christian hope he replied, in language we shall never forget: "*The foundation of my hope, is nothing which I have done, but simply the atoning merits of a Crucified Redeemer.*"

He left Honolulu in the following June on board the U. S. S. "Congress," but was subsequently transferred to the "Columbus," in which vessel he returned to the U. States. After he left Honolulu we received two interesting letters from him, and in other ways learned that he had not turned back, having once put his hand to the gospel-plough. In one of these letters now lying before us, he makes most grateful mention of his indebtedness to the kind treatment of the Hospital Physician. We refer to this fact to meet the reproachful remark, we have often heard made, that in the sailor there was no gratitude! We believe it is as unfounded, when made in regard to seamen, as any other equally large class of our fellow men.

Some one has remarked that "one fact is worth a thousand arguments." We doubt not a thousand good arguments might be adduced for vigorously laboring in behalf of seamen, yet there are some, whose minds are so prejudiced that they will not acknowledge that it does any good whatever, to preach to, and distribute good books among seamen. May not the minds of such persons be favorably affected by this fact, that a Sweedish sailor, on being converted embraces the earliest opportunity to restore 700 rix dollars to his mercantile employer and others, from whom he had wickedly taken the same several years previously. We confess that we are glad to publish a fact of this description for the consideration of those upon whose countenances might be seen the smile of incredulity, should it be announced in their hearing, that a sailor,—a man-of-war's man had become a converted man, and was now living a christian life.

Materials are at hand, which show abundantly, that other good results followed the efforts made for the moral and religious benefit of the ship's company of the "Constitution," when she sailed from the United States, having on board the Hon. Henry Wise and family, bound to Jio Janeiro, and from thence round the world. Some good remarks of Mrs. W. on the first Sabbath morning after the vessel left New York, had probably more influence than she could have imagined they would! The self-denying efforts of Lient—in maintaining the public reading of the Episcopal Service, were not without their good moral and religious effects! That "Christian Library," placed on board by the Rev. Mr. Parker of the Episcopal Floating Chapal, in New York, was profitably read by some whom he may never meet until the Judgment Day! That "pious marine" labored not in vain, and will undoubtedly enjoy the sweet consciousness of having done his duty as a christian, when some of his opposers and vilifiers are exercising the deepest regret for their wicked conduct! It was surely to be deplored, that a ship's company of about 500 souls, should leave the shores of Christian America, to circumnavigate the globe, without a Chaplain on board, and that too, when the vessel was entitled to the services of a minister of the gospel, and moreover when one was actually offered, but a naturalist taken in his place. It may be asked how this could have been? It may be answered, upon good authority, because, in the opinion of him, upon whom devolved the responsibility of deciding between the services of a naturalist and a chaplain, it was judged that the professional services of a chaplain, would reflect less honor upon the country, than those of a naturalist! For the honor of a great and christian nation like the United States, we hope a similar decision, may never be made, and if made, never allowed to be carried into execution, thereby depriving 500 American citizens of the services of a gospel minister during a three year's cruise, around the world. In one other instance, has an United States Frigate, cruised in the Pacific, during the last seven years, having no chaplain on board, but for the honor of the Navy, the "Ward-Room of that Frigate furnished those who regularly read the Episcopal Service," and one of those officers is about to be admitted to "holy orders" in the Episcopal Church of the United States.

P. S. In perusing a file of the Boston Recorder, recently received, we find a communication from the Rev. Mr. Turnbull, Seaman's Chaplain at Valparaiso. In referring to the influence of good books he remarks as follows:—

"A most interesting case on ship-board has recently come to my knowledge. When the United States frigate Constitution sailed three years ago, the Rev. Mr. Parker, Seaman's Chaplain in New York, placed on board of her, a set of the Christian Library published by the American Tract Society. It contains forty-five volumes and is sold at $20, including the case. During the voyage, a marine read some of them, and by the aid of God's grace, good old Dr. Doddridge spoke to his soul. He listened, believed in Jesus Christ and became converted. On board of this 'man-of-war' he stood up alone on the Lord's side. He was derided and slandered, but all this did not prevent him from a full and resolute discharge of his duty.

At that time there was no chaplain on board, an omission reprehensible in any administration, which allows a national ship with five hundred men to leave port on a protracted absence, without any spiritual adviser to comfort the sick and dying. The marine above alluded to, finding no chaplain in the Constitution visited the sick ward and attempted conversation with the patients. The well would jeer, and often the sick would utter rude remarks and unkindly repulse him. But he was not to be driven from duty; his visits were daily repeated and he tried to urge upon all the obligations of the gospel. The Constitution returned home, and I have lost trace of the man, but not of his labors.

The officers of the 'Columbus' recently gave her men liberty to come on shore at this port, and a Swede, speaking the Canaan language called on me. He had been told that I was here. When I inquired how and where he became acquainted with the Savior, he replied 'on board of the Constitution. He was very ill,' he said, 'and expected to die.' A marine whom he accurately described, had conversation with him about his soul and his salvation. He felt ashamed when he first spoke with him, but now he is bold and fearless for God. Difficult as it is to live the christian life on ship-board, yet it can be done. Of this he is certain, for he has tried it and trusts he has been successful. Is there not encouragement for the continued distribution of these little messengers of truth and life?"

Loss of the Whale Ship Cassander, *of Providence, by Fire, at Sea, and the sufferings of her Crew in the Boats.*—The ship Cassander, Henry Winslow, master, sailed from Providence on the 19th November, 1847, on a whaling cruise. Nothing occurred worthy of remark until the 1st of May, 1848; between 4 and 5 A. M., it blowing a moderate gale of wind from the northwest at the time the alarming cry of "fire" was heard. All hands were instantly on deck,

and it was soon discovered the fire was in the lower hold, apparently near the foremast, where four barrels of tar had been stowed; it was also discovered that two of the crew—negroes from the Coast of Africa—had jumped overboard; I hove a rope's end to one of them, but he refused to take it, and sunk out of sight. Orders were instantly given, and every exertion made to extinguish the fire, and save the ship, but the fire being in the lower hold, and the smoke so dense and the flames so rapid, that no one could enter the between decks; our efforts proved unavailing.

Attempts were then made to procure bread and water, but the smoke in the steerage was so dense as to prevent us—this led us to believe the ship had been fired aft as well as forward. Three boats were lowered, with the customary boat kegs of water, a small quantity of bread, some raw meat, taken from the harness cask, my nautical instruments, and a few articles of clothing.

As every exertion had been made to arrest the progress of the fire without avail, it was thought most prudent to leave the ship to her fate and make the best of our way towards land.

Shortly after leaving the ship, the second mate's boat picked ap one of the Africans who had jumped overboard when the alarm of fire was first given. He afterwards confessed that his companion had fired the ship, and then, plunging a knife into his side, and jumping overboard, said that he was his accomplice, he gave as their reason for acting as they did, their fears that they would be sold as slaves at the first port we entered. I hope it is not necessary for me to say their fears were without the shadow of a foundation.

Being now daylight, it was found that all the ship's company, except the African, were in the three boats; in all twenty-three souls. We found our supplies to be two boat-kegs and one teakettle, in all about ten gallons of water, about fifteen pounds of bread, and some raw meat. According to the previous day's reckoning, we were in lat. 34 deg. 38 min. south, lon. 45 west—four hundred miles from the nearest land. No one who has never been in a similar situation can appreciate the sufferings that succeeded. Confined to one gill of water and a small portion of bread a day, in bad weather, and obliged to pull against the wind, we soon became exhausted, and had to trust to our sails, heading as nearly towards the land as we could.

Nothing of importance occurred until the morning of the 5th, [lat. 32, lon. 47,] when, about 10 A. M., we discovered a sail; all hands took to the oars, and after pulling and making signals of distress for five hours, we came up with her, and found her to be a Spanish brig, 100 days from Barcelona, bound to Montevideo. He made every effort to get away from us; the mate's boat came up with her first, the captain would not let him come along side, but gave him a rope and towed him some distance astern. I then came alongside, and through an interpreter stated my distressed circumstances, and asked permission for me and my crew to come on board—he refused most positively. I then begged him to take us to Montevideo or St. Catharine's or one or two day's sail towards land. He refused. I asked him to let us come on board one night then, that we might get some sleep and rest to enable us to bear the fatigue and hardship consequent on a renewal of our voyage. This also he refused. He gave us some bread, wine and water, and then passed a pencil and a piece of paper down to me to write the name of my ship that he might report me. I refused to write it unless he permitted me to come on board; and, against his express wishes, jumping into the main chains I went on board. He asked me if he could do any thing more for me. I told him nothing but take us on board. This of course he refused, and I left him. Thank God, such instances of "man's inhumanity to man," are rare, very rare, among seafaring men, and Capt. Dormick of the brig "Alercidita," will have the satisfaction of knowing he stands "alone in his glory."

We again made sail and proceeded, without accident, until the night of the 6th, when it commenced blowing very heavy in squalls; hove the boats to until daylight, by making a line fast to the oars and paying them out ahead. At daylight again made sail, until 11 o'clock, when it began to blow a heavy gale from N. N. E., and we were compelled to heave to. About 4 P. M. my boat was swamped, and we were left to the mercy of the sea. We supported ourselves by the capsized boat until the two remaining boats came to our relief, when all, eight in number were saved. By this accident I lost my nautical instruments and all my water.

The two remaining boats now contained 22 persons, and their gunwales were not more than six or eight inches out of water. In this situation we passed the night; nothing was heard save the awful roaring of the tempest, and occasionally the voices of some of the officers and crew offering up prayer to the Almighty Ruler of wind and wave for their safety. He heard our prayers. In the morning the wind moderated, and the sea was beaten down by a heavy shower of rain. From this time we had fine weather, and proceeded toward the land, where we arrived at 5 P. M., 10th of May, on the beach near Conventas, in the province of St. Catharines, Brazil, nearly exhausted, having no water and very little food left.

The mate's boat was capsized in the surf on landing, and Barney Reed a boat steerer, was drowned, he being so weak as to be unable to extracate himself from the surf.—Near where we landed we discovered a house, at which we were furnished with water and provisions.

Two days after I left for St. Catharines, to give notice to, and ask assistance from the U. S. Consul there. Shortly after I left, the negro either deserted or was stolen; most probably he met the latter fate, his fears of which were the cause of so much suffering.

I arrived at St. Catharines on the 19th—the Consul procured a vessel, with which I went back and met the crew at a place called Laguna, forty-five miles from where I landed, and sixty from St. Catharines.

I shall never be able to thank sufficiently the Americans in St. Catharines, particularly Captain J. R. Malcolm, R. S. Cathcart, E. N. Jefferson, E. P. Mosher, and Mr. W. Hammel, for their kindness and the assistance they afforded me, both in St. Catharines and to enable me to get down to Rio. I am also under great obligations to Messrs. Maxwell, Wright & Co., of Rio, and Capt. John J. Jackson, of the bark W. H. D. C. Wright, for the services they rendered, and the attention they paid me.

P. S.—In Rio, I was told by Lieut. Commanding Tilton, of the U. S. brig Perry, that the Alercidita had arrived at Montevideo and that Capt. Dormick reported to him having fallen in with us; he said he offered to take us on board and carry us with him to Montevideo, but that we refused, preferring to remain in the boats. This I pronounce to be utterly false. — *Whalemen's Shipping List, Sept.* 5, 1848.

Daniel Webster's Opinion of New Mexico.—New Mexico is secluded—isolated,—a place by itself,—in the midst and at the foot of vast mountains, five hundred miles from the settled part of Texas, and as far from any where else! It does not belong any where! It has no *belongiugs* about it! At this moment it is absolutely more retired and shut out from communication with the civilized world, than the Sandwich Islands or other Islands of the Pacific Sea. In seclusion and remoteness New Mexico may press hard on the character and condition of Typee. And its people are infinitely less elevated, in morals and in condition, than the people of the Sandwich Islands. We had much better have Senators from Oahu. Far less intelligent are they than the better class of our Indian neighbors. Commend me to the Cherokees,—to the Choctaws,—if you please, speak of the Pawnees—of the Snakes—the Flatfeet—of anything but the *Diggin* Indians, and I will be satisfied not to take the people of New Mexico. Have they any notion of our institutions,—or of *any* free institutions? Not the slightest! Not the slightest on earth! When the question is asked—what will be their Constitution,—it is farcical to talk of such people making a Constitution tor themselves. They do not know the meaning of the term—they do not know its import. They know nothing at all about it; and I can tell you, Sir, that when they are made a State, such a Constitution as the Executive power of this government may think fit to send them, will be sent and will be adopted. The Constitution of our *fellow citizens* of New Mexico, will be framed in the city of Washington!—*Speech in U. S. Senate March* 23, 1848.

Franklin's Wife.—When Dr. Franklin's mother-in-law first discovered that the young man had a hankering for her daughter, the good old lady said, she did not know so well about giving her daughter to a printer. There were already two printing offices in the United States, and she was not certain the country would support them. It was plain that young Franklin would depend for the support of his family on the profits of a third, and this was rather a doubtful chance. If such an objection was urged to a would-be-son-in-law, when there were but two printing offices in the United States, how can a printer get a wife now when the number is near two thousand?

Nantucket Fishermen.—The Nantucket Inquirer states that the cod fishermen of that Island have thus far done grandly. The schooner Luraua has arrived with 39,000 fish, and the schr. Oneco is hourly expected with 48,500.

Hawaiian Bible Society.

Mrs. Rebecca Johnstone, constituted a Life Member, by a friend; (the proceeds to be devoted to the purchase of Portuguese Bibles, for seamen.) $10,00.

Miss Mary Hubbard Turrill, a Life Member, by relative in the U. States. $10,00.

Master Frederick Turrill, Life Member, by his parents. $10,00.

Miss Mary Aletta Paris, Life Member, by her father. $10,00.

DIED.

November 14th, 1848, on the coast of Chile, Edward Morton fell from the fore-top-sail-yard of the ship 'John Coggeshall', of New Bedford, and struck on deck which killed him instantly. He belonged in or near Boston, and was about 19 years of age. He was a smart and promising young man, and much esteemed by all hands on board the ship.

We copy the above from the last Polynesian, but we have, since the publication of that paper learned that Morton's true name was Edward Douglass, belonging to Amherst, Mass.—We obtained this fact from a shipmate, Henry Metcalf, belonging to Northampton, Mass., who came out in the "Warren."

Killed, Oct, 24, 1848, James Blackie, Aberdeen, Scotland, by falling from fore top-mast-cross-trees, of Margaret Scott.—Foremast mand

Capt. Nash, master of bark Prudent, reports that on his passage out, while in north latitude 39 deg., west lon. 41, a foremast hand, by the name of M. Josa, fell overboard in the night, and nothing was either seen or heard from him. A boat was lowered in vain.

In Honolulu, Monday morning, 26th ult, Mr. Alexander Smith. He has resided in Honolulu near 30 years, having come out in the brig which brought out the first missionaries to these Islands. He originally belonged to Marblehead, Mass.

At Makawao, Maui, January 21, 1849, Mary Cummings, adopted daughter of Wm. McLane Esq, and wife of Thomas Cummings, aged 17 years and 10 months. This young wife and mother was amiable, intelligent, faithful, and exemplary; a blessing to her family and friends during her brief life. She died sustained by the consolations and hopes of the gospel of Christ, leaving to her afflicted friends the sweet solace of believing thut she has gone to be with the Lord, in whom she confided in life and in death. "Blessed are the dead who die in the Lord." Com.

MARINE JOURNAL.

PORT OF HONOLULU.

Arrived.

Jan. 27.—Peruvian brig Pacifico, Hooper, 21 days from San Francisco.

28 —Am. brig Sabine, Goodwin, from Monterey.

29.—Am. whale ship Margaret, Fales, of Newport, 56 days from New Zealand; 7 months out, clean.

31.—Am. merchant ship Serampore, Hastings, 154 days fm Boston, with mdze. Messrs. Everett & Co.

Feb. 1.—Am. w. s. Margaret Scott, Luce, 14 mos. 100 s. o. 200 w. o.

Feb. 5.—Am, schr. Honolulu, Newell, fm. San Francisco.

7.—British H. Bay Co's bark Columbia, fm. England.

Feb. 13.—Am. wh. sh. Isaac Hicks, Rice, N. London.

—Am. wh. bark Elizabeth Frith, of Sag Harbor·

15.—Am. mer. bark Auckland, Jennings, 144 days from Boston, with mdze. to S H. Williams & Co.

Feb. 22.—Am. w. sh. John Coggeshall, Luce, 15 months out, 460 sperm, 120 whale.

SPOKEN,

By ship 'John Coggeshall,' Capt. Luce, on the Off-Shore Ground, Jan· 22, 1849, ship Roscoe, McCleave, of New Bedford, 15 months out, with 1,100 bbls. of sperm oil; Jan. 30th, ship Susan, Ray, of Nantucket, 26 months out, with 700 bbls sperm oil—had not taken a whale for five months.

By ship 'Abm. H. Howland', Capt. Fisher, Dec. 20, '48, ship Commodore Morris, of Falmouth, 41 months out, 2,200 sperm; Jan. 8, '49, bark Sappho, of New Bedford, 6 months out, 30 bbls sperm; Jan. 10, bark China, of New Bedford, 30 months out, 1,900 bbls. sperm; same date, ship Lion, of Providence, 40 months out, 2,000 bbls. sperm; Jan. 12, ship Charles Phelps, of Stonington. 19 months out, 1,500 bbls. sperm and whale; Feb. 5, ship Herald 2nd, of New Bedford, 15 months out, 150 bbls. sperm, 250 bbls. whale—bound into port. Desdamona, 26 mos out, 1800 sp; Virginia, 16 mos out, 400 sp; Golconda, 17 mos out, 550 sp; Mary, 15 mos out, 100 sp; Sparton, 15 mos out, 200 sp; Autumn, 33 mos out, 900 sp; Hilander, 3o mos out, 800 sp, Fellons, 450 sp and wh; Canton, 29 mos out, 1800 wh, 400 sp; Malta, 16 mos out, 400 sp and 100 wh.

Capt Hastings, Serampore, roports Nov 24, he spoke whale ship Citizen, Lansing, off east end Staten Land, bound hsme. Also, Dec 18, whale ship Ploughby, oil not stated.

By Capt Richard Luce, Jr., master of ship Margaret Scott,—Coast of Chile, Oct. 20, '48, ship Niger, Gray, 4 mos. 80 s. o.; ship Vineyard, Coon, 12 mos. 750 s. o. 200 w. o.; Nov., ship Fabius, Smith, 2,600, home; heard from, in Nov., ship Commodore Morris, Jones, 38 mos. 2,100 s. o.; barque Russel, Morse, full, 2,400 s. o.; Nov. 29, ship John Coggeshall, Luce, 150 s. o. 100 w. o.; Dec. 6, ship Harbinger, Fisher, 6 mos. 60 s. o.; ship Isaac Hicks, Rice, clean, Sandwich Islands direct; Dec. 8, ship Emily Morgan, Ewer, nothing since leaving S. Islands, bound to the coast of Peru sperm whaling; Dec. 20, lat. 20 S , lon. 84 W., ship Leonidas, Swift, of N. B., 38 mos. 700 s. o., who reports off Callao, ship China, Fisher, 27 mos. 1.700 s. o.; barque Smyrna, Hilmore, 38 mos. 1,200 s. o., had lost his 2nd officer, Mr. Norton of Edgartown, who died 36 hours after he was taken; barque Peru, Fisher, 16 mos. 400 s. o.; Highlander of Mystic, 40 mos. 1,000 s. o.; the above is I believe to be depended upon.

On the 22nd of October, a man named James H. Blakey, of Edinburgh, Scotland, was killed instantly by falling from the fore-top-mast crosstres of the 'Margaret Scott'.

Sailed.

Feb. 6.—Hawaiian schr. Spy, Cortis, for California.
Jan. 28.—Am. merchant ship Rhone, Hill, for Hongkong.
Feb. 3—Hawaiian schr. Julian, Moran, for China
5.—Peruvian brig Pacifico, Swain, for China.
—French wh. sh. Gustave, to cruise.
6.—Bark Connecticut, Penhallow, for Valparaiso.
9.—French schr. Sophia, for San Francisco.
10.—Am. schr. Honolulu, Newell, for China.
Feb. 13.—Peruvian brig Eliza, for San Francisco.
—Am wh sh Margaret, Fales, to cruise.
—Am wh sh Margaret Scott, Luce, to cruise.
16.—Am mer bark Auckland, Jennings, for San Francisco.

PORT OF LAHAINA.

Arrived.

Feb. 4.—Am. w. sh. Geo. Washington. Gibbs, of Warham, 14 1-2 mos. out, 260 s. o. 1,050 w. o. 13,000 lbs. bone.

—Am. w. sh. Washington, Palmer, of New Bedford, 16 mos out, 80 sp. 900 wh. 1,000 lbs bone.

Feb. 8.—Am wh sh India, Swift, N. Bedford, 6 mos. out 100 sperm.

9.—Am wh sh Dover, Jeffery, New London, 7 mos. out, 20 sp. 150 wh. and 1,000 lbs. bone.

—Am wh sh Benj. Morgan, Chapel, New London, 6 mos. out, 60 sp., 300 wh., 2,000 lbs. bone.

Feb. 17.—Am. w. ship Tobacco Plant, Allen, New Bedford, 29 months out, 320 bbls. sperm.

20.—Am w. ship Romulus, Hull, Mystic, 6 months out, 1 sperm whale and 1 right whale.

—Am. w. ship Abm. H. Howland, Fisher, 6 1-2 months out, 25 bbls. sperm.

New Bedford Oil Market.

Sept 4,—Sperm, 93c, unbleachdd winter do., $1,10, bleach'd do. $1,15. Whale, N. W., 34c to 35c. Whale bone, 24c cwt.

Information for Whalemen.

The subscriber would respectfully give the following notice for the information of whaleships, cruising in the Pacific. Recruits can be obtained at Pitcairn's Island, for at least twenty-five ships, at about the following prices:—

Yams, per barrel,	$2,00
Sweet Potatoes "	2,00
Irish " "	3,00
Onions "	3,00
Limes "	2,00
Lime Juice, per gal,	33
Cocoa Nuts, per hundred,	2,00
Oranges, "	1,oo
Fowls, per doz.,	3,00

In exchange, the inhabitants are ordinarily ready to take white and blue drilling, at from 20 to 25 c per yard; and calicoes from 15 to 20c per yard. They are usually in want of soap, oil, check shirts, powder, percussion caps, old lead, carpenter's tools, &c.

The best season for furnishing yams, is from August to January; Sweet Potatoes, throughout the year; Irish Potatoes, from December to February, and July to September, (two seasons). JOHN BUFFETT.

Honolulu, Feb. 23, 1849. tf

D'Aubigne's History of the Reformation, in 4 vols.

A few copies of this interesting work, elegantly bound in cloth, are for sale at the Study of the Seamen's Chaplain.

This edition is prefaced with the following notice by the author:—

"I have revised this translation line by line, and word by word. It is the only one which I have corrected.

"Signed, J. H. MERLE D'AUBIGNE."

Bibles and Testaments.

A fresh supply per "Serampore." At the study of the Seamen's Chaplain a supply of Bibles and Testaments is constantly on hand and for sale. At present the assortment comprises those in the English, French, German, Spanish, Sweedish. Portuguese and Dutch languages.

March 1, 1848. tf

The Friend sent Abroad.

Any person, by paying the subscription price of the Friend, ($1,50) in advance, can have the paper forwarded to any part of England or the United States, by the earliest opportunity. tf

NOTICE.

To SEAMEN AND STRANGERS.—*The Seamen's Chapel.* is open for Public Worship every Sabbath, at 11 o'clock, A. M., and 7½, P. M. SEATS FREE.

Religious services will be held at the Vestry Room every Thursday evening. Usually, there will be a Lecture delivered.

The Seamen's Concert for Prayer is held at the Vestry Room the third Monday evening each month.

Seamen belonging to vessels (of all nations) visiting this port are invited to call at the Chaplain's Study, where they will be gratuitously supplied with copies of the Friend and other reading matter. It will be most convenient for the Chaplain to receive calls from Seamen between 2 and 4 o'clock, P. M.

Public services at the Native Churches, on the Sabbath, commence at 9½, A. M., and 2½ P. M.

The Seamen's Reading Room is open at all hours of the day. Strangers arriving and having late foreign papers, are respectfully invited to aid in keeping said room supplied with useful reading matter.

☞ Donations are respectfully solicited for the support of the Chaplaincy, and the publication of 'The Friend'. An anuual report of all donations is made to the American Seamen's Friend Society, in New York. Any person contributing the sum of $50 is entitled to become a Life Director of the Society, and by $20 to become an Honorary Life Member.

SAMUEL C. DAMON,
Honolblu, April 1.—tf. Seamen's Chaplain.

Return Borrowed Books.

The subscriber desires all persons having books in their possession belonging to him, or the 'Seamen's Library to return them immediately. Some valuable books are missing.

☞ Some weeks since, the subscriber loaned the 'Memoirs of General M——' to some one in Honolulu, who has neglected to return the volumes. He is requested to so immediately. SAMUEL C. DAMON,

Jan. 1, 1849. Seamen's Chaplain.

Lahaina Chaplaincy.

Divine service will be held in the Seamen's Chapel, every Sabbath, at 11 o'clock, A. M. Seamen, residents, and visiters, are kindly invited to attend.

The office of the Chaplain is a short distance from the Chapel, on the same street towards, the sea. All persons wishing to converse with him, procure the Holy Scriptures, or religious publications, books, etc., will be always welcome, between the hours of 3 and 5 P. M.

T. E. TAYLOR, Chaplain.

Lahaina, July 29, 1848.

The Friend, Bound.

The Friend, bound, for one, two, or more years, can be obtained at the Chaplain's Study. ☞ A few entire sets remain unsold. A deduction will be made from the subscription price to persons purchasing more than one volume.

*** Seumen will never be charged more than the actual cost of the publication snd binding.

Notice to Lahaina Subscribers.

The REV. MR. TAYLOR will now act as Agent for the "Friend," at Lahaina, and the irregularity which has attended the forwarding of your papers, it is hoped, will no longer be experienced. Mr. T. will employ a carrier, who will deliver the paper.

History of the Hawaiian Islands:

Embracing their Antiquities, Mythology, Legends, Discovery by Europeans in the sixteenth century, re-discovery by Cook, with their Civil, Religious and Political History from the earliest traditionory period to the present time. By JAMES JACKSON JARVES. Third edition. For sale at Chaplain's Study. Price, $1,00.

Just received and for Sale,

At the Chaplain's Study, a fresh supply of the publications of the American Tract Society.

THE FRIEND:

A Monthly Journal devoted to Temperance, Seamen, Marine and General Intelligence.

PUBLISHED AND EDITED BY
SAMUEL C. DAMON, SEAMEN'S CHAPLAIN.

TERMS.

One copy per annum,	$1,50
Two copies per annum,	2,50
Five copies per annum,	5,00
Ten copies per annum,	8 00

☞ Single copies and bound volumes for 1, 2, 3, 4 and 5 years may be obtained at the Study of the Chaplain.

For the Friend.

GONE TO SEA.

Three little words I know,
Ah! how sorrowful they flow,
Only three;
Yet no cunning phrase can teach,
Yet no flight of song can reach,
Half the power of that short speech.
Gone to sea!

Oft amid the windy spray,
Those we love adventurous stray
Full of glee;
While the terrors of the deep,
Hover round fond woman's sleep,
And she only wakes to weep,
Gone to sea!

We, at home, are tempest tost;
We are heart-wrecked, we are lost;
And we flee—
Fancy-swept o'er waters drear,
Fearing more than mortal fear,
Searching for those souls so dear,
Gone to sea.

We can see the masts go by,
And the white surge towering high,
O'er the lee;
And the riven ship ashore,
Sinking crew, and floating store,
Fused within that molten ore,
Gone to sea.

And we see that mourning dove—
Wife, who for her absent love,
Makes her plea;
Waiting, wasting, watching late,
Listening for the unlatched gate,—
On her breast this lead-like weight,
Gone to sea!

But there is in light enrolled,
Three bright worlds of power untold,
Only three:
Yet the soundless deep they drain;
Earth's cleft shores unite again,
At the power of that short strain—
NO MORE SEA! *

This shall soothe the tempest's frown,
Chain the billowy Neptune down;
Storms will flee,
Rivers fresh, and gardens gay,
O'er yon wat'ry plains will stray,
And no quivering lip shall say,
Gone to sea.

No more sea! Then shipwrecks dire,
Foundering ships, and ships a-fire,
Will not be;
Then no treacherous waves shall roll,
O'er the globe, or o'er the soul—
Shivered then shall be the scroll,
Gone to sea.

No more sea!—O glorious word!
Second rain-bow from our Lord!
And to thee
God of promise!—bending low,
We the heart's deep thanks bestow,
For this brightening inner bow,
No more sea.

New London, Con. F. M. C.

* Rev. 21 1. "And there shall be no more sea."

Polynesian Sketches.

Samoan, or Navigators' Group.

Situation,—Government,—War now raging,—Late intelligence,—Establishment of the Mission, 1830,—Present number of Missionaries,—Printing,—English and American Consulates, &c., &c.

The Samoan, or Navigators' group of islands, is situated in the South Pacific, between 13° 30 and 14° 30 S. L., and 168° and 173° W. L. Eight islands belong to the group, viz.—Savaii, the largest, Upolu, next, Tutuila, Manua, Oloosinga, Ofoo, Manono, Apolima. The largest, Savaii, contains 700 square miles, being about the size of Mani, while Apolima contains only 7 square miles. The entire population of the group is estimated at between 50 and 60,000. The island of Upolu is estimated to contain 25,000, Savaii 20,000, Tutuila 8,000, and Manono 1,100.

In 1845 one of the English Missionaries, the Rev. Mr. Mills, made the following remarks in regard to the government of the islands, in a letter to the Editor—"There is no properly constituted government in Samoa. Every land has its chief, and each is unwilling that another should dictate to him. Still, in matters which concern the public welfare, they are ready to agree and enact laws. After all, as it remains with each party to act upon those regulations or not, as they please, it is of course very difficult for the well disposed part of the community to stand out against an evil which demands punishment." The system of independent chieftainships would seem to resemble the state of affairs on the Sandwich Islands, previous to the conquest of the islands by Kamehameha, I. The evils resulting from these separate and independant clans, are now woefully apparent in the devastating war which was there raging at the last accounts from the islands. We have been favored with the following extract from a letter recently received, dated, Upolu, June 23, 1848:—

"A most destructive war has lately broken out, involving the whole of Upolu, Monono, and a large part of Savaii. Monono, though a small island, and comparatively of minor importance, with regard to numbers, has nevertheless been long regarded and respected by all the other islands as the ruling power. If a Monono man visits any of the other islands it is his privilege to ask for whatever he may wish, and if the rightful owner of the desired property refuses to comply with such requests, it is considered an insult to the government. In former times it would be at the risk of his life, and the same feelings are cherished yet to a considerable extent. In this way many a poor fellow has been deprived of a choice mat, a fat pig, or perhaps a favorite dog. But this Heathenish despotism does not operate so well in these more enlightened times, and a great body of the people have resolved no longer to submit to this oppression.

The warriors of Monono party are not less than 2,000, but there is a greater number on the defensive. They must either submit, or fight. They have chosen the latter alternative. About 50 in all, have fallen, and perhaps double that number are wounded. As far as can be ascerained, the loss on both sides has been nearly equal. The most the missionaries can do is to pray for them, and attend to the wounded. The whole fighting, as yet, has been with muskets."

From the "Samoan Reporter" for September, we glean additional particulars respecting the unhappy state of affairs in the Islands. We copy as follows:—

"From the time of the engagement on the 17th of June till Saturday, the 9th of September, there was a cessation of actual hostilities. On the evening of that day, a party of the Aana forces burned Lemulifanua, a district belonging to Manono. Between the night of the following Sabbath and Monday morning, a party from the Manono fort made a secret attack upon a village in Atua, surprising its unsuspecting inhabitants at the early dawn of day, butchered in cold blood twelve persons—men, women, and children, and wounded others. This was a very prevalent mode of warfare in the heathen state of the islands; but many thought, that such a dastardly mode of procedure would not again disgrace their islands; and, consequently, appear to have used less vigilance than they otherwise would. The Manono party have since been waiting in daily expectation of an attack, in revenge. But Aana and Atua appear to be making their

arrangements with great coolness and deliberation; and this seems to augur more ominously for a determined and deadly attack, when they may decide upon it, than if they had made a hasty onset, under the excitement of the moment.

"Several church members have been drawn aside to take part in the war; and, among them, two or three who had sustained the office of teacher; but it is also encouraging to see that many of them have, as yet, taken a decided stand against uniting with those who delight in war; and are endeavouring practically to exhibit the power of the principles of the religion of the Prince of Peace. They retired to other lands, at a distance from the immediate scene of conflict, when it was evident that all efforts to bring the war party to a better mind were fruitless; and some of them have found a refuge, and are under instruction, in the Institution at Manula. One of the church-members has fallen in the war.

"While it is, indeed, a cause of thankfulness that some have stood in the trying hour, yet no one can estimate the moral and spiritual evils which must result to the district from the condition into which it has been brought. Even should peace be quickly restored, it may take years of toil and anxiety to overcome the effects of present proceedings among the people.

"Sept. 1848. "H. N."

By referring to the Life of the Rev. J. Williams, it appears that he made his first missionary voyage to the Samoan Islands, on board the "Messenger of Peace," in the summer of 1830. He left upon the Islands some native teachers who had accompanied him from the Island of Rarotonga. The following year he made his second voyage to this group. A highly prosperous mission was soon established on the islands, under the direction of the London Missionary Society. In 1839 12,300 were gathered in the various missionary schools, and near a fourth part of the population was brought under direct religious influence. From the Annual Report of the L. M. Society for 1847, the last which has came to hand, we learn there were 19 missionaries, clerical and lay, laboring upon this group. The entire New Testament, and a portion of the Old Testament, has been translated into the Samoan language. Besides various works in the native language, the missionaries publish, *half-yearly*, the "Samoan Reporter" in English, each number containing about the same amount of reading matter as the "Friend."

This group of Islands are frequented by English and American whale ships, which has led to the establishment of consulates.

Mr. Prichard, formerly missionary at Tahiti, is now the British consul, and Mr. Williams, son of the missionary Williams, is the U. S. consul.

The mission there has suffered recently a severe loss in the death of two of its members, viz.—the Rev. Thomas Heath, who died May 9, 1848, and the Rev. Thomas Bullen, who died on the 24th of March previous.

We shall anxiously look for additional intelligence from that quarter, hoping it may be more favorable in regard to the internal and political affairs of the Islands.

The Temperance Friend.

For the Friend.

A KIND WORD TO MODERATE DRINKERS.

While I have no hard words to utter against those who do not join in an enterprise so nearly allied to the best interests of community, as the cause of *Total Abstinence*, I would say a few words with candor, frankness, and love, to all those who use intoxicating drinks as a *beverage*.

I would propose the inquiry—is your practice a safe one for yourselves? Is there not a legitimate tendency, in the haditual use of any intoxicating beverage, to increase the demand for such stimulant? To these inquiries the reply is often made—I can govern myself. I can drink, or I can let it alone

I grant that men of strong minds and generous hearts are found in your ranks. This may be your endowment, but does this fact place you beyond the reach of danger? Have you not seen your equals, or even superiors in all that exalts human nature, fall before the power of habit, and yield themselves the victims of intemperance. The circle of every man's observation furnishes facts bearing upon this point. Where then is the certainty that you may not follow in the same course. I admit that many men have used intoxicating drinks through life without becoming drunkards. Men have encountered the strife and shock of battle and escaped unhurt, while very many of their comrades have fallen. You would not infer from this that it is wise for men to endanger their lives without some adequate cause. No more should the moderate drinker consider himself safe because some of that class live and die sober men. In reference to those who are regarded as *temperate* in the use of strong drink, it remains to be shown that they enjoy more, and suffer less, in passing throngh life, than they would do if they lived according to the total abstinence principles.

Again; it is an undeniable truth that every drunkard was once walking in the same path which you now tread, and felt the same security which you now feel. Go ask that man, who has been drawn into the whirlpool of intemperance, now shattered and wrecked until his soul retains only some faint traces of its former greatness, in a calm interval, when the fierce waters do not rage within, ask such a one for the history of his ruin; he will point you to the *social glass* as the outer circle of that maelstrom into which he has been drawn, he will tell you that he thought that he was safe until he saw his bark in the whirl of waters plunging to destruction. If men of rank and station, of genius and learning, have fallen into this chasm, what security is there against your sharing the same fate.

Once more; not only are you walking in the same path, with the same assurance of safety, that has proved the ruin of thousands, but many from your circle are yearly drafted to repair the ravages of death in the army of drunkards. Were it not for the recruits furnished from your ranks, drunkenness would pass away, and the curse of intemperance would cease from among men. It is a sad thought that the thousands who are now staggering through life will soon be numbered with the dark army of the dead; but sadder still to reflect that the places of those thousands will be filled by those who now hold honorable stations in society, who are the pride of their friends, and the joy of the various circles in which they move. No man can contemplate the immortal wrecks that lie scattered along the path-way of the *moderate drinker* without feeling a strong desire to stay this tide of living death.

Again; admitting what it would be difficult to prove, that you may pass on in the beaten track of fashionable drinking, without injury to yourselves, there is another ground to appeal. Every *moderate drinker* is the centre of a circle, more or less extensive, over which he is exerting an influence against this noble reform. Your words have some weight, your actions much more. Many of you stand in high places, where all you say and do tells upon the conduct of others. It is a privilege to stand where many of you stand, but a privilege which links itself with fearful responsibilities. By your practice you are saying that it is safe to use intoxicating drinks as a beverage. You are saying this to many a man who has not the same control over his appetites which you possess, around whose path-way are not the same inducements to sobriety as have been mercifully shed around you. As friends of humanity, I know your deep sympathies are often excited in behalf of the more than orphan children, and worse than widowed wives of the unfortunate drunkard. The friends of temperance have been engaged in this contest for many years; with you is the power to decide it at once and for ever. Your position resembles that of the *regulars* in an opposing army. The decidedly intemperate are fast passing away. The rising generation would grow up soldiers of the cold water army, were it not for the influence of your example. The profit and respectability of the trafic in *ardent spirits* turns upon your patronage. Hence, to you, as to generous and liberal minded men, we make the appeal. We plead not for ourselves, but for the thousands who groan beneath the blighting curse of intem-

perance; and for the thousands more who are hastening to the same dreadful position. For their sakes, we entreat you to take the high ground, that you will neither use intoxicating drinks as a beverage, nor encourage such use in others.

T. E. T.

Lahina, Jan., 1849.

A Terrible lesson.—One evening some weeks since there came into our office, a man of some thirty-five years of age, in a state of almost helpless drunkness. Seating himself upon a stool, he threw back his cap, which in the effort fell upon the floor, and "striking an attitude," as we say of players, sometimes, he asked if we had ever seen him before. After an examination we told him that we did not remember ever having that honor. He then said the last time we met, was at Baltimore, at the great Whig Convention in 1844. We remembered him at once. He was then editing a leading whig paper in that state, with marked success, and was an honored delegate to that convention, though he had seen strange vicissitudes in his day, and had been much addicted to intemperance. He now stood before us in a state of loathsome drunkness, and asked the privilege of sleeping upon the office floor. We told him that we could not do that—that in spite of his condition, we could not be content to give a fellow craftsman, whom we had known in better days, so poor accommodations as that, but he utterly refused to accept anything else. He was too drunk, he said, for anything else. We finally spread down a large lot of our old exchanges, and fixed him up as comfortable as we could, and left him for the night. In the morning we found him sober and rational, and we embraced the opportunity to talk to him of his habits, though we had small hope of good from it, notwithstanding his most solemn promises. He wanted to borrow five dollars. We had no money to lend to such as he, but we gave him freely a small sum of money—more than was for his good, we apprehended—and he left us with the most heartfelt thanks for our kind deeds and kind words.

We heard no more from him until last week, when we came across an item stating that a man named Thompson was found drowned in Lawrence. Though we had no knowledge of his whereabouts, we thought instantly that it was he. The truth realized our anticipations. It was Henry G. Thompson, a man connected with some of the best families in the State—of decided talent and genius, who but for the terrible habit of intemperance might have filled a prominent place in society.

The lesson should not be lost. To our readers he is unknown, but there is hardly one of them who does not know of parallel cases, less distinguished perhaps, and not so shockingly fatal. We can name them by scores—men possessing every natural qualification to adorn society, but who instead of ornaments have become its pests. That man who goes reeling home to his family, night after night, was once its ornament and its pride The appetite for strong drink was indulged in, and now, instead of the intelligent and gentlemanly citizen, he is at times little better than a drivelling idiot. These things come from very small beginnings. The young men who indulge even in an occasional glass of wine, on a festival occasion, may escape this end, *possibly*—they think they shall escape it—so did poor Thompson—so did every man who now fills a drunkards' grave, or is reeling toward's it. But they should know that there is no safety but in abstinence. "The appetite grows with what it feeds on," and there is not one of them who may not come to as sad an end as his who has called forth this article.—Let the young men of this community think of these things and be warned.—*Nashua (N.H.) Telegraph.*

Sandwich Islands.—From the last accounts received at the Mission rooms from these islands, it appears the natives are engaging with increased energy, in building school-houses and meeting-houses, and raising funds for the support of teachers—and actually contributing money to aid in sending the blessings of Christianity to more destitute parts of the world.

On the Island of Molokai, the native Christians, during the past year, have raised between eight and nine hundred dollars for these benevolent purposes, besides erecting three new meeting-houses on their island.—At Waimea, Island of Hawaii, Mr. Lyons reports as under his charge, sixteen churches, containing about 2000 members; twenty-one common schools, with about 1000 pupils, and the greater part of the children in Sabbath School.—*Zion's Herald.*

The above is a fair sample of the style in which people abroad are humbugged and misled in regard to the religious improvement of the natives of these islands. Such paragraphs as the one quoted above are only productive of ridicule among those who reside here, and know the entire falsity of the statements there made.

If the *Zion's Herald*, and other papers of that stamp, would inform their readers of the number of missionaries who have deserted their calling, to accept of office, they would be serving the cause of truth much more effectually than by publishing such nonsensical paragraphs as the one above.—We do not, nor does any one else here, believe that the natives ever contributed one farthing for the support of missionaries in other countries; nor do we believe that natives of Molokai can raise $900 in the course of a year, independant of their own support, unless, indeed, there should chance to be an extra number of ships and sailors visit the islands.—*Sandwich Island News.*

Reading the above extracts, brought to our recollection a visit we made to the Island of Molokai, during the summer of 1847. As the remarks in the *Zion's Herald* most probably referred to transactions upon that island during that year, it may not be uninteresting to our neighbor, the *News*, and others, to read such memoranda as we have preserved, respecting facts, to which we were an eye witness.

The following remarks we re-publish from the *Friend* of July 16, 1847:—

"On the afternoon of Monday, July 5th, occurred the missionary monthly concert of prayer in the native church. Previous to the meeting, the natives, adults and children, brought to the missionary's study, their various monthly contributions. We would here remark that the missionaries, Messrs. Hitchcock and Andrews, have rather discouraged, than encouraged their people from bringing cash, but preferred that they would bring the products of the soil or of their hands. They have pursued this course, principally, that they might encourage industry among the people. It was interesting to witness the variety of Hawaiian wealth that was poured into the Lord's treasury. The men usually brought a stick of wood valued at 6¼ cents; the women and children brought mats, rope, twine, taro, eggs, fowls, potatoes, &c. The entire contributions, reckoned at Molokai price current, amounted to about $8,00. Additional contributions, we learn, would be brought during the month by persons living at a distance. This method of collection subjects the missionary to far more trouble than would a collection in money, but it is, doubtless, far better for the people. He is very particular to record each donor's name, the article given and its value. Subsequently, he must find a market for the various donations. The following extract from a late American paper, will inform our readers respecting the disposition which has been made of some of the funds contributed by the christian people of Molokai:—

"'At the Anniversary meeting of the New York and Brooklyn Foreign Mission Society, held a few days since, Rev. Dr. Armstrong, in the course of some remarks, made the following remakable statement:

"'I have just received a letter from the Sandwich Islands, with a draft from the Church of Molokai, the contributions of the natives, derived from the sale of mats, of $100—to be paid to the Ceylon mission for the education of pious natives there for the ministry.'

"We are happy to add that this same people recently voted the sum of $20,00 for the benefit of their fellow Polynesians, the Tahitians, who have been called to pass through so much trouble. This amount is now in our possession to be forwarded by the earliest opportunity, accompanied by a well executed letter in the native language, written by a member of Mr. Hitchcock's church, and addressed to the native christians at Tahiti.

"Religious services at the meeting house followed, 'laying down the contributions.' Knowing as we do, (Mark 12, 43,) that it is not the gift, but the motive prompting the gift, which renders it acceptable to God, we could not but conjecture that some poor Hawaiian that afternoon might have cast in more than a score of 'princely donations,' which are trumpeted round the world. An audience of 200 assembled to pray for the extension of the Redeemer's kingdom, and that the people of all lands might come into the possession of a purer, holier, and more rational liberty than is now enjoyed by the most favored on earth. We are happy to add our testimony touching the favorable reports which have gone abroad respecting the condition of the natives of Molokai."

THE FRIEND.

HONOLULU, APRIL 2, 1849.

Life at Sea.

Our readers need not be informed that a life at sea is a severe test of temper and character. If a man has "corners" to his character, they will be sure to knock against some body if he is placed on ship-board either as a passenger or as one engaged in the management of the ship. The tongue, denominated by an inspired penman as "a little member," finds ample scope for the display of its true nature on ship-board. During a long voyage, for want of weightier matters, trifling remarks are magnified into grave subjects of dispute, and made the grounds of enmity. It is astonishing how small an affair will create jealousies and enmities among a company of passengers, or between the master and officers of a ship. It is a rare circumstance for a voyage to commence and end without more or less occurring of an unpleasant nature. Sometimes, however, pleasant passages are made, pleasant for passengers, master and all on board. If such instances are not the exceptions to the general rule, yet they form the minority.

A vessel has lately arrived, and sailed from our port, having made, according to reports, a remarkably pleasant and agreeable passage from Boston. Passengers and master have not come on shore, mutually to abuse one another, or speak of the miseries of the voyage. It appears that the ship's company of the "Leland" are to separate good friends, and with regrets even that their voyage was not more protracted. Without, just now, endeavouring to point out the reasons for this somewhat remarkable phenomenon in a life at sea, we proceed to speak of certain methods devised by the "knowing ones" for beguiling the otherwise tedious hours and days of a five months' passage, during which terra firma gladdened the eye but once, and that was the barren point, where, report says, certain unscrupulous persons have either "hung up," or otherwise disposed of their consciences. The good ship "Leland," be it remembered, left Boston freighted with both Yankee Notions, and natives of that good land, faceteously styled by a quaint Boston Editor, Yankee-doodledom! Some of the passengers had previously been at sea, and knew that something must be done to bring out the better part of human nature, or soon discord might appear. So, forsooth, a newspaper was started, and other means taken to entertain the mind. Ah! a newspaper—that's the thing! Nothing in a Yankee's estimation to equal a good newspaper! Let not our readers imagine that type, ink, and presses, are indispensable for issuing a periodical. The "Leland" must have its weekly Gazette, and if half the reports are true, that famous newspaper, the *Hodge Podge*, must have been a rare production in this age, abounding with periodical literature. Besides this method of employing the mind, in the way of writing and listening, the calendar was studied, that no anniversary of any remarkable event, should pass without being duly celebrated. It only appears strange, that in their zeal for celebrations, the passengers of the "Leland" did not get up a first rate 4th of July celebration in January!

We shall now furnish our readers with a full report of the mode of celebrating the 22d of February, copied from the editorial department of the *Hodge Podge*. We shall preface the somewhat lengthy extracts we are about to make, by inserting a programme of the anticipated exercises, which we found posted up in a conspicuous part of the vessel when she arrived in port.

Washington's Birth Day!

CITY CELEBRATION!!

The City Authorities of "Leland" have appointed for the celebration of the 22d of February, the following

ORDER OF PROCESSION, &c.—

The procession will form in front of the State House at 9 o'clock a.m., precisely, and move in the following order, escorted by the

1. Bangathumpian Band!!
2. Heroes of the Revolution and Mexican Volunteers.
4. Mayor.
3. City Authorities.
5. Orator of the day, } Marshals.
6. Poetess of the day, }
7. Champion of Women's rights.
8. Governor of the State.
9. Distinguished guests.
10. Citizens generally.

The procession will march up State House Hill; through Saloon Avenue; Larboard Street; Windlass Square; Galley and Starboard streets; up Quarter Deck Hill; round Taffrail street and Tiller Place to the Pavilion.

ORDER OF EXERCISES.

1. Music by the Band.
2. Voluntary on the Organ.
3. Declaration of Independence.
4. Original Ode, by full Choir.
5. Mayor's Address.
6. Oration.
7. Song: Star Spangled Banner.
8. Declaration of Ladies Rights.
9. Original Poem.
10. Original Hymn. Air: *America;* with full chorus.

Immediately after the services a collation will be served up in the Pavilion, of which all present are invited to partake by the Mayor, who also invites all who join in the festivities of the day, to a Public Dinner at 3½ o'clock, p.m., at the State House, and to the exhibition of the Tableaux Vivantes at 7½ o'clock.

A strict police will be in attendance. No carriages allowed in the streets through which the procession is to pass, from 9 a.m. to 12 m.

After the collation the procession will again form and return to the State House.

Printed at the *Hodge Podge* Office.

(FROM THE "HODGE PODGE.")

The 22d of February, 1849, will long be remembered by the good citizens of Leland, as one of the proudest in her annals. It was, indeed, a glorious anniversary, and gloriously was it kept by our patriotic citizens. Many an anxious glance at the heavens was cast on the previous day, and many a little urchin or miss trembled lest a rainy morning should deprive them of their promised sight of the civic procession. But the sun rose clear and cloudless, and never within our memory, have we known a more delightful day. The air was so mild that fires were dispensed with, and even the windows were thrown open to the balmy air from without. As old Sol came out of his ocean bath to smile upon the festivities of the day, his appearance was greeted by the roar of artillery, the joyous ringing of bells, and the wild martial strains of the Bangathumpian Band, proclaiming to the world that it was the birth-day of Freedom's Champion. There was but little rest for the sluggard. What, with the roar of cannon, the chiming of bells from every steeple, the music of the band as it marched through the principal streets of the city, the firing of crackers, and the joyous shouts of little boys, not an eye could remain closed.

We regret to state that from some unexplained cause, either from the guns becoming heated and exploding before the ramrod was withdrawn, or a paixhan shot being left in them by mistake, one of the discharges of the guns did much damage, tho' we are happy to state that no one was injured. The city baths in Starboard street were shattered so much that the whole front of the immense edifice came down with a tremendous crash. When the first alarm had subsided, and the cause of the terrible noise had been ascertained, each one looked on his neighbor with horror as the thought flashed on their minds that possibly the baths were occupied at the time of the explosion. The greatest intrepidity was at once displayed by many of our citizens to aid, if possible, the victims. Some imagined they heard moans issuing from the ruins, and common council man, Everett, with self devoted heroism, which should immortalise him, rushed at once into the ruins, resolved to rescue the victim or perish in the attempt. For some moments he was lost to the anxious gaze of the breathless multitude; but at length he emerged from the fallen timbers and announced the joyful news that he had searched every nook and crevice, and that it was clear that no one was in the building at the time of the crash. The multitude then dispersed with light hearts to prepare for the festivities of the day.

The stores were all closed, and a general holiday was given. The masts of the shipping in the harbor were decorated with flags, having a fine effect. Long before it was time for the procession to move, the streets through which it was to pass, were crowded with spectators, so that the marshals had some difficulty in clearing a space wide enough for the procession.

At half-past nine a murmur, "not high but deep," rose from the mighty mutltude, announcing the approach of the long expected pageant. Long before it came in sight, however, the inspiring strains of the Bangathumpian Band rose above the shouts of the populace, and the appropriate tune of Washington's March sent a thrill of patriotism through every breast. At last the showy uniforms of the band were seen glistening in the sunbeams, and soon the whole procession with its imposing splendor, came in sight. Immediately after the band came the warworn veterans of the revolution, with the more recently, but no less scarred and warworn heroes of the Mexican war. We noticed one of the former particularly whose steps tottered from age and hardships, but still the fire of patriotism lighted up his eyes, as he proudly thought that he was aiding in commemorating the birth-day of him whom he had so often followed to the field, and under whom his scars and his glory had been won. The famous Everett, too, of Mexican renown, we were glad to observe among the heroes of that war; his lofty bearing, notwithstanding his lame leg, distinguished him above all, and he attracted more notice from the populace than all the rest of the Mexican officers. Next in order came the mayor and city authorities of "Leland," followed by the orator and poetess of the day, who were escorted by a marshal on each side.

We felt proud of our noble city, the Pacific "Athens," as we looked on the talented individuals whose performances, on that day, afforded us so much entertainment. The champion of female rights followed, proudly bearing a banner, on which was depicted the flags of every nation in the universe, symbolical of the universal sway which is held by their sex in every clime.

The good governor of our Commonwealth came next, his whole countenance irradiated with benevolent smiles, as he acknowledged the cheers and shouts of the enthusiastic citizens at his appearance. The procession was closed by the distinguished strangers who are now visiting our city, and the citizens generally. Among the former class we noticed one of the Scottish nobility and several S. I. missionaries.

The whole pageant was one of the most imposing we ever remember to have seen in our city. After marching through the principal streets of the city, the procession reached the pavilion, which made a splendid appearance, decorated with flags and banners, and hung with garlands of flowers notwithstanding the season of the year. The walls were covered with paintings; the portraits of all our presidents were there, among which the noble features of him whose natal day was thus celebrated, beamed upon the mighty mass assembled to do him honor, with dignified composure.

But how shall we describe the performances of that occasion. We cannot find words to express our delight as the exercises proceeded, each seeming better than the preceding. The brilliant sallies of wit, the masterly eloquence, the feast of reason, and the flow of soul, to which we listened on that morning, will never be forgotten by any of that fortunate audience. After a volnntary on the organ, played by the champion of female rights, in her happiest style, an original Ode, composed by one of the marshals of the day, and full of grand and lofty thoughts, was sung. This was followed by the Declaration of Independence, read in a most clear and dislinct voice by General Everett; not a word was lost by the vast throng of listeners. The fire of patriotism again lighted up the eye of the old veteran of the revolution; and as the speaker detailed the wrongs which had compelled our fathers to take up arms in defence of our rights, his hand, trembling with age grasped the staff which supported his tottering limbs as if it were that musket which had so often dealt death to his country's foes.

The mayor next made an address to the audience, welcoming them to the first national celebration of the new city of "Leland. He gave an interesting account of the foundation and progress of the city; paid a well deserved compliment to the governor of the Commonwealth, under whose wise rule the state has acquired its pesent lustre. He stated the present prosperous condition of our city; and as he congratulated them that the few attempts at disorder had been entirely put down, the inmates of the disorderly houses quailed before his searching glance, and seemed to be anxious for a knothole to creep out of, or a lodge in some vast wilderness where they might hide their diminished heads. We understand that one of them intends to assume another name, in the hope of escaping the unenviable notoriety thus attached to the old one. At the close of his address, the mayor presented the orator of the day.

Had we room in our columns we would gladly give place to his whole speech as it was reported by our stenographer, but are compelled to deny our readers that pleasure. He gave a most interesting account of the earlier days of the great man, a subject that has not been dwelt upon so much by other orators. He brought vividly before us the young hero in his infantile efforts to use his pegs; and never was Washington's first march so eloquently described. His oration was received with loud cheers.

The champion of female rights then rose and read the Ladies' Declaration of Independence. It was a bold stand she took and well did she maintain it; but we feel a natural hesitation in commending the novel views taken by her; as however much we may at heart agree with her, still—there are reasons —the—the fact is—we have *wives ourselves*— and as they are at all times ready to use their prerogatives to the utmost limit, we do not exactly—that is to say—we mean—we *darsent* commit ourselves for fear of "getting it."

The Poem which followed was indeed a beautiful production, worthy of its author—need we say more in its favor? It was listened to with breathless interest and intense delight. Its design was a panoramic view of the past year, and vividly, indeed, was it portrayed. The mighty events which have shaken Europe to its foundation, toppling down thrones, and breaking up empires, passed in rapid succession before us—then the scene was changed to the new world, and the sad event of the year to the great Republic—the decease of the "old man eloquent," was alluded to in the most beautiful and touching language. The Mexican war was then brought before us, and the battles in that ill-fated country came up before our mental vision with the utmost distinctness, until the groans of the dying, and the wail of the widows and orphans seemed to be ringing in our ears. From these mournful themes, the strain, by a happy transition changed, and a view of our city was presented to us, true to life. The principal events of the past year all came up before us, and we saw beautifully deliniated, the various festivals and jubilees which have enlivened us during the past, the poem closing with the very celebration in which we were engaged.

The Poem was followed by an original Hymn, composed by the old revolutionary hero before alluded to. It was a noble invocation to the immortal Washington; and as the glorious anthem swelled upon the ear, till the whole building was filled with the lofty strains, the whole multitude seemed animated by the same patriotic spirit.

After the performances were over, the procession reformed and marched to the State-House where a collation was spread, to which all did ample justice.

At half-past four o'clock the grand dinner came off in great style. But as, after dwelling, as we have been, on the rich *intellectual* feast which we had had, we do not feel like devoting much time to a description of that spread for the bodily wants, suffice it to say that every delicacy which the markets of "Leland" afforded, was heaped in profusion on the groaning board, and that toasts were given by those present, as well as by many invited guests, whose engagements forbade their presence.

In the evening a brilliant assemblage again gathered at the pavilion to witness the Tableaux Vivantes. The city procession passed through the same streets as in the morning, and on reaching Windlass Square they were saluted with three hearty cheers by a deputation from the neighboring town of Forecastle, which were as heartily returned. The deputation then joined in the march to the pavilion, when the tableaux came off in great style—and thus ended the festivities of a day long to be remembered as the brightest in our city annals.

We take pleasure in furnishing our readers with the following poetical effusions which were called forth by the contemplated celebration on board the "Leland." By referring to the foregoing programme, it will readily appear at what stage of the proceedings. the "Poem" was read, and the "Ode" and "Hymn" were sung :—

THE GRAVE OF WASHINGTON.

By E. B. M., a lady passenger.

Air:—*Grave of Bonaparte.*

In the land of our homes, far away o'er the ocean,
Where liberty's banner waves proudly on high,
Whose name stirs the fount of the hearts deep emotion,
The bright flush of hope, or fond memory's sigh.
That land holds a spot, ever sacred in story,
Since he who now rests there—the good and the brave—
First planted that banner, still waving in glory,
While he sleeps securely—'tis Washington's grave.

Oh! fierce was the din of the battle, wild raging,
And darkly war's cloud on our loved country rose,
He scattered the bands, in stern conflict engaging,

And drove from her borders, her merciless foes.
When the first dawn of freedom was over her gleaming,
The might of his strength to her councils he gave,
'Till that sun rose in brightnesss, whose rays are now beaming
In noon-tide's full splendour on Washington's grave.

Far away in the shades of Mount Vernon he sleepeth,
His labours are over, his victory won,
His spirit hath risen to God, who still keepeth
The life which He gave, and recalled as His own.
The angel of peace guards his slumbers so lowly,
Above him the laurel and cypress boughs wave;
In the heart of each freeman, that spot is deemed holy—
The shrine of a nation is Washington's grave.

And we, while the billows around us are heaving,
Though far from our homes and loved country we stray,
Will raise our glad voices, in gratitude weaving,
A tribute of praise on this festival day.
The incense of love on the heart's altar burning,
While the walls of our temple the blue waters lave,
Shall be kindled anew, in fond memory turning
From the deck of the "Leland" to Washington's grave.

ORIGINAL HYMN.

By Mr. Sargent, an officer of the "Leland."

Hail to the glorious morn,
When to our land was born
Her noblest son;
The statesman bold and free,
Champion of liberty,
A nation honours thee
Our Washington.

When foreign foes assailed,
When boldest hearts had quailed,
To us was given
The hero and the sage,
Whose name through every age
Shall live on history's page
A gift from Heaven.

'Tis from the ocean wave,
To thee, the good and brave,
We tune our lay.
Loud let the welkin ring,
Till ocean back shall fling
The honoured theme we sing,
Thy natal day.

To thee, great God, we bow,
In adoration now,
Accept our prayer,
Upon us shed thy light,
Protect us by thy might,
Show earth that freedom's right
Is thine own care.

ORIGINAL POEM.

By C. E. N., a lady passenger.

Immortal patriot, hero, statesman, sage!
Bright cynosure of earth through each successive age!
If as we're told, the spirits blest on high,
Oft leave their starry homes in mansions of the sky,
And hover o'er the scenes which erst their impress bore—
Oh deign to smile on us, as parted from the shore
Of native land, we've gathered on the surging deep,
With hearts o'erflown with love and gratitude to keep,
The natal day of freedom's brave and honored son,
Of thee our pride and boast! O peerless Washington!

Four months my friends have sped since on the pilgrim strand,
We waved a sad adieu to our dear native land.
And thus shut out from bustling earth by ocean's track,
In thought we'll roll the pond'rous wheels of time aback,
And view as in a magic glass the shifting scenes,
Fitful and wild as hues of feverish dreams,
Which earth's broad panorama to our eyes present,
As the strange weird-like drama of the year just spent,

Convulsions dire are rending nations o'er the main,
And shouts of triumph mingled with deep cries of pain,
Are echoing fierce and dread across the waters wide,
As the old world in wrath lay's low her tyrants pride.
France with a spring like tiger on her Bourbon foe,
Hurls from his throne the hoary monarch low,
Who thought to chain a fiery nation's voice with gyves.
Rash deed! avenged by hecatombs of human lives!
Behold "the Crœsus King" as pale, deserted, lorn,
To Albion's cliffs in wretched guise he's born,
A throneless outcast like the Corsican of yore,
Imploring rest and home on her calm, peaceful shore.

Bnt hark! again the shout of triumph and the wail
Of grief and anguish blended, makes the cheek turn pale.
Europe, like giant armed is rising from the night
Of dark oppression, and the glorious light
Of freedom gilds her hills; her plains, and mountains o'er,
From vine-clad Tuscan vale, to Denmark's sea-girt shore.
Her discrowned monarchs trembling o'er the ruins stand
Of thrones they deemed the deep-sunk pillars of the land.
Peace to thy troubled shores, O storied land of song!
May tyrants ne'er again their stern misrule prolong,
But girt with plenty—all thy bloodless vict'ries won,
Heaven bless thee with a second Washington!

Now turn we to the western land that gave us birth
To us oh fairer far than classic climes of earth.
But lo! a nation mourns, and sable signs of wo
Appear in lofty palace hall and cottage low.
Meet is it that our reft and stricken country mourn,
For cold, outstretched—to his last dreamless rest is born—
"The old man eloquent!" by death's dread dart laid low,
The only shaft he hurld not back upon his foe.
Stricken with armor, clad like England's far-famed son,
Upon the field where many a palm he won.

War now unfolds his wing, and quick from ev'ry shore
Gather the fiery legions charged to pour
The tide of battle o'er the Mexicans land
Who boldly muster under Santa Anna's hand.
Fierce grows the contest, and on many a plain
Arise the gory pyramids of welt'ring slain.
At length the victor's laurel twines the stripe and star,
And slowly wending home from pilgrimage afar,
Behold the drooping, toil-worn, scarred and scattered host
Who left so late filled high with pride and haughty boast!
Oh dear bought vict'ry! ne'er could earth's broad lands atone
For sounds that rend our ears; the orphan's, widow's moan
For those that fell at Cerro Gordo, Monterey,
Amid the din of battle fierce or wild foray!

And now I fain would leave, all affairs across the water;
And ask of you right earnest each Leland son and daughter,
If you can shew just reason why in this magic glass,
We can't like other worthies in trim reversion pass?
I think I read approval in each quick-consenting eye,
So nem. con. vote is given for the scenes to hasten by.
From Salem and from Pittsfield, from great Manhattan's mart,
From Albany and Charlestown most sadly do we part.
On Leland deck we gather and with kerchief to each eye,
We burst out all a-weeping as our friends on shore we spy,
At last they weigh the anchor, but ere night grows very thick,
Quick into berths we tumble, because we're awful sick
This nauseous, vile ordeal! we think our friends had orter
*H*ave some compassion on us, and throw us in the water.
At length those outward heavings, no more do grimly vie
With ocean's yesty surges; concluding *not* to die,
We invalids like bean-poles long, sallow, lank, and lean,
Around the deck are scattered, a touching sight I ween!
Now swiftly glide the moments, for under awning wide
With our books, our games and music, if heartily we tried
We could not raise a murmur, for our passengers all think
Our merry Cape Cod captain is of tars the very pink—
While our little group so kindly, all seem intent to make
This lengthy voyage pleasant, for each others much-prized sake.
Rare festivals are given and our christmas, new-year's call,
Our jovial birth-day parties, and the nightly mimic ball,
Our masquerade so motley with its brilliant, merry scenes.
All in memory will glisten, like rain-bow tinted dreams.
In valentines full ninety, (due honoring the saint,)
Our love-lorn swains and maidens their tender hearts well paint
Evincing very plainly by many a thrilling line,
Our novel "Hodge Podge" paper ne'er for genius lack will pine.
This day our last scene closes with its magnafique parade
Of banner hung pavilion and the civic promenade
Of tried and trusty burghers of our great and fair Le-land,
Escorted all so proudly by "the Bangathumpian band."
These thrilling martial strains! I'm sure their wild cadenza
Would make an Orpheus even, throw down his lyre in frenzy.
At last the steps we've clambered; each one in his right place
The organ very grandly rolls out its solemn bass.

The next event in human course is Freedom's Declaration,
And then an ode sublime, a freeman's fit oblation.
A wicked little vixen, with fair and curl-decked brow,
Her "Woman's right" position quite bold does now avow.
But listen to our mayor, who ushers the oration
"Cook"ed up with talent rare to honor the occasion.
And last of all your servant in humble tones and meek,
For poem long and tedious your pardon would bespeak,
In earnest hope to meet you all, in knife and fork array
At feast provided kindly by the 'marshal' of the day.
And seeing in my fancy, these brilliant belles and beaux
In motely garb all gathered, this eve at our tableaux.

We feel we owe our readers no apology for occupying so much of our narrow space with the affairs of the "Leland." The literary merits of these productions, entitle them to more than a passing notice, and we hope their publication may prove beneficial, in a suggestion way, to other ships' companies bound on long voyages.

How much more rational and commendable to beguile the hours, days, and months of a long voyage in reading, writing, visiting, and anniversary festivities, than to spend the time necessarily occupied in making a passage, in disputes with fellow passengers and master of the vessel.

It affords us great pleasure to add that during the entire passage, commander and pas-

sengers, in their social and festive scenes, carried out, most fully, the principles of teetotalism. Capt. Eldridge, (who, by the way, is a staunch teetotaler,) remarked to us—"to my knowledge, not a drop of wine or spirits has been drank during the passage; we had a dozen bottles of wine put on board for medical purposes, and they have been kept as such." We hope the idea is exploded that the contents of the intoxicating bowl and the wine cup are the necessary accompaniments of social life and festive celebrations. It is not for us to judge how great may have been the influence of the lady passengers, or how much their presence contributed to bring about so many desirable results, but it was undoubtedly very great, and most salutary! It may be that the advocates of "woman's rights" will prove champions on the sea as well as land, and find the ocean the true field for glory.

LOSS OF AMERICAN WHALE SHIP "UNITED STATES."

This vessel sailed from U. S. December 10, 1845, and had taken 700 barrels sperm and 1700 barrels whale oil. In November, 1848, she left Lahaina, run down to Fannings' Island for wood and water. There she took on board the family of Mr. Foster, and that of his son-in-law, Mr. Halsted, 13 passengers in all, and was bound to Sunday Island. On the 13th of December passed the Navigator Islands, where three sperm whales were taken. On the morning of the 20th December, in that region of the ocean where there are no sunken reefs or rocks, if the charts are correct, the vessel was stove and in five minutes filled and sunk.

It was at 3 o'clock in the morning when the sad catastrophe took place. The spot where she was stove was about 57 miles N. W. of Tongataboo. In the few moments allowed for getting clear of the wreck all were successful, except four children of Mr. Halsted who were drowned. Capt. Worth and his boat's crew, after 28 hours of hard rowing, succeeded in reaching Tongataboo. The mate, Mr. Creasy, with the remainder of the crew and surviving passengers, succeeded in reaching a small island about 20 miles distant, where they remained two days, and for want of provisions put away for Tongataboo.

Capt. Worth and his ship's company received every attention from the Rev. Mr. Webb, an English Wesleyan Missionary residing in Tongataboo. We are requested by Capt. Worth to bear his public testimony to the kind attentions which he received from both the Rev. Mr. and Mrs. Webb.

In the account of the wreck furnished by Mr. Creasy for the Sandwich Island *News*, he gives his opinion that the vessel struck a rock. Capt. Worth is of opinion that the vessel was stove by a whale. Capt. W. and his mate left Tongataboo in the French Sch. "Clarion," and after a passage of 38 days reached Tahiti.

Agreeable to the request of Capt. Worth, we insert the following:—

"Mr. DAMON—In publishing the account of the loss of my ship, you will do me the favor to insert the following statement.—On my passage from Tongatabo to Tahiti, in L. 24° S., and L. 153 W., I spoke the H. B. Company's Bark. "Cowlitz," Capt. Weynton. I told him my circumstances. I had no shoes, and our small vessel was in distress; all that Capt. W. would furnish me was one small pig and a few potatoes. His conduct I considered most unkind and ungenerous. He seemed to view me as an impostor! while Capt. Mott, who was a passenger on board the "Cowlitz," and had lost his vessel, the "Vancourer," at Columbia River, manifested the kindest feelings; gave me two shirts, and what was of vastly more consequence, a kind look.

(" Signed.)

"CALVIN G. WORTH,

"Late Master of the "United States."

"Honolulu, March 27, 1849."

Capt. W. came to the Sandwich Islands on board the "Brooklyn," Capt. Jeffrey, from whom, and whose lady, he desires us to state that he received every kindness. Mr. Creasy came here on board the "James Monroe," Capt. Bowman. The crew and passengers of this ill-fated "United States" most probably remain on Tongataboo, although it is to be hoped they may have found some means of conveyance to a part of the world where their wants can be better supplied. They were in rather a suffering state when Capt. Worth left them.

Schooner "Amelia." Discovery of an Island. Gold fever at China. Typhoons, &c.

We are glad to announce the arrival in China of the British schooner "Amelia;" U. S. ship "Preble;" Hawaiian Brig Moctezuma;" American merchant ship "Sea Witch;" hence 25 days. It will be recollected the "Amelia" put into Honolulu in consequence of a horrible mutiny occurring on board. She was to undergo some repairs in China, and would thence proceed with her cargo to Mazetlan. Capt. Lindsey still retains command, and reports to the British Consul General as follows:—

"On the 25th of December, 1848, during a calm I discovered an island or rock in Lat. 19° 20 N. L., 141° 15,30 E. L. It appeared about 40 feet high, and 4 miles in length; very barren, and of a dark brown colour. I feel confident of its position, as I proved the rate of my chronometer only two days previously at the islands of Gregan, and Assumption."

It appears by a private letter, and the *Friend of China*, of January 13, that matters there were in a tranquil state, except the gold fever broke out furiously in Hong Kong upon the "Amelia's" arrival. She took a considerable quantity of gold dust from Honolulu. The "fever" was extending to the other free ports, and parts of China.

Freights—to England £3 10s., to New York $18,00.

There had been some terrific typhoons during the last year; several vessels were missing, and an immense number dismasted, as may be learned from the fact that one ship-wright had an order at one time for no less than 70 lower-masts.

☞There is a rumor of war between England and China, but not well authenticated.

SYDNEY.—At last accounts no less than 11 vessels were advertised to take passengers to California. One vessel advertised, offering superior accomodations, adds that "she is armed," and that the master is "well acquainted with the habits of the people, having been for several years on the coast." We have heard of bloody affrays on land, perhaps the contest will now be transferred to the sea!

MARRIAGE AMONG DISSENTERS. — The marriage of the Honorable Seth Barton, Chargé d'Affaires, of the United States of America, near the Government of the Republic of Chile, with the Senorita Dona Isabel Astaburuga, was solemnized at the United States Legation, in Santiago de Chile, by the Reverend Chester Newell, Chaplain of the United States ship of war "Independence," in the presence of her commander, Com. William Branford Shubrick, and suite, all the Foreign Ministers now resident in Santiago, the American Consuls of Coquimbo and Valparaiso, and others.

Senor Don Manuel Camilo Vial, Minister of Foreign Affairs, and the other members of the Chilean Cabinet were also invited to the ceremony.—*El Mercurio.*

This marriage appears to have excited more than ordinary interest, from the fact, that it was solemnized in violation of the laws of the land.

Prior to 1844, a Protestant foreigner was not allowed to marry a Catholic foreigner. That is now allowed; but a Protestant foreigner is not allowed to marry a Catholic native of the country unless he will sincerely or hypocritically become a Catholic. "In the present instance," remarks the editor of the *Neighbor*, "exposure to such hindrances and such compulsion was avoided by retreating to the inviolable character of the residence of a foreign minister; and there, without coercion of the parties, the marriage was celebrated."

The editor makes some very sensible remarks upon the absurdity and injustice of the Chili or Catholic laws about marriage. The true Catholic doctrine is, that no marriage is legally solemnized which does not take place according to the rules of that church.

MARRIED,

At Honolulu, on board of the Am. ship "Leland," by the Rev. Samuel C. Damon, on the 11th ult. Hon. WILLIAM L. LEE, formerly of Sandy Hill, state of New York, to Miss CATHERINE E. NEWTON, of the city of Albany, State of New York.

At Charleston, Mass., U. S. A., on the 4th October, 1848, by Rev. Geo. E. Ellis, James F.B. Marshall, of the firm of S. H. Williams, & Co., Honolulu, Hawaiian Islands, to Miss Martha, A. T. Johnson, daughter of the late John Johnson, Esq.

At San Francisco, January 9, by Rev. T Dwight Hunt, Mr. R. A. S. WOOD, of Honolulu, to Miss FRANCES E. Merrril, daughter of John H. Merrill, of San Francisco, California.

In the Congregational Church, at Pittsfield, Mass. September, 25th, by Rev. John Todd, D D., Charles H Wetmore M,D., of Lebanon, Conn., to Lucy S. Taylor, of Pittsfield.

DIED.

In this town, on the 27th ult., Mr. WILLIAM MORETON, aged 41 years, a native of the Isle of Wight, England, and for some years a resident on these Islands.

Dec. 13th, at Koloa, Kaui, MARY ARABELLA, daughter of Dr. James W. and Melicent K. Smith, aged 2 years and 16 days.

At Wailuku, Maui, Dec. 17, MARY ANDELUCIA, youngest daughter of Rev. D. T. and Mrs. A. L. Conde, aged one year, ten months and seventeen days.

In Honolulu, March 4, Mr Charles Johnston, long a resident on the islands, a Dane, aged 50, but formerly a resident of the Bonin Islands.

Killed by a whale or drowned, December 31 1848, Mr Isaac Hanson, a boat steerer belonging to the American whale ship "Tuscarora." He is believed to belong to Hudson New York.

On the 25th, Mrs. Abell, wife of A. G. Abell, Esq. This lady came from Tahiti in the U.S.S. Independence, but was unable to be removed from the ship, on board which she breathed her last on Sabbath morning. -"Valparaiso Neighbor."

At Dedham, Mass. U. S. A., in August or September 1848, Mr. Francis Johnson late of the firm of C. Brewer & Co. Honolulu, S. I.

PASSENGERS.

In the Leland, from Boston—Messrs. N. Cook and lady, C. Wetmore and lady, Henry S. Howland and lady, J. F. B. Marshall and lady, Misses E. B. Marshall, C. E. Newton, E. J. Dowsett, Messrs. S. H. Everett, Thomas Crehore, James Cook.

In the Seis de Juno, from Valparaiso—A. G. Abell, Esq.

For Calafornia, per "Asenath"—Mr. E. H. Boardman; —— Hawes, Esq., U. S. Consul for Tahiti; Dr William Jelly; Thomas Cummings Esq.; Mr. Ogude; Mr. Foster; Mr. Byers; and Mr. W. H. Rogers.

—Eng. bark Asenath, Rooney, San Francisco.
Feb 26—John & Elizabeth, Chappell, for Japan Sea
March 1—Marengan, Devol, Japan Sea
27—Fr. schr. Leocadia, LeMaire, from Tahiti.
28—Am w s Marengo, Devol.
—Am whaling bark Romulus, Cartwright
—Eng bark Asenath, Rooney, from Liverpool
—Cabinet, Hathaway Stonington, 6 1-2 mos out, 100 sp
March 6—Ship Good Return, Cook, of New Bedford, 15 mos out, 450 brls sp, 900 wh, 9000 lbs bone.
9—Ship Kutusof, Slocum, N. Bedford, 8 mos. out, 200 brls sp, 100 wh, 1000 lbs bone.
—Ship Metacom, Shockley, N B, 8 mos out, 30 sp.
10—Ship Champion, Colt, Edgartown, 6 1-2 mos. out, 23 brls. sp.
—Schr Currency Lass, McLane, Tahiti, 30 days, bound to San Francisco.
12—Ship Navy, Norton, New Bedford, 7 mos out, 90 sp.
—C. Phelps, Birch, Stonington, 21 mos out, 375 sp, 1600 wh, 14,000 lbs bone.
March 9—Am. w. s. Copia, Taber, 8 months out, 100 brls. sperm.
March 6—Haw. schr. Louise, Bent, San Francisco.
9—H. B. Co's brig Mary Dare, Scarborough, for Columbia River.
10—Fr. Protectorate bark Mary, Fleury, Hong Kong.
—Am. mer. ship Serampore, Hastings, Realejo, Central America.
March 10—Schr Papiete, Bowles, Tahiti.
11—Fr. brigantine Currency Lass, McLane, Tahiti.
12—Brig Eveline, Cooper, from Monterey.
—Am. mer. ship Leland, Eldridge, Boston, 144 days.
March 13—Am. w. s. Brookline, Jeffrey, New London.
14—Am. schr. John Dunlap, Bachelder, Salem.
—Am. w. s. James Munroe, Bowman, Fairhaven.
15—Chilian brig Seis de Juno, from Valparaiso.
20—Am w s Ontario, Payne, Sag Harbor
—Chilean brig Anfonio Ramos, Hansen, Valparaiso
21—Hawaiian schr Plymouth, Gould, Sydney via Tahiti.
22—Am w s Logan, Nickerson, New Bedford.

Sailed.

March 10—Am. w. s. John Coggeshall, Luce, Japan Sea.
22—Am w s Copia, Taber, New Bedford, for Behring's Straits.
23—Am brig Eveline, Cooper, for Hong Kong

PORT OF LAHAINA.

Arrived.

March 14—Ship Gen. Scott, Harris, New London, 8 mos out, 250 brls wh. oil, 2000 lbs bone.
15—Bark Eugene, Brown, Stonington, 20 mos out, 90 brls sp, 1600 wh, 14,000 lbs bone.
16—Ship Brookline, Jeffey, New London, 8 mos out, 180 sp, 60 wh, 600 lbs bone.
—Ship South Boston, Soule, Fairhaven, 6 1-2 months out, 175 brls sp.
19—Ship Almira, Coffin, of Edgartown, 25 months out, with 600 brls oil.
Ship Catharine, Green, NLondon, 7 mos, 55 brls sp, 525 wh, 5000 lbs bone.
Ship Parachute, Fisher, NBedford, 9 mos out, 100 brls wh, 1000 lbs bone.
20—Ship Logan, Nickerson, New Bedford, 16 mos out, 50 brls sperm.
—Bark Fellows, Babcock, Stonington, 48 mos, 430 brls sp, 400 wh, 4000 lbs bone.

Sailed.

March 20—Brigantine S. S., Ely, for San Francisco. with 76 passengers.

MARINE INTELLIGENCE.

The Inez has on board 3000 barrels black and 60 barrels sperm oil, having been thirty-eight months out. She touched at the Sandwich Islands in November last, and reports the British American ships Athol and James Stewart as recruiting there—the former having on board 50 barrels sperm and 1950 barrels black oil; the latter 1300 barrels of sperm and 1500 barrels black oil. News from California to the 12th October had been received at the Sandwich Islands. There were then about six thousand persons engaged in digging for gold. The Inez, we believe, has come on to Sydney with a view of selling her oil and proceeding to California.

The Albion has been about sixteen months out from Fairheaven, during which time she has taken 375 barrels sperm and 180 barrels black oil. She has spoken no whalers but what have already been reported.

THE CALIFORNIA GOLD FIELD.—Within the next fortnight no less than eight vessels, (exclusive of the schooner Plymouth,) will sail from this port for Calafornia—namely—the barques Eleanor Lancaster, Lindsays, and Juno; brigs Louisa and William Hill; and the schooners Despatch, Deborah, and Titania.—*Sydney Herald*, Jan. 8.

ACKNOWLEDGEMENTS.

A donation of $50,00, from Miss Waldo, of Worcester, Mass., for the purchase of books, for gratuitous distribution among seamen.

A donation of valuable books, for "Library," from J. C. Jones, Esq., formerly U. S. Consul at the Sandwich Islands. Among these volumes are "Qincy's History of Harvard University," 2 volumes; "Life of Lord Eldon," 2 volumes; "Missionary Voyages," a rare work, being a large quarto volume, containing an account of the first missionary establishment at the Society Islands; and other valuable books.

A donation of books, per "Serampore," from some unknown donor in the U. States.

Lahaina Chaplaincy.

Divine service will be held in the Seamen's Chapel, every Sabbath, at 11 o'clock, A. M. Seamen, residents, and visiters, are kindly invited to attend.

The office of the Chaplain is a short distance from the Chapel, on the same street towards, the sea. All persons wishing to converse with him, procure the Holy Scriptures, or religious publications, books, etc., will be always welcome, between the hours of 3 and 5 P. M.

T. E. TAYLOR, Chaplain.

Lahaina. July 29, 1848.

Information for Whalemen.

The subscriber would respectfully give the following notice for the information of whaleships, cruising in the Pacific. Recruits can be obtained at Pitcairn's Island, for at least twenty-five ships, at about the following prices:—

Yams,	per barrel,	$2,00
Sweet Potatoes	"	2,00
Irish	"	3,00
Onions	"	3,00
Limes	"	2,00
Lime Juice, per gal,		33
Cocoa Nuts, per hundred,		2,00
Oranges,	"	1,00
Fowls, per doz.,		3,00

In exchange, the inhabitants are ordinarily ready to take white and blue drilling, at from 20 to 25 c per yard; and calicoes from 15 to 20c per yard. They are usually in want of soap, oil, check shirts, powder, percussion caps, old lead, carpenter's tools, &c.

The best season for furnishing yams, is from August to January; Sweet Potatoes, throughout the year; Irish Potatoes, from December to February, and July to September, (two seasons).

JOHN BUFFETT.

Honolulu, Feb. 23, 1849. tf

NOTICE.

TO SEAMEN AND STRANGERS.—*The Seamen's Chapel.* is open for Public Worship every Sabbath, at 11 o'clock, A. M., and 7½, P. M. SEATS FREE.

Religious services will be held at the Vestry Room every Thursday evening. Usually, there will be a Lecture delivered.

The Seamen's Concert for Prayer is held at the Vestry Room the third Monday evening each month.

Seamen belonging to vessels (of all nations) visiting this port are invited to call at the Chaplain's Study, where they will be gratuitously supplied with copies of the Friend and other reading matter. It will be most convenient for the Chaplain to receive calls from Seamen between 2 and 4 o'clock, P. M.

Public services at the Native Churches, on the Sabbath, commence at 9½, A. M., and 2½ P. M.

The Seamen's Reading Room is open at all hours of the day. Strangers arriving and having late foreign papers, are respectfully invited to aid in keeping said room supplied with useful reading matter.

☞ Donations are respectfully solicited for the support of the Chaplaincy, and the publication of 'The Friend'. An annual report of all donations is made to the American Seamen's Friend Society, in New York. Any person contributing the sum of $50 is entitled to become a Life Director of the Society, and by $20 to become an Honorary Life Member.

SAMUEL C. DAMON,
Honolulu, April 1.—tf. Seamen's Chaplain.

The Friend, Bound.

The Friend, bound, for one, two, or more years, can be obtained at the Chaplain's Study. ☞ A few entire sets remain unsold. A deduction will be made from the subscription price to persons purchasing more than one volume.

*** Seumen will never be charged more than the actual cost of the publication and binding.

D'Aubigne's History of the Reformation, in 4 vols.

A few copies of this interesting work, elegantly bound in cloth, are for sale at the Study of the Seamen's Chaplain.

This edition is prefaced with the following notice by the author:—

"I have revised this translation line by line, and word by word. It is the only one which I have corrected.

"Signed, J. H. MERLE D'AUBIGNE."

History of the Hawaiian Islands:

Embracing their Antiquities, Mythology, Legends, Discovery by Europeans in the sixteenth century, re-discovery by Cook, with their Civil, Religious and Political History from the earliest traditionory period to the present time. By JAMES JACKSON JARVES. Third edition. For sale at Chaplain's Study. Price, $1,00.

The Friend sent Abroad.

Any person, by paying the subscription price of the Friend, ($1,50) in advance, can have the paper forwarded to any part of England or the United States, by the earliest opportunity. tf

Just received and for Sale,

At the Chaplain's Study, a fresh supply of the publications of the American Tract Society.

THE FRIEND:

A Monthly Journal devoted to Temperance, Seamen, Marine and General Intelligence.

PUBLISHED AND EDITED BY
SAMUEL C. DAMON, SEAMEN'S CHAPLAIN.

TERMS.

One copy per annum,	$1,50
Two copies per annum,	2,50
Five copies per annum,	5,00
Ten copies per annum,	3 00

The Poet's Corner.

For the Friend.

A WELCOME TO THE POETESSES OF THE 'LELAND,' MISS M. AND MISS N.

Suggested by the perusal of a record of the proceedings on board the "Leland," at sea, on the 22d of February, as published in the "Friend" for April.

Welcome, thrice welcome, to our sea-girt isle,
Ye minstrels fair, who wake the tuneful lyre;
Here let your sweetest strains the hours beguile,
And o'er the social waste new life inspire.

Fresh from proud Hudson's gorgeous scenes ye stray,
And brave the dangers of the mighty deep
To find congenial spirits far away
Where PELE's fires in boding stillness sleep.

Here, where the goddess once, with wild delight,
Reveled in dread KILAUEA's surging flame;
Here, 'midst wild nature's beauties may you write,
On Fame's bright scroll, for each a deathless name.

A deathless name? such names already shine
In richest lustre on the world's broad page;
M——-L and N——N! names indeed sublime,
Alike adored by poet, statesman, sage.

Already have we heard your touching lay,
By ocean breezes, gently wafted on;
The theme was noble! 'twas the natal day
Of proud Columbia's God-like Washington.

Such ever be the themes on which you dwell,
Lofty, ennobling, eloquent, sublime;
Sisters! for such call up your sweetest spell,
For such the Poet's richest garlands twine.

"BARD OF THE VALLEY."

Nuuanu, May, 1849.

Selected for the Friend.

LOOK ALOFT.

In the tempest of life, when the wave and the gale
Are around and above, if thy footing should fail—
If thine eye should grow dim, and thy caution depart,
"Look aloft" and be firm, and be fearless of heart.

If the friend, who embraced in prosperity's glow,
With a smile for each joy, and tear for each woe,
Should betray thee, when sorrows like clouds are arrayed,
"Look Aloft" to the friendship which never shall fade.

Should the visions which hope spreads in light to thine eye,
Like the tints of the rainbow, brighten to fly,
Then turn, and through tears of repentant regret,
"Look Aloft" to the sun that is never to set.

And oh, when death comes, in terrors to cast
His fears on the future, his pall on the past,
In that moment of darkness, with hope in thy heart,
And a smile in thy eye, "Look Aloft" and depart.

New York, August, 1843. J. H. C.

THE FRIEND.

Late and Important News.

Election of General Taylor, President of the United States—Louis Napoleon President of the Republic of France—Death of the Pacha of Egypt—Flight of the Pope from Rome—Gold—Steam, &c., &c., &c.

By late arrivals, we have received late and important intelligence from different parts of the world. We would acknowledge files of the "Alta California" to March, "New York Sun" to Dec. 2, and Valparaiso "Neighbor" to January 27. From these papers, and private sources, we glean the following items :—

CALIFORNIA.—*Arrival of the steamship California, and her reception at this port.*—The long expected and welcome pioneer of the North Pacific Steamship Line arrived in our harbor yesterday morning.

She left Mazatlan on the 17th of February, and Monterey on Tuesday last. Gen. Persifor F. Smith, new military commander of the Territory, and his suite are among the passengers.

The California is truly a magnificent vessel and her fine appearance as she came in sight off the town, called forth cheer upon cheer from our enraptured citizens, who were assembled in masses upon the heights commanding a view of the Bay, and in dense crowds at the principal wharves and landing places. She passed the vessels of war in the harbor under a salute from each, returned by hearty cheering from the crowded decks, and at eleven was safely moored at the anchorage off the town.—[Alta California.

The latest intelligence from California, shows that great and important changes are there transpiring. The slow work of centuries is compressed into months and weeks. Thousands are arriving from east, west, north and south. Vessels are deserted, parties are returning from the mines, and other parties setting off. From a private source we learn that an Irishman recently arrived from the mines with 200 lbs. of the precious ore. Let our readers compute his fortune, at $16 per oz.

Several clergymen have arrived from the States. It is reported that between 40 and 50 vessels are at anchor in the bay, without seamen. All kinds of merchandise are daily arriving. There is the greatest demand for tenements. Let those going to California take with them a house, even if it be no larger than the tub of the philosopher Diogenes.

UNITED STATES.—The New York Sun gives the result of the Presidential election as follows:

STATES FOR TAYLOR AND FILMORE. Electoral votes.		STATES FOR CASS AND BUTLER. Electoral votes.	
Massachusetts.	12	Maine.	9
Rhode Island.	4	New Hampshire	6
Connecticut.	6	Ohio.	23
Vermont.	6	Indiana.	12
New York.	36	Illinois.	9
New Jersey.	7	Michigan.	5
Pennsylvania	26	South Carolina.	9
Delaware.	3	Missouri.	7
Maryland.	8	Virginia.	17
Kentucky.	12	Iowa.	4
North Carolina.	11	Alabama.	9
Tennessee.	13	Wisconsin	4
Louisiana.	6	Arkansas.	3
Georgia.	10	Mississippi.	6
Florida.	3	Texas.	4
	163		127

Total vote, 290. Necessary to a choice 146. Taylor's Majority, 34.

On the Popular vote, the total majority for Taylor as far as heard from was 141,000.

EMIGRATION TO CALIFORNIA.—In almost every city down East, associations are forming to go to California, but the plan involves better prospects of success than it does in this city. A hundred persons of enterprise advance $300 each, which enables the party to purchase a substantial vessel, and fit her out with cargo and provisions, the ship being used, when in California, as a home for her owners. This plan for a small outlay promises comfort and success. The great error of adventurers is the small sum which they put into the general stock, which, when exhausted, leaves them nothing for their support far from home. The sum of $300 is scarcely sufficient for so long a voyage, but among 100 subscribers it ensures the purchase of a ship and cargo, which belong, on its arrival, to all the stockholders, and will enable them, if successful, to return home in her.

In the different ports of Boston, New York, Philadelphia and Baltimore, at least fifty vessels are up for freight or charter to the gold regions, and to record all the expeditions would be impracticable. A New York letter of Wednesday evening, the 13th, says:

The jewelers had a mass meeting—yes, a mass meeting !—at Riley's Hotel, last evening, to form a California association, and the names enrolled comprise many of our most respectable citizens engaged in that important branch of business.—The shoemakers are to have a demonstration to-night, and to-morrow the printers are to have a talk about whether it wouldn't be better for them even to throw down the *stick* and take up the *quoin*.

Besides all that, in to-day's Sun two hundred young ladies are advertised for immediately, to set out for the "placero." They must be respectable—so says the advertisement, and steady employment will be guaranteed. Passages all to be paid. Seamstresses and tradesmen preferred. The N. Y. Sun, after specifying several associa-

tions of capitalists and others in that city; gives the following new feature:

Important action of the Government in reference to the Gold Region.—According to the following from the Washington correspondence of the N. Y. Sun, of the 12th inst., the government is taking steps to prevent the export of gold ore, duty free, from the new mines in California:

It is rumored, and I have every reason to believe the rumor is true—that the Government in Cabinet council on Saturday last, decided to send immediately a number of small vessels of war, brigs and schooners, to enforce the embargo upon all merchant vessels going into the harbor of Monterey, San Francisco, and other ports on the coast of California, requiring them to come under bonds not to receive on board for transportation any part or parcel of gold ore dug from the public lands or mines on the Sacramento or other parts of the gold region in Alta California.

The Government is fully awake to the importance of the gold region, and the Cabinet undoubtedly regret that a mint at California was not acted upon at the last session, before the close of which they had an inkling of the gold regions. A State Government will undoubtedly be at once organized in California, and the mines taken possession of by the United States troops. The final methods for securing the mining regions to the Government have not yet been decided on.

The California and the Panama steamers of the 5th January and 16th February, from Panama, are full of passengers, and a large number of applications have been made for passage in the Oregon, to sail on the first of March. All these boats are on their way round Cape Horn.

The steamers Crescent City, Isthmus and Orus are advertised for Chagres and are nearly full. The Orus is intended to navigate the Chagres river. Beside, there are some forty-five or fifty vessels of all sizes, up for Chagres or San Francisco direct.—At last accounts, about 6000 persons were at Panama waiting conveyances to the El Dorado. The number of course was continually increasing, and it requires some stretch of imagination to conceive how all these people are to be transported to the gold regions.

No less than four vessels are being fitted out at Sag Harbor, and it is calculated that more goods will arrive in California in the next six months than will supply the inhabitants three times over.

The Park Theatre in New York was destroyed by fire on the evening of the 16th December. Loss $80,000, of which but a small portion is covered by insurance.

Austria.—The Emperor of Austria has abdicated in favor of his nephew, Francis Joseph.

Egypt.—Ibrahim Pacha is dead, and succeeded by Abbas Pacha in the viceroyalty of Egypt.

France.—Prince Louis Napoleon Bonaparte has been elected President of the Republic of France, by an overwhelming majority.

A Paris correspondent of the European Times, under date of Dec. 15, writes:

"Up to this date tranquility continues. The latest election returns show a majority in favor of Prince Louis, similar in proportion to those already announced. The proclamation of the President will probably be made about the 20th.

The present Ministers are preparing to evacuate their official residences. The sweep will be nearly as general as it was in February last. As usual, a succession of programmes has been circulated. The cabinet, as now settled, is said to be as follows:—

President of the Council, Minister of Justice and Public Worship—Odillon Barrot.
Foreign Affairs—Drouin de l'Huys.
Interior—Leon de Malleville.
Finance—Hyppolite Passy.
Public Works—Leon Faucher.
War—General Rulhieres.
Commerce and Agriculture—Achille Fould.
Public Instruction—DeFalloux.
Marine—De Tracy.
The above form the Cabinet.

The latest returns of the Presidential election now give about four millions for Prince Louis and nine hundred thousand for Gen. Cavignac.

Two negroes and two mulattoes have been elected to the National Assembly from Gaudaloupe, of whom one has taken his seat.

Italy.—The Pope has fled to Naples. "The Pope," says the London Times, "left the Quirinal on the evening of the 24th o. November, disguised as a servant of Count Sophr, and wearing the livery of the Bavarian Legation. Dressed in the character of a footman, he mounted the box of the Ambassador's carriage, seated himself by the coachman, and thus absconded from the Quirinal Palace and was carried off to Gæta. No one in Rome recognized him, and the illustrious fugitive arrived in Gæta on the night of the 25th, without experiencing the least danger."

The Pope of Rome, who had wished to stand aloof from the struggle between the Italians and Austrians, was forced at the eleventh hour to despatch all the troops he could assemble to the assistance of the former. A handfull of malcontents who had lately returned from exile, took advantage of this circumstance to create a riot at Rome. The Count Rossi, President of the Council, was assassinated by a ruffian, at noonday, in one of the public streets. The Pope withdrew privately from Rome, and sought a refuge in the kingdom of Naples, where he was received with acclamations by King Ferdinand and his subjects.—[Times.

Arrival Extraordinary.—The U. S. transport steam propeller "Massachusetts," Capt. Wood, arrived in our harbor on Monday last, from Boston, via Valparaiso, on her way to Oregon. She has on board 161 rank and file of the 1st regiment U. S. Artillery, (companies "M" and "L,") Brevet Major Hathaway, commanding. These troops are intended, we understand, to garrison the ports of Oregon. The 'Massachusetts' is a noble vessel, registered 750 tons, and coming in as she did in a calm, moving without the help of sails, or other visible means of locomotion, she perfectly astonished the native population who assembled in crowds upon the beach. She is provided with Ericcson's propeller, (which, by the way, is well worth inspection) and is the second steam vessel in working order that has ever visited these Islands.

We have been politely furnished with the following list of the command:—

Major J. S. Hathaway, 1st Art. commanding.
Capt. B. H. Hill, 1st Art. comdg. Comp. M.
L. H. Holden, Surgeon.
1st Lt. J. B. Gibson, Comp. M.
1st Lt. T. Talbot, " "
2nd Lt. J. J. Wood, qr. master and com'sary.
2nd Lt. J. B. Foy, Adjutant.
2nd Lt. J. Dement, Comp. L.
2nd Lt. G. Tallmadge, Comp. M.
—[Polynesian.

The Great Sea Serpent.—When the Dœdalus frigate, Captain M'Quhæ, which arrived at Portsmouth on the 4th inst., was on her passage home from the East Indies, between the Cape of Good Hope and St. Helena, her Capt. and most of her officers and crew, at 4 o'clock one afternoon saw a sea serpent. The creature was twenty minutes in sight of the frigate, and passed under her quarter. The Dœdalus left the Cape of Good Hope on the 30th of July, and reached St. Helena on the 16th of August. The following interesting report respecting the appearance of this extraordinary animal has been forwarded to the Admiralty by Captain M'Quhæ:—

"*Her Majesty's ship Dœdalus,*
Homoaze, Oct. 11.

"Sir;—In reply to your letter of this day's date, requiring information as to the truth of a statement published in the "Times" newspaper, of a sea serpent of extraordinary dimensions having been seen from her Majesty's ship Dœdalus, under my command, on her passage from the East Indies, I have the honor to acquaint you, for the information of my Lords Commissioners of the Admiralty, that at 5 o'clock p. m. on the 6th of August last, in latitude 24 degrees 44 m's. S., and longtitude 9 degrees 22 minutes E., the weather dark and cloudy, wind fresh from the N. W., with a long ocean swell from the S. W., the ship on the port tack heading N. E. by N., something very unusual was seen by Mr. Sartoris, midshipman, rapidly approaching the ship from before the beam. The circumstance was immediately reported by him to the officer of the watch, Lieut. Edgar Drummond, with whom and Mr. William Barett, the master, I was at the time walking the quarter-deck. The ship's company were at supper. On our attention being called to the object, it was discovered to be an enormous serpent, with head and shoulders kept about four feet constantly above the surface of the sea, and as nearly as we could approximate by comparing it with the length of what our maintopsail yard would show in the water, there was at the very least sixty feet of the animal *a fleur d'eau*, no portion of which was to our perception, used in propelling it through the water, either by vertical or horizontal undulation. It passed rapidly, but so close under our lee quarter, that had it been a man of my acquaintance I should have easily recognised his features with the naked eye; and it did not, either in approaching the ship or after it had passed our wake, deviate in the slightest degree from its course to the S. W., which it held on at the pace of from twelve to fifteen miles per hour, apparently on some determined purpose. The diameter of the serpent was about fifteen or sixteen inches behind the head, which was, without any doubt, that of a snake, and it was never, during the twenty minutes that it continued in sight of our glasses, once below the surface of the water: its color a dark brown, with yellowish-white about the throat. It had no fins, but something like the mane of a horse, or rather a bunch of sea weed, washed about its back. It was seen by the quartermaster, the boatswain's mate, and the man at the wheel, in addition to myself and officers above mentioned. I am having a drawing of the serpent made from a sketch taken immediately after it was seen, which I hope to have ready for transmission to my Lords Commissioners of the Admiralty by to-morrow's post.

The Temperance Friend.

For the Friend.

POCKET VERSUS PRINCIPLE.

Mr. Editor—There resides near one of H. H. M.'s ports, a gentleman that I wot of—fair and honorable, as the world goes—"a friend of temperance"—and withal a conservator of the public morals "by authority."

Not long since, as the story goes, Jack ashore on liberty thereabouts, was observed to be right merry; and from his bad navigation, and sundry oft-repeated lurches to leeward, it was more than suspected that the stevedore had made bad stowage of the cargo on board, or else that contraband goods were in the hold which were dangerous to the ship's safety.

The latter soon came to be the settled opinion But then ——— was a temperance port! The serpent of the still dared not show his head there—save indeed on the premises of "the Doctor," who, *of course* had the right to distil "*for medical purposes alone,*" if his "license" could be depended upon. How then could poor Jack have been bitten? Where *did* the slimy spirit of evil lurk? were the inquiries oft and anxiously revolved by "the authorities;" for, be it remembered, to the solution of this problem hung a coveted *tail!*

But, to make a long story short, it was at length discovered, though not till after a deal of commendable anxiety and great pains-taking *pro bono publico*, with no small quantity of unjust suspicion against the beer bottles of sundry law and license abiding dwellers thereabouts, that the spirit which poor Cassio rightly calls *devil* actually issued from *Cologne Bottles!*

Jack had ascertained by actual experiment that the veritable Eau de Cologne possessed *fuddling* no less than the *perfuming* virtue, furnishing thereby a new exemplification of the proverb, "Where there's a will there's a way." To be sure the article was rather expensive, at three reals a glass, or rather bottle, but then considering that the agreeable perfume and the fuddle were both secured with that amount, perhaps the purchaser arranged the matter thus with himself—

Essential Oils, three fips,
Rum, three do.

Which would not be so very expensive after all, you know, particularly as one bottle fulfilled the consumer's *noblest* desire—throwing him into a state of brutal drunkenness—thus qualifying him by *living example* to instruct these poor heathen Hawaiians in the *peculiar* blessings of civilization and christianity!—Alack-a-day, that these poor heathen should prove so stupid and unworthy their privileges!

But the story. Well, our hero soon perceived that quite a demand was made for the genuine Eau de Cologne, and that a penny could be turned to advantage in the business. Now *he* of course would do nothing to encourage intemperance! Not he! He was a fast friend of temperance; and then he would do nothing to favor immorality! Oh, no! he was the constituted guardian of the public morals in that vicinity. But then he could not lose the opportunity to provide for himself and his household, so providentially opened before him. He surely need not *know* that the Cologne was poisoning the community, since it would not be drank on his premises, any more than the man who plunges the fatal steel into his neighbor's bosom, in the dark, need *know* that he is a murderer. He didn't *see* the death-throe of his victim! Suppose conscience *does* pretty clearly intimate at times the *probabilities* in the case! In either case, suppose it would hardly require Yankee shrewdness to *guess* that the assassin's knife and murderous alcohol were hardly safe instruments to be scattered at random in the community! Why, what then?

But never mind that. Our hero did not feel it to be his duty to refuse to line his pockets with the profits of Eau de Cologne! Why indeed should he? If he didn't sell it somebody else would. Besides, he was violating no temperance pledge. No temperance society was ever known to be so fanatical as to include *perfumery* in its pledge! Of course then, all was right. The natives, too, purchased *meeting-house water* (as Cologne is expressively denominated by them,) and he might suppose, if he could, that all he sold was applied to no worse purposes than that purchased by natives. Why indeed might not he supply the demand as well as any one? * * * * * *

A large quantity of the article in question was soon said to be on board a vessel, marked to his address.

* * * * * * *

What say you, Mr. Editor—can there be any harm in selling perfumed alcohol? We all know that selling the filthy stuff called *Rum* is a dirty and murderous business, make the best you can of it. But then the aromatic *Cologne* is quite another affair! It isn't classed with "the drink that drunkards use," you know!

Suppose Jack gets drunk on it—beastly drunk—and mayhap commits suicide, or does worse; can there be any harm in this? And could his captain, think you, complain that his man had poured the sweet odor into his stomach rather than upon his handkerchief?

Do you really think it possible that *Cologne water* could be made "to bite like a serpent, or sting like an adder?" or that its fatal thrust could consign the soul of its votary to the second death?

And in the bare possibility of so dire an event, how do you suppose it would stand, in the final reckoning, with the vender of this article for such uses?

HOMO.

TEMPERANCE PLEDGE IN 1637.

Mr. Editor—I have found the following temperance pledge written on the blank leaf of an old English book, which has been handed down from parent to child for several generations; but at the time when the pledge was dated, to have been the property of good old Robert Boltok, Bachelor in Divinity, and preacher of God's word at Broughton, in Northamptonshire, England. It shows that temperance was properly appreciated, by some at least, in olden time.—[Ch. Adv.

A. P.

Marietta, July 3d, 1834.

Broughton, 1637.—Ffrome this daye forwarde to the ende of my life, I will never pledge anye healthe nor drinke a whole carrowse in a glasse, cupp, bowle, or other drinking instrument whatsoever; whosoever it be, or ffrome whomsoever it come, except the nscessitye of nature doe require it. Not my own most gracious kinge; nor anye the greatest monarch or tyrant on earth. Nor my dearest ffriende, nor all the goulde in the worlde shall ever enforce me or allure me. Not an Angell from Heaven (whoe I knowe will not attempt it) should persuade me.—Not Satan with all his old subtilities, nor all the powers of Hell itself, shall ever betray me. By this very sinne (for a sinne it is and not a little one,) I doe plainly finde that I have more offended and dishonored my great and gloriouse Maker and most merciful Saviour, than by all other sinnes that I am subject unto; and for this very sinne I know it is that God hath often been strange unto me. And ffor that cause, and noe other respect, have I thus vowed; and I heartilye begg my good Father in heaven of his greate goodness and infinite mercie, in Jesus Xt. to assist me in the same, and to be favourable unto me ffor what is past. Amen.

April 10, 1637. R. BOLTON.

GIVE THOSE WHO PREFER IT, CHAMPAGNE.—In a little work just published, entitled 'The Whole Art of Making British Wines, Cordials, and Liquors,' by James Robinson, the trade-secrets are fully divulged. See what 'sparkling champagne' *L'Oil de Perdix* is made of! 'sliced rhubarb stalks, the tops of young spring nettles, sugar, and eggs!'—Taste, also, this '*Fine Old Port*' compound of the juice of Hamburg grapes, sugar, a decoction of purple beet-root, sliced ginger, and red sage leaves—together with a large proportion of French brandy, isinglass, bitter almonds, sugar candy, and lemon-peel! Roughness is given by alum, oak bark, some other astringent; and the real port-flavor, by adding the tincture of the seeds of raisins!—[Gateshead Obs.

THE FRIEND.

HONOLULU, MAY 1, 1849.

☞ The publication of the Friend will be discontinued after the present number, until the editor returns from a voyage to the Western Coast of America. It is our intention to embark to-day, April 16th, on board the U. S. Propeller "Massachusetts," Captain Wood having very kindly and generously proffered us a free passage to San Francisco, via Oregon. It is with no ordinary feelings of pleasure that we anticipate visiting our native land. To be sure, we do not expect to visit those portions of the country rendered sacred by the associations of home and kindred, yet it is to be our privilege to embark in a vessel bearing the name of our native state, and it will require no great stretch of the imagination to fancy ourselves once more an inhabitant of the Old Bay State! Under the protecting care of Divine Providence, we hope to resume our duties at the end of three or four months. During our absence, the recollection of the many acts of kindness which we have received from residents in Honolulu, and the sea-faring community, during a sojourn of six years at the islands, will serve to hasten our return to our home, and the sphere of our labors.

N. B. The affairs of the Chaplaincy, during our absence, will be entrusted to the care of the Rev. T. E. Taylor, Chaplain at Lahaina.

Hawaiian Coffee.—The fair experiment has been made that coffee of the first quality can be raised upon the Sandwich Islands.—Some recently from the island of Kauai, is of a superior excellence. *We* are able to pronounce that from the plantation of Mr. Titcomb, of the *very best quality*. It is now for sale in Honolulu, by Mr. Reynolds. It is surely to be regretted that an inferior article from a foreign country should be imported in such quantities as to overstock the market, and thus check the growth of coffee upon the islands.

Hawaiian Syrup.—We have recently had an opportunity to test the good quality of some most excellent Syrup, made for family use, by Judge Parsons, at Lahaina. It is superior to anything of the kind that has been in the market since the Chinamen ceased the manufacture of the clarified syrup.—We hope the manufacture of good Syrup will find ample encouragement. Such syrup as that manufactured now at Lahaina, would undoubtedly command a very high price on the coast.

A novel Novel.—There has been republished in Germany, an exact copy of a Japanese novel, by a Mr. Schwartz.

Progress of Temperance.—Both Houses of the British Parliament, in answer to the numerous petitions of temperance societies, have passed a bill prohibiting all sale of intoxicating liquors on Sunday morning and afternoon.

☞ We copy the above item of intelligence from a late American paper, and most sincerely do we hope it may be true. It is an important step in the right direction.—The Hawaiian Legislature we hope may be thereby encouraged to carry out, during their present session, a measure now but partially executed. We refer to the entire prohibition of the sale of spirituous liquors on the Holy Sabbath. At present houses licensed to sell by the glass, are alone closed, while Hotels may continue open as on other days. We cannot see why this distinction should be made. If it is wrong for a grog-shop to be open for the sale of spirits, why not for a Hotel? It needs not a very close observation to see that the sale of spirits by Hotels on the Sabbath is productive of much evil, especially to the sea-faring community, as well as the mechanics of Honolulu, not to speak of any other class. Will not some member of the Hawaiian Legislature bring forward this subject, and endeavor to have a revision of the License Law, so modifying the statute that no person shall be licensed by the laws of this kingdom to sell spirituous and intoxicating liquors upon God's holy Day. This day was consecrated for other purposes, but the sale of liquors more than any other cause leads to a most gross desecration of the sanctity of this Sacred Day.—Remember the Sabbath Day and keep it holy.—We are anxious to see the laws of this kingdom just as strict upon the subject of the license and sale of all kinds of intoxicating liquors, as the English and French treaties will allow; and we hope to see the day when England and France will cooperate with the rulers of this Kingdom to entirely prohibit the importation of intoxicating liquors.—What an inestimable blessing would thereby be conferred upon the seamen of England, France and the United States.

The effects of trafficing in Spirituous Liquors.—Those engaged in the sale and manufacture of intoxicating liquors, and such as sympathize with them, are extremely sensitive when the point is urged that they are upholding an iniquitous and dishonest business. This is natural and what is to be expected. Before their minds we would hold up the mirror of the past. What does that reflect? As we gaze upon that mirror, we see reflected this truth, *wealth acquired by traffic in spirituous liquors has proved a curse to those who acquired it, or to their children and friends.* This result follows on the principle that God ordinarily punishes men in the line of their transgressions. We should as soon expect the sun not to rise, water to run up hill, iron to float, or a man to fly, as not to witness the awful curse of drunkenness eventually being visited upon rumsellers or their descendants, unless they exercised timely repentance. The laws of God cannot be violated with impunity. Solomon asks, "Can a man take fire in his bosom and his clothes not be burnt?" Of course not. Can a man acquire wealth by selling spirituous liquors and reasonably expect it will prove a blessing, either to himself or his children? The past answers. "No."

Volcano of Kilauea, Hawaii.—We learn from the Rev. Mr. Paris, recently from Hawaii, that on passing from his station in Kau, to Hilo, he observed the great crater of Kilauea undergoing some remarkable changes. Although the lake is now comparatively quiet, yet the internal pressure is such as to have elevated the surface of the lake from one to two hundred feet. In the centre of the lake a huge cone has been thrown up, and from its summit there are frequent eruptions. The frequent explosions of the pent up gases may be heard at the distance of ten miles. These explosions resemble the sudden escape of the steam from the boiler of a. steam engine, although upon a scale immensely enlarged. Other parts of the crater furnish abundant evidence that the subterranean fires of Hawaii are far from becoming extinct.

Depopulation by the Measles.—In a former number we noticed the fact that the measles had been very destructive to the aborigines of these islands. The following statement will show that this epidemic was not confined to the Sandwich Islands. Capt. Klinkofstrom, connected with the Russian Fur Company, thus writes us from San Francisco:—"During the last summer we had, throughout all our colonies, the measles, and great numbers of the inhabitants were taken off. Some of our Islands in the Alsaitian chain lost most of their population. In Sitka, among a population of 600 souls, we had in one month nearly 80 deaths, if not more. Nearly all, except Europeans, were sick, so that all the town was in sorrow, fear and dread."

☞ It is with great regret we are called upon to announce the death of Capt. Lindsay, late a resident of these islands, who sailed from hence in the British schooner 'Amelia.' His decease took place at Whampoa on the 22d of June last, and was caused by inflamation of the brain induced by exposure after his undergoing an operation for the removal of a tumor from his forehead. Capt. Lindsey leaves a widow, a native of Hawaii.—[Polynesian.

Hawaiian Bible Society.

Honolulu, April 26, 1849.

Dear Sir: A meeting of the Executive Committee of the Hawaiian Bible Society was held, on the 20th inst, at the house of the Treasurer, when the following vote was passed: "That the Secretary, *pro tem*, be a committee to prepare an account of what has already been collected for the Society, with what may be collected at the Seamen's Chapel on the coming Sabbath, and that the same be published in the next number of the *Friend*—also cause to be re-published, with corrections, the list of the Life Members."

An excellent sermon in behalf of the H. B. S. was preached at the Seamen's Chapel, Lord's day morning, 22d inst., by the Rev. J. S. Green, from Acts 17: 11, 12. "Noble Bereans." The preacher set forth the value of the Scriptures in the formation of character, and the evils of light, novel reading, *alias* "yellow covered literature," and admonished his hearers, especially the children and youth, to study the Bible. After the sermon a collection was taken up. This, with the amount received from the new Life Members, and annual subscribers, and for Bibles sold, will amount to about $400.—The expenses are nearly $50, leaving $350 in the Treasurer's hands, ready to be forwarded to the parent Society for a new supply of Bibles and Testaments.

By the *Serampore*, which arrived in January last, a large and beautiful assortment of Bibles and Testaments, in various languages, was received in return for the $500 sent to the parent Society, about a year since.

This Society (H. B. S.) has been in operation, now, eight years, and has collected, from year to year, a sufficient sum to purchase a full supply of Bibles and Testaments in the English, French, Spanish, German, Portuguese, Welsh, Swedish, Danish and Dutch languages, for seamen and landsmen.

The amount collected from year to year, is as follows, viz:—

From June, 1841, to June,	1842,	$108 50
"	1843,	44 00
"	1844,	62 00
"	1845,	292 98
"	1846,	482 46
"	1848,	584 82
May,	1849,	407 62
Making from 1842 to 1849,		$1982 38

Ten dollars, paid at any one time, constitutes a Life Member. Eighty-five individuals, by paying this sum, or by having it paid for them, have been made Life Members.—The first sixty-three were constituted life members previous to June, 1848. For the last twenty-two, see the Treasurer's Report, for the last eleven months, which is sent herewith.

Yours truly,
A. S. COOKE, Sec. *protem*.

Rev. S. C Damon.

AMOS S. COOKE, Treas.

Honolulu, April 26, 1849.

Examined and found to be correct.

S. N. CASTLE.
Auditor of *Haw.* Bib. Society.

"The U. S. S. Preble is about to proceed to Japan to bring away the crew of the American whaler Lagoda, recently wrecked on the coast."—[China Mail.

Extract from the log-book of barque "Hermes," Capt. R. B. Corkhill, from Hong Kong to-mards the Sandwich Islands.

Monday, 12th March, 1849.

Lat. 25, 56 N. long. 126, 49 E. moderate and fine weather, E. N. E., Koomsang Island, Loo Choo group N. 1-2 E., 11 or 12 miles distant, fresh, E. by S., stood to the N. N. E. intending to pass between the great Loo Choo and Koomsang.

At fifteen minutes past 2 o'clock P. M., saw a ship on shore on the N. E. end of Koomisary island on low point of sand and reef, fully five miles to the N. E. from the island. The ship on shore lying about half way out on the point. At 2.45 tacked to the southward. Ordered the quarter boat down and sent the 2nd officer with four hands te endeavour to see what ship it was on shore. While the ship was hove to, the nearest part of the reef 3-4 of a mile distant, the ship on shore bore N. N. W. 1-2 W., a low rock off the S. E. point of Koomsang W. by S. 1-4 S. the point of the low land and reef, E. N. E.—The S. W. of Amakirrima island of the Loo Choos S. E. by E. 1-4 E. Took a cast of the lead in 35f., hard sand. At 6.10 P. M., the boat returned on board and the 2nd officer informed us the name on the ship's stern was "Elizabeth and Henry," of London, lying inside a small reef, starboard side to the shore, about midway between the reef and sand, distant from either about 3 cables lengths. The lower masts and bowsprit gone, also anchors, cables, rigging, sails, brass and iron work, glass of sky-light, deck-lights, and in fact every thing that could be removed had been taken away. No one on board or in sight from the ship on shore; supposed the ship to have been stranded about a month—part of the copper stripped off round the ship. Rudder sawn in two below the rudder trunk. A small pair of shears rigged as if to unship the rudder.

From a few receipts found on board in the cabin, dated "Auckland, New Zealand, 1st Dec. 1848," find the Captain's name was W. J. S. Clark. It appeared that the natives or other people had been stripping the ship, as but little was left on board except a few water butts that were floating about in the hold. We supposed the crew would be all saved when the ship went on shore. They might now be on the island, or more probably have gone away in the boats to Loo Choo, or elsewhere. At 6 P. M., hoisted up boat and made sail to southward. Strong breeze and cloudy, E. S. E.

The reef on which the "Elizabeth and Henry" was wrecked is not laid down on Laurie's chart, 1847, or on Norrie's, 1836.

Mem.—Should the crew of the "E. & H." have proceeded to Loo Choo, they will most probably meet with kind and hospitable treatment. When the "Royal Oak" was wrecked there five or six years back, the crew was provided with lodging and provisions and every assistance rendered them in saving what were possible from the wreck. The authorities also built them a junk in which the ultimately reached Chusan in safety. Altho' offered remuneration it was constantly and firmly refused.—[Polynesian.

Cabin Boy's Locker.

Anecdote of Swearing.—An anecdote of this description, which we read a few days ago, reminded us of one we have never seen in print, but which we have for a long time stored among our recollections of the late Rev. Joseph Grafton, of Newton. We know nothing of the truth of the story, and yet so perfectly characteristic is it, that we have always regarded it as the relation of a veritable incident. Father Grafton stood high in the public estimation, and was often present with other clergymen on great occasions.—At one time he was dining with the Governor and Council, the Mayor and Aldermen, or some other body of magnates, in Boston, and was excessively annoyed as well as shocked by the profanity of a young man who sat nearly opposite to him at table. Having endured the odious vice as long as his patience would allow, the old gentleman arose and exclaimnd, "Mr. President," in the sharp, energetic tone, which all who knew him will recollect. The President struck his knife handle upon the table to command attention, and replied, "The Rev. Mr. Grafton." Silence prevailed, and the old gentleman very cooly proceeded—"I move you, sir, that there be no swearing done at this table excepting by my friend the Rev. Dr. Homer." The motion prevailed by acclamation, and the remedy was as thoroughly effectual as the mortification of the young swearer was complete.—[N. Y. Rec.

The Rich Man and the Day Laborer.—A merchant who is as avaricious as opulent, recently excited some public attention at London. He had obtained at the cheapest possible rate, a poor day-laborer to do some work in his house. This unfortunate man, fatigued with work, represented to the merchant's wife, that with so low wages he could not purchase a glass of beer to quench his thirst. The compassionate woman gave him a tankard of ale, but the husband learned this circumstance on his return, and when he settled with his laborer, retained the value of the drink. The poor man exclaimed against it, and raised so great an uproar that the police took him to prison. The next day when he was called before the Judge, he explained the affair, was discharged upon the payment of two shillings; but the merchant had another account to render to justice.—He was condemned to pay fifty pounds sterling as a fine for having sold beer without a license, and the poor laborer, as the informer of the offence, received the third of the sum.

Gen. Lafayette.—During the Revolutionary war, Gen. Lafayette being in Baltimore, was invited to a ball. He went, as requested, but instead of joining in the amusement, as might be expected of a young Frenchman of twenty-two, he addressed the ladies thus: "Ladies, you are very handsome; you dance very prettily; your ball is very fine; but my soldiers have no shirts." The appeal was irresistable; the ball ceased; the ladies went home and went to work, and the next day a large number of shirts were presented by the fairest hands of Baltimore, for the gallant defenders of their country.

Tale of a Tub.—The following droll story appears in the *St. Joseph Times:*

On the passage of the ship Alexandria from New Orleans to New York, a young lad, of about fourteen, from a naturally frolicksome disposition, became so troublesome that he was threatened by the captain that he would confine him in a water cask. Our youngster took no heed, and, at his next offence, was put into the cask, which was headed up, leaving a large bunghole for the admission of air. The ship encountered a violent storm, and, in a violent lurch, the cask containing the boy rolled into the sea. The circumstance was not noticed by those on board.—Fortunately, the cask struck bung up, and floated about thirty hours, when it was thrown upon the beach of Cape St. Blas Here the boy made efforts to extricate himself from his prison, without success, and, in despair gave up to die. Some cows strolling on the beach were attracted to the cask, and one of the number, it being fly-time, switched her tale into the bung-hole, which the boy grasped with desperate resolution. The cow bellowed, and set off for life; and, after running some three hundred yards with the cask, struck it against a log on the beach, and knocked it to pieces. The boy, thus providentially released, was discovered by some fishermen on the Point, and taken into Apilachicola, where a small collection being made for him, he was enabled to proceed north by the way of Columbus.

Nantucket Sheep.—Even in Nantucket people have their troubles. At present there is a sheep and anti-sheep party; the anti-sheep party being much the largest. There are about seven thousand sheep on the Island; some large flocks are owned by men who do not own a rod of land. The sheep run at large on the Island and eat up every green thing. The people of the Island are noted for their love of blackberries; it is estimated that ten thousand dollars goes off the Island every year to purchase this delicious fruit. It is contended, and with much force that if the sheep were away the people could raise their own blackberries, and hence the difficulty. The question is now before our State courts, whether people who keep sheep have any right to let them run at large upon the land which is the common property of the whole people. Hence, you see that we have here a real, bona-fide "*free soil*" question.

Doing the Barber.—An Eastern-shore man stepped into a barber's shop in our city, on Saturday, says the Baltimore Argus, and requested the barber to take off 12½ cents worth of his hair. The barber trimmed his locks very neatly, and then combed and brushed them in the most particular style.

"Are you done?" asked the Eastern-shore man, as the barber removed the napkin from his neck.

"Yes sir," returned the man of the razor with a bow.

"Are you certain that you took off eleven pence worth?"

"Yes sir," returned the barber, "there's the glass—you can see for yourself."

"Well," said the Eastern-shore man, "if you think that you have got eleven pence worth off, I don't know as I have got any use for it, and I haven't got no change, so you may just keep the hair for your trouble!"

A Duel Avoided.—A famous duellist challenged an Irish barrister for some remark made by the barrister while the duellist was giving his testimony on the stand in some important case. The barrister knew precisely as much about fighting as a fancy boxer knows about Milton's "Paradise Lost." His friends told him, however, that there was no way to avoid the scrape, and it was certainly expected of him either to fight or apologize. This settled the point; for the proud little Hibernian, though he would rather eat than fight, still infinitely preferred being shot to making an apology. So the two duellists, with their seconds, &c., were soon upon the battle ground. The challenger was notorious as a great pistol shot, and had fought some half dozen duels before, in one of which he was so badly wounded as to be left a cripple for life.

When other preliminaries were arranged, he requested, through his second, one favor from his adversary, which was permission to stand up against a mile stone, that was on the chosen ground. He sought no advantage, but wished to lean upon the stone, being too lame to stand without support. His request was at once granted, and just as the word was about to be given, the lawyer issued his mandate to stay proceedings, as he had also a request to make.

In the gravest manner in the world he solicited permission to lean against *the next mile stone*, and the joke was so good that the challenger took his revenge out in a hearty roar of laughter, withdrawing his deadly defiance, and declaring that he could never shoot a man of such excellent humor.

☞ "Put your finger in de, vat you call him, de blacksmith's vice," said the foreigner, "and turn him till you can bear him no longer. Dat is de rheumatiz. Den give him another turn. Dat is de gout." But taxation in this country has long since passed the gout point of intolerable, and verged upon the impossible. To pay taxes is the grand feature, and would seem to be the only object, of English life. Tax, tax. tax.

School of Manners.—As George III. was walking the quarter-deck of one of his men of war with his hat on, a sailor asked his messmate who that fellow was who didn't dowse his peak to the admiral?

"Why, it's the King."

"Well, king or no king," retorts the other, "he's an unmannerly dog."

"Where should he learn manners?" replied Jack, "he never was out of sight of land in his life."

SYLLOGISM.

A sailor is not a sailor when he's aboard,
And a sailor is not sailor when he is ashore;
But he must be either ashore or aboard.
Therefore a sailor is not a sailor.—[Ex.

Why is a sailor not a sailor when he is overboard.—[P. Journal.

BECAUSE

If he fell from the taffrail, he is a-stern,
If from a jib-boom, he is a-head,
If from the bulwarks, he is a-long-side,
Therefore a sailor overboard is not a sailor.

When is a sailor a SAILOR? Do you give it up?
When he is no SO'GER.

☞ The following Original Hymn, composed by a young lady, of New London, Ct., was sung by the choir at the Seamen's Bethel, on Sunday, the 22d ult., on which occasion the Rev. Mr. Green preached a sermon for the benefit of the Hawaiian Bible Society.

AN ORIGINAL HYMN.

BY MISS F. M. CAULKINS, NEW LONDON, CT.

THE BIBLE.

What light breaks on a darkened world,
From these resplendent leaves unfurl'd!
The opening eyelids of the morn,
Shed no such beams on hill or lawn.

An angel bending from the skies,
Heralds the volume as it flies;
Happy the nation that receives,
With outstretch'd hands, the dropping leaves.

Thrice happy each life-quickened heart,
That trusts to this unerring chart:
'Tis hope to age, and strength to youth,
To darkness, light; to wanderers, truth.

'Tis gentle rain, 'tis sparkling dew,
The mind to cleanse, refine, renew:
'Tis lightning fierce, and thunder deep,
To startle conscience from its sleep.

A shaft from this full quiver sent,
In twain hath many a bosom rent;
A drop of balm from this rich store,
Hath healed the broken heart once more.

Learning and zeal from age to age,
Have worshipped, loved, explored the page;
Martyrs in its defence have died,
Or torments worse than death defied.

Like angels round a dying bed,
Its truths a heavenly radiance shed;
And hovering on celestial wings,
Breathe music from unnumbered strings.

O now thou Word, divinely fair,
Take wings and wide thy message bear;
Peace to all climes,—heart-peace be given,
And light to guide the soul to heaven!

We are assured that M. Pageot, the late French Minister Plenipotentiary to the United States, has left that country for England, to offer Louis Philippe a part of his princely fortune, and induce him to establish himself and his family in America. This is most admirable in M. Pageot, and the more so as it is most rare. —*Joural du Havre.*

☞ We cannot help remarking on the very quiet and good natured way in which the crew of the Russian Brig Baykall have behaved themselves on every occasion when they have been on shore. If all sailors followed their example the police force might be reduced to one-half of its present strength.—[Polynesian.

Sabbath Friend.

A NEW ENGLAND SABBATH.—A correspondent of the Rochester Democrat, writing from Springfield, Mass., says:

"A New England Sabbath is something which can only be seen in New England. It is not an article of exportation. There is a quiet, settled calm about it—a stillness which can almost be felt—unused to any other atmosphere. I arose yesterday morning oppressed by the solemn serenity which seemed to pervade every object around me. In this busy town, at eight o'clock, not a sound could be heard. Silence pervaded its streets and I could scarcely make myself believe that I was in the midst of a population of ten or twelve thousand souls. The green fields —the mountains—the forests—stretching out in every direction, far as the eye could reach —seemed praising God, in their calm beauty, and the huge elms of an hundred years, lifted up their long arms towards heaven and looked devout as the ancient patriarchs.—The very buildings—many of them associated with stirring events in the past—became sanctified monitors, as they said to the contemplative mind, 'This is the land of the Pilgrims—Remember the Sabbath day to keep it holy.' Whoever remembers his first Sabbath in a New England town, will be able to understand what I have written, for he must have *felt* what I have attempted to describe.

There is no ingress or egress here on the Sabbath. All public conveyances lay by.—Formerly a car passed over the road to Boston and back with the mail. This has been discontinued.

In these Yankee villages one is always delighted with their magnificent shade trees. They constitute the principal beauty of almost every place you visit—of this place preeminently. Nearly every street here is shaded by magnificent elm, sycamore or maple trees."

☞ England, Scotland and America enjoy a Christian Sabbath. To them it is what God originally designed it should be in all the earth,—a day of blessing and of mercy to man. But how melancholy the reflection that they only, among all the nations of Christendom, enjoy a Christian Sabbath. It is truly sad to witness the desecration of the Sabbath even in Protestant Europe.—But a son of the Pilgrims, who loves this day of the Lord, wearied with the perpetual hurrying to and fro of the multitude in that strange land; saddened at the sight of the gay throngs that crowd every place of amusement, in pursuit of every conceivable form of merriment and of guilty pleasure; sickened at the sound of revelry and noisy mirth mingling with the notes of martial music, the bustle of the military parade, and the din of business; to such an alien from the land of the Pilgrims, it is most refreshing to enjoy, once more, a day of sacred rest in his native land, or in that fair and happy island from which his fathers came. Even in busy London, that vast metropolis of the world, the sacred suspension of secular business, the deep repose of that tumultuous city, as the Sabbath returns, the stillness of the hallowed day, its sacred associations, its solemn rites and divine instructions enforced by the solemnities of the sanctuary—these are all a cordial to his thirsty spirit. In the enjoyment of such a Sabbath, he feels how blessed, above all other days, is the one which the Lord hath made.—*Bibliotheca Sacra.*

WORKING ON THE SABBATH.—There are a great many people who profess to keep the Sabbath according to the fourth commandment, but who, somehow or other, always find a multitude of 'works of necessity' to be attended to. We have seen a capital anecdote, lately, about a family of such people, who were pretty severely rebuked by a colored man in their employ. The family were farmers. One Sabbath morning the colored man was not up, as usual, at breakfast.—The son was sent to call him, but Cæsar said they need not wait for him, as he did not wish for any breakfast.

Why, Cæsar, said the young man, we shall want you as soon as the dew is off, to help about the hay.

No, said he, I can't work any more on the Sabbath; it is not right.

Not right! said the other. Is it not our duty to take care of what Providence has given us? And would you not pull your cow or sheep out of a pit, upon the Sabbath, Cæsar?

No, not if I had been trying all the week to *shove them in.* I would let them lie there.

REMEMBER THE SABBATH DAY.—The Grand Duke Constantine, of Russia, during his tour around Scotland, visited the Islands of Staffa Iona, in the Hebrides. He arrived at the latter on Sunday.

The stern old keeper of the Cathedral keys refused to unlock the gate and admit the party to see the tombstones, for that would in his opinion have been desecrating the Sabbath. In vain did Captain Robinson ask imploringly, whether he was aware who the illustrious stranger was, whom he refused to gratify. Donald 'dinna exactly ken.' He supposed 'from what folk said, it was only the Emperor of Russia. But he wad nae gie up the key to his own Queen on the Lord's day. There was a power aboon superior to any earthly power, and he could nae gie up the key.'—*Chr. Watchman.*

AN EXAMPLE.—A vessel containing upwards of one hundred and fifty Hollanders, lay all of Sabbath day at one of our wharves rather than violate, by travelling, that law which secures its sanctity as well in the New as in the Old World. They held public service upon the deck of their vessel in the morning, a sermon being delivered by a minister of their own number. Their hymns, sung in their own tongue, seemed indeed to be hymns of praise, swelling forth from hearts that rejoiced to breath this the land of freedom and their adoption. They are destined to the colony in the Grand River Valley, which was brought to the attention of our legislature during the past winter. We wish them favorable winds and a speedy passage to their new home in our Western Valley, and trust that thousands more will speedily follow them.—*Det. Adv.*

A CHILD WITH TWENTY NAMES.—The Madrid Gazette officially announces the birth of the Duchess de Montpensier's child, and that she has been baptised Maria Isabel Francisca de Asis Antonia Luiza Fernanda Cristina Amalia Felipa Adelaida Josefa Elena Enriquita Carolina Justa Rufina Gaspara Melchora Baltasara Natea.

The following was furnished by the Captain of the Hermes, to the editor of the Polynesian.

"March 23, 1849.

Lat. 31, 58 N. long. 138, 28 E. Steered N. E. by E. 1-2 E. till 8 P. M., distance run since noon, 65 miles. At that hour the centre of a small island bore south five miles which would place it in latitude 32, 24 N. longtitude 139, 36 E. Not laid down in Laurie's or Norrie's charts.—From 8 P. M., steered E. by N. 1-2 N., kept a goed look out for South Island and must have passed close to the place assigned it on the chart but saw nothing of it, and doubt very much if it is in that position.

Found the chronometers very correct by observations taken in Honolulu harbor, April 26th 1849."

DIED.

On board Am. whaleship "Alexander," off Rio Janerio, Nov. 23, 1848, Capt. Joseph Black, belonging to Middlebury, Mass.

Also, on board the same vessel, Nov. 25, Wm. Mayfield, carpenter, belonging to New Hampshire. They died of a fever caught at Cape de Verde Islands, it being very sickly when the vessel touched there.

At Waioli, Kauai, Feb 5, Frank, infant and twin son of Rev E & Mrs L S Johnson, aged 5 months and 1 day.

MARINE JOURNAL.

PORT OF HONOLULU.

Arrived.

March 31--Ship Hellespont, Manwaring, of Mystic, 7 mo out, 25 brls. sp.

---Ship Alexander, J. Byon, of New Bedford, 11 mos out, 416 brls sp, oil. Capt. Jos. Black, late master, died at sea on the 21st of Nov. last.

April 7—Ship Hope, Christian, New Bedford, 18 mos out, 300 sp.

10—Ship Luminary, Norton, Warren, 6 mos. out, 30 brls sp oil.

—Bark Columbia, Sweeny, Sag Harbor, 6 mos out, 25 sp.

—Bark Cavalier, Dexter, Stonington, 6 mos. 100.

March 24—Danish brigantine Emmy, Gebhard, from Hong Kong.

27—English brigantine Dispatch, Plant, from Sydney.

28—Hamburg brigantine Charlotta, Decker, fm Valparaiso.

—Am. whale ship Tuscarora, Leek, Coldspring.

April 2—Haw schr Starling, Menzies, 28 days from Columbia River. Reports in the river ship Undine, and bark Anita, for San Francisco

3---Am whale ship Splendid, Pearson, Cold Spring, clean

April 8—Russian Am. Co's bark Prince Menzikoff, Raudacoff, 19 days from San Francisco.

9—Steam Propeller Massachusetts, Wood, from New York via Rio de Janeiro and Valparaiso.

—Eng. schr. Eliza, Chard, 78 days from Hobart Town.

12—Russian man of war brig Baikal, Nievielskoy, 54 days from Valparaiso.

April 14—Chilean Brigantine Lola, Schroedor, from Valparaiso via Tahita.

April 14—British schr. Louisa, Milton, from Sydney.

April 18—Hawaiian brig Moctezuma, Pfannkuche, 78 days from Heng Kong.

April 19—British sch. Osprey, Griggs, 56 days from Port Wellington, New Zeland.

April 23. Fr. brig Anonyme, Rabballard, 35 days from Tahiti.

—Br. bark Lindsays, McKenzie, 90 days from Sydney, N. S. W. for San Francisco; put in to stop a leak.

26. Br. brig Velocity, Dixon, 46 days from Valparaiso, with British Naval Stores.

OUTSIDE—Br. bark Hermes, Corkhill, 64 days from Hong Kong for San Francisco.

Sailed.

April 10---Haw schr Plymouth, Church, for San Francisco.

11---Am schr John Dunlap, Bachelder, San Francisco.

---Chilean brigantine Seis de Junio, Hobson, do.

April 16—Hawaiian schr. Josephine, Brickwood, for San Francisco.

April 17—U. S. Transport Massachusetts, Wood, for Columbia river.

April 18—British schr. Louisa, Milton, for San Francisco.

SPOKEN,

March 12, off Gallipagos Islands, spoke ship Massachusetts, Chase, of and from New Bedford 7 mos. 150 bbls. sperm, bound for coast of Japan.

Ship Rambler of Nantucket, Horton, 15 mos. 700 sperm; reported a ship in sight to be the Wm. Wirt, of New Bedford, quantity unknown.

The Alexander spoke ship Coral on the line, 28 mos. out, 2700 sperm; had taken 1000 bbls in about 8 days.

Flora spoken in Feb. off Chile, bound home from California, 800 whale. All well.

PORT OF LAHAINA.

Arrived.

April 14. Ship Majestic, Hall, New Bedford, 5 months out, 40 sperm.

16. Orozimbo, Bartlett, New Bedford, 4 months out, clean.

—America, Adams, New Bedford, 5 months out, 130 sperm.

—Cowper, Cole, New Bedford, 5 months out, 60 sperm.

—W. C. Nye, Rose, New London, 9 months out, 300 sperm.

17. Massachusetts, Chase, New Bedford. 8 months out. 90 sperm.

A Card.

To the Editor of the Friend:

Dear Sir—It gives me great pleasure to acknowledge through your paper, a donation of one hundred dollars, received from foreign residents in Lahaina, and from officers and seamen stopping at this port. This sum has been appropriated, according to promise, in purchasing a Seraphina for the Chapel in this place.

T. E. TAYLOR,
Seamen's Chaplain, Lahaina.

Extract from the Records of the General Meeting of the Sandwich Islnnds Mission:

April 24, 1849.

Voted, at the request of the Rev. Mr. Taylor, the Seamen's Chaplain at Lahaina, we relinquish the room belonging to the mission, under the Seamen's Chapel, together with a strip of land around the Chapel, 14 feet wide, for the use of the Chaplaincy, so long as that building shall continue an Evangelical Protestant plaee of worship.

True Copy.

SAMUEL G. DWIGHT,
Ass't Scribe.

To Seamen.

The subscriber, a practical seamen and shipmaster, has entered upon the duties of a Marine Missionary at large, in the port of Boston, under the patronage and support of the benevolent, and offers his services to seamen, free of charge.

The Office of the mission is at No. 8, Long Wharf, where the scriptures and religious tracts may be had in all the languages of Europe, and where ship owners and ship masters, on application, may obtain miscellaneous books, pamphlets, and files of papers for the use of their crews, free of expense, and also select Ships' Libraries, by paying for them.

The following are among the duties assumed by the missionary. He will hold religious or temperance meetings on ship-board when invited, either on the Sabbath or at other times; visit sick or disabled seamen on shore or on board their vessels, and seek to promote their temporal and spiritual welfare; look after the pecuniary interests of seamen who die away from home, and correspond with their friends. To shipwrecked Mariners he will afford every assistance in his power, and also to such seamen as may desire to send money to distant friends, or to deposite it in the Seamen's Savings Bank for safe keeping against a rainy day.

In short, he will aim to promote the great ends of morality, temperance, religion, and enlarged benevolence, among those "who go down to the sea in ships, that do business in great waters."

Seamen in want of the Bible, religious books, temperance and other publications, counsel or advice, are invited to call at the office of the mission, No. 8 Long Wharf, opposite the Custom House.

THOMAS V. SULLIVAN,
Marine miss'y at large in the port of Boston.
September 1, 1848.

Information Wanted.

Respecting a young man who shipped in 1845 on board the Am whaleship Nile, Capt Case, New York, his name Theodore Belden, age from 15 to 16 years. By a letter received from Capt. Case by one of her owners at Greenport, dated Sandwich Islands, March 16, 1847. stating that he had left Belden under the charge of the Am. Consul, sick, when recovered to be sent home. Any Consul having had the boy under his charge, or any other person having information respecting him, will confer a lasting favor upon an anxious mother by communicating it to H B Haswell, Esq, 85. South Pearl Street, Albany, N Y.

Notice to Lahaina Subscribers.

The Rev. Mr. Taylor will now act as Agent for the "Friend," at Lahaina, and the irregularity which has attended the forwarding of your papers, it is hoped, will no longer be experienced. Mr. T. will employ a carrier, who will deliver the paper.

To Seamen and Strangers.—*The Seamen's Chapel* is open for Public Worship every Sabbath, at 11 o'clock, A. M., and 7½, P. M. Seats free.

Religious services will be held at the Vestry Room every Thursday evening. Usually, there will be a Lecture delivered.

The Seamen's Concert for Prayer is held at the Vestry Room the third Monday evening each month.

Seamen belonging to vessels (of all nations) visiting this port are invited to call at the Chaplain's Study, where they will be gratuitously supplied with copies of the Friend and other reading matter. It will be most convenient for the Chaplain to receive calls from Seamen between 2 and 4 o'clock, P. M.

Public services at the Native Churches, on the Sabbath, commence at 9½, A. M., and 2½ P. M.

The Seamen's Reading Room is open at all hours of the day. Strangers arriving and having late foreign papers, are respectfully invited to aid in keeping said room supplied with useful reading matter.

☞ Donations are respectfully solicited for the support of the Chaplaincy, and the publication of 'The Friend'. An annual report of all donations is made to the American Seamen's Friend Society, in New York. Any person contributing the sum of $50 is entitled to become a Life Director of the Society, and by $20 to become an Honorary Life Member.

SAMUEL C. DAMON,
Honolulu, April 1.—tf. Seamen's Chaplain.

Information for Whalemen.

The subscriber would respectfully give the following notice for the information of whaleships, cruising in the Pacific. Recruits can be obtained at Pitcairn's Island, for at least twenty-five ships, at about the following prices:—

Yams, per barrel,	$2,00
Sweet Potatoes "	2,00
Irish " "	3,00
Onions "	3,00
Limes "	2,00
Lime Juice, per gal,	33
Cocoa Nuts, per hundred,	2,00
Oranges, "	1,00
Fowls, per doz.,	3,00

In exchange, the inhabitants are ordinarily ready to take white and blue drilling, at from 20 to 25 c per yard; and calicoes from 15 to 20c per yard. They are usually in want of soap, oil, check shirts, powder, percussion caps, old lead, carpenter's tools, &c.

The best season for furnishing yams, is from August to January; Sweet Potatoes, throughout the year; Irish Potatoes, from December to February, and July to September, (two seasons). JOHN BUFFETT.
Honolulu, Feb. 23, 1849. tf

D'Aubigne's History of the Reformation, in 4 vols.

A few copies of this interesting work, elegantly bound in cloth, are for sale at the Study of the Seamen's Chaplain.

This edition is prefaced with the following notice by the author:—

"I have revised this translation line by line, and word by word. It is the only one which I have corrected.

"Signed, J. H. Merle D'Aubigne."

History of the Hawaiian Islands:

Embracing their Antiquities, Mythology, Legends, Discovery by Europeans in the sixteenth century, re-discovery by Cook, with their Civil, Religious and Political History from the earliest traditionory period to the present time. By JAMES JACKSON JARVES. Third edition. For sale at Chaplain's Study. Price, $1,00.

Bibles! Bibles!!

At the study of the seamen's Chaplain a supply of Bibles and Testaments is constantly on hand and for sale. At present the assortment comprises those in the English, French, German, Spanish, Swedish, Portuguese, Dutch and Welsh languages.

☞ By a late arrival, some elegantly bound Family Bibles have been received from the depository of the merican Bible Society, New York. Prices from $1 to $7 A

The Friend sent Abroad.

Any person, by paying the subscription price of the Friend, ($1,50) in advance, can have the paper forwarded to any part of England or the United States, by the earliest opportunity. tf

THE FRIEND:

A Monthly Journal devoted to Temperance, Seamen, Marine and General Intelligence.

SETTING SAIL.

O for a blessing from on high,
Ere from the much loved shore we fly;
A hope divine to stay each soul,
As o'er the dangerous main we roll!
See! the long wished-for wind blows free!
We must part! we must part!
To sea! to sea!
And now to thee, O heavenly Friend!
Ourselves, our ship, we would commend;
Star of the East! our Pilot be,
As we launch with the wind on the boundless sea!

Along life's restless billows driven,
They win their port, whose port is heaven;
They meet no wreck who trust God's love,
They sail secure, who look above.
Lord! when our eyes are fixed on thee,
All is well! all is well!
On land, or sea.
Let songs, not sighs, around us flow,
From land, but not from God we go;
In storm or calm, in joy or pain,
The sailor may trust in the Lord of the main.

F. M. C.

New London, Conn.

From the Louisville Journal.

GO AHEAD.

Never doubt a righteous cause;
Go ahead!
Throw yourself completely in;
Conscience shaping all your laws,
Manly through thick and thin,
Go ahead!

Do not ask who'll go with you;
Go ahead!
Numbers! spurn the coward's plea;
If there be but one or two,
Single-handed though it be,
Go ahead!

Though fierce waters round you dash,
Go ahead!
Scale them! certainly you can;
Let them proudly dare the skies—
What are mountains to a man?
Go ahead!

Though fierce waters round you dash,
Go ahead!
Let no hardship baffle you;
Though the heavens roar and flash,
Still, undaunted, firm and true,
Go ahead!

THE FRIEND.

A Trip from the Sandwich Islands to Lower Oregon and Upper California.

Leaves selected from "Our Log Book."

I.—PASSAGE TO COLUMBIA RIVER.

Tuesday, April 17th. The order was given to "cast off," which was followed by that to "go ahead" with the steam, and the "Massachusetts" quietly glided out of Honolu harbor. Soon the pilot bids us adieu and I felt that I was for some months severed from scenes and persons endeared by many pleasant associations. At sundown we had reached that region of calms off the S. W. part of the Island of Oahu, but fancying that we should be favored with wind, the steam was allowed to escape, and we found the vessel becalmed. During the evening some of the officers assemble in the "Ladies' Cabin." One reads the "News," another the "Polynesian," a third 'Jarves' History," and a fourth "Wyllie's Notes." Another group assemble in the after cabin to listen to the sound of the violin. Everything is very quiet. Not a sailor or soldier deserted at Honolulu.

All day, yesterday, (the 18th,) it was quite calm, and the vessel made but little progress. Towards evening Capt. Wood gave the order to "fire up," and during the night we ran at the rate of six knots. This morning the summits of the mountains and hills of Oahu are scarcely to be discerned in the distance. By the aid of steam and sails we are rapidly urged on our course. I am surprised to perceive how retired a passenger can be, on board a vessel with two hundred shipmates. As for sea-sickness I have escaped in a manner far short of my fears. * *

In conversation with Capt. Wood I learned that he was a classmate in Harvard University with Prescott the Historian. He remarked that Prescott was quite celebrated, in college, as an excellent Latin scholar, and furthermore that while an under-graduate he received an injury in one of his eyes which resulted in almost destroying his vision, to which he makes so touching an allusion in the Preface of his history of "Ferdinand and Isabell." "Thus shut out frome one sense, I was driven to rely exclusively on another, and to make the ear do the work of the eye."

20th. This morning high wind, rough sea, and ship going nine knots. At noon, Lat. 25° 14' N., have made two degrees of easting since leaving the Islands.

Sabbath, 22d April. After three days of rough weather, it was exceedingly pleasant to greet a peaceful and quiet Sabbath morning. I could not but think, perhaps this may be that we may enjoy the privilege of public worship. I chanced this morning to open a volume of sermons by Dr. Spring, addressed to seamen. I was in circumstances to appreciate the opening paragraph of the first discourse: "There is a moral sublimity in a Sabbath at sea. The landsman conjectures it—paints it, while the devout seamen feels it; there are aspirations here felt, felt no where else. Yet what is it that gives such sublimity to a Sabbath at sea? It is not the mart of business which we here enter; nor are they the portals of science and literature; nor is it the splendid Cathedral; no, nor yet the more simple and humble sanctuary, where far distant friends "worship and bow down and kneel before the Lord their Maker." Great objects consecrate all that is around them. This vast ocean, this emblem of infinity itself, gives sublimity to the scene."

On going upon deck at the hour appointed for Divine service, I found the awning spread over the spacious quarter-deck—the officers and soldiers assembled—a flag thrown over the capstan—and every thing admirably arranged. It was an impressive scene—the Day—the quietness—the gentle breeze—the almost sleeping, yet heaving ocean—all conspire to call forth emotions of love and gratitude to the Giver of all good, the Ocean's God and the Sabbath's Lord.

24th. We are having a fine run. The winds are strong, but favorable, speeding us forward at the rate of 8, 9, and 10 knots.—The weather is cool, and becomes more so every day. Thick clothing very necessary. Such weather, by contrast, reminds me of the mild and warm temperature of the Islands.

30th. Being the last day of the month, according to the Army Regulations of the United States the soldiers were called out for inspection. The weather was very cold and with a "quick step," the soldiers marched over the quarter-deck, and in "double

quick time," each one heard his name called. The orders "face front, face left, face right, and right about face," were quickly given, and all soon disappeared from the deck whose services were not required in the management of the ship. Thus ended the "training." *Exeunt omnes.*

May 4th.—According to observations at noon we were about five hundred miles from land. Every thing moves on pleasantly on ship-board. Some of my fellow passengers are great readers, and having an excellent public library on board, time does not hang heavy.

This morning, May 7th, at 11 o'clock the dim outline of the land was seen. Just 20 days since leaving Honolulu. For two days not having been able to obtain observations, our position is not exactly known, but Capt. Wood conjectures that we are too far North, hence as we approached the land the vessel made a southerly course. Drift wood occasionally passed the vessel. Land birds and sea fowls are frequently seen.

"High o'er the restless deep, above the reach
Of gunner's hope, vast flights of wild duck stretch
Far as the eye can glance on either side,
In a broad space, and level line they glide."

The coast presents a most uninteresting aspect. In some places may be seen dense forests, and in others only scattered trees.—Towards evening the mist and fog entirely concealed the land from sight, but from the appearances, our captain concluded that we must be off Shoalwater Bay. The order was given to "fire up" for the first time since losing sight of the Islands.

On our passage over, the good ship "Massachusetts," as well as other vessels which have sailed over the route, proved the falsity of statements in Gulliver's Travels. The celebrated Dean Swift in giving an account of the same, represents Mr. Gulliver as having visited "Brobdingnag," a country lying between the Asiatic and American coasts.—The King of that country must have been a Prince of vast possessions, for says Gulliver, "The whole extent of this Prince's dominions reaches about six thousand miles, and from three to five in breath; whence I cannot but conclude that our geographers of Europe are in a great error, by supposing *nothing but sea between Japan and California.*" Either the good Dean of St. Patricks, Dublin, must have misunderstood Mr. or Capt. Lemuel Gulliver, or the vast continent, upon which the kingdom of Brobdingnag was situated, must have been submerged. It is somewhat surprising not to find allusions to this subject in Cook's, Vancouver's, Belcher's, Beechey's, or Wilkes' voyages. This matter, however, may attract the attention of distinguished navigators, when the learned geographers and navigators of England, France, Russia, and the United States, have satisfactorily shown to the world the important results of having expended so much treasure and destroyed so many lives in discovering an Antarctic continent, or in attempting to discover a N. W. passage!

II.—COLUMBIA RIVER, ITS DISCOVERY AND NAVIGATION.

With a thankful heart I sit down to record the incidents of this day, May 8th, our vessel having safely crossed the much dreaded Columbia River "Bar," and now lies safely at anchor in Baker's Bay. Early this morning our ship was some distance off the mouth of the river. Guns were fired for a pilot, but none made his appearance. It was a source of much anxiety to the captain, as neither himself or any person on board had ever entered the river. As we approached the entrance, a boat was sent forward—but it did not appear safe to enter on our first coming up. A line of breakers extended the entire distance across from Cape Disappointment to Point Adams. Some rather anxious countenances were visible on board the Massachusetts, for we were not ignorant of the fact, that no less than four vessels (U. S. S. Peacock, U. S. S. Shark, H. B. Co.'s Bark Vancouver and Am. whaleship Maine,) had been wrecked on the very spot where we were hoping to cross in safety. We knew, however, that scores of vessels had safely entered the river, and having the aid of steam, our captain determined in the afternoon to make a second trial. It was in every respect successful. Just at the time of our crossing the bar, the heavy rollers seemed to subside and the sea to die away. As one landmark after another was made and the Massachusetts approached her anchorage, some two hundred hearts beat more free!

Soon after our vessel came to anchor, it was visited by a canoe containing ten Chinook Indians. Surely, I can say, that I never saw more miserable specimens of humanity. Whoever sees them, will agree with Washington Irving, who never saw them, when asserting in his Astoria, "Neither sex can boast of personal beauty." One represented himself as a chief, I was ready to ask, if such the leader, what are his followers? It was sad to witness their eagerness to obtain rum! I now felt ashamed of the Anglo-Saxon race, for English and American traders almost exclusively have pampered to the poor Indian's desire for intoxicating drinks. It is the lust for gain which has taken ship loads of strong drink to the N. W. coast to destroy the aborigines. Indian traders and their employers may have pocketed the profit of the sale, but there the matter does not rest. Let not the rumseller on the cold and inhospitable N. W. coast of America, imagine that the eye of an Omniscient Judge has not been fastened upon him. When the poor, miserable and drunken Indian has died a bill has been filed against his destroyer in Heaven's Chancery. In the day of final reckoning there will be no want of facts and evidence to establish the guilt of multitudes who have engaged in this destructive, altho' lucrative traffic.

After tea, I accompanied a party on shore. We visited the house of a Mr. Keplin, which is near the extreme point of Cape Disappointment. On entering his dwelling I observed a Yankee clock, fresh from the manufactory! I also noticed lying upon the table an English Bible, English Prayer Book, and Noah Webster's Spelling Book; the latter printed in Oregon! In taking a short ramble through the forest, I observed many trees and shrubs corresponding with those on the Atlantic coast. Blossoms of the strawberry and raspberry were thrice welcome to the sight. We were compelled to return on board for the last rays of the setting sun had but a few moments longer to play among the branches and leaves of the noble forest trees.

After returning on board I endeavored to carefully survey, so far as could be done with the eye, the outlines of the Cape, the Bay and highlands. This is a spot replete with historical associations of the deepest interest. Not sixty years had rolled away since the first vessel from a civilized nation had anchored within the bar. For ages, the Columbia, or as it was called by the Indians of the country, "the great River" had poured its full tribute of waters into the *Pacific*, although its existence was unknown to the civilized and commercial world. A Spanish navigator, Bruno Hecate, commanding the Corvette "Santiago," sailed along this coast in 1775, is supposed to have been the first who expressed his decided opinion that a great river here entered the ocean. "These eddies and currents caused me to believe," he remarks, "that the place is the mouth of some great river, or some passage to another sea." The North Cape he calls "Cape San Roque," the South, "Cape Frondoso," and the Bay "Assumption."

Three years pass, and in 1778 an Englishman, by the name of Meares, commanding a Portuguese vessel, attempts to discover this "great river," but failing in his enterprise, blots "Cape San Roque" from the chart and writes "Cape Disappointment," and for "Assumption Bay," writes "Deception Bay." Quitting the coast Meares records in his journal, "We can now with safety assert that there is no such river as that of Saint Roc exists, as laid down on the Spanish charts."

A few years more elapse, (1792,) and the

distinguished navigator Vancouver is found glancing his keen eye along the same rugged coast. His vessel sails within three miles of the breakers, but they extend across the mouth of "the great river." He looks in vain for an entrance. "Not considering," remarks Vancouver in his journal of April 27th, "this opening worthy of more attention I continued our course to the north west."—Only *two* days afterwards Vancouver spoke the Boston ship "Columbia," Capt. Gray, by whom he was informed that the "Columbia" had "been off the mouth of a river in the latitude of 46° 10', where the outset or flux, was so strong as to prevent his entering for nine nays." (Vancouver's Journal.)—This statement of the Yankee captain was doubtless received with some incredulity by the English navigator, for only *two* days previously his vessel was off the very same opening which did not appear "worthy of more attention."

The vessels of Vancouver and Gray parted, the former sailing north, but the latter sailing south. Capt. Gray doubtless concluded that he would forever decide the point whether there was, or was not a great river emptying into the ocean south of Cape Disappointment. "On the 11th May, Gray arrived opposite the entrance of the river, and heedless of the risk, in his ardent spirit of enterprise, dashed boldly through the breakers on its bar, and in a few moments slid out upon the tranquil bosom of a broad and majestic river." The great question was then forever settled. Hecate was right when he said "a great river here entered the ocean," and Meares was wrong when he asserted no such river was in existence. Capt. Gray commenced trading with the Indians, exploring the surrounding bay, and ascending the river fifteen or twenty miles. He now assumes the prerogative of altering the names upon charts. "On leaving the river," an anonymous writer remarks, "Capt. Gray bestowed on it the name of his vessel. The southern point of land he called Cape Adams, and substituted the name of Cape Hancock for that of Cape Disappointment. Neither Cape Hancock nor Cape Adams have taken an assured place on the maps. * * The name of the good ship Columbia, it is not hard to believe, will flow with the waters of the bold river as long as grass grows or waters run in the valleys of the Rocky mountains."

The discovery of the Columbia Capt. Gray communicated to Vancouver, (accompanied by a rough chart,) who in the autumn of the same year despatched Lieut. Broughton, commanding the "Chatham," to make an exploration. This enterprise was most successfully accomplished; Lieut. B. with boats ascending as far up the river as Fort Vancouver, about 90 or 100 miles from its entrance. On his return down the river the "Jenny," a vessel belonging to Bristol, England, was found anchored in the bay, within Cape Disappointment. This noted Bay was denominated "Baker's Bay," by Lieut. Broughton, in compliment to Capt. Baker, commanding the "Jenny," which vessel took the lead on leaving the Bay, and was followed by the "Chatham."

III.—ASTORIA.

This morning, Wednesday, May 9th, the Massachusetts left Baker's Bay for Astoria, a distance of ten or twelve miles. The river is several miles wide, but the ship-channel is somewhat intricate, and difficult of navigation, except to experienced pilots. Twice the vessel touched the sand spits, but was backed off by the propeller with little damage or difficulty. She came to anchor off the city, the town, or village of Astoria, about one o'clock. Just as we were sitting down to dinner, Gen. Adair, the Collector, called on board. He was much rejoiced to learn that Capt. Wood had piloted the Massachusetts, in safety, over the bar. This feeling I subsequently learned was quite general among the inhabitants, not only of Astoria, but of the territory. They felt that the bar and river were suffering in consequence of ill-founded reports which had been circulated. The first American steamship, which had ever attempted to enter, had now come safely up the river, without a pilot, in the most difficult parts of the channel. Not only did the Astorians seem really to confer upon our Captain the hospitalities of the city, but Gen. Adair proposed calling the next new county in Oregon, *Wood* county. The Massachusetts, being the largest vessel which had ever entered the river, and moreover having arrived, bringing two companies of U. S. troops, was thrice welcome. So many of the male inhabitants of Oregon being absent at the mines, serious fears were entertained that more Indian troubles, if not massacres would occur. Gen. Adair furnished us with the latest news from the United States and Europe, but having recently arrived from California, he had tales to rehearse about the abundance of gold that would have satisfied a gold adventurer of the 16th century.

After dinner a party visited the shore—the army officers were delighted to receive intelligence through the post-office. Gen. Adair give us a cordial Kentucky welcome to his house, where we were kindly entertained by his family. The General had only been in the place about one month, but yet he had succeeded in erecting during that short period a very comfortable dwelling, as good as those tenanted by his neighbors. Neither nature, nor as yet art, seems to have conferred great attractions upon Astoria. The village contains about twenty buildings of every description, erected without order or regularity as regards the streets. A visitor is somewhat surprised the site should have been selected for a city, when others far more desirable might have been chosen. The inhabitants are rendered quite uncomfortable by the cold, strong and disagreeable winds which prevail. The town I would remark is upon the south side of the Columbia, being at this point four or five miles in width. The prospect from the hills upon which some of the houses are built, is exceedingly fine. It commands a view of the ocean, the mouth of the river, Cape Disappointment, Chinook hills, the highlands on the opposite side of the river, and the extensive ranges of hills and mountains stretching away to the East. The region was formerly covered with a heavy growth of pines, and only a small area has been reclaimed from the dominion of nature. As the visitor looks out upon the peaceful little village snugly crowded under the shade of stately forest trees, he is ready to ask, "Is this Astoria?" Is this the spot so famous in history, and of world-wide celebrity? It was for this place that forty years ago the ships of Astor took their departure, via. Cape Horn, when a voyage hither was among the uncommon occurrences of the times. Here were the head quarters of the North West Fur Company, and subsequently of the Hudson Bay Company, until the establishment of Fort Vancouver. Among the English Astoria, even now, is denominated "Fort George." Thus historical associations of interest are connected with this spot, but the fascinating narrative of Washington Irving, styled "Astoria," has contributed more powerfully than any other cause to render the place remarkable, and in coming time somewhat classic ground. The ingredient of romance forms so prominent a characteristic of Irving's writings, that many readers imagine his Astoria belongs to the same class. History, genuine history, and faithful narrative, are most prominent in this work, the value of which will be highly prized by the reader who delights to trace out historical incidents associated with the place which he may visit.

It is certainly a remarkable as well as interesting fact, that although the U. S. Government possess the whole of Oregon, having for a long period maintained with England a joint occupancy of the country, yet it is only the narrow and small district of Astoria, which has ever been, in reality, purchased from the aborigines of the country!—Indian titles to the vast domain have not as yet been extinguished by purchase and treaties.

While at Astoria I made enquiries respecting the settlement of Clatsop Plains, situated on the south shore of the Columbia,

near its mouth. I learned that a thriving settlement had been commenced, consisting of about thirty families, which are engaged in agricultural pursuits. They are supplied with the preaching of the Gospel by a Presbyterian and a Baptist minister. As an evidence of the enterprise of the people, this fact is worthy of record. Being perplexed about getting their produce to the California market, vessels visiting the river not affording the desirable facilities, one of the inhabitants immediately laid the keel of the "Clatsop Clipper," a vessel of 60 or 70 tons, and in three months it was freighted, bound to California! Eventually, ship building will be extensively prosecuted along the banks of the Columbia. Timber suitable for ship building exists in the greatest abundance. Remarked an officer of our ship, as he gazed upon the forests of pine, from two to three hundred feet in height and straight as an arrow, "What a place to get masts, here are enough for all the shipping in the world."

The French again at the Sandwich Islands.

The events of the last month will form a memorable chapter in Hawaiian history. Difficulties having arisen between the French Consul and the government, Admiral Tromelin, commanding the Frigate "Poursuivante" and steamer "Gassendi," is sent to effect a settlement. Our object is now, merely, to state facts necessary to introduce and explain the accompanying documents. August 22d, the Admiral and Consul make ten demands, threatening that unless complied with, in three days, "they will employ means at their disposal to obtain a complete reparation." The King's Foreign Minister replies that their demands cannot be complied with, but declares that "the King has ordered that no resistance whatever shall be made to such force." The Consul follows this reply, by taking down his flag and retiring on board the steamer. A force of over two hundred soldiers land and take possession of the Fort, while another force takes command of all Hawaiian vessels in port. The French are exceedingly careful not to touch the Hawaiian Flag, doubtless remembering the English and French guarantee of 1843. This is done on Saturday, August 25th. The Sabbath passes quietly, the town remains orderly. An attempt is made at negotiation.—On the 28th, the King's Commissioners visit the steamer. See their report. No reconciliation is effected. The Admiral without charging the government with a violation of the Treaty of 1846, but only putting an unfair interpretation upon the same, orders the Fort to be dismantled. Now commences a most wanton destruction of government property. Guns are spiked and broken; their carriages cut up and destroyed; powder magazines broken open and tons of powder emptied into the sea; Governor's house shockingly disfigured, windows smashed, doors broken, and property of various kinds totally ruined. After the "Army of reparation" had gloriously waged successful war, for four days, upon old guns and *calabashes*, no one offering "let or hindrance," it safely embarked without the loss of a single man! All this being done with the Hawaiian Flag flying night and day over their heads! The Admiral and Consul not succeeding in forcing the government to lower the duty on French brandys (which the Treaty of '46 allowed the Hawaiian Government to impose,) put to sea taking the King's beautiful yacht "Kamehameha III.," releasing other Hawaiian vessels belonging to private persons.—The end is not yet. Monsieur D. informed us the morning of his departure, that trouble had but just commenced! The English Consul General, United States, Chilean, Peruvian and Danish Consuls protested against these violent measures endangering property under the protection of their respective flags. The King, through his Foreign Minister, has solemnly protested against these acts of violence. The foreign community, almost to a man, is strongly opposed to this strange movement, and unless we greatly err, in regard to public sentiment in the United States, England, and even France, a voice of indignant rebuke will be uttered. No more space for remarks at present.

The following despatch was received by R. C. Wyllie, Esq., the King's Minister of Foreign Relations, on the 22d August, at 3 P. M.

COPY OF TRANSLATION FROM THE FRENCH.

On board of the Admiral's Frigate Le Poursuivante, off Honolulu, the 22d August, 1849

NAVAL STATION OF THE FRENCH REPUBLIC, AND CONSULATE OF FRANCE, IN THE SANDWICH ISLANDS.

"The undersigned, Legoarant de Tromelin, Rear Admiral, Commander-in-Chief of the Naval Forces of the French Republic in the Pacific Ocean, and Dillon, Consul of that Republic, in the Sandwich Islands, fulfilling the functions of Charge d'Affaires of France near the Hawaiian Government,"

"Have in concert, and in a joint note dated the 20th of August current, demanded of His Majesty, the King of this Archipelago, through the medium of His Minister of Foreign Relations, an Audience in His Council, to entertain with him many grave questions actually pending between the Consul of the French Republic, at Honolulu, and the Hawaiian Government."

"By a note dated yesterday, 21st August, Mr. the Minister of Foreign Relations, making known the decision of His Majesty, informs the undersigned that the King deliberating in his Council, has not thought proper to grant the audience demanded, upon the ground that the difficulties raised between the Consul of France, in the Hawaiian Islands, and the Government of this Archipelago, have been submitted direct to the appreciation of the French Republic, through the medium of the Hawaiian Charge d'Affaires at Paris."

"The Minister of Foreign Relations adds that in case there should be other questions, besides those submitted to the French Government, the undersigned are invited to formalize them, in order that the Hawaiian Government may examine them and take them into consideration."

"Neither the questions submitted to the appreciation of the French Government, by the Hawaiian Government, nor those which the undersigned had the intention to make valid, not having been formalized by the one part and the other [it is presumed that the meaning is by both parties,] the refusal of the Audience which results from the tenor of the precited note of Mr. the Minister of Foreign Relations, cannot be considered otherwise than as a dilatory reply. The intention of the undersigned was at first to treat summarily, in a conference, of the principal points in litigation, and to remit into the hands of Mr the Minister of Foreign Relations, their demands duly and precisely (nettement) formalized."

"In the meanwhile, the time for deliberation has passed; admitting as true the declaration given by the Hawaiian Government that the questions to be treated of have been submitted by it to the examination of that of the French Republic, the time required to know the decision of the Cabinet of Paris, and the actual situation in which the persons and commerce of the French in the Sandwich Islands, are placed, do not permit to accept any longer new delays. The undersigned, therefore, consider themselves as bound to-day to accomplish here, and without delay, their whole duty, and to put the Government of His Majesty King Kamehameha III, in the case (demeure) of giving a categorical answer to the following demands put by the undersigned, without exposition of facts and discussions which the correspondence previously interchanged, render completely useless."

1. "The complete and loyal adoption of the Treaty of the 26th March, 1846, as it reads in the French text."

2. "The reduction to fifty per cent. *ad valorem* of the duty upon Brandies and spirituous liquors of French origin."

3 "The subjection of Catholic Schools to the direction of the Chief of the French Mission and to special Inspectors, not Protestants, and a treatment rigorously equal granted to the two worships, and to their schools."

4. "The adoption of the French language in business ntercourse (pour les rapports) between French citizens and the Hawaiian departments, ("administrations")."

5 "The withdrawal of the exception with which French whalers are affected, which import wines and spirits, and the abrogation of the regulation which obliges vessels laden with liquids to pay and support the custom-house officer placed on board to superintend the loading and unloading."

6. "The return of all the duties received in virtue of the regulations of which the withdrawal is demanded by the 5th paragraph immediately preceding."

"All these conclusions ought to be the object of Resolutions of His Majesty, passed in His Council, and of urgency."

7. "The return of the fine of twenty five dollars paid by the French ship "General Teste," besides an indemnity of sixty dollars for the time during which she was unjustly detained here."

8. "The insertion in the official organ of the Hawaiian Government of the punishment inflicted upon the scholars of the High School whose impious conduct gave occasion to the complaints of Mr. the Abbe Coulon."

9. "The removal of the Governor of Hawaii, who violated or allowed to be violated the domicile of Mr. the Abbe Marechal, or the order that that Governor make reparation to that Missionary, the one decision or the other to be inserted in the official journal."

10. "The payment to the French citizen proprietor of the Hotel of France of the damages committed in his house, by foreign sailors, against whom the Hawaiian administration has not taken any process."

"The undersigned give a delay of three days from this day, 22d August, 1849, to the Hawaiian Government to make a categorical reply to the demands above."

"In the default of this Government making known its decision, between this and Saturday next, the 25th August, 1849, at 3 o'clock in the afternoon, the undersigned agreeably to the formal instructions of the French Government will have to declare the Treaty of the 26th March, 1846, null and void, and replaced by the Convention concluded the 12th and 17th of July, 1839, between the Post Captain Laplace, acting in the name of the King of the French, and His Majesty Kamehameha III."

"Besides the two parties re-entering, by right, under the empire of that Convention, it will become the rule of the reciprocal conduct to follow, and the Hawaiian Government will be bound to execute it, in all its extent, remaining after that day responsible for every infringement thereof which they may commit."

"And in regard to the demands comprised in the paragraphs 7th, 8th, 9th, and 10th above, the undersigned declare that in case justice be not done, they will employ the means at their disposal to obtain a complete reparation, declining for this case, and from the present all the responsibility of the subsequent acts that may happen."

Signed, DILLON.
Signed, LEGOARANT TROMELIN.

The foregoing is a true copy of the translation made by me from the original French this 23d of August, 1849.

R C. WYLLIE,
Minister of Foreign Relations.

The following reply, on behalf of the Hawaiian Government, was sent off to the French Admiral and the French Consul, at half past 1 P. M., on Saturday, the 25th August, 1849.

FOREIGN OFFICE, Honolulu, August 25th, 1849.

The undersigned, Minister of Foreign Relations of the King of the Hawaiian Islands, had the honor to receive on the 22d instant, at 3 o'clock of the afternoon, the despatch addressed to him, dated the same day, by Rear Admiral Legoarant de Tromelin, Commander-in-chief of the Naval Forces of the French Republic in the Pacific Ocean, and M. Dillon, Consul of France in the Sandwich Islands, in which they make, in the name of the French Republic, ten demands, to which they require a categorical reply from the King, before three o'clock of the afternoon of Saturday, the 25th instant, under the penalty of their declaring null and void the Treaty of the 26th of March, 1846; and reviving in full vigor the Convention with Post Captain Laplace of the 12th and 17th July, 1839; and under the further penalty of their employing the means at their disposal to obtain a complete reparation, unless the demands comprised in paragraphs 7th, 8th, 9th and 10th are complied with.

The undersigned has the honor to reply to the Rear Admiral and Consul of France, that their despatch has been laid before the King in Council, and deliberated upon with all the care possible, and that the King as an independent sovereign, under his rights guaranteed by the joint declaration of France and Great Britain, of the 28th November, 1843, as a party to the Treaty of 26th March, 1846, and as the Sovereign of these Islands, in

direct correspondence through his duly accredited Representative, since the 23d of April last, with the Government of the French Republic, by and with the advice of His Privy Council, has instructed the undersigned to make the following reply.

In the first place, the King and Government disclaim any intention in the letter of the Minister of Foreign Relations of the 21st instant, of refusing an audience to Rear Admiral de Tromelin and the Consul of France. It appears however, from the demand, under hostile menaces, of categorical answers to certain peremptory requirements, without discussion or exposition of facts, on the ground that such discussion or exposition would be wholly useless, that such audience could have been of little or no avail, if granted. But the undersigned is nevertheless commanded to add, that if it be the pleasure of the Admiral and Consul of France to have an audience of the King, upon matters actually pending between this Government and the Republic of France, it will be granted. In relation to the demands of the Admiral and Consul of France, the undersigned is instructed to reply as follows:

That to the first demand, namely, the complete adoption of the Treaty of the 26th March, 1846, as it reads in the French text, the King and Government assent; assuring the Admiral and Consul of France, that they are now ready and willing, as they ever have been and will be, to fully and faithfully execute all the provisions of the Treaty of the 26th March, 1846, until the same be modified or superseded by a new Treaty.

To the second demand, namely, that the duty on brandies and other spirituous liquors of French origin, be reduced to fifty per cent. *ad valorem*, the undersigned is instructed to make answer, that to this demand, the King and Government most respectfully decline to accede. First, on the ground that this question is now pending in direct reference to the consideration of the Department of Foreign Affairs in France. Secondly, because such demand is a plain and decided infraction of the letter and spirit of the Treaty of the 26th of March, 1846; the 6th article of that Treaty expressly empowering the Hawaiian Government to designate the amount of duty to be laid upon brandy and other spirituous liquors; "provided always, that such duty shall not be so high as absolutely to prohibit those articles." So far is the present duty from amounting to an absolute prohibition of the importation of those articles, that it appears from the statistics of the Custom House at Honolulu, that there have been three thousand, two hundred and eighty three gallons of brandy and other spirituous liquors imported into this place, which have paid duties, since the first day of January last.

To the third demand, requiring the subjection of Catholic schools to the direction of the chief of the French Mission, and to special inspectors, not Protestants; and a treatment rigorously equal granted to the two worships and their schools, the undersigned is instructed to make answer, that it is the intention of the King and Government of the Hawaiian Islands to treat with perfect equality the Catholic and Protestant worships and heir schools. But that the schools referred to are public schools, entirely supported by the funds of the government, raised exclusively from natives, and that they cannot submit to place them under the direction of any mission, Catholic or Protestant.

As answer to the fourth demand, requiring the adoption of the French language in business intercourse between French citizens and the Hawaiian departments, the undersigned is commanded to state, that the subject of this demand is now pending in reference to the government of France; and that it is confidently believed by the King, that the result of that reference will be favorable to the views entertained by this government; namely, that this demand is without foundation in the Treaty of the 26th of March, 1846, or the law of nations, and absolutely impracticable in the present state of these islands.

To the fifth demand, requiring the alteration of the law "to encourage the visits of whalers," so as to admit brandy and other spirituous liquors free of duty, in common with other commodities; and the repeal of the regulation which obliges vessels laden with spirituous liquors to pay and support, while on board, the Custom House officer placed there to superintend the lading and unlading of such vessels, the undersigned has it in command to reaffirm the ground previously taken in regard to other demands, namely, that these questions have been referred to the direct consideration of the government of France; the result of which reference the King now awaits. But to add, however, that if the King and Government could see wherein such provisions conflict with the parity or any other right guaranteed to France under the existing Treaty or the law of nations, or wherein such provisions apply to French whalers or merchant ships differently from the vessels of other nations, this demand would be granted.

In answer to the sixth demand, namely, the return of all duties received in virtue of the regulations, the repeal of which is demanded in the fifth paragraph, the undersigned is commanded to state, that it follows as a consequence of the answer above given to the fifth requirement, that it cannot be granted.

To the seventh demand, requiring the return of the fine of twenty-five dollars, paid by the French whaleship, the 'General Teste,' besides an indemnity of sixty dollars for the time during which she was detained here, the King and Government, through the medium of the undersigned, answer that this with other questions has been referred to France; and that relying upon her justice to support the view they have taken, they respectfully decline to yield their assent to this demand. The "General Teste" in leaving the port of Honolulu, without first obtaining a clearance, plainly violated the law, as admitted by the Consul of France, subjecting her to a penalty of five hundred dollars, which, through the clemency of the King's Commissioners of Customs, was reduced to twenty-five.

As answer to the eighth demand, requiring the insertion in the official journal of the Hawaiian Government, of the punishment inflicted upon the scholars of the high school, for impious conduct, giving motive to the complaints of Mr. the Abbe Coullon, the undersigned is instructed to answer, that the King and Government have discountenanced, and ever will, strongly discountenance all improper or impious conduct in any church of this kingdom; but, that in the case referred to, the King's Government are informed no conviction was had, or punishment inflicted, because the Justice before whom the case was tried, was of the opinion that the charge had not been sustained by proof; and, no appeal having been taken from his decision, no international question can arise in the matter.

To the 9th demand, requiring the removal of the Governor of Hawaii, who it is alleged, violated, or allowed to be violated, the domicile of Mr. the Abbe Marechal, or the order that he make reparation for the same to that Missionary; the one decision or the other to be inserted in the official journal; the undersigned is instrtoucted reply,—that the King and Government have now for the first time learned of the grievance here complained of,—that the legal tribunals of this Kingdom have ever been open to the redress of all injuries of this nature; and that it is for the party alleged to have been injured to seek for justice by due recourse to such tribunals. Until justice be so sought and denied, neither the Admiral or the Consul of France, can, under the law of Nations or the Treaty of the 26th of March 1846, rightfully proceed as if justice were refused.

To the tenth demand, requiring the payment to the proprietor of the French Hotel of the damages committed in his house by foreign sailors, the undersigned has it in command to answer,—that the Courts of this Kingdom ever have been and now are, open to the proprietor of the French Hotel, equally with all other persons, to compel the remuneration of damages wrongfully sustained. The King and Government are not aware that redress for such wrong has ever been denied to any French citizen, and until it is denied, they can see no ground for such reclamations.

Having answered the several demands in the order in which they are propounded, the undersigned is commanded to add, that a copy of the Admiral and Consul's despatch, with full explanations upon every demand, has been forwarded to the King's Special Commissioner, to be added to those other documents which he has it in command to submit to the French Government, with a view to the amicable adjustment of every matter and question contested with the Consul of France. And he has been instructed to use similar efforts to adjust all those embraced in the despatch now under reply; so as not to leave one grievance, or even the alleged evils arising from the delay of said reference, unprovided for.

And the undersigned is further commanded to add, that the King and Government of the Hawaiian Islands, ever ready fully and faithfully to carry out all the stipulations of the Treaty of the 26th March, 1846; and ever solicitous to live on the strictest terms of amity and peace with the Republic of France, would respectfully propose, in case the reference made to France is not satisfactory, to refer all matters and controversies in difference between France and the Hawaiian Islands, to the friendly mediation and adjustment of some neutral Power, by whose arbitrament and award the King and Government will engage to abide.

With this answer and proposition solemnly conveyed to you in the King's name, it will be for the Admiral and Consul of France to answer to their own Government, to their own consciences, and to the world, for the use they may make of the large force at their disposal. The King has ordered that no resistance whatever shall be made to such force.

R. C. Wyllie.

Seamen's Friend.

Intelligence from Samoa, or Navigator Islands.

New Iron Seamen's Chapel—Loss of Am. Whaleship Gem—War among Samoans—Whooping Cough—Missionary Barque "John Williams."

APIA, UPOLU, Feb. 27, 1849.

My dear Sir—Opportunities for sending letters direct from this to your Islands, are but of rare occurrence, so I must take what presents at the present time, to forward by way of Tahiti. We have to acknowledge your kindness in transmitting to us from time to time copies of the "Friend." I fear our little "Reporter" is but a poor return for the trouble you take. Situated as we are, any news is always very acceptable. We are especially glad to hear of good being done among seamen.

I am sure you will rejoice to learn that our Bethel Chapel here is about completed. I trust that many who visit this port will be induced to come and listen to the glad tidings of salvation, which we shall endeavor to preach with all simplicity from Sabbath to Sabbath. It will of course be a great addition to my labors to preach in English and well as in Samoan. But we must try and do good to all.

The Chapel is composed entirely of galvanized corrugated Iron, brought out within the last year from England. The cost of the building in London was about £170.—About £60 of this was raised in the Islands before I left; the rest was subscribed by friends in England. It is 40 feet by 20.—Ten feet is taken off the length for a reading room, where a library will be kept, with what newspapers and magizines we can procure. We have need to do something to counteract the temptations held out to seamen by the grog-sellers on shore.

One thing astonished me when travelling through England and Scotland, to see the little interest taken in the spiritual welfare of seamen in remote parts of the world. Some would say when begging a little sum from them, "But what have we to do with Seamen's Chapels in the South Seas?" Others would ask, "Does not the Missionary Society support you and build your chapels?" It is difficult to get Christians at home to understand the real state of matters in this quarter of the earth.

You may recollect the "Gem," of Sag Harbor, being at the Sandwich Islands a short time age. She was wrecked a month ago on Suwarrow's Islands—which are only a number of sand banks, surrounded by a large reef, about 500 miles to the N. E. of this. It seems that the reef was not laid down correctly on the chart, and the captain not being aware of this, but supposing he had passed them, was going on, no one thinking of danger, when the ship struck the reef about half past 10 at night. About a week after the mate and a number of the crew reached this in a boat. A small vessel was sent to endeavor to save the rest, but they could not find the Island. Capt. Worth, however, and those with him, managed to repair their boats. After being 21 days on one of the sand banks, they left, and got here six days since. All hands were saved.

Our work continues to be hindered by this foolish and wicked war. When or how it will end, is difficult to say. The longer it is continued the more difficult will it be to reconcile the contending parties. A large meeting is being held this week at the next Island, Savaii, of the neutral party, consisting mostly of church members, and steady people, to try some plan to restore peace.—The aggressive party contend for retaining the power which they gained in former wars. The others say, we wish no superiority—but we fight for equality. The last have certainly so far right on their side, and have ever shown a disposition to settle matters quietly. It was only when they were compelled that they took up arms. It is a pity to see what evil they are doing both to soul and body. If ever this war was settled, both sides have had so much of it, that they will think well before they commence the like again. Some of the leading chiefs have been killed.

Whooping cough has been very bad, among children, particularly. It was introduced some months since from Tahiti.—None of the missionary children have died from it, but vast numbers of the natives.

Our missionary bark, John Williams, has gone on to Sydney about a month ago. She is to call at the New Hebrides, to see how our friends Geddie and Archibald are getting on. Mr. and Mrs. Powell, belonging to our Mission, went with them when they settled at Aneitum. They may expect much rough work for a long time.

Praying that the Lord may bless you in your own soul, family and labors, belive me

My dear Sir,

Yours very truly,

WM. MILLS.

REV. S. C. DAMON.

A WHALEMAN'S OPINIONS OF "D'AUBIGNE'S HISTORY."—The master of an Am. whale ship writing us, expresses the following opinion of D'Aubigne's History of the Reformation:

"I have read those four volumes of the Reformation, and shall feel anxious to get the rest of it as soon as it is issued. I hope God may spare the author's life to a good old age, that he may have an opportunity to complete it to his satisfaction." W. L. J.

Our readers will see the work advertised in another column.

The Bethel Flag re-hoisted.

Efforts were made some years since to establish a Seamen's Chaplaincy in China, by the lamented Stevens, and others, but from various causes the undertaking was partially relinquished. We are rejoiced to learn that the American S. F. Society has commissioned an able and efficient Chaplain for China. From a letter dated Canton, 4th January, 1849. we copy the following paragraph, showing that the Rev. Mr. Loomis finds ample encouragement in pecuniary matters, which certainly reflects much credit upon the mercantile and sea-faring community in China:—"Owing to the depression of business, I deemed it advisable to make no effort for a Bethel till this winter. I have struck the first blow. I think at the right time and in the right place. My success has been far beyond my largest hopes, and I now feel sanguine that I shall raise funds for the construction of a Bethel, large and commodious. I cannot speak too highly of the noble generosity of captains, officers and men. From merchant vessels I am raising $40, $50, $70, $80, and from one $90. A large number of captains have given $25 each.—From the shipping and merchants I shall raise 5 or 6,000 dollars."

XXI ANNIVERSARY OF THE AMERICAN SEAMEN'S FRIEND SOCIETY.—The 21st Anniversary of this Society was celebrated at the Tabernacle, on Monday evening, 7th inst., Perit, Esq., the President, in the chair. A large number of the clergy and other philanthropists who are deeply interested in promoting the welfare of this most interesting class of our fellow men. The vast amphitheatre of the Tabernacle was filled to its utmost capacity both of standing and sitting room. The exercises were opened with the singing of a Hymn, commencing with the following stanza:

Light on the Deep!—When Chaos walked
With Darkness o'er the wave,
Life came with rosy light, and talked
Of beauty to that grave.

An earnest and impressive prayer was then offered, after which the venerable and reverend Justus Sppulding, one of the Secretaries of the Society, presented an abstact of the 21st Annual Report, from which it appears that this Society extends its beneficent operations for the benefit of seamen to Gottenberg, Stockholm, and Gottland, Sweden; Havre, Bordeaux, and Marseilles, France; Canton, China; Havana, and St. Thomas, W. I.; Valparaiso, Chile; and Honolulu, and Lahaina, S. I.; where its chaplains and sailor missionaries are stationed. In several other foreign ports it is also doing much through the agency of pious seamen and missionaries of other societies. In addition to this, it is acting in harmonious and efficient concert with numerous societies, which at home employ more than four-score laborers for the spiritual and temporal good of those who do business on the waters.

The receipts of the society the past year, without including a considerable amount raised by its officers, and expended in the places where raised, were $18,582; and the expenditures $18,497.

Those institutions called Sailor's Homes, so essential in protecting seamen, and promoting their social and moral improvement, are happily accomplishing the object in view—the one in N. York, owned by the Society, having had 3,635 sailor boarders the last year; and in 7 years, ending May 1, 25,554. The N. Y. Marine Temperance Society now numbers over 23,000 members. Both at sea and on shore seamen are cultivating habits of sobriety.—Hence the increase of their deposites in Savings Banks, of their personal comforts, their self-respect, their manly bearing, their attendance on the means of grace, their fear of God, and obedience both to divine and human laws.—The aspects of the seamen's cause are such as to fill every mind with the purest satisfaction, and every grateful heart with thonksgiving to the Author of all good.

The report having been read, the Chairman introduced to the meeting the Rev. Dr. Scott, of Newark, N. J., who in a very animated and eloquent style spoke to the following resolution:

Resolved, That the repert be accepted, and printed under the direction of the Board of Trustees.

Rev. Dr. Beecher, of Boston, followed. His discourse was listened to with the utmost attention, and elicited much applause. The doxology and benediction concluded the exercises, and all, we doubt not, retired from the place much profited.—[N. Y. Eve. Post, May 17.

☞On Tuesday, the 28th, at 11 o'clock A. M., the Commissioners appointed by His Majesty, accompanied by their honorary Secretary, repaired on board the war steamer "Gassendi," and after a conference of three hours, in which the Admiral stated that he did not charge the Hawaiian Government with any violation of the Treaty, but merely with placing a wrong interpretation upon its 6th article, relating to the duty to be laid upon brandy and other spirituous liquors of French origin, and in which the King's Commissioners stated their regret at the misunderstanding which had arisen in reference to the audience, which it was not the intention of the King to refuse, returned on shore, reported to His Majesty in Privy Council, asked and received further instructions. At six o'clock, they returned to the "Gassendi," and after another conference of four hours, came on shore without having been able to come to a satisfactory arrangement. The minutes of what transpired at these conferences, taken down in short hand, will be added, in the Appendix, if copied out in time. Meanwhile, the following document, duly authenticated by both parties, is printed.

Points of disagreement in the Conference of 28th Aug. 1849, between Rear Admiral de Tromelin, and Gerrit P. Judd and Wm. L. Lee, the King's Special Commissioners.

Admiral de Tromelin proposes to the Hawaiian Government to reduce the duty on brandy, and other spirituous liquors, to some per centage to be agreed upon by the conferees, naming as a fair duty eighty per cent.

The commissioners offer to refer the question of duty on brandy and other spirituous liquors to the arrangement of France and the King's Special Commissioner in France, the Hawaiian Government giving a satisfactory guarantee that they will abide by the decision resulting from such reference, and also to abide by the decision of some neutral power upon all questions upon which France and the Special Commissioners cannot agree.

The Admiral answers that he is willing to refer to France the question of the duty on brandy, but to her alone, recognising no neutral power as an umpire. That if the government will give a guarantee in specie, say twenty thousand dollars, that all duty over the amount France may decide as just, he will wait one year or sixteen months from this day, the Hawaiian Government agreeing, in case the duty is not fixed by France at the expiration of that time, to consider the duty of 80 per cent. as the lawful one from this date, and refund the difference between that per centage and the duty collected, with interest from the time of collection.

The King's Commissioners object to the limit of time, and to leaving the whole thing to the decision of France alone. They state their desire for some umpire upon questions which cannot be settled by France and the Special Commissioner, to be named by France and the Commissioner.

The Admiral states that he cannot consent to the umpirage of a third Power, in any event whatever.

But the Admiral adds that he will recommend a reference to some umpire, upon questions which France and the King's Special Commissioner cannot agree upon.

The Admiral further adds that he cannot proceed to discuss or arrange any of the other demands, unless the question relating to the duty on brandy and other spirituous liquors be first settled.

G. P. Judd, } Commissioners.
W. L. Lee, }

Read and approved, as exact.

Legoarant de Tromelin.

☞During these negotiations, the work of dismantling the Fort was progressing, and continued up to the 30th instant, a little past midday.

PROTEST,

BY COMMAND OF THE KING OF THE HAWAIIAN ISLANDS.

By order of His Majesty, Kamehameha III., King of the Hawaiian Islands, given to the undersigned on Thursday, the thirtieth day of August, 1849, after receipt of a despatch dated same day, and addressed to the undersigned, from Rear Admiral Legoarant de Tromelin, Commander-in-Chief of the Naval Forces of the French Republic, in the Pacific Ocean, in which, rejecting the offer made by His Majesty's command, to refer all differences of opinion about the true meaning and interpretation of the Treaty of the 26th of March, 1846, jointly to France and Great Britain, who jointly framed it and proposed it to His Majesty (agreeably to the express understanding between the undersigned and the Commissioner of France, and the Consul General of Her Britannic Majesty,) and rejecting the offer of indubitable security and guaranty for the full amount of all indemnity and reparation, in all cases, claims and grievances whatsoever, that France herself might pronounce to be just, after fully hearing and amicable concert with His Majesty's Special Plenipotentiary, or that a friendly nation of her own choice, might declare to be just, as umpire, in regard to points whereon France and His Majesty's Plenipotentiary might not be able to agree, he the said Admiral subjects His Majesty's weak and unresisting Kingdom to the harsh law of reprisals, the undersigned, Minister of Foreign Relations, in His Majesty's name, and on His Majesty's behalf, most solemnly *appeals* to the good faith and justice of France, under *Her Engagement* of the 28th of November, 1843. and Protests against the infringement of that Engagement, by the said Admiral, in landing a Military Force, in hostile array, and taking military possession of the Fort, Government offices, and Custom-house of Honolulu, and of those portions of the territory of His Majesty's Domain on which these edifices stand, on the afternoon of Saturday, the twenty-fifth of August, 1849, immediately after the receipt of a despatch from the undersigned, by His Majesty's command, rendering all such hostile measures absolutely unnecessary; the undersigned further protests against the attempt of the said Admiral to justify these proceedings upon the ground that His Majesty had violated the Treaty of the 26th of March, 1846, which His Majesty declares he has not violated, but which the Consul of France, in despite of its ratification by the late King of the French, did violate both in word and spirit, as was shown in His Hawaiian Majesty's protest, through the undersigned, of the 28th February, 1848, in regard to Wines, and which the Admiral himself attempted again to violate, in letter and spirit, in regard to spirituous liquors, which violations, if approved by France, (which His Majesty does not believe they can be,) under the Law of Nations would abrogate said Treaty altogether; the undersigned further protests against the said Admiral, for an assumption of His Majesty's Sovereignty, in printing and posting up in the streets of His Majesty's Capital, on the morning of Sunday, the 26th of August, 1849, a *Proclamation*, in contempt of His Majesty's laws and Royal Authority, pretending to cancel the said Treaty of the 26th of March, 1846, and to revive the Convention of Laplace, which never was a Treaty because France never ratified it, and was wholly annulled by the Preamble to the said Treaty of the 26th of March, 1846, although His Majesty, at the Admiral's own suggestion, on the 25th of August, 1849, had nominated Special Commissioners, for the express purpose of making an amicable adjustment with the said Admiral, on principles reconciling the honor and dignity of France with the Rights of His Majesty as guaranteed by herself; the undersigned further protests against the said Admiral for the hostile and unnecessary act of beginning to throw down the guns and dismantle His Majesty's Fort, in the forenoon of Tuesday, the twenty-eighth day of August, 1849, at the very time when His Majesty's Commissioners were engaged on board the war steamer Gassendi in *Conference* with the Admiral, with the view stated; the undersigned further protests against the said Admiral for the exclusion of the King's Ministers from their offices, at the very time, when in the execution of their duty to the King, they most needed free access to all their papers for the defence of His Majesty's rights unjustly invaded, and for the protection due to neutral interests; the undersigned further protests against all and every one of the *Demands* jointly made on His Majesty's Government on the twenty second day of August, 1849, by the aforesaid Admiral, and M. Dillon, the Consul of France, as altogether unrighteous and unjust in themselves, untenable under the Law of Nations, and urged upon His Majesty by the beforenamed, with a festination, cogency, and limitation as to time; as if His Majesty's Kingdom had been a beleaguered Fortress, and not a friendly independent State under the *Special Protection* of the joint declaration of France and Great Britain, of the 28th November, 1843, copy of which is hereto appended; the undersigned further protests against the rejection by the aforesaid Admiral of the security for every just reparation and indemnity offered by His Majesty, through the undersigned, on Wednesday, the twenty-ninth day of August, 1849, and against the *Reprisals* after that offer resorted to by the said Admiral, weakening His Majesty's authority, and by the wanton destruction of his Military Stores, disabling His Majesty from suppressing intestine disorders, repelling Pirates, and extending that protection to the persons and properties of French citizens, the responsibility of which, the said Admiral, nevertheless, scruples not to throw stringently upon His Majesty; the undersigned further protests against the seizure and confiscation by the said Admiral of the King's Yacht, indispensable to keep up the communications between His Majesty's Islands, and to enable His Majesty to make those progresses throughout his Islands which are necessary to their good government; the undersigned further protests against the seizure and detention by orders of the said Admiral of all other vessels under the Hawaiian or any other flag, and against the damages thereby done to his subjects and to Foreign Residents whom, and all Foreigners within his Waters, His Majesty is bound to protect as much as his own subjects; the undersigned further protests against the printed *Proclamation* by the Admiral, posted up on the thirtieth day of August, 1849, for the reasons aforesaid, and because it is a flagrant outrage on His Majesty's rights, guaranteed by France, herself, in the joint declaration herein before mentioned, and under the Treaty of the 26th of March, 1846, copy of which also is hereunto appended; the undersigned further protests against the ground taken by the Admiral in his aforesaid Proclamation and in other documents, that His Majesty's Government have made an erroneous interpretation of either the letter or spirit of any part of that Treaty, and in virtue thereof, made any unjust or unlawful exactions whatever, either of French citizens, or other Foreigners, and against the right arrogated by him and by the Consul of France to pronounce their own interpretation to be the correct one, and to subject His Majesty to War and Reprisals on a mere difference of opinion, and because His Majesty refuses to adopt their interpretation, until after such difference shall have been clearly and fairly decided by amicable reference, as international Law provides for in such cases, and as, in this case, was expressly provided for between the undersigned, as His Majesty's Plenipotentiary, and the Commissioner of France, and Consul General of Great Britain as aforesaid; the undersigned further protests against the pretension of said Admiral and Consul to interfere either with the Religion or Education of His Majesty's subjects, or with the appropriation of the funds contributed by his subjects for those purposes; the undersigned further protests against their interference with or opposition to the laws of this Kingdom, and to the jurisdiction of His Majesty's Courts of Justice as established by law, and against their extraordinary pretension to claim damages and indemnity of the Hawaiian Government on their own view of cases, before such cases have ever been before the Hawaiian Tribunals, or ever been heard of by the Hawaiian Government; the undersigned further protests against the Admiral's imputation of obstinacy to the King's Commissioners, in resisting Demands which, under their duty to their God, to the King, and to their own consciences, they could not fail to resist; the undersigned further protests against the voluntary hauling down of the French Consular flag, and the voluntary abandonment of the said Consul's private house, and of his public office, under values enormously exaggerated for which values he sought to make the King's Government responsible on the 25th of August, 1849; and the undersigned protests against, and throws the responsibility upon said Admiral for all damages, injuries, captures, detentions, confiscations, or detriments of any kind whatsoever, to all persons or things, that have ensued from the measures adopted by him since the twenty-second day of August, 1849, or that he may hereafter adopt, in pursuance of the unjust and unlawful demands then made.

And, finally, the undersigned, in the King's name, and on *His* Majesty's behalf, is commanded to protest that the King does not consider himself at war with France—that he entertains for France the utmost respect, and that notwithstanding all he has unjustly suffered from the Admiral and the Consul before named, *His* Majesty has given the strictest orders that the persons and properties of all citizens of France, now on these Islands, or that may hereafter arrive, he as much respected and as carefully protected as if said Admiral had inflicted upon *His Ma*jesty and upon his subjects no injuries whatever.

Done in presence of the King and Council, under my hand and the Great Seal of the Kingdom, at the Palace of *Honolulu*, this third day of September, in the year of our Lord one thousand eight hundred and forty-nine.

(The Great Seal of the Hawaiian Kingdom)

R. C. WYLLIE.

Naval.—The American frigate Savannah, Capt. Voorhees, arrived at Valparaiso on the 17th of June, and sailed the same day for Callao. This is the ship, it will be recollected, that has on board the American Commissioner under appointment for these Islands.—[Polynesian.

THE FRIEND.

HONOLULU, SEPTEMBER 11, 1849.

☞In consequence of the recent French difficulties, we have been unable to issue our paper on the 1st of the month. Henceforth, however, or until the close of the year, we hope to furnish our readers with a semi-monthly sheet, to compensate for the non-appearance of the Friend during the months of June, July and August. We make this proposition, hoping that our readers and patrons will furnish the necessary pecuniary means.

☞ Communications, obituary notices, and Editorial articles, relating to Japan, California and the United States, intended for this number of our paper, we are compelled to omit, that our readers may be furnished with the principal official documents connected with the hostile movements of the French at these Islands. Let our readers keep in mind, the French Admiral's declaration to the King's Commissioners was, "that he cannot proceed to discuss, or arrange any of the other demands, unless the question relating to the duty on Brandy and other spirituous liquors be first settled."

Late News.

Intelligence, per "Sabine," has been received from Europe to middle of June, and the U. S. to last of the same month.—Cholera raging on both sides of the Atlantic.—The French are prosecuting the war against the Romans.—Troubles in Paris.—Everything quiet in England.

Ex-President Polk died at his residence in Tenn., June 15th.

California *fever* continuing to rage in the United States.

☞At 3 o'clock to-day, Sept. 11, embarked on board the Am. schooner Honolulu, His Excellency, G. P. Judd, H. H. M.'s Special Commissioner and Plenipotentiary Extraordinary to the Governments of France, Great Britain, and the United States. He is accompanied by the Prince Royal, Alexander Liholiho, and his brother, Lot Kamehameha.

New Chilean Cabinet.—At the close of last month Senor Vial resigned, and soon after Senor San Fuentes did the same. Some days elapsed ere the posts were filled. At length certain persons, prominent in the opposition, were called to the side of the President. The Cabinet is now composed of Senores Don Jose Joaquin Perez, of the Interior and Foreign Affairs; Don Antonio Garcia Reyes of the Treasury; Don Manuel A. Tocornal, of Instruction, Justice and Worship; and Don Pedro N. Vidal of War and the Navy.—[Neighbor, of June 29th.

Panama Railroad.—The books of subscription to the capital stock of the above railroad were opened in New York, on the 27th June, and the whole amount was subscribed before 3 o'clock, of the same day, by New York capitalists principally.—[Polynesian.

MARRIED.

In this town, on the 9th ult., by the Rev. E. W. Clark, Henry L. Sheldon, of Salem, Mass., to Hannah W., eldest daughter of J. G. Munn of Honolulu.

DIED.

Recently, at his residence on Molokai, Ionaha Hulu, late member of the House of Representatives.

In this town, on the 9th ult., Robert Kilday, a native of Ireland, for many years a resident of these Islands, aged about 60 years.

On Tuesday, the 21st ult., Ann Mary Ann, daughter of Capt. D. P. and Mary F. Penhallow, aged 18 months.

On board bark Richmond, March 12, of disease of the heart, William Cole, Boatsteerer.

PASSENGERS.

Per Mary and Adeline—A. Ten Eyck, Esq., J. F. B. Marshall, Esq., and A. Johnstone.

Per Mary—A. W. Bush, Wm. C. Parke, O. P. Wood, G. W. Houghtailing, G. S. Kenway, Mrs. Harris and two children, W. F. Studleigh, T. Gandle, T. Fisher, B. Hornblower, W. M. Orrell, J. Fox, H. Phatonboro.

Per Pacifico—C. P. Robinson, J. T. McDougall, Johnson Freeborn, Mr. Cartwright, T. Gibson, J. White.

Per Julian—James Makee, Esq., David Rigley.

MARINE JOURNAL.

PORT OF HONOLULU.

Arrived.

Aug, 13—Fr. frigate Poursuivante, Bellecroix Commander 60 guns. 35 ds fm Callao.

Am. whaleship Washington, Bailey, Nantucket, 21 months out, 130 sperm; leaking 2500 strokes an hour.

14—Fr. steam frigate Gassendi, Faucon Commander, 10 guns; last from Tahiti.

15—Am. whaleship Ontario, Brown, Sag Harbor, fm Japan Sea, 3250 whale, 12,000 lbs. bone; bound home.

Aug. 21—Am sloop-of-war Preble, Glynn, 16 guns, 72 days fm Hongkoug.

21—Am whaling bark Richmond, Swift, Providence, 25 mos out, 3400 wh, 100 sp, 20,000 lbs bone.

Am schr Napoleon, Williams, 70 days fm San Blas.

Aug 23—Am ship James Munroe, Hamley, for San Francisco.

Danish schr Emmy, Neal, for Tahiti.

Aug. 28—Br. ship Amazon, Bates, fm Shanghae.

30—Am. bark Mary, Parker, 17 ds fm San Francisco.

Peruvian brig Pacifico, Swain, 14 ds fm San Francisco.

Chilean brig Correo de Cobija, Solhaune, fm Kauai.

Sept. 1—Am. whaleship Alert, Green, fm Bhering's Straits.

6th—Haw. schr. Julian, Moran, 13 ds fm San Francisco.

9—Am. brig Sabine, from San Francisco.

Sailed.

Sept. 5—Am. bark Mary Frances, Morris, for San Francisco

11—Schr. Ann, Smith, for San Francisco.

Schr. Honolulu, Newell, for San Francisco.

Brig Correo de Cobija, for San Francisco.

Spoken.

By bark Richmond, June 28—Ship Moctezuma, Tower, New Bedford, 2,700 whale; Chandler Price, Taber, do., 1,800 whale; Candace, Allen, NB, 1,500; Huntress, Sherman, NB, 1,400 whale; Roman, Blackmore, NB, 2,000 whale; Braganza, Devoll, NB, wanting 2 whales to fill; Minerva, Seabury, NB, 1 whale to fill; John Coggeshall, Luce, NB, 700 wh, 460 sp, Marcia, Elliston, NB, 2,200 whale; Erie, Norton, Fairhaven, 3,000 whale; Marcus, Osborne, Fairhaven, 300 wh., 500 sp; Warren, Evans, Warren, 1,000 whale; Luminary, Norton, Warren, 700 whale; Ontario 2d, Payne, SH, 1,000 whale; Wm. Tell, Taber, SH, 800 wh, 80 sp; Levant, Lowen, SH, 2,000 whale; George & Mary, Middleton, NL, 2,000 whale.

The Alert, Green, spoke June 18th, Richmond, Winters, Cold Spring, cutting first whale; Washington, Drake, 2 whales—same time saw Elizabeth Frith take a whale; July 7, George Washington, Gibbs, Wareham, saw him take two whales;—12th, Panama, Sag Harbor, 2 whales; 13th, Two Brothers, Jenney, N. B., nothing, just on the ground; 20th, Caroline, Greenport, 6 whales; Ajax, Havre, 1 whale; 23d, Morea, Wyatt, N. B., 5 whales, 2000 bbls.

Memoranda.

Capt. Green, of the Alert, reports as follows—With regard to whaling in the Arctic regions—I left the Japan Sea, 8th of May, and took my first whale June 15th, and from that time until I was full, there was no lack of whales. I cut 11 yielding 1550 barrels. I found them quite tame, and very easily taken. The weather was beautiful, if I except a few of the last days there, which were dirty, dark and rainy. I should recommend ships to visit the Sea of Anadir as early as June 1st. They will find the weather milder than in 50° or even 45°. Whales will there be plenty for two or three seasons.

Ships whaling in the vicinity of St. Lawrence Island, and Tschukutskoi Noss, should the weather be thick, will be set far into the Straits, unless on their guard. This happened to the Alert, and we found it difficult to work out where the whales were. There is undoubtedly a plenty of whales within the Straits, but I had no occasion to go through for them, as I found plenty in the Sea of Anadir. They were plenty when I left. Species the same as in the Ochotsk Sea, yielding 150 barrels each.

July 12. H. B. M.'s S. Herald seen entering Bhering's Straits, under full sail.

PORT OF LAHAINA.

Arrived.

Aug. 8—Am. whaleship Chas. Phelps, Birch, Stonington, 300 sperm, 2700 whale; bound home.

10—Haw. brig S. S., Taylor, 13 days fm San Francisco.

14—Am. schr. Anonyma, Chatfield, 13 ds fm San Francisco.

Am. whaling bark Richmond, Swift, Providence, 60 sperm, 3400 whale; bound home.

Aug. 17—Am whale ship Minerva, Seabury, New Bedford, 25 mos out, 150 sp, 2500 whale.

21 Schr Boston, Cole, from Honolulu.

Just Received and for Sale

AT THE CHAPLAIN'S STUDY, a new and beautiful assortment of BIBLES in the English Language. They are bound in various styles, and can be had at prices varying from 37 1-2 cents, to $7,00 per copy.

☞ Seamen, and others, are informed that at the same place may be found Bibles printed in the following languages: German, Swedish, Danish, Dutch, French, Spanish and Portuguese.

N. B.—Portuguese seamen are especially notified, that they can obtain copies of the Holy Scriptures in the old and new Testaments.

⁂ It is left voluntary with seamen whether they receive a copy of the Bible as a gift, or pay the whole or a part of its value. Money received from the sale of Bibles is appropriated to the purchase of new supplies. tf

The Friend, sent Abroad.

Any person, by paying the annual subscription price of the Friend, ($1.50) in advance, can have the paper sent, by the earliest opportunity, to any port in the Pacific, or to any part of the U. States or England.

N. B.—By paying the additional sum of 50 cents, the paper will be sent for one year to the U. States, via California and Panama. Postage on papers to private persons must be pre-paid. The Friend, being a monthly sheet, and containing a full report of Marine Intelligence, will be found a useful and cheap method of communication with the mercantile community in Europe and the United States. tf

Religious Books.

☞ The Seamen's Chaplain has just received an excellent assortment of Books published by the American Tract Society, including nearly all of their standard publications. These books are beautifully bound, and will be sold at an advance on the New York prices only sufficient to cover the expenses.

☞In the collection will be found some new and instructive books for children. tf

History of the Hawaiian Islands:

Embracing their Antiquities, Mythology, Legends, Discovery by Europeans in the 16th century, re-discovery by Cook, with their civil, Religious and Political History from the earliest traditionary period to the present time. By JAMES JACKSON JARVES.—Third edition. For sale at Chaplain's Study. Price, $1,00. tf

For the Friend.

BATTLE OF GUAYMAS.

By W. H. Campbell, a Marine, U S S. "Dale."

Come all you bold Americans, I would have you lend an ear
Concerning a small victory, which now you're going to hear,
In the year of '47, I suppose you all do know.
The United States of America were at war with Mexico.

We had as brave a ship's company as ever trim'd a sail
On board an American sloop-of-war, the gallant little Dale;
We were brave Yankee tars of war that never knew a fear,
To have a fight with our proud foe it was pleasure for to hear.

In the month of November in Guaymas we did lay,
For to blockade the harbor, and keep all ships away;
We soon did stop their trade and took possession of the port.
We moored our ship, both head and stern, to bear upon their fort.

One day our captain came on deck—to his officers did say,
Call Company B to quarters—also Company A,
Have their muskets all well loaded, see everything done right,
This day we will march into the town the enemy to fight

Each man filled up his cartridge box with 40 rounds or more,
We were fully bent to take the town before we left the shore;
We only landed half our men, we numbered seventy-three,
One field piece we took with us to bear us company.

We straightway marched into the town, our banner we did fly,
The Mexicans did fire upon us as we were passing by;
The first round that they gave us our Captain he did fall,
He was severely wounded by a copper musket ball.

But then the fight began at once, without the least delay,
We took possession of their fort, and at them blazed away;
The Mexicans did keep concealed, like foxes they were shy,
From every door and window their musket balls did fly.

We fired them grape and cannister with our field piece from the fort,
The Mexicans began to run, they did not like the sport;
They ran out of the buildings into the open street,
Our marine guard headed them in front and cut off their retreat.

They commenced again to fire at us—they spent their shot in vain—
We fired a volley into them which drove them back again;
The Mexicans were much confused and retreated back with fright,
Company A opened upon them from a corner to the right.

They returned a few rounds back again but no one did they kill,
Company A still blazed away with the field piece on the hill;
The Mexicans now gave up—their bugle sounds retreat,
They retreated to the mountains when they found that they were beat.

Our force contained by seventy-three that fought upon the shore,
The Mexicans in number were four hundred men or more;
About two hours we were engaged, our flag did boldly fly,
We let them know that Yankee tars will fight until they die.

They were miserably defeated by the Dale's gallant crew,
We drove them from their quarters although we were but few;
We raised our banner on the fort, a standard for the brave,
In spite of all our enemies the stars and stripes did wave.

Our ship kep' up a sterdy fire at the enemy in town,
The buildings where they kept concealed were shot or else cut down;
The fight commenced at 10 o'clock and lasted until three,
We whipped them four to one my boys and gained the victory.

We killed 'wehty-five of them, and wounded forty more.
The Mexicans were horror struck to hear our cannon roar;
To see the bravery of our men did make their courage fail,
They never will forget the crew of the sloop-of-war Dale.

Honolulu, Jan. 1849.

THE FRIEND.

A Trip from the Sandwich Islands to Lower Oregon and Upper California.

Leaves selected from "Our Log Book."

IV—ASCENT OF THE COLUMBIA.

Soon after our vessel came to anchor off Astoria, the "J. W. Carter," Capt. Hoyt, arrived from Portland on the Willamette, having on board a pilot, Mr. Lattie, well acquainted with the navigation of the Columbia. His services were immediately secured for the Massachussetts, as otherwise we might have been detained for many days. About three o'clock, P. M., May 10th, we left Astoria, proceeding up the river. One hour afterwards the Massachussetts was fast upon a sand spit off Tongue point. It is not an uncommon occurrance for vessels to get aground at this place, indeed, the very first vessel that ever attempted to ascend the river after its discovery by Captain Gray, got aground at this very place. I refer to the Chatham, commanded by Lieut. Broughton. At this point, he left his vessel and proceeded to explore the river in "the cutter and launch with a week's provisions." The "Columbia" did not advance higher up the river than this place, and to commemorate the discovery of Capt. Gray, the Bay lying upon the North shore of the river, was called *Gray's Bay*. Soon after the Massachussetts struck, the tide fell and the pilot reported that it would be vain to endeavor to get her off until next high tide. To wait for tides is tedious. To beguile the hours slowly passing, we were favored with some visitors from the shore. In a large Chinook canoe, containing fifteen Indians, came two Catholic priests. They were very glad to learn the most prominent items of European and American news. I informed them that Louis Napolean had been elected President of France. This event seemed both to surprise and rejoice them. One especially, who clapped his hands expressive of joy! I also announced the Pope's flight, but this item of news apparently called up another class of emotions. I may have been mistaken, but I thought our visitors heard this intelligence with an air of incredulity. It certainly would not have been strange if they had supposed their *heretical* newsmonger dealt in the marvellous!—I made enquiries respecting their success in teaching the Indians. They replied that their neophytes were rather thick headed!—After our visitors had viewed the ship, I saw them over the side and push off for the shore. Although I could not sympathize with the doctrinal opinions of these missionaries, yet I could not but admire that spirit of self-denial which they manifested in laboring among the Clatsop Indians, or going *if they should be ordered by their superior*, to spend their lives among the tribes of Africa, Asia, and New Holland. Would that all Protestant clergy rendered as willing obedience to the Great and last command of the Saviour.

The tide rose and fell, but still the Massachussetts remained quiet in her bed of sand. All day, Friday, we there remained, and we began to entertain serious fears, that perhaps a month might pass and still the vessel continue in the same spot. Every effort was made to get her off. Leaving Captain, Pilot, and hands to work the ship, I must not fail to observe our Indian guests, who have come alongside to sell a large sturgeon, and look at the strange craft. One Indian made his appearance on the quarter deck, wearing a blue coat with U. S. Navy buttons, and a British glazed chapeau. He presented a truly ludicrous appearance. His uniform indicated that he went for a joint occupancy of Oregon by England and the United States! Alongside appeared a canoe containing an Indian mother and pappoose; I made signs for her to bind her child upon the board,

a la Chinook. At first she understood me as desirous of taking the child on board. To this proposition she did not seem inclined to assent, but upon further explanation, I saw the little fellow bound hand and foot with thongs, while his head was rendered immoveable by a head-board. When all was done, the child was stowed carefully away in the head of the canoe! Nothwithstanding the Indians did what they could for our amusement, the day appeared long. To be aground on a sand bank is even more tedious than to be in a calm at sea. The good ship "Massachusetts" with its numerous tenants in not a few points, resembled the 'Castle of Indolence' described by Thompson:

"Their only labor was to kill the time,
(And labor dire it is, and weary woe
They sit, they loll, turn o'er some idle rhyme;
Then rising sudden, to the glass they go,
Or saunter forth with tott'ring steps and slow;
This soon too rude an exercise they find,
Straight on the couch their limbs again they throw,
Where hours on hours they, sighing lie reclined."

This morning, Saturday, May 12th, I was waked by the cheering announcement, "She is going a-head." Soon after I heard the man heaving the lead cry out, 'Quarter less four!' This was additional good news, for I recollected that the vessel would float in two and a half fathoms. We were now gliding along within a stone's throw of the banks, covered thick with forest trees and brush-wood to the water's edge. On both sides of the river the woodland extends as far as the eye can reach:

"Woody hill o'er hill encompass'd round."

Many a long year will elapse ere this song will need to be sung by the settlers of Oregon:—

"Woodman spare that tree!"

We have passed one or two Indian lodges, but alas, the once lords of the forest are no more to be seen. Their hunting and fishing grounds are nearly deserted. The small pox, measles, and other diseases, and I may add rum, have well nigh swept them all away. Our intelligent pilot, who has been twenty years in the country, remarked that since his arrival "95 per cent. of the Indians had died off."

But here we are at 12 o'clock, M. fast upon another sandbank, twenty-five miles from where we started this morning, and 45 from the mouth of the river. About 4 o'clock, P. M., got off, and proceeded twenty-five miles further up, and came to anchor a few miles above Cowlitz river. To-day, for the first time, saw Mt. Hood. On a previous day I had caught a view of Mt. St. Helens. They are noble and majestic mountains. To these add Mt. Rainer, all peaks of the Cascade range, and they form a trio of as sublime mountain elevations as are any where to be found upon our globe. One clear and distinct view of those mountains leaves an impression upon the beholder's mind never to be effaced. Easily can their towering summits, capped with eternal snows, be called up in imagination before the mind.

This morning Sabbath, May 13th, the vessel came to anchor off Fort Vancouver, and although it was not convenient to have public service on ship-board amidst the necessary confusion attending the ship's duties, yet it was pleasant when we arrived off the pier, and the pilot asked, "Where are all the gentlement of the Fort?" to listen to the reply, "They are at church." How, methought, can gentlemen be better employed during the hours of the holy Sabbath than in worshipping God. Would that all who profess themselves gentlemen were thus to be found on God's holy Day.

I much regretted, however, to hear the firing of salutes, from ship and shore. Such things but illy comport with the sacredness of the Sabbath, or roughly harmonize with the command, "Remember the Sabbath day and keep it holy." I have always admired the reply of our worthy Sandwich Island Governor Kekuanoa, who refused to fire a national salute in compliment to the frigate "United States," in the fall of 1843. This vessel arrived in the outer harbor of Honolulu on the Sabbath. A lieutenant was sent on shore, by Captain Armstrong, to notify the Governor that the ship was ready to fire a salute. The Governor was informed of the lieutenant's errand, while at church, and sent back word that he would attend to the business *apopo*, (to-morrow.)

Our sailing up the Columbia was exceedingly pleasant. This river abounds with much beautiful scenery, agreeably diversified by valleys, hills and mountains. At present the whole country, along the river's banks, abounds with a heavy growth of forest trees, some of which are of immense dimensions. Among these trees I observed the pine, hemlock, maple, sycamore and poplar. I looked in vain for the chestnut and walnut of the Atlantic coast, and if I was correctly informed, they are not to be found in Oregon. From the mouth of the river as far up as Fort Vancouver, a distance of ninety miles, probably the number of settlements or small clearings in the forest, would not exceed twenty, including three or four sawmills. Even the view of a log cabin was exceedingly pleasant to the eye. On Sabbath morning, May 13th, we passed "New Plymouth," where there was a very good log house, which presented an air of neatness within and without. The master of the establishment came to the door and welcomed us with a tune upon his flute, the soft and melodious sounds coming over the gentle waters, wafted by the morning breeze, fell soothingly upon the ear. The lover of nature will find ample range for the gratification of his visual and mental powers, in ascending the noble Columbia.

V.—GEOGRAPHICAL OUTLINE OF OREGON.

Having ascended the Columbia to the highest point which I expected to advance, and expecting to spend some weeks in travelling among the settlements along the banks of the Willamette, I endeavored to inform myself with reference to the general outlines of the Territory of Oregon, so that I might understand the relation of that part which I was about to visit, to the whole. I now began to realize that Oregon was indeed "a great country," considered with reference to its number of square miles, the length of its rivers, and height of its mountains. This morning (May 14) took breakfast with the officers of the Hudson Bay Company when I met the Company's agent, Mr. Grant, from Fort Hall, who had come to the Fort to obtain his annual supply of goods. The presence of a man, from his "home" at Fort Hall, six or seven hundred miles in the interior of the country, was well calculated to impress the mind with the truth of the statement, that Oregon embraced a territory equal in extent to all of New England, and the Middle States, with the addition of Virginia, N. & S. Carolina, and a good part of Georgia; or an area more than three times as large as England, Scotland, Ireland, and the neighboring Islands belonging to the British Empire. Oregon extends from 42° to 49° of N. L., and from 110° to 124° of W. L., embracing an area of 400,000 square miles, and watered by the Columbia and its numerous tributaries.

It is distinctly divided into three grand divisions:—Lower, Middle and Upper Oregon. 1. Lower Oregon embraces the territory lying between the ocean and the President, or Cascade mountains, the Willamette being the principal river of this division. 2. Middle Oregon lies between the Cascade and the Blue mountains, the Shutes and Umatilla being the principal rivers of this division. 3. And Upper Oregon lies between the Blue and Rocky mountains, the Lewis and its tributaries being the rivers of this division.

The Middle and Upper sections of the country remain unsettled by any white population, except the trading posts of the Hudson Bay Company, and the Missionary stations. Upper Oregon is described as "a rocky, barren, broken country, traversed in all directions by stupendous mountain spurs, on peaks of which, snow lies nearly all the year." The Middle region of Oregon, being less elevated, possesses a milder climate and better soil, remarkably well adapted to the purposes of grazing. This is very manifest from the immense herds of horses in possession of the Indians, who allow them to graze in large companies, and cannot, of course, make any provision for them during the winter months.

VI.—LOWER OREGON.—POPULATION.

This division lies along the coast, and extends as far inland as the Cascade mountains. It is heavily timbered, well watered, and well adapted to farming and manufacturing purposes. A census has recently been taken of this portion of Oregon. I obtained a copy, on application to Governor Lane, who had just ordered it to be made, in view of the establishment of the Territorial Government of the U. S. over the country.

Summary of the Census Returns of the Territory of Oregon, for the year 1849, made under the provisions of Section 4 of the Act of Congress entitled "An Act to establish the Territorial Government of Oregon"—Approved August 14, 1848

* Children under 14 years of age.

Remarks.—The above statistical table does not include the aborigines of the country, half-breeds and Hawaiians. At the time the census was taken, considerable discussion was elicited upon the point, whether any but white inhabitants would be allowed to become enrolled as American citizens, and entitled to the privilege of the elective franchise. Some Hawaiians presented themselves before the proper officers, and desired to become American citizens, and be allowed to vote at the coming election on the 1st of June, but the Governor did not feel authorized by the existing laws of the U. S. to allow them to do it. The subject was referred to Judge Bryant, the Supreme Judge of the Territory, and he expressed a similar opinion, although he was not perfectly decided in his opinion that it would be in violation of the U. S. laws for Hawaiians to become citizens. The law was explicit with reference to the African race, and the aborigines of the country, but it was evidently a new feature in the process of the naturalization of foreigners, for individuals of Asiatic descent to make application for papers of citizenship.

During the month of May several hundred foreigners were naturalized. I was somewhat amused with the mode of application, adopted by one who, presenting himself before the officer, asked for "two and a half dollars worth of Yankeeism."

By referring to this table it will appear that Benton, Champoeg, Clackamas, Lynn, Polk, Tuality, and Yamhill counties are densely populated, compared with the remainder, Clatsop, Lewis, and Vancouver.—The former are situated in the valley of the Willamette, where reside a large proportion of all the white inhabitants of the Territory. Clatsop county is near the mouth of Columbia river, Lewis about the Nisqually settlement on the straits of Juan de Fuca, and Vancouver about the Fort of Vancouver.

VII.—FORT VANCOUVER—VISIT TO CALSAS PLAINS.

This morning, May 14th, visited the Fort, or the extensive stores, store-houses, and offices of the Hudson Bay Company. The extensive mechanical operations, which have in the estimation of former visitors, imparted so much animation to this central depót of the "Company," are now almost entirely suspended. Scores of the Company's servants are now seeking their fortunes in the mines of California. It is clearly apparent that affairs at the Fort are in a transition state.—The old and rigid discipline is relaxing; a new order of things is gradually coming about; and one is inclined to think that the glory of Vancouver's Fort is departing. The introduction of U. S. laws into the territory necessarily will have a powerful influence upon the government of the Company's servants. A person now, who may be charged with crime, cannot be sent to Canada for trial, but may seek protection behind the Ægis of U. S. Territorial laws. This very week Mr. Douglass, hitherto at the head of the Company's establishment, is to remove with his family to Vancouver's Island, there to officiate as Governor. Mr. Ogden is to become his successor at the Fort. This gentleman some months since distinguished himself in the rescue of numerous captives, who were seized and cruelly treated by the Indians at the massacre of Dr. Whitman. His long experience as an Indian Trader, admirably qualified him satisfactorily to conduct such a negotiation with a tribe of savages, thirsting for blood. For fourteen hours he stood arguing and reasoning the matter with the Indians before they would give up the captives. At length he succeeded in obtaining every individual held in captivity. It is but repeating the remark in the mouth of every person acquainted with the circumstances, that "no one but Mr. Ogden could have succeeded so well." He is now past the meridian of life, but possessed of remarkable energy. A smart shake of the fever and ague does not incapacitate him for overhauling goods and invoices, and conducting an extensive correspondence.

In strolling about the premises I chanced to fall in with a group of Sandwich Islanders. Much to the credit of the company, it pays the salary of an Hawaiian preacher and school teacher. At the time of my visit he was labering under serious hindrances, in consequence of so many of his countrymen leaving for the mines, and others becoming (palaka) indifferent to religion. He accompanied me to visit an old *kanaka* who had been nearly forty years in the Company's service, during which period he had visited England. He said that he had been away from the Islands 'three tens and nine years,' having originally left in the ill-fated "Tonquin," which was blown up on the N. W. coast. I next visited the Company's bark Columbia taking on board a cargo of wheat for the Russian settlement at Sitka. The vessel was partially unmanned, several sailors having taken French leave for the mines. It is remarkable how wide spread is this gold mania.

Agreeably to appointment, went on shore this morning, May 15, to accompany a party on an excursion to Calsas Plains, situated about seven miles in rear of the Fort, and upon the North side of the Columbia. The weather was cold, rendering an overcoat very comfortable. Our party consisted of Governor Douglass and daughter, Mr. Birnie and daughter, and myself. Our small cavalcade gallopped away at a rapid gait, and was soon out of sight amidst the dense and stately forest trees skirting the beautiful plain upon which the Fort is situated. As we passed along, I was much instructed by the remarks of Mr. Douglass, who spake of the trees and shrubs in the forests of Oregon, as Solomon "spake of trees, from the cedar that is in Lebanon even unto the hyssop that springeth out of the wall." After passing through the forests of stately pines, and over two small patches of prairie land, we came to the Calsas Plains, so called from an edible root found there by the Indians. This prairie is several miles in circumference, and contains three or four settlements, situated at the respectful distance of more than a mile apart. Our object was to visit a lady, whom I had met at the Islands on her first arrival from London. On seeing us emerge from the forest she came out and gave us a cordial welcome. It was an interesting event, amid the solitude of a prairie, to meet a lady of intelligence and refinement, who had, with her husband, commenced gathering around them the comforts of a home. At the time of our visit he was absent at the mines. A blazing fire was soon kindled, much to my gratification, although our kind hostess regarded it as a pleasant May morning! "Now," says Mrs. C., "I am not obliged to go two miles into the country, to obtain soil for my flower-pots." Very true, one could enjoy more elbow room on a prairie in Oregon, than in the crowded streets of London! She was usefully and happily employed in teaching several pupils, among whom was an interesting boy, the son of Mr. Von Pfister, who lost his life in California.—For a long time I shall remember my pleasant excursion to Calsas Plains.

On our return to the Fort, in the middle of the afternoon, I found a boat about ready to start for Portland, fourteen miles up the Willamette. A sketch of my rambles thro' the beautiful valley of this river, I must reserve for another leaf of my Log-Book.

THE FRIEND.

HONOLULU, OCTOBER 1, 1849.

Japan.

In the November No. of our paper, there is a brief notice of the "Lagoda" having fifteen of her crew escape in the Japan sea; and in the December No. an account of McDonald's leaving the "Plymouth" for an adventure in Japan. We are now able to furnish our readers with a sequel to their adventures. The names of the young men from the "Lagoda" were as follows:

Robert McCoy, Philadelphia, Penn.;
*John Bull, Kempville, N. Y.;
Jacob Boyd, Springfield, Essex Co., N.J.;
John Martin, Rochester, N. Y.;
Melchar Biffar, New York City;
John Waters, half-caste, Sand. Islands;
Ezra Goldthwait, and eight natives of the Sandwich Islands. All these left the Lagoda about the 5th of June, 1848, and fled to Japan, in three whale boats. They made the land near the Straits of Matsmai. After a variety of adventures, by land and water, at one time confined in prison, then breaking out and escaping, on the 2nd of September, having been for sometime confined on board a junk, they were ordered to be brought to Nagasaki, and were brought into the presence of the Governor. McCoy reports that on entering the "Town House" he was made to tread upon a crucifix, in the floor, made of either brass or composition. One of the others asserts that not stepping upon it, he was thrust back and made to do the business to the satisfaction of the Japanese. While arraigned for trial various questions were asked them, such as follows: "Did you come to this country as spies?" Answer, "No." "What did you come for?" Answer, "Whales." "Do you eat whales?" Answer, "Make oil out of them." At this interview Dutch officers were present. They were removed to a prison, or temple, about one mile from the city. Here they broke out and escaped to the mountains, but were retaken, brought to the city and confined in the common prison, situated on the site of the old Catholic church. They were now shut up in cages and treated more cruelly.—About this time the Dutch superintendant wrote to the authorities at Batavia about these young men. All escaped the third time from prison, but were retaken and more cruelly treated, being confined in cages, with their feet made fast in stocks, and allowed no fire, no lights, and but little clothing. On the 17th of December one of the Sandwich Islanders, Maui, hung himself, and two days after his body was removed and buried, but his companions were not allowed to attend his remains to the grave. On the 24th of January died Ezra Goldthwaite. He had been ill for some time, and was attended by a Japanese physician. Sometime before he died, he was quite deranged. During their confinement one other was sick and delirious, and it is the belief of all the captives that there was "foul play" with their companions. In March they learned that another American was confined in Nagasaki.

We will now furnish some facts relating to that American, who was none other than Ronald McDonald. It may be recollected by some of our readers that this young man voluntarily left the Am. whaleship Plymouth, and was furnished with boat, sextant, compass, &c., by Capt. Edwards. On landing he intentionally capsized his boat, and was kindly received by the Japanese. After being on shore eight days he was taken under the charge of four Matsmai officers. At Matsmai he was imprisoned from the [6th of September until about the first of October. Subsequently he was removed to Nagasaki, and was brought before the Governor in the Town Hall. On entering he saw upon the pavement a crucifix, and an image of the Virgin Mary and the Savior when an infant. He was compelled to tread on these when he entered with the crowd into the Town Hall. Then he was questioned in regard to his coming to Japan, and whether he believed in the God of Heaven. To which he replied that he did. He was given to understand that the images he had trampled on were the Devil of Japan. During his imprisonment he had several scholars among the Japanese interpreters, which doubtless contributed to the kind treatment which he generally received. McDonald, for the first time met the other captives on the 26th of March, at the Town Hall, although they had been prisoners for months in the same city.

Knowledge that these young men were imprisoned in Japan, led Commodore Geisenger, Commander of the East India U. S. squadron, to despatch the "Preble," Commander Glynn, for their rescue. This vessel arrived in the Japanese waters about the last of April. On her approach, Japanese officers warned her Commander off, but he pushed forward and came to anchor near the city of Nagasaki, where the prisoners were in confinement. The report of the Preble's guns inspired hope in their bosoms, although the Japanese evidently designed to keep from them all knowledge that an American man-of-war was in port. McCoy reports that he had threatened the Japanese with a visit of such a vessel if he was not treated better, but they only laughed at his threats. They hold foreigners in supreme contempt.

Several interviews were held between Commandnr Glynn, and the authorities. The Japanese evidently intended to evade any direct communication between the Commander of the Preble, and the Emperor. He was put off from day to day, and given to understand that "by and bye" he might expect to have the business attended to. The prompt and decisive action of Com. Glynn seemed to infuse some new ideas into the minds of the Japanese. He distinctly told them the object of his visit, and if the Japanese authorities were determined not to surrender the prisoners, then he should leave immediately and report to his superior officer. A time was appointed for their delivery, but if they were not forthcoming the Preble would sail. Before the time had elapsed they were delivered over to the Dutch merchants, and transferred to the Preble.

During their captivity these young men gathered much interesting information respecting the country and the the Japanese government. McDonald, but more especially McCoy succeeded in acquiring a tolerable knowledge of the colloquial Japanese language. We hope that ere long a more full report of these young men will be spread before the world, together with the visit of the "Preble." It opens a new chapter in the intercourse of foreigners with the exclusive Japanese.

The "Preble" returned to China, where the Americans were left to be sent to the U. States, but the Sandwich Islanders were brought to Honolulu.

In our next we intend giving some account of the Loo Chooans, and the visit of the "Preble."

☞ There is a certain newspaper in Boston, of no small pretension, in the columns of which for January 27, 1849, we notice some stanzas entitled "My Country's Flag of Stars." These lines have this superscription, "Written for the Flag of the Union." We would merely add, that the same, *verbatim*, are to be found in the "Friend" for October 15, 1845. The author was a sailor on board the U. S. S. Portsmouth. His manner of placing the manuscript copy of the same in our hands, induced the belief on our part that he was no plagiarist.

☞ McDonald, of Japanese celebrity, is a native of Astoria, in Oregon, his father having been once an officer in the Hudson Bay Company's service, but now residing in Canada.

☞ Never chase a lie. Let it alone, and it will run itself to death. I can work out a good character much faster than any one can lie me out of it.—[Dr. Beecher.

---

* This young man reported himself at the Sand Islands, in March, 1848, as John Brady, from Kentville, N. Y. See Friend, Apr. 1848, page 29.

AN AMERICAN GIRL "BEFORE THE MAST."—From the Polynesian of August 25th, we learn that on board the whale ship 'C. Mitchell,' seven months from home, there was discovered a female who had shipped as a sailor in Nantucket. "When summoned into the Captain's presence, immediately after the discovery, she made a full and voluntary confession, whereupon she was taken into the cabin, a state-room set apart for her use, and every attention shown her that could be extended to a female on board ship." To the American Consul at Paita she reported that she belonged to Rochester, N. Y., of respectable parents, but in consequence of misfortune was abandoned by them, although she had resolved not to lead an abandoned life. She was taken under the charge of the Am. Consul, and was elated with the idea of returning to the United States. "Too much praise," remarks the correspondent of the Polynesian, "cannot be awarded to the Capt. of the 'C. Mitchell,' the Am. Consul, Captains of vessels in port, residents, &c., for the interest they took in her welfare, and the measures they adopted for her comfort and safe passage to her native home."

THE PACIFIC NEWS.—This is the title of a new paper, to be published tri-weekly at San Francisco. We are much pleased with the tone and spirit of Nos. 1 and 3, and shall be glad to see additional numbers. For these we are indebted to Wm. Ladd, Esq. From an article entitled "Gold Mines," we clip the following:

"Upon the Sacramento and its tributaries, are at work about fifteen thousand men, and with the year ending next January, they will doubtless relieve the earth of little less than $20,000,000, and this we consider a moderate estimate.

"Upon the San Joaquin and its tributaries there are some twenty thousand men now at work, who will earn by January next some $20,000,000. According to this calculation, this country will yield not less than $40,000,000 annually."

☞The attention of the Protestant Missionaries is called to the following resolution. At the Monthly Concert, held in Honolulu, in Sept., it was voted, that the avails of the collection for the next two months be appropriated to the Tualatin Academy, Oregon, and that other stations be invited to co-operate.

N. B.—Remarks upon the Academy may be expected in the next number of the Friend.

☞Latest advices from England and Europe, indicate that the gold mania is there raging with terriffic fury!

[COMMUNICATED.]

Visit to Guam—No Supplies—an Alarming Earthquake.

Mr. Editor—Presuming that it may prove interesting to your readers, I hereby transmit you a hasty, and perhaps rather imperfect sketch of an earthquake which took place at the Ladrone Islands, on the 25th of January last, a day which will long be remembered in the annals of those Islands.

We were laying at anchor, at the Island of Guam, at the usual anchorage inside of the reef, in company with a fleet of about 20 sail of whalemen, endeavoring to recruit ship, preparatory to encountering the cold, damp, foggy and cheerless weather of a N. W. season. We use the term *endeavoring*, as owing to an article which appeared in the columns of your valued journal, under the signature of *Blue Water*, (extolling those Islands for the varied and bountiful supplies which could there be obtained,) almost the entire fleet was induced to direct its course thither, not to partake of the bounties of nature, so lavishly diffused, (as we were led to believe,) but to meet with a cruel and bitter disappointment, an almost total absence of fruit and vegetables to shield us from the attacks of that dire scourge to seamen, on protracted voyages, the SCURVY. A fearful account will no doubt be made on the return of the fleet. Death and disease, however, at the period of our stay there, was stalking through the land with fearful and appalling strides, decimating the inhabitants, and carrying terror and dismay into every hamlet. This may in some measure account for the paucity of supplies, and we will charitably presume it is so, as it must have been widely different in *Blue Water's* time.

But to our subject, craving pardon for this digression: the 25th of January was a serene and beautiful day, the trades blowing very moderately, cooling and refreshing the atmosphere, the woods in our vicinity, resounding with the heavy blows of the axe, or ringing with the merry laugh of the careless mirth loving mariner, as metamorphosed into a back woodsman, he vigorously plied his axe to wood his ship; the slumbering bosom o. the bay dotted with the swift whale-boat, ever and anon darting with the rapidity of an arrow from ship to shore, shore to ship, or ship to ship, in the varied performance of their duties, presented a pleasing and an interesting view. But lo! at 3 P. M., in the midst of this busy scene, a distant rumbling and unearthly sound is heard in the direction of the mountains, trending westerly; louder, nearer, and more distinct it approaches us; when in an instant rocks, mountains, forests and shipping, reel and rock to and fro quicker than thought, in one great convulsive throe; the earth yawns open in many places, disclosing deep fissures, and spouts forth fresh water; almost every church on the island is either shattered or destroyed, (being about the only stone buildings there); the affrighted inhabitants rush from their frail tenements, and throwing themselves on their faces to the earth, lustily repeat their prayers, (being Catholics,) and we hesitate not to affirm they prayed in sincerity. The shock lasted about forty-five seconds, and would have levelled to the dust any modern built city, of brick or stone, on the habitable globe. On board ship it was almost impossible to stand erect without holding on for support; the clattering of the chain cables, the appalling rumbling beneath us, united with the din of every moveable thing on ship board, in rapid motion, sounded as though 10,000 Chinese gongs had burst forth in one simultaneous concert. The motion was lateral, and inconceivably rapid, with three heavy, distinct perpendicular shocks, as though the ship was beating over a reef. It extended to all the islands composing the group, and ships which arrived afterwards, felt the shock sensibly, two days sail from land with a fair wind. At the watering place the sea came in and caused an alteration there, and one ship which lay at anchor, came near being thrown on shore, parting her chain and losing her anchor. Rumors were rife of lives being lost, but of this we are not positive, their houses being built of such light materials and so loosely thrown together, that would be almost impossible to shake them off their equilibrium. After the first shock had subsided, and the inhabitants had regained a little self possession, they seized their priest and fled with him to the mountains, thinking, as we suppose, to place him in greater security from personal danger. We had a great number of light shocks during the three following days, at every recurrence of which, the inhabitants would repeat their prayers, saying the island was about to swim.

About 25 years since they experienced a pretty severe shock, but neither the memory of the oldest inhabitant, nor oral tradition can recal to mind so tremendous a shock as that on the afternoon of the 25th January last.

Yours respectfully,

WHALEMAN'S FRIEND.

Ship Braganza,
Honolulu Harbor, Sept. 24.

TO HONOLULU SUBSCRIBERS.—We are obliged to employ a native carrier, and should he neglect to leave our paper where directed, subscribers will be supplied upon application to the Editor.

PAINFUL INCIDENT.—We regret to learn by the arrival of the ship Prince de Joinville from Canton, whence she sailed Dec. 7th, the loss at Sea of our young friend Burritt H. Shepard, son of Mr. Fitch Shepard, aged 19. Mr. S. was a member of the Senior Class in the New York University, and a young man of much promise.

On account of impaired health, and by the advice of his physician and friends, he embarked for Canton in Oct. 1847, in the ship Matilda, to recover his health and invigorate his constitution. He visited several of the principal ports on his way, and arrived at Canton in September last, via Cape Horn, California and the Sandwich Islands.

He remained in Canton till Dec. visiting the places of interest in the vicinity; and finding his health entirely restored, he embarked for home with high hopes and fond anticipations of soon meeting his friends and resuming his place and studies in the University. But by a solemn and mysterious Providence he was lost overboard a few hours after the ship left the port, and all his hopes blasted in a moment.

The day was bright and clear, and the wind fair. The ship was going nine or ten knots an hour, when suddenly the spirit-stirring cry was heard, "A man overboard, throw over the life-buoy." The ship was hove to, a boat lowered and every effort made which personal regard or humanity suggested, but to no purpose. He struggled manfully with the rolling billows to reach the life-buoy, but in vain. The captain with his glass watched him from the deck with interest, till the boat was half way to him, when he sunk exhausted, and his body went down to sleep amid the coral reefs of the ocean till the sea shall be summoned to give up her dead, while his spirit ascended, it is believed to join his mother in Heaven. The sad intelligence has wrung the hearts of many friends with anguish, and the more so because of the hopes which he had excited of future usefulness.—[N. Y. Evangelist, April 17, 1849.

☞With sad emotions we read the above notice of young Shepard's death. Our recollection of him is quite vivid. He was an interesting, intelligent and promising young man, and his untimely death must have been severely felt by his kindred and friends.

FROM VALPARAISO.—*Arrival of the Sophia Walker, with Ninety Thousand Dollars worth of Gold Dust.*—The ship Sophia Walker, Captain E. G. Wiswell, arrived at this port this forenoon in the short run of 64½ days from Valparaiso—and *nineteen* days from the Equator. She brings a large amount of gold dust, valued at from $80,000 to $90,000, of which $40,000 is in charge of Captain J. H. Spring, late of ship Huntress, of New York, sold at San Francisco, and is owned by Oliphant & Co., of that city. The remainder of the precious metal is consigned to Baltimore houses. Captain Spring came passenger in the Sophia Walker, and also Charles E Hitchcock, from Oahu, and J. R. Schaffer, of Baltimore. The Sophia Walker left this port on the 18th of November for Valparaiso, and has made the voyage out and back in five months and 18 days.—[Bost. Journal.

No entertainment is so cheap as reading, nor any pleasure so lasting.

Miss Mitchell, the Discoverer of a New Comet.

From a late "N. Y. Evangelist" we copy the following interesting statements respecting the achievements in the science of astronomy by a young lady of Nantucket. Not merely the lover of this sublime science will rejoice in this triumph, but every American must experience a thrill of delight, when he learns that one of his countrywomen—a Miss yet in her "teens" has won the palm, when the veteran Astronomers of England, Germany and Italy were her competitors for the prize. We have another instance wherein the accomplished scholar and statesman Mr. Everett, transfers a name from the records of village obscurity, to the scroll of historic immortality. It may be recollected that Mr. E. first took by the hand, Mr. Burritt, the "Learned Blacksmith"—the reader of fifty languages, and introduced him to the learned of two hemispheres.

"In the year 1831, a gold medal, of the value of twenty ducats, was founded by Frederick VI., King of Denmark, to be awarded to any person who should first discover a "telescopic comet." This foundation was offered with the following conditions: 1. The medal was to be given to the first discoverer of any comet, which at the time of its discovery was invisible to the naked eye, and whose period was unknown. 2. The discovery must be made known by the *first* post after the discovery, to the Astronomer Royal at London. If no regular mail left the place of discovery, it must be sent by the first opportunity of another kind. An exact compliance was indispensable; and the medal would be given to the discoverer who earliest complied with the condition. 3. The exact position of the comet must be described, and the direction in which it is moving. 4. Observations sufficient to settle these points must be made, and each observation sent off, the first without waiting for the second, the second without waiting for the third, &c. 5. The medal to be assigned in twelve months after the discovery—Messrs. Baily & Schumacker to decide if a discovery has been made. If they differ, Mr. Gauss, of Gottingen, to decide; and these gentlemen agreed to communicate mutually to each other any announcement of a discovery.

On the 1st of October, 1847, at half-past ten o'clock, P. M., Miss Maria Mitchell, of Nantucket, discovered a "telescopic comet." On the 3d of Oct., at 7½. P. M., Father de Vico saw it at Rome. On the 7th of Oct., 9, 20m., Mr. Davies saw it at Cranbrook, Kent, in England; and on the 11th of Oct., Madame Rumker discovered it at Hamburg.

Mr. Mitchell took no steps to obtain the medal for his daughter, not thinking it at all probable that she had anticipated others.—But he transmitted by the first mail that left the island of Nantucket, information of the discovery, to W. C. Bond, Esq., Director of the Observatory at Cambridge. The priority of Miss Mitchell's discovery was admitted throughout all Europe. President Everett, of Harvard University, was anxious that the claims of Miss Mitchell should be presented, and he took the matter earnestly in hand.—One difficulty stood in the way—the condition had not been complied with. The earliest mail that left Nantucket after the discovery, did inform Mr. Bond of the fact. But Mr. Bond was not the Royal Professor of Astronomy at London; and the gentlemen with whom the award rested, decided that as the condition was not complied with, Miss Mitchell could not have the medal.

Gov. Everett was not discouraged. He sent all the letters and documents touching the case—the letter to Mr. Bond, bearing the post-mark of October 3—to R. P. Flamken, Esq., Charge d'Affaires of the United States at Copenhagen. This gentleman obtained an audience with the King of Denmark. He referred the whole matter to Prof. Schumacker, with an order to report at once. The report was favorable to the claims of our fair countrywoman The King was pleased to regard the letter to Mr. Bond, as compliance in spirit with the condition. He ordered the information to be sent to Miss Mitchell, that as soon as the medal could be struck it should be transmitted to her. The courtesy of the King of Denmark must be admitted. The zeal of Gov. Everett in behalf of one whom he never saw, is deserving of all praise. The whole transaction must be regarded with great interest by all the friends of American science."

CURIOUS PHENOMENA.—We take the following from the "Journal of the Royal Geographical Society of London," 1842:

Chili.—"Dr. Weyman, a protégé of Baron Humbolt, and a fellow-passenger, tells me that Chili is to a mineralogist or geologist one of the most interesting countries in the world, and that her botanical productions are, although less numerous, less known than those of Peru. He says that the province of Copiapo is in a state of constant agitation from earthquakes, and that the whole face of the country is progressively undergoing most interesting changes from these convulsions.—He states that this is the case, more or less, throughout Chili; but that, unless scientific persons are present to observe and compare the extraordinary effects of these convulsions of the earth, much will be lost to the scientific world. According to the Doctor, Valparaiso and most part of the coast of Chili have risen several feet from the level of the sea of late years. This accounts for two streets having been gained on the ocean in that city since I first arrived there, in 1817. The water is very deep close to the beach all round the bay. When at Valdivia, in 1820, we observed that there was only two feet of water where six Dutch line-of-battle ships had anchored sixty or seventy years before. The rivers of Birbir and Imperial are now scarcely navigable for boats at their mouths, whereas, when Ercilla wrote his 'Araucana,' 300 years ago, large vessels sailed some distance up those streams. The Doctor assures me that Lake Titicaca is 12,100 feet above the level of the sea, and the Ceno de Toledo, between Arequipa and Puno, is 17,200. —(Note made during my voyage from Peru to the Sandwich Islands in 1831. W. M.")

"Not a single teetotaller in all Ireland," said Father Matthew, in his speech at Cork, "is known to have died either of famine or the fever."

Whoever is not persuaded by reason, will not be convinced by authority.

Deaths and Obituaries.

On our return to the Islands, we much regretted to learn that the venerable Mr. CHAMBERLAIN had been removed by death, although the event had long been anticipated by himself and by all who were aware of his precarious state of health. For years, it might almost be said in truth, that he had been a dying man He died July 29th, and had he survived another month would have been just 57 years of age. He was born in Dover, Vt.; commenced a successful mercantile business in Boston, with flattering prospects of wealth, but by an interesting train of providential events, literally renouncing the pursuit of gain, he turned his correct and business-like talents into a channel for the welfare of his Divine Master, and the interests of the Church. During a period of 27 years—honestly and conscientiously devoted to the secular agency of the Sandwich Islands Mission and such other missionary labor as could be performed by a layman, he has shown that it was a full, unreserved and hearty consecration which he made of himself to God, and the interests of missions. There was a correctness about all his financial concerns, as agent of the mission, that reflected the highest credit upon his character. His influence and acquaintance were extensive, but not more so than the esteem and respect which were shown him. His death will be severely felt, by not only his family, and missionary associates, but the public has suffered a loss.—The influence and example, however, of such a man will long be felt. A good man's deeds are not forgotten. His presence may not be seen amongst us, but recollection of his virtues and excellencies will be long cherished. "The memory of the just is blessed."

DIED—In San Francisco, July 29, HENRIETTA EUGENIE, aged 28 years, daughter of J. C. Zimmerman, Esq., Consul of the Netherlands at New York, and wife of Frank Ward, Esq., of that place.

In company with a numerous concourse of the citizens of San Francisco, it was our melancholy privilege to attend the funeral of the deceased. This instance of mortality was calculated most impressively to inculcate the sentiment that "in the midst of life we are in death."

The family of which she was a most esteemed member had just arrived in the country, with worldly prospects the fairest, but thus suddenly a mysterious Providence had caused a dark cloud to overspread the household. Only a few days previous to her most unexpected departure, she and her husband had bid adieu to a beloved parent who had accompanied his children to their new home, but the very next steamer would convey the sad intelligence that the Angel of Death had visited the happy family circle. The funeral services were conducted by the Rev. Mr. Mines, an Episcopal clergyman. His remarks on the occasion were most appropriate and impressive, and his allusions to the virtues of the deceased peculiarly touching. Slowly the procession accompanied the departed to the cemetery, where sorrowing friends and strangers committed her remains to the dust, "looking for the general resurrection and the life of the world to come, thro' our Lord Jesus Christ."—[ED.

DIED—In San Francisco, April 24th, MRS. SIMMONS, wife of Capt. Simmons.

A correspondent thus refers to this interesting lady, under date of April 25th:—"I yesterday witnessed one of the happiest scenes it has ever been my happiness to behold—the dying scene of Mrs Simmons, wife of Capt. Simmons, of Woodstock, Vermont. You have probably known him at Honolulu. She and her husband arrived a little more than three weeks since in the steamer Oregon. Now she is a corpse. She died of the Isthmus Fever. She was an amiable and lovely young woman, a member of the Congregational Church in Woodstock, Vt., and an ornament to her profession. She died in the triumphs of faith. Infidelity itself would have wept at her touching allusions to Jesus and Heaven. Her funeral is to take place today—funeral sermon to be preached next Sabbath.—"Let me die the death of the righteous, and let my last end be like his," came home to my heart with peculiar power as I witnessed her smiling countenance and heard her cheerful voice even in the hour of dissolution. May we and ours, and our people, live the life of the righteous that we may die their death."—[T. D. H.

"*In the midst of Life we are in Death.*"—In crossing a stream in Kipahulu, East Maui, August 7, WILLIAM SISSON was thrown from his horse and drowned. He was a young man of some 21 years, who left a whale ship at Lahaina three years since. He was a resident of Hana at the time of his death. Will the newspapers devoted to the interests of seamen, please notice this communication? Seamen, landsmen, "in such an hour as ye think not, the Son of Man cometh."—[COM.

DIED—July 9th, at Sutter's Fort, California, Mr. AMOS M. ATWELL, of Lynn, Mass, aged 23 years.

The deceased had recently arrived in the couuntry, accompanied by a brother They had started for the mines on foot, and stopped by the road-side to rest, but it appeared that deceased who had in years past been subject to fits, was again suddenly attacked, and never recovered. His remains were brought to the Fort, where they were interred, it devolving upon the Editor to officiate as a clergyman upon the occasion.

DIED—At sea, on board the U. S. brig Dolphin, in the Indian Ocean, of Typhus Fever JAMES LARRIBER, aged about 18 years, a native of Camden, Maine.

On the death of this youth I feel proud in affirming that he left behind him a character untarnished by the many vices of a seaman; he was much respected and beloved, and bid fair to have made and become an honor to the employment.

Tread lightly shipmates as you bear the pall
Of one that's bound unto another shore;
Reflect, his debt is paid, and he obeys the call,
For greater comforts may be there in store.

Hold steady shipmates the plank that now divides
His frail timbers from his mansion home;
Usher lightly into the rugged ocean's tide
A seaman's heart, no more to roam.

Oh could there be but one tender parent here beside,
To shed the tear of sympathy sincere,
Methinks it might calm the stormy ocean's tide,
And draw from many a last and grateful tear.

[COMMUNICATED.

FORE PEAK, BRIG DOLPHIN,
Oct. 21, 1848.

DROWNED, Aug. 24, in the surf at Lahaina, by the upsetting of a boat, JAMES TOWNSEND, steward on board "Minerva," aged 40. Residence unknown.

Deaths in California.—By almost every arrival from the coast, intelligence is brought of the death of one or more persons who have resided upon these Islands.—Several have already been reported, but we are not aware as the following have been published. (We are unable to give the dates.) Mr. PATTERSON, and Mr. MCKEAN, both partners of the firm of Z. Bent & Co., carpenters in Honolulu. They died about the last of July, and were buried in San Francisco. It is with sincere regret that we record the deaths of these two enterprising young men. They originally came to the Islands on board the brig Henry. Their friends reside in Nova Scotia, or on Prince Edward's Island Mr. BURROUGHS, belonging to the Island of Maui, has died, but when and where in California, we cannot report. So also THOMAS GREGORY, THOMAS LITTLE, and NOAH NUTTER. It is really distressing to learn respecting the fearful waste of human life connected with the mining operations of California. It is almost certain death for persons of intemperate habits, while many of the most robust and vigorous constitutions are incapable of undergoing the exposure, fatigue and labor attending a miner's life. We have heard of other deaths reported, but have not as yet heard the reports confirmed.

DIED—In California, in August last, Mr. JETHRO HUSSEY, a native of Nantucket, and formerly a resident at these Islands.

DIED—Last of August, on board the ship Connecticut, in San Francisco, PETER FISHER, a colored man, and long a resident in Honolulu.

DEATHS on board U. S. Sloop-of-War Preble, from June 13, to August 27, 1849.

At sea.

June 13, Wm. Lloyd, ordinary seaman, Charleston, 24.
18, James Dick, Boatswain's mate, Philadelphia, 42.
20, James Thompson, sailmaker's mate, Eng., 31.
22, Jack, passenger, Sand. Islands, age unknown.
29, Peter Thompson, ord. seaman, Philadelphia, 25.
July 1, Jacob Janson, seamen, Sweden, 39.
8, Philip Richardson, do. Maine, 27.
9, Samuel Wier, Cooper, New York, 24.
16, John Crafts, Quartermaster, Newport, R. I., 49.
17, James Vallance, Capt afterguard, Delaware City, 21,
23, Michael Laughlin, yeoman, Ireland, 28.
John Culp, orderly serg't marines, France, 27.
26, John Gardner, Capt. forecastle, Mass., 45.
29, James Quinn, Capt maintop, Delaware, 28.
August 5, Jacobus Caddus, seaman, Holland, 27.
11, James Baird, ship's corporal, Maine, 38.
13, Peter Seymour, armorer, New York, 44,
17, Wm Cozzens, seaman, Conn., 30.
19, Richard Berry, ordinary seaman, Mass., 25.
20, Jeremiah Horn, marine, Ireland, 28.

At Honolulu.

22, John Ryan, seaman, Ireland, 39.
25, Wm. Archibald, landsman, Boston, 22.
26, Thomas Coleman, act'g carp. Newfoundland, 41.
27, James Dunnett, seaman, Charleston, 24.
Sept. 6. William Cox, marine, New York, 25.
7, William Prest, seaman, Sweden, 31.
8, John Williams, cook, American.

Note.—Places of nativity, and age, taken from shipping articles, and cannot be depended on as very correct

DIED.

At San Francisco, California, on the 26th ult., of inflammation of the lungs, GILES WALLO, aged 34 years, late U. S. Vice Consul at Lahaina, Sandwich Islands

On board ship Braganza, Aug. 21, '49, John, a native of the Sandwich Islands.

On board same ship, Sept. 2, '49, HENRY SCOTT, of New Bedford, formerly of ship Chandler Price, of New Bedford, on his passage to these Islands.

Lost overboard, and was drowned, from ship Braganza, Dec. 8, '48, QUINCY A. HARLOW, seaman, of Bridgewater, Mass., aged 19 years.

MEDICAL DISCOVERY.—It has been ascertained that the true source of scorbutic disease, as it shows itself in our ships and prisons, is the want of potash in the blood; that salted meat contains little more than half the potash in fresh meats; and that, while an ounce of rice contains only five grains of potash, an ounce of potato contains 1,875 grains, which accounts for the great increase of the disease since the scarcity of the potato. In patients under this disease the blood is found to be deficient in potash: and it has been ascertained by repeated experiments that whatever be the diet, such patients speedily recover if a few grains (from 12 to 20) of some salt of potash be given daily. Lime-juice is regularly ordered in the navy, as a specific for the disease, and the reason of its efficacy is not the acid, but the amount of potash, being 846 grains in an ounce. On these facts, it seems possible to found a slight, but very salutary improvement in the navy. Let a portion of tartrate of potash be ordered regularly to be mixed with the lime-juice that is given out for use; and let arrangements be adopted for boiling the salt meat in steam. A large portion of the salt would thus be eliminated and the food made more wholesome. A similar course might be adopted in workhouses and prisons. If so simple a remedy is in our hands, it is criminal to neglect it.—[N. Y. Farmer & Mechanic.

THE FRIEND.

Wreck of Richmond, and Report of Ships.

The Junior arrived 28th ult. bringing intelligence of the loss of the whale ship Richmond, of Cold Spring. Winters. She was full, wanting one whale, and went on shore in the fog, Aug. 2, 3 o'clock, P. M., about 12 miles south of St. Lawrence Bay. Officers and crew escaped safely to land, and were among the Indians four days. They were kindly treated, the Indians furnishing them with deer and salmon. They assisted also in endeavoring to get the vessel off, and when that was impossible, aided in securing the provisions. The E. Frith, Panama and Junior, took each one third of the crew of the Richmond. These vessels came to anchor about 1½ miles from the ill-fated Richmond. The oil was sold as follows—E. Frith bought 900 bbls. at $1 00 per bbl. Panama bought 600 bbls. at $0.75, and the Junior bought 900 at $0.75. The ship and chattels sold for $5.00!

We have obtained these particulars from Mr. C. H. Reeves, 1st officer of the R. He reports the vessels as doing remarkably well in Bherring's Straits. Panama, E. Frith, Washington of Sag Harbor, all full.—Majestic 1500. Isaac Hicks 1500, Metacom full, J. & Elizabeth, wanting 3 whales.

☞At the head of the Anadir sea the Richmond took six whales in one week, which made 1200 bbls.

☞We regret to announce the death of Capt. WINTERS, who died at sea, Sept. 13, on board the "Elizabeth Frith," commanded by his brother.

Donations.

	For Friend.	*For Chapel*
U. S Naval Hospital,	$3,50	
Capt. Spencer, Triton,	5,00	5,00
Mr. Bush, of Lahaina.	10,00

Paid by A. S. F. Society,	$500 00	
Donations,	1,865 54	2,365 54
Present Debt,		$578 87

The Chaplain sincerely hopes the contributions from the sea-faring and resident community will enable him to entirely pay off this debt before the close of the year.

☞Donations "For Friend" devoted to the gratuitous circulation of the paper among seamen, and others.

ACKNOWLEDGEMENT OF FAVORS.—Freight free of 5 boxes of Bibles, on board the ship Montreal. by favor of Henry Pierce, Esq. Also, a similar favor by James Hunnewell, Esq., who allowed 2 barrels and 3 boxes to be conveyed from Boston to Honolulu, freight free, on board ship Tsar. A valuable package of papers, &c., from J. Hunnewell, Esq., for Seaman's Reading Room; and a similar package of valuable books, pamphlets and papers from J. C. Jones, Esq., and Mrs. Gorham, Boston.

DONATIONS OF BOOKS FOR SEAMEN.—The Seaman's Chaplain would acknowledge 25 copies of "Manual of Devotion, for Soldiers and Sailors," by an unknown gentleman in New York; the books being forwarded by J. P. Engles, of Philadelphia.

H. B. M.'s CONSULATE GENERAL for the Islands of the Pacific, HONOLULU, March 9, 1849.

It is hereby notified that Consul Gen Miller has received a despatch from the Foreign Office, London, dated the 31st of last March, instructing him to take proper steps for causing to be made known within his Consular District, that, "The Lords Commissioners of the Admiralty have offered a reward of £20,000 (twenty thousand pounds sterling) to such private ship or ships of any country as may, in the judgment of their Lordships, render efficient assistance to Sir John Franklin, his ships, or their crews, and may contribute directly to extricate them from the ice."

The following is a copy of a minute of the Lords Commissioners of the Admiralty transmitted on the occasion:—

ADMIRALTY, 23d March, 1849.

The Lords Commissioners of the Admiralty are under the necessity of laying a supplementary estimate for the relief of the Arctic expedition under Sir John Franklin, and Sir Jas. Ross upon the table of the House.

Their Lordships having been apprized by the last letters received from Sir James Ross, that it was his intention to direct the "Investigator" to land all the supplies, that she could spare, at Whaler Point, and to proceed to England, if no tidings of the Expidition under Sir J. Franklin were received by the Whale Ships now about to sail, leaving the "Enterprise" to prosecute the search alone,—have consulted the highest Naval authorities as to the probable consequence of this step.

They find it to be the unanimous opinion of those most conversant with the Polar Seas, that such a separation of the ships under Sir James Ross would be most perilous to the ship remaining in the ice, and would probably neutralize the entire object of the Expedition, if Sir J. Franklin's party were to be discovered at a time when the "Enterprise" had nearly exhausted her own stores. They have therefore determined upon sending out a fresh supply of provisions for both ships by the "North Star," which is now fitting, for this purpose, at Sheerness, with orders to proceed across Baffin's Bay, and as much farther as practicable in the direction of Lancaster Sound. and Barrow Straits, looking out for the "Investigator," or her boats.

In the event of the "Investigator" not being fallen in with, the Com'nder of the "North Star" will be directed to land the supplies at such points on the South side of Lancaster Sound, or other places indicated by Sir James Ross, as may be accessible to the "North Star," in sufficient time to secure his return across Baffin's Bay before the winter sets in.

The expense of fitting the North Star for the ice, will be £6086, and the wages of the crew, stores, provisions, on board, £6602, making £12,688, in all, which constitute the supplementary estimate now submitted to the House But, in addition to this, Her Majesty's Government has determined to offer a reward of £20,000, to be given to such private ship, or distributed amongst such private ships, of any country, or to any exploring party or parties, as may, in the judgment of the board of Admiralty, have rendered efficient assistance to Sir John Franklin, his ships, or their crews, and may have contributed directly to extricate them from the ice.

H. G. WARD.

MARRIED.

In Oregon, at Salem, May 9, by the Rev. J. L. Parrish, Mr. J. B. M'CLANE to Miss H. O JUDSON.

At Portland, Oregon, by the Rev Mr Atkinson, Capt O S HALL, master of bark "Anita," to Miss E WARREN.

PASSENGERS.

Arrived.

Aug 6—Br. schr Clyde, McLean, 84 days fm Auckland, N Z.
Br. bark Maxim, Lindsay, 54 days from Valparaiso.
Aug. 9—Am. brig Sabine Barmore, 17 days from San Francisco.
10—Br. schr Bandicoot, Carraway, 93 days fm Hobart Town.
14—Am. brigantine Mary Stuart, Tucker, 19 days from San Francisco.
Sept. 16—Am. whaleship Wm. Rotch, Kempton, fm Japan.
Bark Swallow, Seagrove, 16 ds fm San Francisco.
17—Schr. Fraternite, 29 ds fm Tahiti.
Ship Tsar, Bursley, 128 days from Boston.
Bark Connecticut, Penhallow, 15 ds fm San Francisco.
18—Schr. Joseph Albino, Allen, 67 ds fm Port Adelaide.
19—Braganza, Devol, fm Otchotsk sea, 2600 whale.
Schr Greyhound, Lemoine, 16 ds fm San Francisco.
26—Haw brigantine Wilhelmine, Schriever, fm Hamburg.
Sept 29—Electra, Brown, from Artic Ocean, full.
Elizabeth Frith, Winters, fm A O, full.
Junior, fm A O, full
A Barker, Barker, fm A O, nearly full.
Marengo, Devoll, fm A O, 2300.
Isaac Hicks Rice, fm A O,
Indin, Miller, fm Ochkotsk sea, full.
Montezuma, Tower, fm O sea, 2900.
Julian, Taber, fm O sea, 1500.

☞When our paper goes to press, 8 whaleships in the offing, no reports.

Sailed.

17—Schr. Bardicoot, Carraway, for Tahiti.
19—Mary Stuart, for San Francisco.
Brig Sabine, for Sydney.
Sept 25—Tahitian schr Fraternite, Richit, San Francisco.
Br brig Joseph Albino, Allen, San Francisco.
Am wh ship Alert, Green, New London, via Society Islands,
26—Haw schr Privateer, King, San Francisco
29—Haw schr Julian, Moran, Concepcion and Valparaiso.

Spoken.

Memoranda.

Capt Kempton, of the Wm Rotch, reports upon the authority of Capt Folger, of the Monticello, that the bark Emigrant of New Bedford, foundered at sea about April 1st, in the vicinity of the French Rock, N of New Zealand. There are strong fears that all were lost, Parts of the vessel have been picked up by several vessels. The Monticello and Barkley experienced the same gale.

July 2, left at the Bonin Islands, Monticello, 45 mos, 1500 sp all well;—3, spoke Olympia, 23 mos, 800 sp;—13, L B Jenny, 34 mos, 1500 sp;—4, Alabama, 37 mos, 1300 sperm.

Just Received and for Sale

AT THE CHAPLAIN'S STUDY, a new and beautiful assortment of BIBLES in the English Language. They are bound in various styles, and can be had at prices varying from 37 1-2 cents, to $7,00 per copy.

☞ Seamen, and others, are informed that at the same place may be found Bibles printed in the following languages: German, Swedish, Danish, Dutch, French, Spanish and Portuguese.

N. B—Portuguese seamen are especially notified, that they can obtain copies of the Holy Scriptures in the old and new Testaments.

*** It is left voluntary with seamen whether they receive a copy of the Bible as a gift. or pay the whole or a part of its value Money received from the sale of Bibles is appropriated to the purchase of new supplies. tf

School Books.

Teachers and others can be supplied with a few school books at the Chaplain's study. The assortment comprises Primary Geographies, Arithmetics, Grammars, Reading Books, Webster's Dictionaries, &c.

The Friend, Bound.

Bound volumes of the Friend, for one, or more years, can be obtained at Rev. T. Coan,s, Hilo; Rev. T E. Taylor's, Lahaina; and the Chaplain's study, Honolulu. tf

Notice to Masters of Whaleships.

☞Your ships will be reported correctly in the Friend and Polynesian, if, on your arrival, a report is left at the Polynesian Office. Unless you are willing to take this trouble, the Editors of these papers are subjected to great inconvenience, and are oftentimes unable to make any report. tf

Spelling Books.

Noah Webster's, and the Union Spelling Books for sale at Chaplain's Study. tf

THE FRIEND.

A Trip from the Sandwich Islands to Lower Oregon and Upper California.

Leaves selected from "Our Log Book."

VIII—TOUR THROUGH THE WILLAMETTE VALLEY.

Visiting Portland—Tualatin Plains—Oregon City and Salem.

Portland.—Arrived at Portland about 12 o'clock last night, May 15, in company with Judge Bryant, the newly appointed Territorial Judge, and Capt. Crosby. We were rowed in a small ship's boat from Vancouver, about twenty miles, by four Indians, and having a strong current against us, our progress was slow. On waking this morning, looked out upon the rising town of Portland, situated fourteen miles above the junction of the Willamette with the Columbia. The town is handsomely laid out on the east side of the river, and is well situated, having in the rear an extensive forest and beyond that forest, at the distance of fifteen or twenty miles, a beautiful farming country. The first settlement here was made in the autumn of 1845, by Capt. Crosby and Mr. Stark, the former, master, and the latter, supercargo of the barque "Toulon." Their first building was a log-store, which is now standing; between twenty and thirty buildings have since been erected, and others are in progress. The house built by Capt. Crosby, is an excellent dwelling house, and cost $5,000, and at the present time the premises are valued at $10,000. The buildings, including store and dwelling house, erected by Mr. Pattegrove are substantial, and do credit to the place. The number of inhabitants in Portland, is now about one hundred. The site of the town is admirably selected, being well adapted to the landing and discharging of vessels. I find but one vessel in port, the "O. C. Raymond," undergoing repairs, and belonging to Capt. Crosby. This vessel is engaged in the lumber trade with California, and must be doing a business, enabling the owner to pay the master $300, the mate $200, and the seamen $100 per month.

Tualatin Plains.—This morning, May 17, started for the Plains, my road lay over hills and through forests, and I was glad to learn that a much better route for a road had been selected. These plains are about 20 miles in extent, surrounded by a heavy growth of timber. The soil is admirably adapted to farming purposes, being prairie-land of the best description. Several small streams intersect the plains in various directions. Settlements have already been made in most parts of the plains, and nearly all the land is now claimed on the system, that every man is entitled to one mile square, or six hundred and forty acres, provided that he enters his claim at the office of the County Clerk.

Soon after entering the plains, I sought out the dwelling of a Mr. Pomeroy, whom I had met at Portland. His good lady furnished me some refreshment, very acceptable after my lonely ride through the forests.—After dinner, I accompanied the proprietor in a walk about his premises. It was gratifying to view a farm of more than five hundred acres, fenced, and stocked with twenty yoke of oxen, horses, cows, and sheep. His barn was nearly completed, measuring one hundred and twenty feet in length, being nearly filled with wheat. Mr. P. is a native of Massachusetts, and after experiencing a variety of fortune, finds himself owner of a fine farm in Oregon, which he superintends, in connection with an extensive building and lumber business.

Proceeding three miles over the plains, I called at a dwelling of the Rev. Mr. Griffin, who was engaged in doing the "press-work" on the 8th number, volume 1st, of the "Oregon American and Evangelical Unionist," a periodical of 16 pages, octavo. It was to have appeared semi-monthly, but has been partially discontinued in consequence of a scarcity of printers. A London or Boston editor would have thought there would have been also a scarcity of readers, for the idea of issuing a newspaper, where the population is so sparse would certainly have been viewed as preposterous, by any but a genuine Yankee. Publisher, editor, and pressman, were all combined in one, who was assisted by a boy who had only set up type but a few months, and a little Indian boy to work the roller! I must not neglect to record the fact that Mrs. G. was busily occupied in folding and stitching the paper. The columns of the paper are at present principally occupied in a discussion and expose of the connection of the Jesuit Missionaries with the Indian massacre at Wailatpu, where Dr. Whitman and wife, with others, were cruelly killed. The editor of the "Union" is fully of the belief that the massacre never would have occurred had it not been for the influence indirect, if not direct, of the Jesuit Missionaries.

Quite sufficient is known to induce the opinion that the full history of that atrocious affair has not yet been published to the world. At present, I hardly know what opinion to adopt in regard to the subject.

I continued my journey over the plains, and before evening arrived at the house of Rev. Mr. Clark, Pastor of a Congregational Church. Occupying the same log dwelling with him, are Rev. Mr. and Mrs. Eells, formerly missionaries of the American Board, among the Indians, but now principals of the Tualatin Academy. Mrs. E. was an old acquaintance, as well as a native of the same town with myself, in Massachusetts. It was exceedingly pleasant to revive an old acquaintance, after twelve years of separation. Most vividly I could recall the scene of her departure from the shores of the Atlantic, for her future home in the wilds of Oregon.—Then it was not an every day undertaking for a lady to leave the frontier settlements in Missouri and traverse the prairies and mountains lying between the States and the shores of the Pacific. She may be said to have been the third lady that started upon this enterprize, as it was on the previous year, 1836, I believe, that Mrs. Whitman, and Mrs. Spaulding led the way. To these ladies belongs the honor of having been the first of their countrywomen to cross the Rocky mountains, and although hundreds have since followed in their footsteps, yet it must be viewed as a noble, praiseworthy and adventurous example. Man may plunge into the unexplored forest, traverse the almost boundless prairie, ascend the lofty mountains, but let him not speak of his hardships and trials, perils and dangers, when woman travels by his side "to share his joys and halve his sorrows."

After spending a few hours with friends I hastened back to Portland to spend the Sabbath, as, much to the regret of the people, no clergyman of any denomination, is yet permanently located in the town.

No house of public worship having been erected, the upper loft of a large store was suitably fitted up for the accomodation of an audience of fifty, and more than forty were present in the morning. During the interval of public services, I attended an interesting Sabbath school, held in a log-building.—Twenty-four scholars, taught by two female and one male teacher, were present. The citizens of Portland are sincerely desirous that a minister of the gospel would be located among them, and they are very ready to subscribe for the erection of a building, which will answer the two-fold purpose of a chapel and school house. During the current season, a Methodist minister is to preach in Portland every other Sabbath.

Oregon City.—This morning, May 22nd, started on horse back for Oregon City, situated at the falls, on the Willamette, from ten to fifteen miles above Portland. The road thither lies upon the east side of the river, is

somewhat circuitous and by no means adapted to wheel carriages. It is a mere pathway through the primeval forests. I had heard of wolves infesting these wilds, but never saw any until to-day, when a large pair of dark brown wolves crossed my path.

Having heard and read much about Oregon City, I was exceedingly anxious to see the place. It is situated on the east side of the Willamette, just below the falls, the river being perhaps an eighth of a mile wide opposite the town and the shores very bold.—The city was laid out by Dr. McLaughlin, the proprietor of this claim, in 1842, although, as early as 1829 he made arrangements for the erection of a saw-mill and other buildings. In the spring of 1830, potatoes were first planted here. During the year 1832 a mill race was commenced. About the year 1838, the whole establishment was nearly destroyed by fire, so that as late as 1840, less than *ten* years ago, only one solitary log-hut marked the spot, where now may be seen a town of more than one hundred dwelling houses, two flouring mills, two saw mills, several stores, a neat Methodist Chapel, a Catholic Church, a Nunnery, and other appurtenances amply sufficient to constitute a thriving settlement, doubtless the nucleus of a much larger and more populous city. On the opposite side of the river are two small settlements also aspiring to be styled cities, not however, of the first class! Linn, and her sister, Multinoma city, have not as yet passed their infancy, and for sometime to come, may not be able to deck themselves in other robes, than that noble growth of forest trees which the Creator has spread over the hills. I record this opinion with all deference to my worthy brother, the Rev. Mr Blain, of the Reformed Presbyterian order, who has located himself on the brow of the hill, and that kind neighbor of his, Mrs. L——, whose garden looked so flourishing under her special superintendence. Linn city, as well as Linn county derive their names from Senator Linn, who while a member of the U. States Senate made strenuous and commendable efforts in behalf of Oregon. The term Multinoma, was the Indian name for the Willamette river. During my sojourn of ten days in Oregon city, enjoying the kind hospitality of the Rev. Mr. Atkinson's and Mr. Walker's families, I made various short excursions into the *suburbs* and environs. The sound of the woodman's axe, and the lumberman's saw, together with the occasional crash of the giants of the forests falling prostrate, perhaps, across the very path you may be travelling, are unequivocal evidences that Oregon is a "new" country, but remarkably similar to New England, two hundred years ago. The traveller in Oregon, who is familiar with the history of the older portions of the United States, will be constantly struck with the similarity which may be traced in the Indian wars, and the hardships of the first settlers, their respect for law, and religion, desire for schools and education, and in their indomnitable love of free institutions, as well as in the natural features of the country.

During one of these rambles, I crossed the river, and visited a party of Indians fishing for salmon, just below the falls. The fishing ground is upon a small island at the foot of the falls; there the Indians rig out a platform over the troubled and foaming waters. One of the party then taking a scope net thrusts it below the surface of the water with the mouth of the net open down the stream. Into this net the salmon run on their passage up and over the falls. In this way, I saw them take several large and plump fish that would have brought an *ounce* apiece could they have been conveyed to the San Francisco market. The salmon possesses a most remarkable instinct for ascending streams in the spring of the year. *Go they must*, notwithstanding currents, rapids, and falls may oppose their progress. It was interesting to see them attempt to ascend the falls, and I could not but sympathize with the unfortunate, who would make the attempt but would fall back into the foaming abyss below, there to gather courage and strength for a second, third, and perhaps the thousandth trial.—Should they finally fail to ascend, their last struggle is their death struggle! The dead may often be seen floating down the stream by the current. There is a certain species of eels also, which is endowed with a similar instinct to ascend rivers. Thousands were to be seen struggling to crawl over the rocks, and force their way up the stream.

The Indians, from time immemorial, have resorted to the falls in the spring of the year to take a winter's stock of salmon. A number of their lodges are erected near the river. The inhabitants of Linn city are not altogether pleased with their Indian neighbors.—Some months since, on a certain evening, a lighted torch was seen to be borne towards the habitations of the Indians, and in a few moments the surrounding country was beautifully illuminated with the ascending flames. No one was presumed to know any thing how the fire could have been communicated. The poor Indians lost their winter's supply of fish and berries. They applied for redress to the Provisional Government of Oregon, but were told to wait patiently until the white man's Great Chief should send out little chiefs to rule over the white men, or the *Bostons*, as Americans are called by the Indians in Oregon. Ere long a *chief* arrives in the character of Governor Lane. The Indians apply for redress, but they are violently opposed. The Indians ask for justice! The Governor goes upon the spot, hears both sides, and decides in favor of the original possessors of the soil. It was a decision which did him much credit, not only among Indians, but among impartial persons of the white population. The poor Indian will soon be gone, but so long as he does linger, let justice be done to him. Such decisions by the governor will pave the way for him to form favorable treaties with the aboriginal tribes in Oregon.

I left this morning, June 1st, for a second visit to the plains, the distance from Oregon city being twenty-five miles. The road is uninteresting and mountainous. Only an occasional log-cabin indicated the abode of civilized man, and these were generally untenanted, the owners having gone to the mines. I was favored with the company of the Rev. Mr. McKinney, a travelling preacher of the Methodist denomination. He had emigrated to Oregon, from Missouri, and was able to furnish much interesting information respecting the various emigrating parties who had crossed the Rocky mountains. On entering the plains, we passed several beautiful farms, well fenced, and stocked with herds of cattle and horses, but it was really disheartning not to see the farmer following his plough, or sowing his wheat. I saw this in only one instance, although, I passed near a score of farms; young and old, of the male portion of the inhabitants, having gone to the mines.

Having spent four days among friends upon the plains, including a Sabbath when I preached to a most interesting audience of mostly children and youth, I started in company with the Rev. Mr. Eells, to proceed up the valley of the Willamette as high as Salem. We rode about twenty miles on the west side of the river, then crossed, and reached Salem, about sun set, having travelled between fifty and sixty miles. The capabilities of the Willamette valley for agricultural and grazing purposes fully met the expectations which I had formed, and I was assured that the richness of the soil, and its adaptation to all farming purposes was even better, further up the valley.

Salem.—This is a new and well located town on the east side of the river. It is the centre of the operations of the Methodist Mission. Here resides the Rev. Mr. Roberts superintendent of the mission. The site of the town is well chosen, on a dry and somewhat elevated position, so that there will be no fears of inundations during freshets in the river. At a short distance from the town is a saw and grist mill. The most interesting feature of the place at present, is the Institute. A large and commodious three story building, with two wings, is here erected. It was originally designed for the education of Indian youth, but as the mission failed, in consequence of such multitudes of the Indians dying off, the building is now found to be exactly what is needed for an English school. The institute is now under the excellent management of the Rev. Mr Wilbur and lady, who are assiduously and laboriously engaged in the instruction of about eighty pupils of both sexes. They are anxiously looking for an assistant teacher to be sent from the Eastern States. The central location of Salem has led some to suppose that it will become the seat of the Territorial Government. Upon inquiry, I learned that settlements had been formed to the distance of near one hundred miles above Salem. There can be no avoiding the conclusion, that the inhabitants in this beautiful valley will continue to increase until they will number sufficient to form one, or more States of the Union. Learning that the "Massachusetts" would soon leave for California, I was compelled to relinquish the idea of advancing; I had, however, seen quite sufficient to give me a most favorable impression of the natural resources of the country, and the enterprising character of the inhabitants.

In commencing my return down the valley, I was highly favored in being privileged to form one of a pleasant party, starting for Oregon city, good fifty miles distant, being in the judgement of the ladies of our company not a long day's ride on horse back.—We started soon after sunrise, and reached the end of our journey before the sun went down. The Rev. Mr. Roberts and lady, the Rev. Mr. Parish, and several others, composed our party. The road is far from being interesting, some portions of it lying through pine barrens. I must not, however, do injustice to the French prairie, some twenty miles long and five or six wide, surrounded by forests of fir and pine. The inhabitants are French Canadians, married to natives of the country. They were formerly servants

of the Hudson Bay Company, but from ten to twenty years ago, were induced to make a settlement upon this prairie. Their dwellings are erected on the out-skirts of the prairie, about a mile apart. Their "claims" embrace a few acres of woodland and extend towards the centre of the prairie. Wheat is the principal product of this portion of Oregon; it is raised with ease and in an abundance. As we rode leisurely over the extended prairie, the fragrance of the wild rose, growing in prodigal profusion, regaled our olfactory sense.

About midway on the prairie, we called at the house of a settler, out of which ran children and dogs in great abundance. In the midst of the group appeared a venerable looking Indian woman. "There is old Dorion's wife," said my travelling companion, Mr. Roberts. "What," says I, "not the person referred to in Irving's Astoria!" "To be sure," he replied. I returned and sought a formal introduction to this Indian dame, who accompanied Hunt's party over the rocky mountains, near 40 years ago, and is so graphically described by Washington Irving. Her husband was Hunt's interpreter among the Indians, in 1811, and his father was an interpreter for Lewis and Clark, in their tour in 1805-6.

My long, fatiguing and dusty ride from Salem to Oregon city, was rendered quite agreeable by the cheerful chit-chat of my fellow travellers, especially Mr. and Mrs. Roberts, who originated on the banks of the beautiful Delaware, a few miles above Philadelphia, at the very spot where I had spent a happy portion of my life. It was truly delightful in the wild woods of Oregon unexpectedly to meet those who possessed with myself, much knowledge in common, respecting towns, cities, villages, and persons in public and private life.

IX—EDUCATION IN OREGON.

Among the settlers in Oregon there exists a commendable public spirit in regard to the subject of education. The bill which was passed in Congress, constituting Oregon a territory, provided that every sixteenth, and thirty-sixth section, should be made available to the purposes of Common Schools. The leading men of the Territory are alive to the importance of having the provision of Congress fully carried out, so that the rising generation shall derive the full benefit of the appropriation; although, at present, the proceeds are very small, yet in coming time it will be the foundation of a large fund.

In addition to efforts for common schools, the various sects are vigorously making efforts for the establishment of permanent high schools, which may eventually be converted into colleges. The Catholics have a school on the French Prairie, and in Oregon city are erecting a large building for a Nunnery, in connection with which there is to be a young ladies' Seminary. The Rev. Mr. Blain of the Reformed Presbyterian Church, in Linn city, has a private school, for boys and girls under his charge. Mrs. Thornton's "Boarding and Day School," has been for several sessions in successful operation, in Oregon city. At Salem, the Methodists have a flourishing High School. [See visit to Salem.] I have no doubt, that ere long this will become a fine institution, embracing a Collegiate or University course of study. I am confident this will be the result should the territory continue to prosper, and emigrants from various parts of the world flock to the beautiful regions watered by the upper waters of the Willamette.

During my two visits to the Tualatin plains, I became much interested in the efforts now making for the establishment of Tualatin Academy, by the ministers and people of the Congregational Church. A school was originally started at this place, by the Rev. Mr. Clark, and an elderly lady, Mrs. Brown. They were knowing to the fact that there were many children in the vicinity, who were orphans, growing up in ignorance. Moved by a most commendable spirit to provide for their education, a school was opened denominated "An Orphan School." Mrs. Brown, living in a rude log-house, received several children into her family as boarders, a neighboring log-house was occupied as a school, and meeting house. Amid many discouragements the school prospered and more scholars presented themselves than could find comfortable lodging. After a few months, the friends of the school decided to enlarge these accommodations, and change the name of the school to that of "Tualatin Academy." About this period, the trustees secured the permanent services of the Rev. Mr. and Mrs. Eells, formerly Missionaries of the American Board among the Indians, in Middle Oregon. I am confident that two more suitable persons could not have been selected for the school; the Rev. Mr. Eells, had been for several months previously engaged in teaching at the "Methodist Institute" in Salem.—There he had given universal satisfaction as a competent and successful teacher. Having a teacher, the trustees resolved to erect suitable buildings. At the time of my visit the workmen were engaged in putting up a two story log-house for the Rev. Mr. Eells' family. While upon the ground, I resolved on my return to the islands to present the claims of Tualatin, Academy, and solicit donations. *There* I fancied I saw the foundations being laid of an institution, which might, in due time, vie with the Colleges and Universities on the shores of the Atlantic.—The records of Harvard, Yale, Dartmouth, Williams, Amherst, Nassau Hall, and numerous other now flourishing institutions would show that they sprung from an equally humble origin. The time was when the now richly endowed Harvard, was sustained by the contributions of the poor colonists of Massachusetts Bay. If a person needs encouragement to contribute for the establishment of schools, academies and colleges, in a new country, let him attentively peruse the history of almost any one of those noble institutions which are now the pride of the people in the Eastern and Middle States. A small donation of a few dollars, at the period when such institutions are struggling into existence, is really of more value than a "princely gift" when the same institution shall have arrived at maturity.

X—VISIT TO KLAKAMAS SETTLEMENT.

About two miles below the Falls, or Oregon city, a small river, called Klakamas, enters the Willamette. The valley through which this river runs, is heavily timbered, and upon it one saw-mill, if not more, has been erected; several settlements have already been formed upon the rich bottom lands. The most remote of these settlements is now owned by a Mr. Foster, in whose welfare I felt considerable interest. In the spring of 1842, Mr. Foster, with his family, embarked with myself at New York, and we were fellow passengers around Cape Horn. Mr. Foster remained at the islands during the winter of 1842-3, and then passed on to Oregon, containing at the period but a few American families. After living a few years in the vicinity of Oregon city, he removed to his present residence, sixteen miles up the Klakamas river. His farm is situated on the road leading over the Cascade mountains, and nearly all the emigrants from the States, over the rocky mountains, pass directly by his door. Here it is, that the careworn and weary emigrants, after their long journey of months across the mountains, first enter the abodes of civilization on the shores of the Pacific. Here they may witness the fruits of thrift and industry; a farm of 500 acres well fenced, 100 sown with wheat, 10 with potatoes, the prairie is covered with 100 head of cattle, together with horses, sheep and swine in abundance. Mr. and Mrs. Foster have a promising family of four sons, and three daughters. As I beheld so much of substantial wealth, I was forced to acknowledge that my old Cape Horn companion had probably made a good exchange of his "small and poor farm," far away on the British line, in the State of Maine, for one of the best farms in the flourishing territory of Oregon.

On my ride out, I met a Mr. Palmer, returning from a trading expedition among the Cayuse Indians. He was conducting a band of one hundred and fifteen horses, which he had purchased at the rate of about $30 each, *in trade.* These horses were destined for the market, at the mines of California.—Thus, it appears, that the mines of California extend their influence far away among the wild Indians of Oregon. This Mr. Palmer conducted an emigrating company over the rocky mountains in 1845. During the journey, he kept a diary which was published at Cincinnati, Ohio, in 1847; I procured a copy of the book, and find the narrative admirably agrees with the verbal narrations which the traveller may hear when he enters almost any log-house in Oregon.

XI—OVERLAND SETTLEMENT OF OREGON.

The settlement of Oregon, by emigrants crossing the Rocky mountains, is one of the great events of the passing age. Ten years ago it was not believed to be possible. Had the undertaking appeared credible, most certainly an eminent European writer would never have hazarded the following remarks, in the Edinburgh Review, as late as July, 1843.

"However the political questions between England and America, as to the ownership of Oregon, may be decided, *Oregon will never be colonized overland from the United States.*"

"The world must assume a new face, before American wagons make plain the road to Columbia, as they have done to the Ohio."

As if the above assertions were not sufficiently baseless, the following unfounded inference shows that the writer knew but little, in regard to the subject upon which he was attempting to enlighten the readers of the Edinburgh Review, "*Whoever, therefore, is*

*to be the future owner of Oregon, its people will come from Europe."**

Having perused these over-confident and unfounded assertions, with the absurd inference, I was somewhat interested to make enquiries, while travelling through the settlements, respecting the condition of Oregon, in the summer of 1843, when these remarks first appeared. ☞In the year, or summer of 1843, 121 "American" wagons, drawn by 296 horses, and 698 oxen, and accompanied by 973 loose cattle, crossed the Rocky mountains to Oregon! The total number of emigrants that year, was 1000, including 558 males, and 442 females of all ages! Previous to this period it is estimated, that about 400 had settled in the valley of the Willamette! We must conclude of course, that the world has assumed a new face!

* The quotations and the above statistics, we make from Greenhow's work on Oregon, published in New York, 1846.

THE FRIEND.

HONOLULU, OCTOBER 15, 1849.

☞ We would call the attention of Seamen to the importance, when in port, of obtaining a good and fresh supply of reading matter, for their passage home, or the coming cruise. You will find some historical and miscellaneous works at the Polynesian office. If you will call at our office, we will do our best to supply your wants. We have some books for gratuitous distribution, and others for sale, on the most reasonable terms.

"The Friend," the Whaleman's Directory.—Ship after ship is arriving heavily freighted with oil and bone from the Arctic Ocean, the new cruising ground. It may not be uninteresting to enquire how the masters of more than fifty vessels should have been induced to steer for Bhering's Straits and the Icy Sea. One and another has informed us that they obtained their intelligence from "The Friend." Our object in thus alluding to the subject is this, to remind our readers among whalemen, that having been enabled to fill their ships, in consequence of the information obtained from the columns of "The Friend," they should now aid in its support. All we ask is simply, that at the year's end, we may not fall in debt to our printer. This cannot certainly be viewed as unreasonable, having on board many thousand dollars' worth more of oil and bone than they would have had, if we had not taken special pains to solicit information from Capt. Roys, of the "Superior," respecting his successful cruise in the Arctic Ocean, and which was published in "The Friend" of November, last year. There was an eager demand for that paper, and several masters have already acknowledged their indebtedness. Now it is not for thousands but only a very few scores of dollars that we ask.

Estimated cost of Friend for 1849,	$850
Receipts from Jan. to October,	388
	$462

Between the present time and the close of the year, we must receive about $450 to meet our expenditures. Perhaps $150 will be derived from subscription; the remainder, we trust will be contributed by the friends of "The Friend." If a single number of this paper, directed whalemen to a spot where they have taken hundreds of whales, worth more than a $1000 each, it is surely a moderate tax upon their purses to ask a contribution of a few hundred, when every dollar thus contributed is converted into paper and ink, to be scattered broad cast over the wide Pacific.

☞ Seamen will aid in the support of the paper, by subscribing for copies to be sent to their friends, also by purchasing bound volumes.

Oil taken in the Artic Ocean.—From the reports of various cruisers in the Arctic Ocean, it is estimated that not less than fifty vessels have passed through Bhering's Straits and taken oil in that ocean.

The following table will show the amount of oil taken by thirteen ships, after they entered the straits, the highest point which they sailed, the number of whales taken, and the time when their first and last whales were taken.

Ships.	Am't of oil.	Whs.	Heig't. lat.	Time of tak'g. first whale.	Time of tak'g. last whale.
Junior	1400	11	66	June 5	July 15
Jeannette	1200	8	67 40	July 13	Aug. 14
Two Brothers	1000	6	68 10	14	26
Marengo	2000	14	69	June 25	26
Metacom	1400	13	67	1	15
Isaac Hicks	600	4	69 50	July 19	14
Electra	350	2	67 30	7	10
Margaret	1300	9	69	21	3
J. Maury	1000	7	68	14	29
Catharine	1400	9	67 30	2	17
Washington	1600	16	68 50	23	10
Omega	1500	12	70 12	June 29	23
Tiger	1600	9	68 40	July 1	30
	17650	150		18	

Average oil to each ship, 1342 brls.
" " " whale, 147 "
" number of whs to each ship, 9

Upon the supposition that other vessels have been equally successful, the following will be a low estimate.

Total amount of oil taken by fifty ships in Arctic Ocean, in 1849,	67,100
Total number of whales taken,	450

June 5th was the earliest that a whale was taken, and August 30th, the latest. No vessel as yet reported as going higher than the "Omega," and she was driven by the winds into 70° 13.

A Sabbath at Sea, 140 years ago.—In the year 1708, three Jesuit Missionaries started on a mission to China. Being unable to obtain passage to the East Indies, in their character as ecclesiastics, they pretended that they "were going to enter the service of the Emperor of China, Don Amodei, as a mathematician, I (so says Father Ripa in his journal,) as a painter, and Father Perrone, as our servant." They obtained passage on board the English vessel "Donegal." During their passage out, they did not make known their character, but Father Ripa bears this testimony in regard to the observance of the Sabbath, by the heretics.

"The principal officers played almost every day at draughts, but on Sunday no one attempted it; and many of those who could read, might be seen during a great part of the day with the Bible in their hands. One of the company who was employed in drawing a geographical map, wishing to continue his work on a Sunday, received a severe reprimand from the captain. *Such is the rigor with which these heretics observe the Lord's day.*"

Really, we could wish modern shipmasters remembered to observe the Sabbath as strictly, and that during the hours of the Holy day, all who are able to read, "might be seen during a great part of the day with the Bible in their hands."

Tualatin Academy, Oregon—We would call the attention of the Protestant Missionaries, at the various stations, on the islands, to the importance of aiding the funds of this Institution. As a pledge that the funds contributed for this purpose will be judiciously expended, it may be stated, that the Rev. Mr. Atkinson and Mr. Hatch, (formerly resident on the islands) are members of the board of trustees.

Memoir of N. Bowditch.—Let all our young readers among seamen, not fail to read this Memoir. Its perusal may inspire them with an ardent desire to advance in their profession. The seafaring community, are probably more indebted to Mr. Bowditch, than to any other writer. His "Navigator" is now found on board all American vessels, and not a few vessels under the flags of other nations.

Oahu Charity School.—Let all friends of this Institution, in Honolulu, attend the meeting of the Trustees, to be held to-morrow evening, (Tuesday,) at Mr. Thompson's Auction Room. A report and business of importance will be presented.

Mexican Claims.—The claims already presented to the Commissioners exceed $10,800,000 and more are constantly coming. Congress voted $3,500,000 in liquidation of the whole.

[COMMUNICATED.]

A Sabbath at Guam—Cock-fighting—Sabbath at the Sandwich Islands.

Mr. Editor:

Sir,—To while away a tedious hour, permit me to give you a brief sketch of a Sabbath passed at Guam; including a dinner at that El Dorado for recruits, and the spontaneous luxuries of nature, believing that it will afford an ample theme for reflection.—On Sunday, the 21st of January last, the starboard watch, of which your humble servant was a member, went on shore for three days of liberty; start not gentle reader, at the idea of our desecrating the Sabbath by going on shore on liberty, as I am not aware of ever having fallen in with that individual, who had walked a plank for six months, who would not embrace the first opportunity to extend his perambulations, provided he was blessed with health and strength. The distance from the landing to the town, was about six miles. On our route thither, we met a number of the inhabitants, some on foot, some astride a bullock, the males invariably armed with the long curved Spanish knife, rather an unseemly sight for the day. Having arrived at the town, we took a bee line for our boarding house; each ship master having provided a house for his crew, at the rate of 75 cents per day, per man; (pretty *tall* price and consequently expected *tall* fare.) Our house having a stone front, and being one of the better sort, we entered with a smiling countenance, and a keen appetite, sufficiently whetted by our morning's walk.—Friend! did you ever take a cold shower bath, in the month of December, for any chronic complaint? If you have, you can judge of the damper we experienced when we surveyed that table; a table, which will never be effaced from memory, whilst reason holds her sway. In the centre of the room a few boards were placed across some uprights, resembling a mason's scaffoldings, upon which were laid a dozen plates of a dingy hue, with here and there a knife and fork of every variety, size and pattern, resembling an importer's card of cutlery, which had lain sufficiently long in salt water to give it a solid coat of rust. Then came the dinner, a hog cut up in small pieces, almost bristles and all, and boiled in fresh water with a few potatoes, and a little salt sprinkled on each man's plate, comprised the sum total of that dinner. After having tantalized nature, satisfied would be too expressive a term, we strolled up towards the Government House, and buildings. At the farther extremity of this range, and a little in advance of it, was located the church, in which service was performing, it being the Sabbath. Between the government house and the calaboose, which stood directly opposite it, was a small grass plot, toward which we saw several parties of Spaniards as well as seamen, directing their steps, and we retraced ours. There we found active preparations going on for a cock-fight, some four or five cocks being already there, a small cord being tied to the leg of each, and at the other end a small peg which was driven in the ground, beside each cock stood its owner, descanting upon its merits, and waiting for bets, previous to heeling and matching them. Within a few yards of the last, another group were seated gambling for money, at a game peculiarly their own, and they too, within one hundred yards of the church, and the sound of the little bell before the altar, which we distinctly heard. Nearly every individual then, was laboring under a severe attack of the influenza, which was raging fearfully and fatally upon the island; but neither death nor disease, prevented them from practising this cruel and brutal *amusement* as it is termed. At 4 o'clock, the services of the church were concluded, which was announced by the tinkling of the bell, when they immediately uncovered and dropped on their knees, remaining in that position until the boxed priest and his retinue had passed, the game cocks standing proudly erect, as though conscious of their superiority to the degraded beings who knelt around them.

The procession having turned an angle of the government mansion, they sprang from their knees, adjusted their hats, and proceeded to cock-fighting, with as much nonchalance as a Broadway exquisite would sip his julep. What a contrast was here exhibited, when compared with the Sandwich Islands! (the group we had just left,) what a melancholy picture! I am neither sectarian in creed, nor enthasiast in religion, and although I have, no doubt, partaken largely, in common with my seafaring brethren, of prejudice against restrictions, still I am not so bigotted, as to shut my eyes against the evidence of my own senses. The contrast here was too glaring, it would have been an utter impossibility to have passed it by unnoticed. In both cases we see religion cherished and fostered by the strong arm of government, but how vastly different the results. The one an infant nation, springing with giant strides from the lowest depths of degradation and heathenism, grasping the extended hand of civilization and christianity, and appearing (as if by magic) to an admiring world, a new people, regenerated and disenthralled. *practising* what they *profess*, according to the principles inculcated in them, particularly in regard to the Sabbath. A liberal policy in encouraging commerce and arts, has already given them the appearance of a thriving, commercial mart, and added a degree of refinement to their national character, which fifty years ago would have been scouted at as ideal and absurd. How widely different is the other picture, a rigid, selfish and ruinous policy is now withering and blasting the prosperity of the entire Ladrone group. No commercial marine whatever. All that we saw, being a few shapeless floating masses designated with the name of canoes, which a Sandwich Island native would blush to own. Trade, commerce, agriculture and the social comforts of life are in a rapid decline; and cock-fighting on the Sabbath appears to take the preference of every other pursuit. These are humiliating but stubborn facts, and whether it be the difference in the creeds, or modes of instruction, by their spiritual teachers, which has caused so astounding a contrast, it is not our province to say, believing that every individual of the large whaling fleet which was so unfortunate as to visit those islands last season, will come to a right conclusion.

Yours respectfully,

WHALEMAN'S FRIEND.

Ship Braganza,
Honolulu, Harbor, Oct. 9, 1849.

PROCLAMATION OF PRESIDENT TAYLOR.—The President of the United States has issued a proclamation recommending that the first Friday in August be observed by the people of the United States as a day of fasting, humiliation and prayer to avert the ravages of the pestilence that is now threatening to sweep throughout the land. —[Am. Paper.

THE CALIFORNIA FLEET.—The number of vessels which have sailed for California is 321, viz: 106 ships, 105 barks, 58 brigs, 46 schooners and 6 steamers. The list comprises vessels which have sailed from London, Liverpool, Bordeaux, Cowes and Antwerp, as well as from the United States.—St. Louis Jour., June 26.

EXTENT OF KNOWLEDGE IN IRELAND.—We notice in some of our exchange papers, the statement that in Ireland there are 74 towns, each with a minimum of twenty-five hundred inhabitants, not one of which contains a bookseller!—Scotland, with a third of the population, has three times the number of booksellers; being in the proportion of nine to one! More remarkable still, there are six counties which cannot boast of even one bookseller or a single circulating library; namely, Donegal, Kildare, Leitrim, Queen's, Westmeath, and Wicklow. Such a state of things certainly needs a revolution; but whether a political change would be for the better, is problematical, at least.

LOSS OF THE U. S. STEAM PROPELLER EDITH.—Despatches received by express from acting Lieut. James McCormick, to Com. Ap. Catesby Jones, report the loss of the U. S. steam Propeller Edith, near St. Louis Obispo—officers and crew all saved.

MEMOIR OF NATHANIEL BOWDITCH.

As this remarkable individual rose by the force of his genius, the integrity of his character, and his untiring industry, from a very humble condition in life to a conspicuous station among the mathematicians and philosophers of his day, and left behind him some valuable testimonials of his talents and industry, it is apprehended that a brief memoir of his life, will be interesting to the readers of the Review.

The following is compiled from the 35th volume of Silliman's Journal of Science and Art.

Nathaniel Bowditch was a native of Salem, Massachusetts, where he was born in the spring of 1773. His parents were in very limited circumstances; his father, during part of his life, was a shipmaster, and subsequently carried on the trade of a cooper, by which he procured a precarious subsistance for his family. His mother appears to have been a pious, though uneducated woman; and if she did not store the minds of her children with knowledge, she was careful to guard them against the encroachment of evil and her maternal tenderness and pious example made a permanent impression on the mind of this son.

The period of his childhood was that of the revolutionary war, when the opportunities of literary instruction, even among the wealthy, were very limited. From the straitened circumstances of the family, the education of young Bowditch was confined to the schools of his native town, which were inadequate to furnish anything beyond the simple elements of instruction. But he possessed a vigour of intellect, and a determination of purpose which eventually enabled him to overcome the difficulties of his situation, and attain a rank among men of science, of which, in the early period of his course he probably never dreamed.

The advantages of the schools, such as they were, he was obliged to forego, at the age of ten years, and assist in the labors of his father's shop, for the support of the family. From this he was soon transferred as an apprentice to a ship-chandler, and subsequently became a clerk in a large establishment of the same kind. During this apprenticeship, he manifested a strong inclination for mathematical learning; employing all the time he could snatch from the counter, in his favourite studies. A circumstance, which, with a boy of ordinary intellect, would, no doubt, have passed away and been forgotten, appears to have roused his latent propensity to mathematical pursuits. When about fourteen years of age, an elder brother, who followed the sea, and was attending an evening school for the purpose of learning navigation, informed him that the master had a new manner of working questions; for instead of numerical figures he employed letters of the alphabet. This excited the curiosity which the brother was not able to satisfy; but informed him the master had a book which told all about it. This remarkable book was borrowed, and proved to be a treatise on algebra; the first the youthful aspirant had ever seen. He studied it assiduously, made himself master of the contents, and copied it out from beginning to end. Subsequently, he got possession of a volume of the transactions of the Royal Society, from which he made a copious abstract of the mathematical papers contained in it. He was too poor to purchase books of science, and, in consequence, restored to this laborious method of procuring them. Some clergymen, however, of liberal education, to whom he became known, allowed him access to their libraries, and thus assisted his early studies.

Among the objects which at an early period engaged his attention, astronomy was unquestionably one, for at the age of fifteen, he completed an almanac for the year 1790, containing the calculation of eclipses and other usual phenomena. His indefatigable industry in literary pursuits, is illustrated by a fact related upon his own authority; that, when quite young, he read the whole of Chambers' Cyclopedia, in two large folio volumes, without the omission of a single article.

In the beginning of 1795, when in his twenty-second year, he commenced a seafaring life, and performed several voyages, first in the capacity of clerk, and afterwards as supercargo. On the second voyage, the captain and supercargo dined one day at the house of the American consul at Madeira.—The wife of the consul having heard that young Bowditch was a great calculator, observed to him, while at table, that she had a question, which she would like to have answered. She then stated that she had received some years before, a legacy in Ireland. The money was there invested, and after remaining some time at interest, the amount was remitted to England, where it remained, still further accumulating, and recently the whole had been remitted to her.—The original legacy, the times of transfer, &c., of course were stated as she proceeded; and she desired to know what amount ought to be received at last. N. Bowditch observed it was a little difficult, on account of the difference of currency and number of remittances; but after about two minutes reflection he answered, "the sum you ought to receive is £843 15s. 6¼d." She then inquired of the head clerk of the house, who had previously made the calculation on paper, whether this result was correct; and he, taking his calculation out of his pocket, answered, "he has got it exactly; and I venture to say there is not another man on the island that can do it in two hours."

A curious instance of his devotion to scientific pursuits, somewhat similar to the case of Archimedes, is related as occurrying on his third voyage in 1798. The relations of the French and American governments were then of an anomalous character. The nations were not avowedly at war, yet on the ocean a state of hostility actually existed.—The vessel in which Bowditch sailed was strongly armed; and being chased by a French privateer, prepared for resistance.—The post assigned to him was the cabin, from which he was expected to hand up the powder as it should be needed on deck. In the midst of their preparation, the captain, looking into the cabin, saw with surprise that his supercargo was quietly seated at the table, busily employed, as usual, with his slate and pencil. The privateer, however, changing its course, left the mathematician to finish his problem at leisure.

The suavity of his manners appears little less conspicuous than his ardour in the pursuit of knowledge; and he made a practice of teaching the sailors how to make the calculations which were required in navigating the ocean. The consequence was, that every one of a crew of twelve men, who sailed with him to Batavia, that could read and write, subsequently rose to the rank of captain or chief mate of a ship. At Salem it was considered as a high recommendation of a sailor, that he had sailed in the same ship with N. Bowditch, and this circumstance was often sufficient to procure for him an officer's birth. In illustration of this statement, we are informed that on his second voyage, the first and second mates had been sailors in the same ship on the previous voyage. This attention to the instruction of the crew was doubly advantageous. It not only paved the way to more lucrative stations, but it furnished salutary employment for those portions of time which sailors too often spend in corrupting each other. Instead of passing their leisure minutes in idle and demoralizing communications, they were found to be discussing questions respecting tangents and secants, altitudes, dip and refraction.

An acquaintance of Bowditch informs us, that in 1796, a foreigner was in Boston who called himself a professor of mathematics, who boasted much of his knowledge in those sciences, and asserted that he had found nobody in this country who knew anything on the subject. He had a question, he remarked, which he had proposed to several of those who were reputed the most knowing, but they could not solve it. This problem being handed in the evening to Bowditch, he returned the answer next morning, and subjoined a question which had once puzzled him. But nothing further was heard from the professor. He did not manifest any inclination to prosecute further this war of problems with the young American.

At the time when the subject of this memoir commenced his seafaring life, the book on navigation which was mostly used by practical mariners was John Hamilton Moore's treatise; a work of but little science, and abounding with errors in the tabular parts. These errors he undertook to examine, and actually corrected eight thousand in the nautical tables. But the obvious imperfection of the work, and the limited portion of science which it contained, necessarily turned his thoughts to the production of an original treatise. The result was The New Practical Navigator, the first edition of which was issued in the year 1800, when he was but twenty-seven years of age.

Though this was the production of an early age, the author of which had his livelihood as well as his scientific knowledge to acquire by his own unassisted industry, the Practical Navigator is unquestionably much superior to any work on the subject which has ever appeared.

In succeeding editions, care was taken to introduce such improvements as were made in nautical science; it is therefore probable, the work will retain its place in the school of navigation, for many future years.

Nathaniel Bowditch, in common with most others who have risen to eminence in science or literature, was in nothing more remarkable than his industry. During the time, in his eastern voyages, when the ship was lazily making its way on the ocean, he was usually engaged in the studies from early in the morning till nine at night; with the exception of the times of taking his meals, making the

needful observations for computing the ship's place, and walking the deck for indispensable exercise. But amidst this pedestrian exercise, he was frequently observed to be deeply immersed in thought, when it was well understood that he was not to be interrupted, as he was supposed to be solving some difficult problem. And when he was observed to dart suddenly into the cabin, the conclusion was, that he had caught the idea which was the object of his pursuit.

His studies, while on the ocean, were not exclusively mathematical, for he is said to have acquired a knowledge of the French and Spanish languages, by the use of his books, without the aid of a living instructor. On one occasion, the vessel was obliged to put into the Isle of France to refit, when it was found that Bowditch was the only person on board who had any knowledge of the French language. His acquaintance with the pronounciation must have been very defective, as he had studied without a preceptor; but his knowledge of the language, such as it was, proved of essential service to the interests of the owners, as well as to the crew of the vessel.

At the age of seventeen, he had undertaken the study of Latin, and in this he appears to have combined the study of mathematics with the acquisition of that language, for the first Latin book that he undertook to read, was Euclid's Elements of Geometry.—A copy of Newton's Principia being lent to him, with liberty to keep it till called for, he is also said to have read and translated it.*

The fifth and last voyage of N. Bowditch, was performed chiefly in the year 1803, having sailed for Sumatra in the autumn of the preceeding year. On his return from this voyage, he was appointed President of the Essex Fire and Marine Insurance Company, in Salem, the duties of which he continued to discharge till the year 1823. During this interval, he was several times invited to accept of appointments of greater emolument in Literary Institutions in different parts of this country; but these offers could not induce him to abandon his native state.

In 1826, he published a chart of the harbors of Salem, Beverly, Marblehead and Manchester, the survey of which had occupied him during the summers of the three preceding years. So minutely accurate was this chart, that the old pilots said he had found out all their professional secrets, and had put on paper, points and bearings which they thought were known only to themselves.

On the establishment of the Massachusetts Life Insurance Company in 1823, he was elected to the office of Actuary, being considered the person best qualified for that highly responsible station, from his habits of accurate calculation, and his inflexible integrity. On accepting the office, he removed to Boston, where he spent the remaining fifteen years of his life. The duties of his new station were performed with fidelity and skill, and to the entire satisfaction of the Company. The original capital was five hundred thousand dollars, but at his suggestion, the Company applied for and obtained liberty to hold in trust, and loan out, the property of individuals; and upwards of five millions of dollars, nine-tenths of which belonged to females and orphans, were thus received and invested. In this manner the Institution became, in fact, a savings bank, on an extended scale, and of incalculable advantage. We are told that the Actuary was never willing to make these investments, until he was satisfied that the owner concerned, was fully apprised of the nature and condition of the investment, and it is noted as an evidence of the skill and care with which the concerns of this company were managed, that although this was the largest monied Institution in New England, with a capital equal to ten common banks, and with loans out amounting to six millions of dollars; yet during the unexampled commercial embarrassments, and financial difficulties, which marked the later years of N. Bowditch's administration, the losses sustained did not exceed those experienced by some of the smaller banks.

In the year 1815, and of course while holding the office of President to the Essex Fire and Marine Insurance Company, at Salem, he commenced the laborious task of translating from the French of La Place, his celebrated work, the Mecanique Celeste. The object of the French astronomer was to deduce from the law of universal gravitation, established by Newton, and the principles of motion, by strictly mathematical investigation, a complete theory of the figures, the action and motions, of the celestial bodies.

The subject itself is one of great difficulty, and the instruments of investigation, the highest refinements of mathematical science; but the difficulty of following the author was greatly increased, by his frequent omission of the process by which the conclusions were connected with the premises. La Place does not appear to have considered that his work would probably be read by many who were not as familiar with the profundities of mathematics as he was. Bowditch used to say, "I never come across one of La Place's *Thus it plainly appears*, without feeling sure that I have hours of hard study before me to fill up the chasm, and find out and show *how* it plainly appears." The design of the translator, was not simply to furnish a version of the original in our language, but to supply the commentaries which appeared necessary to bring it within the comprehension of less penetrating intellects. To accomplish this object, the commentary was more extended than the original.

Though the translation, as already mentioned, was begun in 1815, and it is said to have been finished in about two years, no part of it was published until several years after his removal to Boston; during which time it is probable very considerable revisions and improvements were applied to the annotations.

The manner in which this work was published, manifested a spirit of independence which the nature of the case does not seem to have justified. He was frequently solicited by his wealthy friends, and by men of eminence in science, and formally requested by the American Academy of Arts and Sciences to permit them to print it at their expense. But he was well aware that the demand for such a work was not likely to remunerate the publisher, and he therefore apprehended that its publication at the expense of others, would bring him under pecuniary obligations, which he was anxious to avoid. He revolted at the idea of being patronized in the printing of this expensive production, by men who were totally incapable of understanding any part of it, and therefore chose to wait until he could afford to publish it on his own responsibility. A more correct view of the case would perhaps have been, that some men who had neither the talents, the taste, nor the industry to study and understand such a production, might still have the good sense and good disposition to do what they could towards enabling others to possess such a valuable work. The man who, though ignorant of science himself, has the generosity to encourage it in others, and to furnish the pecuniary means of its promotion, displays a liberality of sentiment which ought to command our respect. An individual who has been endowed with the capacity of enlarging the boundaries of science, and has spent years of unceasing toil in its cultivation, may safely leave to others less liberally gifted, the burden of bringing his labors before the public. The world is certainly more indebted to the author of a valuable book, even though he may be poor to pay for its publication, than to the man who contributes a small portion of his property to pay the expense of printing it.

At length, in the year 1829, the first volume was published, and called forth a high encomium from the London Quarterly Review. In that work it is said: "To the students of celestial mechanism, such a work must be invaluable, and we sincerely hope that the success of this volume will be such as to induce the speedy appearance of the sequel. Should this unfortunately not be the case, we shall deeply lament that the liberal offer of the American Academy of Arts and Sciences, to print the whole at their expense, was not accepted. Be that as it may, it is impossible to regard the appearance of such a work, even in its incomplete state, as otherwise than highly creditable to American science, and as a harbinger of future achievements in the loftiest fields of intellectual prowess." The second and third volumes appeared in 1832 and 1834, each of the three containing about a thousand quarto pages.—The fourth and last volume was nearly completed at the time of his decease, and some of the last reading he did, was a proof sheet of this concluding volume. The cost of publishing this work is stated at upwards of ten thousand dollars, which must have been a heavy draft upon the property of a man who was not rich.

N. Bowditch died in the spring of 1838, a few days prior to the completion of his sixty-fifth year. It is probable that the subject of this memoir will be known to posterity, chiefly as the author of the Practical Navigator, and the commentator of La Place's Celestial Mechanics, yet these are not the only memorials of his talents and industry which he has left behind him. He contributed a number of articles to the Memoir of the American Academy of Arts and Sciences, as well as to other periodicals of the day.—[Friends' Review, Philadelphia.

A profane coachman, pointing to one of the horses he was driving, said to a pious traveller, "That horse, sir, knows when I swear at him." "Yes," replied the traveller, "*and so does One above.*"

* This great work, which was probably the most profound mathematical treatise that ever appeared prior to the Mecanique Celeste of La Place, was originally written in Latin, but it was translated into English, more than forty years before N. Bowditch was born. If he actually translated it, he probably did so to improve himself in the science, and in the Latin Language.

MARRIED.

In Honolulu, Oct. 4, by the Rev. Samuel C. Damon, Mr. William Taylor, to Mrs. Martha Ann Lee.

DIED.

Under distressing circumstances, drowned, on the 22d July last, on the island of Kauai, Julia Ann, the eldest daughter of Jules Dudoit Esq., formerly Consul of France for the Hawaiian Islands. The melancholy accident created general regret in this community. It was not noticed before, on account of M. Dudoit's absence.

Died, in Honolulu, Oct. 13, Capt. I. Hart, carpenter, long a resident on the islands.

On board ship Tiger, Nov. 5, 1843, Josephus, a native of the Sandwich Islands

Drowned at Guam, March 12, 1849, Mark Nickolson, of Deptford, belonging to the bark Envoy, Capt. Walker, of New Bedford. Aged 19 years.

On board ship Alpha, of Nantucket, 29th Aug., Mr. Reubin O. Coleman, 1st officer. It was supposed that he died of yellow fever. Mr. C. was a native of Nantucket.

Died on board same ship, 17th Sept., P. Wood, of E. Greenwich, R. I., also, Abell Squier, of Conn., on the 23d Sept.

Lost overboard and drowned, in the early part of August, Mr. Slater, 2nd officer, and Mr Banks, boatsteerer of the Awashonks of Falmouth. The vessel at the time, being in a gale of wind, having just entered the Arctic Ocean. The latter person unfortunately fell overboard, in the anxiety to save the former, who was precipitated into the sea, by the bow boat giving away.

Died at sea, Sept. 21, on board the Elizabeth Frith, Capt. Philander Winters, aged 31, late master of the Richmond.—After the loss of his ship, Capt. W. took passage with his brother who commands the Elizabeth Frith, bound to the islands He was a great sufferer during the last four days of his life, being deranged, and for the last sixty hours, unable to speak. It is supposed that his death was in part occasioned by the anxiety consequent upon the loss of his ship, which took place on the 2nd of August, previously.—[Com.

Died at U. S. Naval hospital, Honolulu, September 29, John Pierce, seaman, belonging to U. S. S Preble. He was a native of Sheffield, Mass. where he resided with Deacon L. Peets.

Drowned, 11 August, in the Ochotsk Sea, Mr. Paul Ashley, 2nd officer of the William Hamilton. He was unfortunately taken out of the boat by the line getting foul.

At sea on board the Rosalie, September 2, 1849, John Martin; September 8, John Brown; September 11, Bill Mitchell; September 29, William Maui, natives of these islands

Lost overboard from Ship Adeline, of New Bedford, on the 18th January, 1849, Hiram Fisher, seaman, from Edgartown, Marthas Vineyard, aged 17 1-2 years.

MARINE JOURNAL.

PORT OF HONOLULU.

Shipping in Port, Oct. 13, 1849.

Am mer ship Mary & Adeline, McLellan, S. H. Williams & Co. consignees—for Manila.
Am mer bark Mary, Bailey, S H Williams & Co; for Boston
Peruvian brig Pacifico, for sale.
Br bark Maxim, Lindsay, F R Vida, for Valparaiso.
Am ship Tsar, Bursley, S H W & Co; for Hong Kong.

Information Wanted.

TAUNTON, Oct. 21, 1848.

Dear Sir—I write at the suggestion of Mr. Josephus Skinner, of Norton, respecting his son, who sailed from Bristol, R. I, on a whaling voyage, in the capacity of carpenter, on board the ship Chariot, of Bristol, sometime in 1844. From the best accounts that we can get he left that ship in April, 1845, and when last heard from was at some of the Sandwich Islands. We want to learn something of his whereabouts, if he is living, and if not, where and at what time he died. He was subject to fits.

Will you write what information you may have or can get concerning him (his name is Josephus A. Skinner)—whether you ever knew or heard of such a person, or not—and if he is there, to use your influence to have him return. By doing so, you will serve the cause of humanity and relieve an anxious family.—Direct to Josephus Skinner, Norton, Mass.

Respectfully, your friend,
C. A HOCK.

Rev. S C. DAMON, Sandwich Islands.

☞The Editor cannot, at present, furnish the desired information. Any information respecting the person referred to, will be duly communicated if made to the Seamen's Chaplain, Honolulu. tf

Letters

Have recently been received by the Chaplain for W. S Collins, schr. Indiana, Capt. Crosby; Mr. David Hillson, formerly painter in Honolulu, but who left on board a vessel bound to Callao; Capt. R. Allen, ship Condor; Mr. Israel Horseley, Condor; Mr James Peter Ludlow, Margaret; Mr. Sturt, formerly cooper in Honolulu, but now supposed to be in California; Mr. Samuel Rawson, watch-maker, now at the mines; Mr. Jacob P. M. Mead, ship Dromo; and Mr. Jeremiah Varney, Honolulu.

Information Wanted.

When the "Huntsville," of Cold Spring, left the U. S., in the fall of 1847, her shipping articles contained the name of "John Stuart." It is supposed this name was assumed for that of "THOMAS SHEPHERD." Said John Stuart left the Huntsville at Hobart Town, New South Wales. Should this notice fall under his eye, he is earnestly requested to communicate with Mr. John Shepherd, of Patterson, N. J. Should John Stuart, *alias* Thomas Shepherd, visit Honolulu, let him not fail to call at the Chaplain's study. tf

Hymn Books.

At Chaplain's study, large and small edition of Seamen's Hymn Books. tf

Just Received and for Sale

AT THE CHAPLAIN'S STUDY, a new and beautiful assortment of BIBLES in the English Language. They are bound in various styles, and can be had at prices varying from 37 1-2 cents, to $7,00 per copy.

☞ Seamen, and others, are informed that at the same place may be found Bibles printed in the following languages: German, Swedish, Danish, Dutch, French, Spanish and Portuguese.

N. B—Portuguese seamen are especially notified, that they can obtain copies of the Holy Scriptures in the old and new Testaments.

⁂ It is left voluntary with seamen whether they receive a copy of the Bible as a gift, or pay the whole or a part of its value. Money received from the sale of Bibles is appropriated to the purchase of new supplies. tf

The Friend, sent Abroad.

Any person, by paying the annual subscription price of the Friend, ($1.50) in advance, can have the paper sent, by the earliest opportunity, to any port in the Pacific, or to any part of the U. States or England.

N. B.—By paying the additional sum of 50 cents, the paper will be sent for one year to the U. States, via California and Panama Postage on papers to private persons must be pre-paid. The Friend, being a monthly sheet, and containing a full report of Marine Intelligence, will be found a useful and cheap method of communication with the mercantile community in Europe and the United States. tf

Information Wanted,

Respecting EUGENE LEWIS, a native of the state of New Jersey, U S. A. If alive he is now 46 years of age. A report has reached his father, residing in Morristown, N. J., that Eugene may be still alive and residing in some part of the Pacific. Any information will be thankfully received, *if* made to the Editor of the Friend, and communicated to an anxious parent.

School Books.

Teachers and others can be supplied with a few school books at the Chaplain's study. The assortment comprises Primary Geographies, Arithmetics, Grammars, Reading Books, Webster's Dictionaries, &c.

The Friend, Bound.

Bound volumes of the Friend, for one, or more years, can be obtained at Rev. T. Coan's, Hilo; Rev. T E. Taylor's, Lahaina; and the Chaplain's study, Honolulu. tf

Notice to Masters of Whaleships.

☞Your ships will be reported correctly in the Friend and Polynesian, if, on your arrival, a report is left at the Polynesian Office. Unless you are willing to take this trouble, the Editors of these papers are subjected to great inconvenience, and are oftentimes unable to make any report. tf

Spelling Books.

Noah Webster's, and the Union Spelling Books for sale at Chaplain's Study. tf

Religious Books.

☞ The Seamen's Chaplain has just received an excellent assortment of Books published by the American Tract Society, including nearly all of their standard publications. These books are beautifully bound, and will be sold at an advance on the New York prices only sufficient to cover the expenses.

☞In the collection will be found some new and instructive books for children. tf

History of the Hawaiian Islands:

Embracing their Antiquities, Mythology, Legends, Discovery by Europeans in the 16th century, re-discovery by Cook, with their civil, Religious and Political History from the earliest traditionary period to the present time. By JAMES JACKSON JARVES.—Third edition. For sale at Chaplain's Study. Price, $1,00. tf

A Trip from the Sandwich Islands to Lower Oregon and Upper California.

Leaves selected from "Our Log Book."

XII—TERRITORIAL GOVERNMENT OF OREGON.

During the joint occupancy of Oregon by England and the United States, emigrants from the Western States and other parts of the world settled in the country, but they did not find there a regularly organized government, and courts of justice. Even after the question of the boundary was settled with England, it was a long time before the Congress of the United States took definite action in regard to a Territorial Government. In the meantime the people organized a Provincial Government,—chose their governor, and other public officers,—organized their courts and appointed their judges; and at the period of the Wailatpu massacre, the Provisional Governor called out a military force of several hundred soldiers. It reflects credit upon the Oregonians, as a law-respecting and order-loving people, that they could enact civil, judicial and military laws, which would be in force for the time being, but should cease when the time came for Congress to extend the Territorial Laws of the United States over the country.

The policy of the government of the U. S. seems peculiarly and admirably fitted for those portions of the country where the limited number of the inhabitants, renders the expenses of a state government too burdensome. Hence, whilst the government at Washington claims the right of appointing certain Territorial officers, their salaries are paid from the U. S. government treasury.

The territorial government of Oregon consists of the following U. S. officers.

Governor, Joseph Lane, salary,		$3,000
Secretary, R. Pritchett,	"	1,800
Three Judges of the Supreme Court, W. P. Bryant, (ex-off. Sup. Judge,) O. C. Pratt, and ———,	"	each 2,000
Attorney General,	"	unknown.
Marshal, Joseph Meek,	"	"

In addition to the abovementioned officers, the people enjoy the right of electing *nine* citizens, to represent them in an Executive Council; and fifteen, for a Legislative Assembly.

It is also the privilege of the people living under a territorial government to elect a delegate, who shall represent them in the Congress of the United States. He enjoys the privileges of a member of the House of Representatives, with the exception of voting.

The first Election took place, on the first Monday in June. I was present at the election which took place on the Tualatin plains. At 12 o'clock, M., the county clerk called the meeting to order, and announced that it would be proper to appoint persons who should officiate as judges of the election, to prevent frauds. Three were chosen and duly sworn. The necessary preparations having been made for ballotting, one of the judges announced that "the polls are now open,—please walk up and vote." I was gratified to witness the perfect understanding of the voters, in regard to the nature of the business in which they were engaged. Although assembled in a log house, in the woods of Oregon, yet they appeared, acted and spoke, like free born American citizens, conscious of their rights and privileges.

I learned that, S. R. Thurston, Esq., was elected delegate to Congress.

☞ The following facts in regard to the Council, and Assembly, I take from the latest "Pacific News," published in California, on the 29th of Sept., under the head of "information from Oregon."

"The Council is composed of H. Buck, from Clackamas county, W. Blair, of Tualatin, S. Parker and W. Shannon, of Champoeg, J. Graves, of Yam Hill, W. G. Malay, of Linn, Nathaniel Ford, of Polk, N. Humphrey, of Benton, and S. I. McKean, of Clatsop, Lewis and Vancouver counties.

A. L. Lovejoy, W. D. Holman and G. Walling were elected to the House from Clackamas; D. Hill, and W. W. Eng, from Tualatin; W. W. Chapman, W. S. Metlock, and John Grim, from Champoeg; A. J. Hembre, R. Kinney, and J. B. Walling, from Yam Hill; Conser, and J. S. Dunlap, from Linn; H. N. V. Holmes, and S. Bench, from Polk; J. Mulkay, and G. B. Smith, from Benton; H. Simmons, from Clatsop, Lewis and Vancouver.

The Legislature is now in session at Oregon city. The officers of the Council, are S. Parker, Chief, and A. A. Robinson, assistant clerk; C. Davis, sergeant at arms; S. Kinney, doorkeeper, and Rev. D. Leslie, Chaplain. Those of the House are A. L. Lovejoy, speaker, William Porter, chief, and E. Gendis, assistant clerk; William Holmes, sergeant at arms; D. D. Baily, doorkeeper; and Rev. H. Johnson, chaplain."

XIII—THE JARGON.

Every visitor to Oregon will very soon after his arrival, learn that there is in use a new language, which has been created by the necessities of the situation in which emigrants, Hudson Bay Company officers, and others found themselves, in relation to the aborigines of the country. Indians have learned a few English and French words, foreigners have learned a few Indian words, so that ere long a mode of communication was introduced, which answered all the common purposes of trading and intercourse between the Indians and the white population. I was particularly struck with the frequent use which was made of this *jargon*, (as this language is called,) in the intercourse of the white inhabitants among themselves. There was one word which was in constant use, but its derivation I could not learn. This word was *cultus*. If a man was inefficient, he was *cultus*, and if any instrument was useless, it was *cultus*. The frequency with which the word was introduced into conversation led me to imagine, that almost every thing, and every body, animate and inanimate in Oregon, must be *cultus*. Webster's spelling book, has already been re-published in Oregon, and when the time arrives for an edition of his dictionary to make its appearance there, it may be expected that *cultus* and numerous other words of the Jargon, will take their station by the side of words and terms derived from the French, Latin, Greek, and Anglo Saxon.

At the close of Palmer's Journal I find a brief vocabulary of the words used in the "Chinook Jargon." "This is a tongue" says Palmer, spoken by a few in each tribe residing in the middle and lower divisions of Oregon. It is also used by the French, and nearly all old settlers in the country."

I copy the following words—

English.	*Jargon.*
Chain,	Chinkamin.
Handkerchief,	Hankachim.
Crow,	Kawkaw.
Molasses,	Lo-ma-las.
Mountain,	Lemonte.
Name,	Neim.
Old,	Oldman.
Paper,	Papa.
Mad, angry,	Sal-luks.
Warm,	Wam.
Wood,	Stick.
Cat,	Puss.
Americans,	Bostons.
Englishmen,	King Geo. men, &c.

XIV—JOURNEY OVER THE ROCKY MOUNTAINS.

In the XIth chap. of "Our Log Book" reference was made to the "overland settlement of Oregon." "Journals," "Diaries," "Travels" and "Histories" may be publish-

ed, but a full report never can be made of the difficulties and hardships of an overland journey, to the shores of the Pacific. A few spirited and adventurous young men may set off, and accomplish the undertaking in a few weeks, and report it a pleasant summer excursion over the prairies and mountains; but it is a very different affair, when husbands and wives, young men and maidens, old men and children, bid farewell to the last log cabin on the frontier of Missouri, and commence their long, and toilsome journey to Oregon. If a person would fully know the trials incident to the journey, he must make it, but next to that means of information, let him go among the emigrants, sit with them at their hospitable tables and listen to their soul-thrilling narrations. Let him hear the story of that widow whose husband lies buried on the lonely prairie; of the bereaved mother whose child sleeps under a tuft of the wild sage; of that orphan, whose parents died in that deep gorge of the mountains; and of that family which left a home of affluence, wealth and intelligence, but now is struggling with poverty, sickness and privation. I hope that I may never cease to admire the enterprise, hardihood and patience of the first settlers of Oregon, who found their way thither across the Rocky mountains.

The narrative of the journey of an emigrating party, which crossed the Rocky mountains in 1845, has been placed at my disposal but its great length utterly precludes its insertion among the leaves of "Our log Book." It would almost form a book of itself.

XV—RETURN TO THE "MASSACHUSETTS."

A letter from Capt. Wood, notified me that, the "Massachussetts" would soon leave for California, and if I wished to take passage, I must speedily report myself on board.—During the evening previous to leaving Oregon city, I made several calls, in the way of preparation for my deparature. I shall not soon forget a contrast that evening presented to my mind. At one place I found a company of persons drinking, gambling, and using the most profane language, but at the next house where I called, I found a group of christians knelt in prayer, one of whom I heard earnestly addressing the throne of Grace. Thus it is in our world! What strange contrasts does it present! One calls upon God in prayer, another will curse the Being who gave and sustains his life; here is virtue, there vice, here is holiness, there sin. Surely none but God knows the heart, or will be able to judge every man according to his true deserts.

This morning, June 8th, rainy and disagreeable weather, quitted the landing, after numerous delays, at just 12 o'clock, M., having embarked in a Hudson Bay Company's boat, Lieut. Hawkins, kindly furnishing me a passage to Fort Vancouver. On our passage down the Willamette, we passed the brig "Henry," about three miles below the Falls, that being the highest point that a vessel of say one hundred tons, can ascend. Indeed, Portland is considered the head of navigation. Between the Falls and Portland, on the east bank of the river, I was informed that there was a settler, who had under cultivation about 40,000 fruit trees, of various kinds, including the apple, the pear, the peach, the plum, etc. In the garden of ex-governor Abernethy, at Oregon city, I saw thrifty peach trees, and from what I could learn respecting fruits, Oregon is well adapted to the fruit growing trees, which flourish in the eastern and middle states.

We stopped at Portland to dine, and then proceeded on our way to Fort Vancouver. I was somewhat expecting to have found the "Massachustts" at Portland, as I was aware that she had been thus far up the Willamette, to take on board a cargo of lumber, for California. Dr. Newell was a fellow passenger with me down the Willamette. He is an American, a native of Ohio, having been twenty years an Indian trader in the mountains and resident in Oregon. He was in company with Dr. Whitman, when he entered the territory in 1835, and was intimately acquainted with all the Indian troubles connected with the massacre at Wailatpu. He was one of the commissioners who accompanied the army that marched into the Cayuse country, to inflict punishment upon the guilty perpetrators of that outrage. "It was a sad sight" he remarked, "to behold the ruins of the mission station, lately so flourishing." As the soldiers came up to the ruins, and beheld the havoc which had been made, and reflected that on that spot, Dr. Whitman, his wife, and several others had been cruelly murdered, they were filled with indignation and were ready to inflict a soldier's revenge.

We reached the Massachusetts, lying at Port Vancouver, about 11 or 12 o'clock, at night. The Rev. Mr. Roberts had also been a fellow passenger from Portland, as he, too, was going to embark for California on business connected with the Methodist church.

It was exceedingly pleasant to step on board the Massachussets, and to meet her generous and gentlemanly commander, Capt. Wood. I sincerely regretted his duties had confined him so closely to the vessel, that he could not have made an excursion among the settlements of the Willamette valley.

On my return to the "Massachusetts," I found quite a new state of things. Both officers and soldiers, with all their tents and warlike equipage were removed on shore. Their tents were erected, in rear of the Fort. Although it was now the middle of June the weather was quite cool, and I deeply sympathized with officers and men, encamped upon the "tented plain." The soldier, as well as sailor, has surely many hardships to encounter, and it truly is no trifling hardship during times of peace, to be sent to a remote part of the country, and there stationed for years; while the busy world is hurrying on, amidst bustle and noise, the officer of the army, and the private soldier are spending a quiet and monotonous life, receiving their daily rations, and contriving all kinds of sports to "kill the time." I was glad to know that the officers and soldiers had taken the precaution to supply themselves with a good quantity of entertaining books. I rarely met a man more fond of reading than Major Hathaway. I fancy he might say with one of Shakspeare's players.

"My library, a dukedom large enough,"

I doubt not that officers and privates will find ample time for reading.

XVI—DEPARTURE FROM FORT VANCOUVER.

There is one feature of the Hudson's Bay Company's trading establishment that must favorably impress the mind of a religious man. There is a marked respect for religious institutions. It is the invariable practice to maintain public services at the Fort on the Sabbath. If a Protestant clergyman of any denomination is present, he is invited to preach after the reading of the Episcopal service. Methodist, Presbyterian and Congregational clergymen, have, at different times officiated there. In past years, the officers of the establishment have been remarkably kind to ministers of the gospel.—On their arrival, they have been invited to remain so long as they might choose, free of charge, and were privileged with a seat at the company's table. After public worship this morning, May 10. *Mr.* Ogden reading the Episcopal service, and myself preaching from Ps. 119. 11, I listened to a full account of the Wailatpu massacree, by Mr. Ogden.

On the following morning, *Monday*, the Massachusetts left the Fort. Really a more pleasant, mild and propitious day could not have been asked for, wherein to glide down the Columbia. Its banks were clothed in the richest foliage. I am sure spring never decked the country with a robe of deeper and richer green. As steam and tide rapidly bore us down the stream, and I gazed probably for the last time upon the mountains, hills, and forests of Lower Oregon, I strenuously endeavoured to fix a panoramic view of nature's handiwork upon the tablet of the mind. As I reviewed my brief sojourn among the Oregonians, I found memory stored with the most pleasant reminiscences. Old acquaintances had been revived and new ones formed. I had witnessed the enterprising and intelligent citizens of the country busy in their various employments, but laying the foundations of civil, religious, political and literary institutions, which were to bless posterity.

This afternoon, May 11, came to anchor opposite Mr. Burnie's farm to take in a supply of vegetables for the California market. Next day got upon the sand bar, off Tongue Point, and the following came to anchor at Astoria. Here we were detained one day on account of fog and unfavorable weather.

During our detention at Astoria, an opportunity was afforded the ladies of the 'city' to visit the Massachussets. There was a remarkable "turn out." I was glad to learn that Dr. Wilson, had here been located, by the superintendent of the Methodist mission, to preach and labor at Astoria. As he was once a seafaring man, I am quite sanguine that seamen will find in him a kind friend; hence I took great pleasure in furnishing him with a partial supply of the "Seamen's Hymn Book."

While at Astoria, I became acquainted by report and my own observation, with some facts that ought to make those merchants who sent rum to Oregon, on board the "Sacramento," ashamed of their guilty traffic.—When the Massachusetts first entered the Columbia river, no spiritous liquors were for sale in the territory. We heard of no difficulty among the Indians or sailors. But now the scene was changed. A rum-selling craft, the Sacramento, had brought up a supply of spirituous liquors. Indians had obtained a

quantity and *one murder* had already been the result, so I was informed at Astoria. At Portland seamen had obtained a supply and were riotous. So the whole country, or all parts of the territory where the liquors went, must be taxed with noise, riots, drunkenness and even murder, to enrich the owners of the cargo of that one vessel. The ancients were accustomed to punish the murderer, by fastening the dead body of the murdered person, to the murderer's back, and compelling him to bear about the loathsome appendage until decay should relieve him of the load.—It surely would be a fit and suitable punishment for drunkard-makers, alias spirit venders, if they were compelled to carry about their drunken victims until sobriety should return. I was much gratified with learning that among the Oregonians generally, there was a correct moral sentiment in regard to both the use and sale of intoxicating liquors.

XVII—BOOKS UPON OREGON.

Several publications have appeared relating to Oregon. The following I have chanced to meet with; "Vancouver's Voyages;" "U. S. Exploring Expedition;" "History of Oregon and California," by Robert Greenhow, New York, 1848; "Scenes in the Rocky mountains;" "The Oregon Territory and British North American Fur Trade," by John Dunn; "Palmer's Journal;" "Various Publications of the Methodist Episcopal mission;" "Oregon Spectator," 3 volumes; Oregon "Free Press," 1 volume; "Oregon American," 7 Nos. Among the early works upon Oregon of deep interest I must not fail to mention "Lewis and Clark's" Journal, and Irving's "Astoria." I have recently seen notices of a new work on Oregon by Judge Thornton, which is much commended by the reviewers, but I have not as yet met with the book.

Having read the several works which have fallen in my way, and seen a portion of the country, I am prepared to assert that historians, travelers, antiquarians and scientific authors, have but just entered this field of research and investigation. It is a field that will amply reward the literary man, and the scientific explorer. I hope soon to hear of the organization of an historical society, among the literary men of Oregon, and also that the lovers of the sciences,—botany, geology, mineralogy, zoology,—have their associations. It is occasion of just pride to Oregon, that the clergymen of the various denominations, are laborious and energetic men. They have it in their power to accomplish an immense amount of good, connected with the literary and scientific institutions of the territory. May *Oregon* become the *New England* of the Pacific.

This morning, 16th of June, 7 o'clock, left Astoria, and the Massachusetts recrossed the bar of the Columbia in safety. To-day is the sixtieth since leaving Honolulu. We were twenty-one to the river, five days ascending, the vessel lay twenty-nine at Fort Vancouver and Portland, and this is the fifth since leaving the former place. Now, we are once more safely at sea, bound to San Francisco. Ho, for California!

Genius.—Genius resembles a proud steed, that whilst he obeys the slightest touch of the kind hand of a master, revolts at the first indication of compulsion or restraint.—[Life of Leo X.

A pupil of N. Bowditch.—In our last number, we published a memoir of N. Bowditch, author of the "Practical Navigator." The following anecdote of one of his pupils may not be uninteresting. We would merely add, that the vessel called "Cleopatra's Barge," referred to in the subjoined extract, was subsequently brought to the Sandwich Islands, and sold to the chiefs. It was a beautiful craft, and fitted up in the most costly style. If we have been correctly informed it cost the chiefs over $50,000 in sandal wood. The vessel was running but a short time, before it was wrecked in the harbor of Hanalei, Kauai.

"A curious anecdote is related by the Baron von Zach in his astronomic correspondence. In the year, 1817, a splendid packet called Cleopatra's Barge, owned by George Crowninshield, of Salem, arrived at Genoa, when the Baron with others went on board. In conversation with the captain he inquired for a number of his friends and correspondents in America, and among the rest mentioned N. Bowditch. The captain informed him that he was a friend and neighbor of his, and that a young man, whom he pointed out as his own son, was a pupil of Bowditch. This young man, he observed, was the one who actually navigated the ship, and he requested the Baron to examine him. The inquiry was then addressed to the youth: "On making the Straits of Gibraltar, what was the error in your reckoning?" "Six miles," was the reply. "You must have got your longitude very accurately; how did you obtain it?" "First by our chronometers, and afterwards by lunar distances." "What, do you know how to take and calculate the longitude by lunar distances?" The young man, rather nettled with the question, retorted: "*I* know how to calculate the longitude! Why, our *cook* can do that." The owner of the ship and the captain then assured their visitor that the cook could calculate the longitude very well, and did it every day.—"There he is," said the young man, pointing to a black man in the stern of the ship, with a white apron before him, and holding a chicken in one hand and a large knife in the other. "Come, forwards, Jack," said the captain, "the gentleman is surprised that you can calculate the longitude by lunar distances. Answer his questions." The Baron then asked the cook what method he used to calculate the longitude by lunar distances.—The answer was, "it's all one to me; I use the methods of Maskelyne, Lyons, Witchell, and Bowditch; but, upon the whole, I prefer Dunthorne's; I am more used to it, and can work with it quicker." The Baron was greatly surprised to hear such language issuing from a black face, with a knife and bloody chicken in his hand. Being directed to lay down his chicken and bring his books to show his calculations, he quickly returned with his books under his arm. He had Bowditch's Practical Navigator, the Requisite Tables, Hutton's Logarithms and the Nautical Almanac. He exhibited his calculations of latitude, longitude and true time, which he had worked out on the passage; and he answered all the Baron's questions with accuracy, in correct nautical language. This sable navigator does not appear to have been the immediate pupil of N. Bowditch; he probably derived his instruction from the captain's son, who, in this respect, seems to have followed the example of his tutor."

Important Astronomical Discovery.—The Magnetic Clock, spoken of recently by some of the papers, has been made the subject of an official communication from Lieut. Maury, the Secretary of the Navy. The lieut. recommends that the National Observatory at Washington be furnished with one. He thus describes the invention, and its value:—

I have the honor of making known to you a most important discovery in astronomy, which has been made by Dr. Locke, of Ohio, and of asking authority from you to avail myself of it for the use and purposes of this Observatory.

The discovery consists of the invention of a "magnetic clock," by means of which, seconds of time may be divided into hundredths with as much accuracy and precision as the machinist, with rule and compass, can subdivide an inch of space. Nor do its powers end here. They are such that the astronomer in New Orleans, St. Louis, Boston, and in every other place which the magnetic telegraph reaches, may make his observation, and at the same moment cause this clock here in Washington, to record the instant with wonderful precision. Thus, the astronomer in Boston observes the transit of a star as it flits through the field of his instrument, and crosses the meridian of that place. Instead of looking at a clock before him, and noting time in the usual way, he touches a key, and the clock here subdivides his seconds to the minutest fraction, and records the time with unerring accuracy.—The astronomer in Washington waits for the star to cross his meridian; and as it does, Dr. Locke's magnetic clock is again touched; it divides the seconds and records the time for him with equal precision. The difference between these two times is the longitude of Boston from the meridian of Washington.

The astronomers in New Orleans and St. Louis, and every other place within the reach of the magnetic wires, may wait for the same star; and as it comes to their meridian, they have to touch a key, and straightway this central magnetic clock tells their longitude. And thus this problem, which has vexed astronomers and navigators, and perplexed the world for ages, is reduced at once, by American ingenuity, to a form and method the most simple and accurate. While the process is so much simplified, the results are greately refined. In one night the longitude may now be determined with far more accuracy by means of the magnetic telegraph and clock, than it can by years of observation according to any other method that has ever been tried. It is, therefore well entitled to be called a most important discovery; and it belongs to that class of achievements by which the most beautiful and enduring monuments are erected to the national honor and greatness.

The following gives a striking picture of the minute accuracy of the instrument in marking difference of longitude:

"The probable error of longitude determined with Dr. Locke's clock, is brought within such narrow limits, that if, while the

astronomer in St. Louis or elsewhere, were operating with the magnetic clock here for his longitude, the observer in Washington were to move from one instrument to another in this building, the fact that he had moved would be made known at once, and whether he had moved to the east or the west would be told by the clock, and appear in the resulting longitude."—[Sailor's Magazine.

THE FRIEND.

HONOLULU, NOVEMBER 1, 1849.

Antarctic Ocean.

The barque Franklin, Cooper, has just arrived from the Arctic Ocean, having taken 3000 barrels of oil from the 8th of June to the 8th September. Before Captain Cooper tried his fortunes within the Arctic circle, he successfully navigated the Franklin "among the tumbling mountains of ice" floating within the Antarctic circle. At Hobart Town, Capt. Cooper met Lieut. Smith, who accompanied the English Navigator, Ross, in his late Exploring Expedition to the South.—From him he learned that an abundance of whales were seen in high southern latitudes, and that the weather was good. This hint was enough; off starts the Franklin, and in January of the current year, Capt. Cooper advanced as high as 66°, in about East L. 165°. He saw many whales, including hump-back, fin-back, sulphur-bottom and sperm, but no right whales, or a species to correspond to the Greenland or Polar whales, as he expected. In that region he found the weather unfavorable for whaling, and after cruising for 20 days, he steered for the north. Sometimes an hundred ice-bergs would be in view at once. The thermometer did not sink lower than 32° F. Capt. Cooper remarks that should any vessels go there, they must not stand in fear of ice! It would appear that the seasons vary much in those high latitudes. Some years, it is good weather much higher up than in others, and of course the icy barrier is broken up, at different places, in different years, which may account for the confusion in the statements of different explorers. (We shall allude to this subject again.)

In recording the simple facts connected with the attempts of our countrymen to take whales within the Arctic and Antarctic circles, we are reminded of Burke's remarks, three fourths of a century ago, in Parliament: "And pray, sir, what in the world is equal to it? Pass by the other facts, and look at the manner in which the New England people carry on the whale fishery.—While we follow them among the tumbling mountains of ice, and behold them penetrating into the deepest frozen recesses of Hudson's Bay and Davis' Straits, *while we are looking for them beneath the Artic Circle we hear that they have pierced into the opposite region of Polar cold.*"

☞Capt. Cooper, commanding the Franklin, on a former voyage commanded the Manhattan, which made one of the most interesting and satisfactory visits which has ever been made to the Empire of Japan. The Manhattan anchored off Jeddo, where no foreign vessels were allowed to proceed. See Friend, Feb. 2, 1846. Capt. Cooper is reported to have been the first that successfully cruised in the Ochotsk sea.

☞The following article has been placed at our disposal, and we give it insertion without expressing any opinion upon the subject under consideration:

MESMERIC WHALING.

Ship Champion, April 16, 1849.

The saying is that it takes "all sorts" to make up a world, and with equal propriety it may be said that it takes "all sorts" to make up a whale ship's company. We have a mesmerizer, and another that has accompanied a mesmerizer through the United States, to be operated upon in public. We had an exhibition on board, and after the subject was taken to the "fourth state," the following questions were asked, and answers returned:

Operator; I want you to go with me about 250 miles to the North. (A few minutes delay.) What do you see?

Subject; I see land, and it seems to be surrounded with water.

Operator; Was there any snow upon the land? or any islands?

Subject; Yes; several, with a deep bay within them.

Operator; Is there any good passage for a ship amongst them?

Subject; Between some of them, and between others shoal water.

Operator; Do you see any whales?

Subject; I see plenty of them amongst the islands, but never off shore. I see one ship off shore—too far off for whales.

I previously wished the operator to commence explanations of the coast in the neighborhood of Mama-Taha, of our charts. He discovered a reef that run partly along shore about fifty-five miles. He saw a small bay, (no harbors,) with a few whales in it. * * 100 miles, a bay, but no whales;—120 miles a large open bay, and 140 miles, a good harbor full of whales, and a ship at anchor—perfectly smooth. * * 175 miles a few inhabitants—from 180 to 190, rocky shore, no whales. At two hundred miles the subject complained that his sight failed, the distance was too far. They then returned to Mama-Taha, and commenced their route along shore; 30 miles from Mama-Taha they found two bays with a few whales—at 40 miles saw a small bay—at 80 saw a ship some distance from the land—no whales;—130 a point made out some distance, and a whitish colored island to the south of it, and 3 ships off shore—no whales;—at 150, a harbor with a few inhabitants, a small craft;—at 220, a cluster of islands—a ship at anchor, just arrived, and had taken no whales. The subject was then asked if we should see whales to-day? He replied, that we should. We did see many. He was asked if we should get one? He replied, no; and we did not, after chasing about 20 different whales.

☞The person placing the above statement in our hands, was the operator. Being rather sceptical in such matters, we suggested that it would be gratifying to have him bring his subject to our office, and give us some exhibition of the wonders of mesmerism. On the afternoon of the 29th ult., both operator and subject made their appearance. A few invited spectators were present. Some of whom were far from being credulous in affairs of this description. Sufficient to remark—in five minutes the subject was going off into a quiet mesmeretic slumber. No shaking, loud speaking, or other attempts would make him even wink! The operator then took the subject to the second stage of mesmeretic sleep, exhibiting various proofs that the subject was entirely at the will of the operator, the most remarkable of which was rendering the arms and hands of the subject perfectly stiff and motionless, as well as insensible. The operator performed numerous experiments upon the various organs of the brain, viz: self-esteem, benevolence, memory, &c. Permission was given to the spectators to test the truth of what they saw and heard, by various experiments. After the subject had remained under the will of the operator near one hour, he expressed a wish to awake. It was done, but in a manner exactly opposite from that taken to put him asleep.

For years we have been hearing and reading about mesmerism—this was the first exhibition which we have ever witnessed.—Should we venture any remarks, they might exhibit a ridiculous ignorance of the art which would not be surprising, inasmuch as during the last few years our residence has been upon the "out-skirts of civilization."—We dare not say mesmerism is a *humbug*—we do not believe we were *humbugged*—and yet there is in the whole subject something nearly allied to a perfect *humbug!*

LATE NEWS.—Just as our paper was going to press, by the politeness of Capt. Makee, we were furnished with a copy of the N. Y. Tribune for Aug. 16; just received per Danish bark ——— from San Francisco.——Italy, July 16. The French army took the city of Rome and proclaimed the restoration of the Pope ——The Russians and Austrians have conquered Hungary.——Throughout Europe political affairs unsettled. In London, public meetings in favor of the Hungarians.

United States Aug. 11, President Taylor issued a proclamation warning the people not to engage in a secret expedition fitting out for Cuba. The California fever rages with unabated fury! Vessels crowded with passengers leaving Boston New Bedford, &c. $1,306,569 total amount of California gold deposited in the United States mints.

Cholera still rages in Europe and United States.

A Panoramic View from Bunker Hill Monument.

The person who has visited Boston and taken a view of the city and surrounding country from either the State House, or Bunker Hill monument, will ever remember the beauties of the prospect, and the pleasing combination of city and country, hill and mountain scenery. A small volume has lately fallen into our hands, entitled a "Panoramic view from Bunker Hill Monument." It is accompanied by an engraving four feet long and seven inches wide. A view of the engraving, with the notes and explanations, almost equals a visit to the Athens of America.—The following extract from the preface of the work, will furnish a vivid idea of the growing business of the city. "The commerce and trade of Boston are growing with an unparallelled rapidity—mainly attributable to her railroads. There are now, May, 1848, 223 trains of cars passing over the railroads in Boston *every day*. In 1845, the roads carried 2,254,630 passengers to and from Boston; last year, 1847, these same roads carried 4,075,698 passengers, nearly doubling their number in three years." The public spirit of the Bostonians, and the citizens of Massachusetts, in regard to education, (not to speak of other public enterprises,) is noted far and wide.

We clip the following from a late American Paper:

Old Massachusetts Forever!—"There are now 165,000 children attending school in Massachusetts, 3,656 of whom are less than four years old. The amount collected for educational purposes, aside from the State appropriation, for the year 1848, was $754,-943, being $100,000 more than paid any previous year. Boston itself expends annually for public schools more than the whole similar domestic appropriation of Great Britain for its seventeen millions. So says an Englishman, Lyell, the geologist. And yet the people of Massachusetts find this expenditure the most economical in their budget. What is expended for education is more than saved in other respects. Massachusetts is what she is chiefly through her schools. With her arid soil and comparatively barren physical resources, what would be the condition of her population were it ignorant and degraded?—But with her liberal educational and religious provisions her people have become the most competent, successful and comfortable community in the Union. It is gratifying to notice that she appreciates the cause of her prosperity, and instead of diminishing is enlarging her expenditures for education. If any one of her sons feels like demurring at the fact, he needs but to travel over sections of the Republic through which we are now passing. He would see arguments written out on the very fields, fences and houses.—The truest economy of States is to expend liberally for the education of the people."

We commend these remarks to the consideration of all the friends of education and humanity, here and elsewhere. The *moral* panoramic view from Bunker Hill monument is no less interesting than the *physical*.

Cruise of B'k Harvest in Arctic Ocean.

Capt. Lakey, commanding the Harvest, has furnished some data relating to his late cruise, which we gladly publish:—

The Harvest proceeded to the Arctic, via. Kamschatka. Saw many Polar whales off Cape Thadeus, bound N. N. E.; also saw whales about 100 miles S. E. from this point;—this was after June 10th. June 16, near Tschukutskoi Noss, St. Lawrence Island in sight—whales plenty—water not roily, but many specks in it. After some days, wind N. W. and ice driving down from Anadir sea. Here the current sets N., so that some ships lay well over to St. Lawrence Island, supposing the passage blocked up—all is clear From the last of June to middle of July, whales abound in vicinity of King's Island, say s. w. and w. of it. The main body of the Polar whales, from last of July until September, were seen between 67° 30 and 69° 30, and from 170° to 173° w. Last of the season water roily. Whales not seen close in with the land, as they are seen in the Ochotsk sea.

From a table furnished by Capt. L. we copy the following summary:

In June, after the 10th, 8 good whaling days—9 days foggy—2 rainy—4 days gales of wind—14 winds moderate—and 1 day calm.

In July, 18 days suitable for whaling, and 13 which were not, 8 of which it blew strong gales—5 days foggy—19 breeze moderate—and 3 days of calm.

In August, 11 days suitable for whaling, and 20 not so—16 days blowing a gale—6 rainy—1 foggy—9 days moderate breeze, and 6 days of calm.

In September, from 1st to 14th, there were 11 days suitable for whaling, and 3 not so, 2 of which it blowed a gale—9 moderate—3 calm—and 2 rainy.

From June 10 to September 14, 96 days inclusive, saw Polar whales on 49 days. We had a number of heavy gales, the heaviest commenced on the morning of 12th Aug. from w. s. w.

In lat. 62°, off Cape Thadeus, in 45 fathoms water the lead brought up a small piece of beautiful coral.—The weather not cold, considering the high latitude.—Thermometer, lowest, 39° F.—highest, 65° F. Daylight from 10 June to middle of August. In hurry of whaling, difficult to keep run of days as they passed.

California.—By a late arrival we have seen the Pacific News to Oct: 9. No special intelligence. The U. S. ship St. Marys, was reported to leave on the 14th for Canton, via Honolulu; Commodore Voorhees proceeding thence to take command of the E. I. squadron. We hear it reported that the propeller Massachusetts may daily be expected at the Islands, bearing Commodore Jones' broad pennant.

In consequence of the Honolulu not arriving in season for the steamer, H. H. M.'s minister, G. P. Judd, Esq., was detained a month in San Francisco.

Both the Alta California and Pacific News are decided in their disapproval of the late French invasion at Honolulu.

Emigrants continue to arrive. Much sickness prevails at San Francisco, and also throughout the mining districts. By the next arrival late intelligence may be expected from Europe and the United States.

☞It is much to be regretted that no permanent or even temporary mail arrangement has been formed between the Islands and San Francisco. When letters arrive there in the U. S. Mail, for the Islands, there is no authorized person to obtain them from the office and forward them. When in California, we met Maj. Allen, General Post Office Agent for California and Oregon. Until the Hawaiian and U. S. Governments formed some arrangement, he informed us all that was necessary would be to have some agent in San Francisco who would take the letters, &c., from the Post Office and forward them; and should there be any *dead letters*, they might be returned, and the postage would be refunded.

Hitherto the community in Honolulu have been much indebted to the courtesy of the house of S. H Williams & Co. for their kindness in the transmission of letters. A temporary arrangement, we think, might be satisfactorily made, if a communicatien, signed by the leading mercantile firms and private citizens of Honolulu, should be addressed to Messrs. Baker and Post, of the firm of Williams & Co., San Francisco.—We are satisfied all that is now wanting, is for some person to volunteer and make a little effort.—Who will do it, *pro bono publico?*

☞By the very latest intelligence we regret to learn that the U. S, Government find it out of their power to equip vessels to search for Sir John Franklin. When the letter, addressed by Lady Franklin to the President of the United States, was received, it was announced that two vessels would be despatched, one to proceed through Hudson's Bay, and the other through Bhering's Straits.

Donations.

	For Chapel.	*For Friend*
Captain, Officers and Crew, Wm. Hamilton	$16.75	$7;25
A Friend, Wm. Rotch,	8.00	
Sylvester Nellis, E. Frith,	4.00	
Capt. Wheldon, J. Maury,	4.00	4.00
" Taber, Copia,	4.00	4.00
" Shockley, Metacom,	5.00	5.00
" Green, Catharine,	4.00	4.00
" Barker, A. Barker,	10.00	
Officers and Crew, A. Barker,	3.00	17.00
Officers and Crew, Erie,	10.50	
Master and Officers, Margaret,	12.00	8 00
Master, Officers, and Crew, Jeannette,	18.00	14 50
Owners of ship Junior,	5.00	5.00

Mr. Fisher, J. Maury,	2.00	
Mr. Covell, Copia,		1.00
— Ryan, Margaret,		1.00
N. B. Anthony, Montpelier,		1.00
L. Wright, Alpha,		50
A Friend, "		1 50
H. Spindler,		1.50
Com. Glynn, U. S. S. Preble,		5.00
Rev. Mr, Taylor, Lahaina, for Capt. — 3; two friends, 3,		6.00
J. R. Jasper, Esq., besides an. sub.		3.50
	$110.25	$89.75

For the Chaplaincy, by British Consulate, two quarterly payments of $20.00 each.

☞The Chapel debt now reduced to $441.12. We are especially desirous of paying off this debt, before the close of the year, inasmuch as we are now obliged to pay interest on what remains. The first donation is always thankfully received, but of late some of our sea-faring friends have placed in our hands the second donation for the same object.

☞The donations for the Friend have, of late, been unusually abundant. Should those who have recently arrived, with full ships, follow the example of their predecessors in port, the Friend will not come out at the year's end in debt. Some vessels just arrived overflowing with oil, (as we have been informed by their masters,) went to the Arctic Ocean in consequence of intelligence derived through our columns. We again allude to this subject because we think our readers among the whaling community, receive more than 100 per cent for all the money which they invest in the support of this paper.

***At present our monthly expenditures for the publication of the paper, exceed $120.00.

Seamen's Friend.

Good Advice to Seamen and Others.

OAHU, October, 1849.

Dear Sir—With your permission, I wish, through the Friend, to say a few words to my fellow voyagers on the sea of life, relative to the *chart* that is given to guide us to to the haven of eternal rest. When reading the book, "Two Years Before the Mast," I was gratified with the account the author gave of his method of shortening the time of his solitary watch on deck, viz: by revolving, or reciting mentally, various things previously committed to memory, among which he mentioned portions of the Bible.

Having been accustomed more than 30 years, to spend much of the time occupied in solitary walks and rides, and also wakeful hours of the night, in reciting mentally parts of the Sacred Scriptures, I can recommend the practice, with the utmost confidence of its utility; not merely in enabling those who pursue it, to pass the time pleasantly, but more especially, for its salutary effect on the mind and heart. And as the sons of the ocean have ordinarily more leisure hours than most others, I am anxious to persuade them to try the experiment. In order to this, it will be necessary for those who have not previously attended to it to begin by treasuring up in their mental storehouse, the portions of Scripture to be recited and pondered. I say pondered, for I would not have any one recite merely, but give the mind full liberty to dwell on any sentence that, at the time, might present a new or striking thought. I feel persuaded that by so doing new and soul cheering views of divine truth would be obtained—such as tend to encourage in the hour of danger and raise the heart above all fear, except the fear of "Him who has power to destroy both soul and body" forever.

Although all Scripture is of divine origin and therefore profitable for instruction, yet as some parts are more plain and striking than others, I beg leave to recommend a few passages which I deem peculiarly so. To the young, and to those who have good memories, I would recommend as follows:

In Genesis, the first three, with the 44 and 45 chapters.

Exodus, 20th chapter.

Job, the 4, 5, 11, 38, 39 and 42.

Psalms, the first 5, with the 11, 15, 19, 23, 24, 25, 27, 32, 34, 46, 51, 53, 56, 57, 91, 103, 104, 116, 121, 125, 139, 145, 146.

In Proverbs, the 1, 2, 6, 7 and 9 chapters.

Isaiah, 40, 53 and 60.

In the New Testament—Christ's sermon, in the 6, 6, and 7 of Matthew. John the 1st, 3, 14, 15, 16 and 17 chapters. Romans, 3, 5, 8, 12. Hebrews 11 and 11. Revelations, 1, 21 and 22.

To those who have not a *well grounded* hope that they are Christians, I would say begin with the passages named in the New Testament, for there the *way to be saved* is most clearly pointed out.

To the aged, and those whose memories are poor, I would recommend as follows: in Genesis, 1st chapter with the first 3 verses of the 2nd; and in the 3d chap. the first 7, with the last 3 verses. Psalms, 1, 103, 116 and 139; and the chapters above specified in the New Testament.

Now, let no one be discouraged by the number of chapters and psalms pointed out, since all who begin can stop when they choose. And no one should be discouraged because his memory is treacherous—this will improve by practice. If you have no experience in committing, your memory may at first act like a greenhand on ship-board, but by practice you will find it will soon "know the ropes." Still, to secure what you learn, it should be accurately and thoroughly committed, and often repeated—the oftener the better. Having found this a delightful employment, both at sea and ashore, I am very desirous that you should all share with me in the privilege. "O taste, and see that the Lord is good. The words of the Lord are pure words; more to be desired are they than gold; yea, than much fine gold; sweeter also than honey and the honey.comb."

Yours, very sincerely,

SENEX.

Hilo Chaplaincy.

HILO, Sept. 13, 1849.

My Dear Editor—Having learned that you have returned from "the Coast," to resume the publication of your paper, we hasten to say that our little Seamen's Chapel at Hilo is completed, in a simple and cheap style.

For more than a year it has been open for English services whenever a congregation could be assembled; but, for want of workmen and funds, it is but recently that we could pronounce it finished. The visit of the U. S. S. Ohio, in May and June, gave us the generous "lift" of $119, so that we have not only been enabled to complete the work, but we are also in funds for future repairs or improvements.

The Chapel is a low stone building, 50 feet by 16 inside. It is roofed with thatch, and plastered outside and inside. All the wood-work is painted. A tower or belfrey has been erected which contains a small bell, belonging to the native church. The Chapel proper is 30 feet long, 20 feet of the building being separated by a sliding partition for a reading room. This room is furnished with seats, writing desk and bookcase, and will contain a small library and such papers and other periodicals as can be furnished by your subscriber, or as may be contributed by the generosity of any who may favor the enterprise.

The Chapel will be free to all who wish to enjoy its privileges; and divine services may be expected in it on all Lord's days when ships are in port, or whenever a congregation can be assembled of sufficient number to warrant public services.

The reading room will be always accessible to seamen, and will, it is hoped, form an attractive and profitable retreat when inclement weather forbids the sailor to ramble over the country for exercise and recreation. This room contains an excellent set of plates of the human stomach, (Dr. Sewell's) presented to Rev. L. Lyons by a gentleman in the state of New York, and by Mr. L. presented to the subscriber.

The whole building was once occupied as a mission house; but as a new Chapel was much needed here, it has been freely devoted to the use of seamen, by whose generosity, chiefly, it has been entirely remodeled and fitted up in its present style.

The following is a condensed report of the receipts and disbursements in favor of the fore-mentioned Bethel:

EXPENDED.

Timber, boards, zinc, and labor on belfrey,	$46.75
Timber, joists & scantling for floor and ceilling,	31 25
Twice thatching roof,	30 50
2692 feet koa boards,	131.60
181 " pine "	14.48
Stone, and mason's job on walls,	29.88
1400 pine laths, 10 50; lathing, 6 00,	16.50
19 bbls. lime, 38; 30 do. sand, 3.75,	41.75
Plastering and whitewashing,	14.00
Carpenter's bill on main job,	147.87
121 lbs. nails, 12.10; box of glass, 5,	17.10
1 window frame, 3; 4 sashes, 4,	7.00
Glazier's bill, 2; 1 doz. window springs,	3.50
Butts, screws, locks and latches,	6.00
Paints and oil, 15; painter's bill, 5,	20.00
Pulpit trimmings, 3; chair, 1.50,	4.50
Axe, buckets, casks and brushes, (for mason,)	5.00
Broom, .25; clearing chapel, .82,	1.07
Amount expended,	$571.75
Total am't of subscription,	665.42
Balance now on hand,	$93.67

This balance will be faithfully appropriated, when needed, in repairs on the Chapel.

Most truly yours,

T. COAN.

THE AMERICANS AND THEIR NEWSPAPERS.—There is no native American in the Northern States, and few in the Southern, who cannot write and read. The result is shown in the smaller amount of crime. The astonishing activity of the press in America, baffles all conjecture of its progress when the continent becomes better peopled. In England, in the provinces, the number of newspapers decreases; six or seven have fallen during the last year. In the old country we have, or had recently, 470 newspapers to 28,000,000 of population, 12 of which appeared daily. In America, having 20,000,000 of population, there were in 1840, no less than 138 daily, 125 twice or thrice a week, and 1,741 weekly newspapers, besides 227 periodical works. The circulation of a newspaper is free by post within 30 miles around the place of publication. Beyond that distance, one and a half cents are charged on each as postage. Let it not be said that their papers are small; they are as large as ours in the larger towns, and some of them vie with the Times in the number of advertisements.—Mr. Mackay shows, too, that an English is cheaper than an American paper, excepting the duty, of which there is none in the United States. The best papers cost 3 1-2 d. English Every house, even the most remote places, takes a paper; some take two. —[London Weekly News.

TYPES.—Typographical errors are sometimes exceedingly amusing. For instance, we once read in a London paper an account of a party, at which one of the most distinguished personages was the illustrious Duke of *Pork!* A Boston paper gave an account of the proceedings of the Court of Common *Fleas!* and a Western paper contains a description of an Atrocious *Bobbery!*

Temperance Friend.

Mr. Editor—"In time of peace prepare for war," is a maxim which has some force, though it may not sound well in the ears of a "peace man." Still, it has a wide application, and disconnected from the noise of big guns, and bristling bayonets you may not seriously object to allowing it a standing at the head of an article in the Friend. The fact is, my dear sir, I am as staunch a friend of peace as you are. Could I have my way not another gun should the Hawaiian Government purchase, nor a spoonfull of powder, to replace the guns and powder destroyed, wantonly and shamefully I allow, by the *gallant* Frenchmen! No, no—let the French bring all back, unspike the big guns, repair the carriages, and make good other things which, Vandal-like, they demolished, or let the old fort stand just as they left it, a monument of the truth and beauty of the doctrine in view of which they acted, viz: "*Might makes Right.*"

But in repeating the maxim at the head of this article, I do it with my eye on the warfare which we must all wage with the Demon of Intemperance. And here I cannot but remark on the fact that in this warfare, the friends of temperance seem to have lost ground. I mean the friends of this cause at the Sandwich Islands, and particularly at Honolulu, the very centre of operations.—Why, Sir, some two years ago it seemed to us who live a little out of the range of your operations, though not quite out of hearing of your guns, that you were doing terrible execution among the enemy. I could not but be reminded of a celebrated warrior of old, who cried out, as the enemy fell around him, "heaps upon heaps." Indeed, for a while I verily thought all were led captive by you; that scarcely a vestige of an enemy to do honor to the god of Bacchus, remained.—What notes of triumph reached us. The press well nigh groaned with the amount of matter sent forth in the shape of Cascades and Fountains, and orations. I all but felt a pang of regret that my locality prevented me from giving the enemy a single thrust; still, I could not but rejoice in what I fondly hoped was a certain and glorious victory. So I reserved my fire for another enemy.

But at the end of two years it is reported that the army of Temperance has ceased to fight—not because the enemy is conquered, as we all once hoped, but because they have assumed so formidable a front of opposition, that it is said there is no use in attempting anything at present. The "heaps" of slain have arisen and become like an army with banners. Is not this fact amazing? Who would think that men from whom the chains of a debasing servitude had been broken, and who had tasted the sweets of liberty, would so soon bind on those fetters and submit again to the most debasing servitude that ever cursed a guilty world? And yet this is a fact; a melancholy, mortifying, heart-rending fact; a fact, Mr. Editor, that cannot be controverted by any man who walks the streets of your goodly village. Have not the friends of temperance lost ground during the last year or two? If so, how can they regain it? Do you say the cause has suffered from the loss of some working men, some good soldiers who have left for California?—Some may have gone, but I ask, have not two enemies gone to one friend? So I think—and of these, some have "gone to the bourne whence no traveler will return."—Alas, the men that fill a drunkard's grave! "What shall a man give in exchange for his soul?"

To return to our starting point. The state of things at Honolulu might be much worse than it is now in regard to the abominable, shameful practice of drinking the drunkard's drink. Do you not fear a change for the worse? Will not the ranks of the drunkards be filled up soon by recruits from California? And is not this the time, friends of temperance, to bestir yourselves, put on your armor and take the field? So I think, and I write to urge you to duty. "The foe! the foe! They come! they come!" To arms, friends! The God of battle, the Lord of hosts, arm you with energy, and speed you on to victory!

Yours truly,

AMICUS.

The Traffic.—The history of the temperance reform for the past will be its history for the future. It is a waste of moral energy and an idle attempt to reform the social habits of any people, while liquor-vending, the cause of this dissipation, is left to reverse their efforts, and make two converts to the bottle, while they make one to total abstinence.—[N. Y. Express.

We join issue with a contemporary that the above conclusion is fast taking possession of the public press and the public mind, and is a pleasing indication of the progressive aspect of the temperance enterprise. It is a truth which requires no demonstration that so long as intoxicating drinks are permitted to be sold, so long will converts, or rather victims to intemperance be multipled. The only way to suppress intemperance is to prohibit the sale of intoxicating drinks; and the only effective means of its suppression is to make the accursed traffic a criminal offence, and render all interested in its continuance personally responsible for its effects. We have already wasted much moral energy in our various movements and efforts to stay the tide of intemperance which is annually carrying forty thousand of our fellow men to the drunkard's grave; and it is high time, now that we have found that all other means fail, to declare the rum trafficer a criminal.—[Am. Paper.

Old Zac's Jug.—The following excellent temperance story is told by the editor of the Grand River Eagle. If the old hero can introduce the use of the kind of jug recommended by him, he will have achieved a victory over his country's direst foe, which will far transcend the trophies of the battle field.

"We were highly amused yesterday. On the bridge that passes the tumbling waters of the Grand Rapids, we met a hale old man, with eleven sons, seven daughters, thirty-seven grand-children and his own wife—the only one he ever had—with numerous horses, carts, wagons, oxen, cows, and furniture of very antiquated appearance, among which were seen cradles for babies, cradles for grain, spinning wheels, pots, kettles, and almost everything requisite for a settlement, such as fifty-seven blood relations will make in the Grand River country. After stopping the train and making many inquiries, we asked the old gentleman what use there could be of a bottomless jug, which was carefully laid in a safe place, among his domestic equipment, and received the following reply:

'Why, sir, I am a man of many years, and lots of children, and have worked other people's land all my days—paid from 4 to 9 bushels of grain an acre rent, for so doing, have all that time used a jug with a bottom in it, and I got sick of feedin' other people with my hands, either landlord or rumseller; so I sent 7 of my boys to Mexico to fight for some land—and they got back safe, after fightin' with Gen. Taylor, time enough to vote for him—and they got seven quarter-sections of land, that, please God, will be our own without rent. And now, that old jug you see there, (pointing at the bottomless thing) shall hold all the whiskey or rum that will be used in my whole family while I control 'em; because old Gineral Taylor told my son John that a jug without a bottom was the best kind of a jug to put liquor in; and if he was my son John he'd serve all the jugs to hum just as they did the Mexicans—take away their power to kill us. Good day.' "

Pledge Breaking.—The Limerick (Irish) Chronicle, received by the last steamer, says:—"The Catholic clergy of this city continue to call the names of such persons from their respective altars, on Sundays, as have been fined at the police office by the magistrate for public drunkenness during the week previous. This course, so well devised by our good bishop, aided by the magistrates, has had, we are glad to perceive, a very salutary effect; since the number of names denounced on Sunday last was considerably diminished, compared with that of the two previous weeks. We understand, also, that several of these unhappy offenders have, in consequence of this exposure, renewed their pledge, and are now observing correct and temperate habits."

An Iron Stomach.—The following story purporting to be an extract from a work published some time since in London, entitled "The Principles of Medical Psychology," is rather singular, though it appears quite indigestible.

"Urban Fedad was a lunatic confined at Gratz, in Germany. One of his morbid conceptions was, that the stomach must always be strengthened with iron. He was suddenly seized with a violent inflammation of the asophagus, which nearly proved fatal. He recovered, however; but was shortly taken ill again, and died on the third day. On opening the body there were found: 7 oxidated lath nails, each 2½ inches long; 33 nails 2 inches long, some blunted by oxidation, some pointed and large, and 49 smaller nails and rivets; 3 pieces of wound up iron wire; an iron screw 1 inch long; half a knitting needle; two iron tobacco pipe cleaners; a brass hat buckle; part of the blade of a knife two inches long, which was quite blunted on the edges and at the point by oxidation; and lastly a roll of lint abont the size of a hazlenut. The total number of articles amounted to 100, and weighed about 20 ounces. The stomach was very much drawn down but not perforated. Judging from the state of oxidation, it was concluded that many of the above named contents had been retained a couple of years in the stomach."

MARRIED.

In Honolulu, Nov. 1, at the residence of Dr Wood, by the Rev S C Damon, Dr EDWARD HOFFMANN to Miss MARIA LOUISE MORSE

DIED.

Friday, Oct 29, off Honolulu, on board whaleship Tuscany, Capt EDWARDS, master, belonging to Sag Harbor He had been an invalid several weeks. His remains were brought on shore, and his funeral attended in connection with the regular morning exercises at the Seamen s Chapel. There was an unusually large attendance of ship-masters and others. A funeral discourse was preached from Psalms, 90, 12: "So teach us to number our days that we may apply our hearts unto wisdom" After the services a large procession accompanied the remains to a tomb in Nuuanu Valley cemetry.

On board ship Levant, May 1 Franklin Sheffield.

On board bark Prudent, Oct 24, off Honolulu, John Craig, blacksmith, of Elizabethtown, N J.

On board Eng brig Fanny, on passage from San Francisco, Lewis Herring, of 52 Cross street, N Y city

In this town, on the 14th u t., EMILY, daughter of Mr Wm. Gill, aged 2 years and 26 days

At U S Naval Hospital, Honolulu, Sept 21, Edgar Johnson, belonging to Preble

On board Tuscany, Oct 15, Jas Harrington, carpenter, of N Y city.

On board General Scott, August 1847, George Gibbs, of Saratoga, N Y.

On board bark Cossack, Sept 28. Joseph Merry, of Lisbon, aged 32 29 John Thursby alias James Johnson, of St. Johns, N B, aged 28

Drowned in Ochotsk sea. Sept 29. Jose Sylva. of Fayal.

Drowned in Columbia River, Sept 4, Mr Lattie, Pilot.

Taken out of the boat by the line and drowned, Aug 5. in the Ochostk sea, Cyrus J. Robinson, of Fairhaven, a seaman on board the Julian

Fell from al ft and drowned. off Cape Horn, January 1849, Francis Caceras, a Portuguese seaman, on board the Am ship Menkar.

Taken out of the boat and drowned, Albert D Brown, 2nd officer Parachute; also at the same time, Richard Fuller, of Hudson, N Y.

Drowned, May 13, Sloan B Clifton, of Brooklyn, N Y. and seaman on board the Brookline. Also Chas Coffin, a Sand Islander, died of consumption.

Lost off fiving-jib-boom of ship Henry Kneeland, Aug 29, 1848, Wm Draper, of Brooklyn, N Y. Also June 12, 1849, died Southerman Osmon, of N Bedford. June 14, Charles McNorton of New Bedford.

Oct 8—Almira, Codin, Edgartown, 100
Columbia, Sweeney, S H, 85 sp, 1100 wh, 1200 lbs bone.
Frances Henrietta, Clough, N B, 370 sp, 2700 wh, 23000 lbs bone.
John and Elizabeth, Chappel, N L, 45 sp, 2100 whale, 21000 lbs bone.
Sylph, Gardiner, N B, clean. from California, taking in cargo for the United States
Jane, and Chandler Price, whalers, just in, not reported. Twenty-one whalers at anchor, and one coming in.

Information Wanted.

TAUNTON, Oct. 21, 1848.

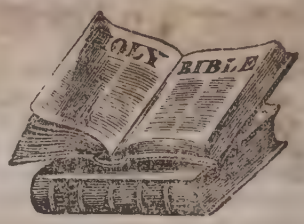
Dear Sir—I write at the suggestion of Mr. Josephus Skinner, of Norton, respecting his son, who sailed from Bristol, R. I, on a whaling voyage, in the capacity of carpenter, on board the ship Chariot, of Bristol, sometime in 1844. From the best accounts that we can get he left that ship in April, 1845, and when last heard from was at some of the Sandwich Islands. We want to learn something of his whereabouts, if he is living, and if not, where and at what time he died. He was subject to fits.

Will you write what information you may have or can get concerning him (his name is Josephus A. Skinner)—whether you ever knew or heard of such a person, or not—and if he is there, to use your influence to have him return. By doing so, you will serve the cause of humanity and relieve an anxious family.—Direct to Josephus Skinner, Norton, Mass.

Respectfully, your friend,
C. A HOCK.

Rev. S C. DAMON, Sandwich Islands.

☞The Editor cannot, at present, furnish the desired information. Any information respecting the person referred to, will be duly communicated if made to the Seamen's Chaplain, Honolulu. tf



Information Wanted,

Respecting EUGENE LEWIS, a native of the state of New Jersey, U S. A. If alive he is now 46 years of age. A report has reached his father, residing in Morristown, N. J., that Eugene may be still alive and residing in some part of the Pacific. Any information will be thankfully received, if made to the Editor of the Friend, and communicated to an anxious parent.

Religious Books.

☞ The Seamen's Chaplain has just received an excellent assortment of Books published by the American Tract Society, including nearly all of their standard publications. These books are beautifully bound, and will be sold at an advance on the New York prices only sufficient to cover the expenses.

☞In the collection will be found some new and instructive books for children. tf

Just Receved and for Sale

AT THE CHAPLAIN'S STUDY, a new and beautiful assortment of BIBLES in the English Language. They are bound in various styles, and can be had at prices varying from 37 1-2 cents, to $7,00 per copy.

☞ Seamen, and others, are informed that at the same place may be found Bibles printed in the following languages: German, Swedish, Danish, Dutch, French, Spanish and Portuguese.

N. B—Portuguese seamen are especially notified, that they can obtain copies of the Holy Scriptures in the old and new Testaments.

⁂It is left voluntary with seamen whether they receive a copy of the Bible as a gift, or pay the whole or a part of its value Money received from the sale of Bibles is appropriated to the purchase of new supplies. tf

Information Wanted.

When the "Huntsville," of Cold Spring, left the U. S., in the fall of 1847, her shipping articles contained the name of "John Stuart." It is supposed this name was assumed for that of "THOMAS SHEPHERD." Said John Stuart left the Huntsville at Hobart Town, New South Wales. Should this notice fall under his eye, he is earnestly requested to communicate with Mr. John Shepherd, of Patterson, N. J. Should John Stuart, *alias* Thomas Shepherd, visit Honolulu, let him not fail to call at the Chaplain's study. tf

The Friend, sent Abroad.

Any person, by paying the annual subscription price of the Friend, ($1.50) in advance, can have the paper sent, by the earliest opportunity, to any port in the Pacific, or to any part of the U. States or England.

N. B.—By paying the additional sum of 50 cents, the paper will be sent for one year to the U. States, via California and Panama Postage on papers to private persons must be pre-paid. The Friend, being a monthly sheet, and containing a full report of Marine Intelligence, will be found a useful and cheap method of communication with the mercantile community in Europe and the United States. tf

Letters

Have recently been received by the Chaplain for W. S Collins, schr. Indiana, Capt. Crosby; Mr. David Hillson, formerly painter in Honolulu, but who left on board a vessel bound to Callao; Capt. R. Allen, ship Condor; Mr. Israel Horseley, Condor; Mr James Peter Ludlow, Margaret; Mr. Sturt, formerly cooper in Honolulu, but now supposed to be in California; Mr. Samuel Rawson, watch-maker, now at the mines; Mr. Jacob P. M. Mead, ship Dromo; and Mr. Jeremiah Varney, Honolulu.

History of the Hawaiian Islands:

Embracing their Antiquities, Mythology, Legends, Discovery by Europeans in the 16th century, re-discovery by Cook, with their civil, Religious and Political History from the earliest traditionary period to the present time. By JAMES JACKSON JARVES.—Third edition. For sale at Chaplain's Study. Price, $1,00. tf

Notice to Masters of Whaleships.

☞Your ships will be reported correctly in the Friend and Polynesian, if, on your arrival, a report is left at the Polynesian Office. Unless you are willing to take this trouble, the Editors of these papers are subjected to great inconvenience, and are oftentimes unable to make any report. tf

The Friend, Bound.

Bound volumes of the Friend, for one or more years, can be obtained at Rev. T. Coan's, Hilo; Rev. T E. Taylor's, Lahaina; and the Chaplain's study, Honolulu. tf

School Books.

Teachers and others can be supplied with a few school books at the Chaplain's study. The assortment comprises Primary Geographies, Arithmetics, Grammars, Reading Books, Webster's Dictionaries, &c.

THE FRIEND.

THE FRIEND.

A Trip from the Sandwich Islands to Lower Oregon and Upper California.

Leaves selected from "Our Log Book."

XVIII—PASSAGE FROM OREGON TO CALIFORNIA.

The prevailing winds along the coast being from the North West, vessels are enabled to make quick passages from the mouth of the Columbia river to the Bay of San Francisco. The distance is about four hundred miles.—I met the master of a vessel in the Columbia river, who had just made the passage down in 78 hours from Baker's Bay to the anchorage at San Francisco, although, on his return passage up the coast he was fifteen days, which is considered a very good passage.—Vessels are oftentimes twice that length of time in sailing from San Francisco to the Columbia river. The Massachusetts crossed the bar of the Columbia on Saturday morning, and on the following Tuesday afternoon, she was off the entrance of the Bay, but prevented from entering on account of the dense fog.

On the Sabbath, we had Divine service on board. Capt. Wood being ever ready to show respect for the day, he most readily made arrangement for the assembling of the ship's company in the large and commodious cabin. It was our expectation to have listened to a discourse from the Rev. Mr. Roberts, a fellow passenger, but just before the time for holding service, he was obliged to inform us, that it would be impossible for him to preach on account of sea-sickness.

We had some most agreeable passengers from Oregon, viz: Judge Bryant, the Rev. Mr. Roberts, and Dr. Welsh, thus each of the learned professions had its representative. Judge Bryant, is at the head of the Judiciary Department in the Territory. He is a native of Kentucky, but has practiced law for about twenty years in Indiana. It is his intention to remove his family to Oregon and make that his permanent residence. The Rev. Mr. Roberts is the Superintendent of the Methodist Episcopal Mission, in Oregon and California, and was on a visit to the latter country for the purpose of completing arrangements for the future supply of Upper California with ministers of the gospel, under the direction and patronage of the Methodist denomination. Their system of itinerary preaching is admirably calculated for a newly settled country. Methodist ministers may well be compared to those light-armed troops, who proceed in advance of the main body of an invading army. Their system has accomplished an untold amount of good throughout the sparsely settled districts upon the western frontier of the United States. Mr. Roberts informed me, that in September a convention of Methodist clergymen would assemble at Salem, in Oregon, for the purpose of organizing an annual conference, embracing Oregon, California, and New Mexico.—This will undoubtedly promote the efficiency and permanancy of the Methodist donomination on this side of the Rocky mountains.—As the country continues to increase in population, Oregon and California will have their separate conferences.

Our other passenger, Dr. Welsh, was an Oregon farmer, who was now on his way to California, for the purpose of exercising his professional skill, in curing the miners, as they come sick and diseased from the mines.

Early this morning, the fog cleared away, and about 9 o'clock a fine opportunity was afforded for the Massachusetts to enter the most magnificent of Bays. Steam, wind and tide hurried our vessel along, and soon after passing the entrance of the bay, we were at anchor amidst a "forest of ships." I counted sixty-eight vessels at anchor. Our vessel was visited by an officer, who informed us that the steamer Panama, would sail in less than two hours for the Isthmus. This afforded us a fine opportunity to forward letters, which in thirty days would reach friends in the Atlantic States. On visiting the Panama, I was most agreeably surprised to meet several gentlemen whom I had known at the S. Islands. Among them, Messrs. Williams, Boardman, and Jarves. They were among the first to improve the new facilties for making a passage from the Sandwich Islands to the United States, without doubling Cape Horn.

XIX—THE BAY OF SAN FRANCISCO.

The following description of the Bay is extracted from a recent memoir by Col. Fremont, communicated to the Congress of the United States, during the summer of 1848.

"The bay of San Francisco is separated from the sea by low mountain ranges. Looking from the peaks of the Sierra Nevada, the coast mountains present an apparently continuous line, with only a single gap, resembling a mountain pass. This is the entrance to the great bay, and is the only water communication from the coast to the interior country. Approaching from the sea, the coast presents a bold outline. On the south, the bordering mountains come down in a narrow ridge of broken hills, terminating in a precipitous point, against which the sea breaks heavily. On the northern side, the mountain presents a bold promontory, rising in a few miles into a height of two or three thousand feet. Between these points is the strait—about one mile broad, in the narrowest part, and five miles long from the sea to the bay.

Passing through this gate, the bay opens to the right and left, extending in each direction about 35 miles, having a total length of more than 70, and a coast of about 275 miles. It is divided by straits, and projecting points, into three separate bays, of which the northern two are called San Pablo and Suisoon bays. Within, the view presented is of a mountainous country, the bay resembling an interior lake of deep water, lying between parallel ranges of mountains. Islands, which have the bold character of the shores—some mere masses of rock, and others, grass covered, rising to the height of three and eight hundred, feet—break its surface, and add to its picturesque appearance. Directly fronting the entrance, mountains—a few miles from the shore—rise about 2,000 feet above the water, crowned by a forest of the lofty cypress, which is visible from the sea, and makes a conspicuous landmark for vessels entering the bay. Behind, the ragged peak of Mount Diabolo, nearly 4,000 feet high, (3,770,) overlooks the surrounding country of the bay and San Joaquin. The immediate shore of the bay derives, from its proximate and opposite relation to the sea, the name of *contra costa* (counter coast, or opposite coast.) It presents a varied character of ragged and broken hills, rolling and undulating land, and rich alluvial shores, backed by fertile and wooded ranges, suitable for towns, villages, and farms, with which it is beginning to be dotted. A low alluvial bottom land, several miles in breadth, with occasional open woods of oak, borders the foot of the mountains around the southern arm of the bay, terminating on a breadth of twenty miles in the fertile valley of St. Joseph—a narrow plain of rich soil—lying between ranges from two to three thousand feet high. The valley is openly wooded with groves of oak, free from underbrush, and after the spring rains covered with grass. Taken in connection with the valley of San Juan, with which it forms a continuous plain, it is fifty-five miles long, and one to twenty miles broad, opening into smaller vallies among the hills. At the head of the bay, it is 20 miles broad, and about the same at the southern end, where the soil is beautifully fertile, covered in summer with four or five varieties of wild clover several feet high.

The strait of Carquinez, about one mile wide and eight or ten fathoms deep, connects the San Pablo and Suisoon bays. Around these bays, smaller valleys open into the

bordering country, and some of the streams have a short launch navigation, which serves to convey produce to the bay. Missions and large farms were established at the head of navigation on these streams, which are favorable sites, for towns or villages. The country around the Suisoon bay presents small low ridges and rounded hills, clothed with wild oats, and more or less openly wooded on their summits.

The Suisoon is connected with an expansion of the river formed by the junction of the Sacramento and San Joaquin, which enter the Francisco bay in the same latitude, nearly, as the mouth of the Tagus at Lisbon. A delta of twenty-five miles in length, divided into islands by deep channels, connects the bay with the valley of the San Joaquin and Sacramento, into the mouths of which the tide flows and which enter the bay together as one river.

Such is the bay, and the proximate country and shores of the bay of San Francisco. It is not a mere indentation of the coast, but a little sea to itself, connected with the ocean by a defensible gate opening out between seventy and eighty miles to the right and left, upon a breadth of ten to fifteen, deep enough for the largest ships, with bold shores suitable for towns and settlements, and fertile adjacent country for cultivation. The head of the bay is about forty miles from the sea, and there commences its connection with the noble valleys of the San Joaquin and Sacramento."

XX—SAN FRANCISCO.

On landing in San Francisco, I must confess, I was somewhat disappointed in the appearance of the town. As a *city* it did not fill up that "beau ideal" which I had pictured in my imagination. I had perhaps expected too much. I was however not disappointed in the business-like appearance of the town. I had witnessed nothing for years, which so much reminded me of the hurry and bustle of the business portions of the cities of Boston and New York. Stores and dwelling houses were going up with magic-like rapidity. New Streets were opening, and enterprize was the characteristic of the place. As I mingled among the hurrying crowd, a mere "looker on in Venice," I soon learned that it was no place for an idle man I was surprized to meet so many familiar countenances. It really seemed as if one-fourth of the population had emigrated from Honolulu, or had spent a season there.

I found it impossible to learn the population of San Francisco, but at this date, (July 21,) there cannot be less than 5,000 to 8,000. It was gratifying to learn that while, merchants, lawyers, physicians, mechanics, and laborers of every description were busy in their various employments, a number of clergymen had commenced their professional labors. One year previously, and there was not a Protestant clergyman in Upper California, now there are at San Francisco, alone, no less than four, the Rev. Mr. Hunt, chaplain to the citizens of San Francisco, the Rev. Mr. Wheeler, pastor of the Baptist church, the Rev. Mr. Williams, pastor of the Presbyterian church, and the Rev. Mr. Mines, an Episcopal clergyman. The Methodists are now erecting a chapel and are soon expecting a minister of the gospel to be laboring among them.

During my visits on shore, the 21st, 22nd, and 23d of July, although I saw much which was wrong, yet, upon the whole, I did not witness so many exhibitions of depravity as I expected, from the accounts which I had heard and read. I am satisfied that the tendency is in the way of improvement, and good order. It was surprising that there were so few cases of theft and robbery, considering how exposed vast quantities of goods of every description were about the wharves and along the streets.

XXI.—PASSAGE TO BENICIA.

The Massachusetts being ordered to Benecia, to discharge her cargo, after spending two days at San Francisco, she sailed thither. The vessel affording such excellent accommodations, Gen. Smith and suite, the Hon. T. B. King, and several other gentlemen took passage for Benecia, situated on the north side of the Straits of Carquinez, about thirty-six miles from San Francisco.—On the passage I was introduced to Mr. W., late from New York. He is the author of a work on the Tories of the American Revolution. I know not that I ever met with a person more intimately acquainted with the history of all the old families of New England. He related this anecdote respecting Judge Prescott, (father of the historian,) and Mr. Peabody, an old Salem merchant. In early life Mr. P. applied to the Judge for advice in some legal affairs. In course of the interview the Judge remarked, "If you would succeed in the world, avoid lawyers and lawsuits." So much pleased was Mr. P. with this advice, that he allowed the Judge to make various shipments to the East Indies in his ships, freight free, by which he laid the foundation of a large fortune of several hundred thousand dollars, which has descended to ———.

The hills and mountains surrounding the bay present a most singular appearance, much resembling immense drifts of sand, but I learn that they are covered with wild oats, which in the rainy season look perfectly green, but as the rains cease, the straw dries up and the grain ripens, affording pasturage for immense herds of cattle and horses, which range over the country for many leagues, no fences obstructing their rambles. The scenery surrounding the bay is so unlike any that I have elsewhere beheld, that I find a description difficult, if not impossible. There may be valleys capable of tillage, but the country generally is ill adapted to farming purposes. The farmer would be especially troubled for want of water and fencing materials.

The afternoon was delightful. The atmosphere essentially changed after leaving the region about San Francisco, where the raw and disagreeable winds have such fair play. As we sailed along the shore lying upon the Straits leading into Pablo Bay, a deer was seen grazing on the highland. He raised his head and took a view of our steam-ship, as much as to say, "What strange craft is this?—what new event has occurred which attracts so many strangers to these shores—as sure as I behold so many strange sails and strange people going up and down the waters of this bay, I and my fellow wild game of the forests will retire."—Upon enquiry I learned that the deer, the antelope and the elk are fast disappearing from their old haunts.—Just before dark the Massachusetts came to anchor off the Army Depot, about a mile above the rising town of Benecia.

XXII.—BENECIA.

To-day, June 23, I visited the city of Benecia. The following remarks concerning the place, I copy from the editorial columns of the "Alta California," of July 2:

"This is the rival of San Francisco for the empire of the Pacific. It is situated on the Straits of Carquinez, about thirty-five miles from the ocean, on a gentle slope which becomes almost a plain as it nears the water's edge. It contains about 500 inhabitants, including soldiers now stationed there, and many buildings have been erected there of late. It is now made the Head Quarters of the U. S. Army. The large deposite of army quartermaster and commissary stores, have recently been removed from San Francisco to that place, and a site has been selected by Commodore Jones for a navy yard a short distance above the town. This place is certainly rapidly advancing in size and importance, but we do not doubt that its prosperity will always be dependent on that of San Francisco. A great many harsh things have been said of army and navy officers "lending their influence" to build up this rival to San Francisco, but we have no disposition to repeat them. There is no necessity for it either, as whatever may be the result of that speculation, we regard the prosperity and destiny of San Francisco as so securely fixed by her natural position, her capital and her energy, as to defy the efforts of all the speculutors that ever existed."

Here I found the Rev. Mr. Woodbridge, a Presbyterian clergyman, engaged in a school, and preaching on the Sabbath. He seemed to have seeured the confidence of all classes in the community, and I was rejoiced to perceive that he was laboring for the real benefit of the future inhabitants of the country. He left on Long Island a flourishing society and church, which were cordially united in his support, where he had labored as a minister of the gospel for fourteen years. After surveying the country, he decided upon Benecia as prospectively opening a wide and promising field for ministerial usefulness. He is expecting to return, ere long, for his family, and cast in his lot with the rising fortunes of the people of the country.

XXIII.—THE HON. T. B. KING'S ADDRESS.

Agreeable to a public notice, I went June 25th, at 4 o'clock, P. M., to the school-room of the Rev. Mr. Woodbridge, to hear an address from the Hon. Mr. King, member of Congress from Georgia, before the citizens of Benecia. After returning on board the Massachusetts, I recorded the following as the substance of his remarks. I do not pretend to give his exact phraseology, for he was nearly an hour in making his address.

He commenced by adverting to the peculiar circumstances under which had gathered representatives from the four quarters of the globe. [Officers of the U. S. Army, a merchant from Chili, a physician from Baltimore, another from Washington, a western pioneer, a clergyman from Long Island, an ex-U. S. Consul from S. I., one or more from England, but in all not exceeding over fifty persons.] Some, he remarked, had censured Congress because that body had not organized a Territorial Government for Cali-

fornia, but he was prepared to give his reasons, showing that it was a fortunate circumstance that no territorial government had been organized. The Congress of the United States has fully discussed the affairs of California, and the Executive was ready to proceed; but then came up the vexed question of slavery. The advocates of the Wilmot Proviso, (which was essentially the ordinance of Congress respecting the non-existence of slavery in the territory N. W. of the Ohio,) would by a law of Congress shut slavery out of California; but no, says the South, let that question remain unsettled until California shall settle the question for herself. The period had now arrived, as he thought, for the people of California to do it. Now was the time for California to become a State. A sufficient number of inhabitants were already in the territory. There was an impression abroad that a certain district of country must have a definite number of inhabitants before it could be admitted as a State. That impression was unfounded; but even if it was not, very soon California would contain 100,000 inhabitants. This he was confident would be the case before the close of the current year; and should the gold mines continue to yield as they had done, not a long period would elapse before half a million of people would become citizens of the country.—Hence, California was now ready to take her station as a sovereign State of the Union.—There could then be no question but it was the duty of the people of California immediately to take the preliminary steps for the organization of a State government. California needed her Senators and Representatives in Congress, to urge her claims more effectually than it was possible to be done by the Delegate of a Territory who might make suggestions, but would not be entitled to a vote.

He then adverted to the unquestionable fact that California was about to assume a great importance, and that of necessity. For a long period the idea of a rail road to the Pacific had been discussed. Almost every state in the Union had passed resolutions in its favor, and now if its construction is decided practicable, its *terminus* must be in this valley;—nature had so decreed, and it was not in the power of man to annul that decree. Here, in this mighty basin, on the banks of this bay, (he would not pretend to define the location,) but here was to arise a mighty Babylon—here was to center a vast commerce—through this channel was to flow the products of China and Polynesia. The teas and silks of China must be conveyed along this route to the shores of the Atlantic, and perhaps to Europe. The commerce of California, he thought, this year would equal that of any state of the Union.

In concluding his remarks, he referred in a familiar manner to some things which had surprised him since his arrival in the country; e. g. he was astonished to witness the order which reigned at San Francisco, on the Sabbath. As he walked the streets on a Sabbath morning, he heard not the sound of the hammer, neither witnessed any more disorder, than would have appeared in a well organized Christian community.

He doubted not, should the proper steps be taken by the people of the country for a State organization, that the older States would joyfully welcome California to the sisterhood of the Union, and pass laws favorable to commerce, schools, &c.

I learned that the Hon. Mr King is a New Englander by birth, but has resided for many years at the South. His name is intimately associated with the enterprise of steam navigation between Panama and California. I believe that he brought forward the measure in Congress. He was one of the candidates for the Secretaryship of the Navy, under the present administration, if I have been correctly informed. I could not but conclude that his visit to California was most opportune, for on his return to Washington he will be prepared to furnish the Executive and Congress with some valuable information, which is much needed!

XXIV—NO GOOD MAPS OF CALIFORNIA.

Although near three centuries have elapsed since California was discovered—although Jesuit Missionaries have for nearly a century traversed the country—and although much has been published about the country, yet its geography has been but imperfectly known. It is not until to-day, June 25, that I have met with any thing like a tolerably well executed map of the country watered by the waters of the Sacramento and San Joaquin rivers, together with their numerous tributaries. This map was sketched by Col. Fremont, or under his direction, still even this is far from being accurate. It would be amusing to collate the numerous maps or charts purporting to delineate the interior of Alta California. No two would agree. Some make the Sacramento river run due west, others make the San Joaquin empty into the Bay of San Francisco at San Jose; verily the interior of Africa is equally well known to the civilized world. I found it impossible to obtain any definite and satisfactory information respecting the geography of the country, from any existing maps, until that of Col. Fremont chanced to fall in my way. The desideratum, however, will very soon be supplied. One of the good results of the discovery of the gold mines, will be that the vast regions west of the Rocky Mountains, north of Mexico, and south of the Columbia River, will very soon be thoroughly explored. Every river and stream, mountain and hill, valley and *canon*, prairie and plain, will be explored, and accurately laid down upon the maps. More will be done this year than has been done for three centuries, to obtain accurate geographical knowledge of the country.

SEAMEN'S CHAPEL, APIA.

During the last few years, a considerable number of ships having anchored at Apia Harbor, and numbers of foreign residents having settled around the bay, it was thought desirable that a small place of worship should be erected for the purpose of holding English service on the Sabbath.

Subscriptions were made by the Missionaries and foreign residents, which, with sums given by Captains and crews, amounted to nearly £60. The John Williams being about to return to England, the Committee requested Mr. Mills, the Missionary at Apia, and Capt. Morgan to use every effort to procure an iron chapel, to be brought out in the missionary vessel. On the arrival of the John Williams in London, an appeal was laid before the Directors of the London Missionary Society as well as the British and Foreign Seamen's Society.

We now take the opportunity of expressing the sense of gratitude which we feel for the efforts made by the Rev. J. J. Freeman and Augustus Fieldwick, Esq., the respective Secretaries of the above Societies, as well as to many kind friends, who aided us in procuring the neat substantial building which now forms an interesting object on one side of the bay, near to the British Consulate.

The building is built entirely of corrogated galvanized iron, raised on a platform of coral; and is well adapted to try the teeth and patience of the white ant, which is the greatest pest that can afflict a poor builder in Samoa.

The building is 40 ft. by 20 ft. Ten feet is taken off the length for a reading room, where a library will be kept, with the most recent magazines and newspapers which can be procured, where the sailor on liberty, or any of the residents can spend a profitable hour. The chapel, which is 30 ft. by 20 ft., is neatly fitted up with seats and pulpit.

The cost of the building in London was upwards of £170. The fittings, glazing, painting, and other items, have added considerably to the expense, to meet which the additional subscriptions received on the islands will go far.

It is just to acknowledge the gratuitous labors of a great many of the foreign residents in putting the building together.

The chapel was opened on Sabbath, the 28th of January. A large number of the foreign residents attended; and the occasion was rendered more interesting by the presence of the captain, officers, and crew of our missionary bark John Williams.

Contributions for the support of the library and reading room will be thankfully received.—[Samoan Reporter.

PRINTING IN ENGLAND AND AMERICA.—A letter from London to the Boston Post, thus compares the facility with which books are printed in London and New York.

"The art of printing advances far more rapidly in America than here. Liverpool, nearly as large as New York, has no printing done by steam. In London, but one or two printers, of books, print by steam, and very rarely print more than twelve pages of a 12mo. book at a time. From an extensive acquaintance with the manner and speed of book-printing in New York and London, I will vouch for the fact that of all the books printed in the two cities, our printers print three copies to the Londoners' one in the same time First-class publications are generally better "got up" in England than America. But, got up equally as well, the New Yorkers will print two copies to their one. Not one book in four in London is stereotyped. In New York three out of four.—In London one publisher lately boasted that he actually published a book in three days from the time he received it. That is quoted as an *extraordinary* operation that was actually accomplished, once. In New York the Harpers have issued many a book in from twenty-four to thirty hours after its receipt. But I will not multiply examples to show the greater amount of enterprise or inventive genius in America.

Scurrility is the corruption of wit, as knavery is of wisdom.

THE FRIEND.

HONOLULU, NOVEMBER 15, 1849.

Antarctic Continent.

Some years ago much was said and published respecting English, American and French navigators cruising along the shores of the Antarctic continent. It has in some way come to our knowledge that certain English navigators report to have sailed over a part of the Antarctic continent discovered, or laid down on Wilkes' charts. The simple facts, so far as we can ascertain, are these: The American navigator appears to have mistook a portion of the "icy barrier" for the main land. Subsequently, English exploring vessels cruised higher up than the point laid down as land upon Wilkes' charts. That he was mistaken, is also manifest, for Capt. Cooper, commanding the "Franklin," navigated his vessel, in January last, 2° of longitude, and 1° of latitude, on a W. by S. course, over a region laid down as land by his countryman, Wilkes. This was between the parallels of longitude 168° 20', and 165° 30' E., and on about the parallel of latitude 65° 20'.

From all we are able to learn respecting very high latitudes, both north and south, the seasons vary exceedingly. Even in those frozen regions they have their warm as well as cold summers, hence the "icy barrier" (as it is called) is by no means stationary.—We do now recollect to have met a whaleman from the Arctic Ocean who spoke of seeing the icy barrier, although Capt. Beechey, in 1827, saw "packed ice" lower down than some of the whale ships lately cruised. The same fact is doubtless true of the opposite region of polar cold. This will satisfactorily account for the mistake of the commander of the U. S. Exploring Expedition.—The mention of these facts may serve to put the commanders of national exploring expeditions upon their guard, as their errors may be detected by some adventurous and enterprising whaleman.

Honolulu Times.—A new weekly paper has made its appearance in Honolulu; H. L Sheldon, Esq., Editor and Publisher. Success to the enterprise. We are glad to see that the publisher is fully aware of the difficulties attending the pecuniary support of a paper; hence, we infer that he will succeed. Let those who read remember the printer;—yet we fear there are, in Honolulu, persons who will read the "Times," as it makes its weekly appearance, but never subscribe for a copy, or in any way contribute for its support. We are led to give this gentle hint, because we sincerely hope the publisher of the "Times" will not fail in the enterprize through want of pecuniary support. If an editor and publisher is well supported, it will keep him in good spirits, and he will strive to make his paper in every respect worthy of a reading and intelligent community.

Navigators among Fox Islands, Beware!

Capt. Lakey, of bark Harvest, informs us that the island of Atcha is laid down in N. L. 53° 3', and W. L. 172° 35", while its correct position is 52° 28', and 174°. The danger is in passing between the islands of Tagoulla and Adach, for when the navigator supposes himself in mid channel, he is among the rocks and shoals on the north side of Atcha.

Amlai is believed to be out of its true position on the chart; when its true position is known, the passage is good between Amlai and Seguman, the only danger being a ledge of rocks extending out 4 or 5 miles on the east side of Amlai.

The following extracts are copied from Capt. Woodruff's private journal, now master of Philip 1st, but on his last voyage master of the Huron. These extracts relate to his last voyage:

Saturday, 1st August, 1846.

This afternoon fresh increasing winds from the southward; cloudy weather and spells of fog; saw one poor, miserable hump-back whale—he appeared to be like myself—don't know which way to go. At 2 P. M. the island of Attou bears N. W., about 45 miles distant; saw porpoises and many wild ducks. Thinking it rather unsafe to run in such thick weather, I double reefed the top-sails and stood four hours off and four hours on. The morning is very thick, with fresh winds from southwest. At 6 A. M. made sail, and thinking myself sufficiently well to windward to pass the island clear of danger, I steered W. N. W., keeping a sharp look-out for the land. At 10 A. M. the fog cleared up, and we saw the island of Attou right ahead, about 5 miles distant. I immediately tacked to S. E.; but it cleared up pleasant, and I concluded to go through between the islands, wore ship and made all sail; saw three smaller islands, not on chart, bearing N. N. E., about 10 miles distant. I find by several good observations that the islands are very erroneously laid down on the chart. The chart gives the latitude of the east end of the island 52° 50' N., and my observation gives it 52° 30' N.; the chart gives the longitude 173° 40' E., and my chronometer gives the longitude 172° 11' E. The island appears to be mountainous, and some parts of it covered with snow. Saw a smoke on the shore, but no signs of any whales.

Sunday, 2d August, 1846.

This afternoon comes in with moderate winds from the southwest, with cloudy weather. Passed the east end of the island of Attou, about 5 miles distant. At 3 P. M. saw another island bearing N. W., about 15 miles distant. Observed a strong current setting N. E. and drawing into the leeward: find I can head to the windward of the island; I will keep her a-going. At 4 P. M. a dense fog set in, and the barometer fell. At 5 P. M. I discovered a reef of rocks to the windward of the ship, about half or two-thirds of a mile distant. The reef appeared to be about one mile in length, and some of the rocks 8 or 10 feet above water, and the sea was making a breach over them all the time. The water about the ship was thick, and indicated shoals near. I immediately gave the order to ware ship, the helm was put up, and the Huron came round unusually quick and stood off from this danger. But now, "Alas, poor Yorick!" here we are in an unknown place; no chart, that I can trust to—surrounded by islands and rocks—in a dense fog, and only two hours more of daylight, and twenty-five men looking to me for protection in the midst of the surrounding dangers. And now I must find my way back the way I came in, for to stay in here all night, I dare not. I set all possible sail, and steered S. E. by E., with a strong breeze from southwest. It now sets in a drenching rain, and we cannot see 50 rods from the ship. My feeling at this time was most painfully intense, and such as I have never before experienced But the Huron is now doing her best, and every man at his station. There is no disorder or confusion; all is still, and all on the lookout for land, and ready to obey my orders. At 8 P. M. we were all relieved by seeing the land on the weather bow, about 3 miles distant, and our noble ship going as straight for the passage as though it had been clear and daylight. It now sets in foggy and stops raining, and we lose sight of the land. At 10 P. M. it is a dead calm, and very dark; we are now about midway between the islands. I took the deck myself all night. At daylight I find the nearest land on the island of Attou bears almost W. N. W., 4 or 5 miles distant. The weather clears up, and we steer on S. E., with a light breeze from N. N. E. At 8 A. M., having gained a good offing, I steer S. W. "God is good, and his tender mercies are over all his works," and nothing but a miraculous interposition of Providence has saved us from a melancholy shipwreck, and perhaps death.

Rattlesnakes.—Mr. John C. Green, Jr., and two others while water-bound near White River, Arkansas, recently found a den of rattlesnakes, and forthwith amused themselves by dispatching seventy-seven of them, each measuring over four feet.

Foreign Cemetery at Lahaina.

Lahaina, Nov. 10, 1819.

Mr. Editor—Will you please insert the following notice in your paper?

Lahaina, Nov. 6.

At a meeting of foreign residents and masters, to take measures for putting a permanent fence around the Foreigners' Burying Ground in Lahaina, a committee previously appointed, gave in the following report:

That it is desirable to have a permanent fence, made of coral, placed around the above-mentioned grounds, in form of a wall three feet wide at the base, and five feet high. This report was adopted, and the following gentlemen were chosen as a committee to carry out its design: Messrs. Swinton, Hoffmyer and Bush.

On motoin, T. E. Taylor was chosen Treasurer of the funds collected for building this wall.

It was moved and carried that one condition of burial in this burying ground should be that a head and foot board mark the place of each grave.

It was also moved and carried that T. E. Taylor have the whole direction of the burying ground, and be authorized to employ a man to keep the grounds in order.

Nov. 10.

Meeting met according to adjournment.

The chairman reported that $131 had been subscribed since the last meeting, which added to $80 previously paid in for the same purpose, makes the sum of $511 available funds to bestow upon the burying ground.

On motion, the meeting adjourned.

T. E. TAYLOR. Sec.

Whaleship Burnt.—It is with regret that we are called upon to record the burning, in our harbor, on the morning of the 9th inst., of the whaling bark Mercury, Capt. G. Pendleton.—The fire was discovered about one o'clock, in the forward part of the fore hold; and was so far advanced before it was discovered, that every effort to get it under was unavailing. As yet, the origin of the fire has not been ascertained; no time for an investigation having intervened.

The Mercury is owned in Stonington, and has been out sixteen months, and had on board 1200 barrels of oil. The entire ship and cargo are consumed, and nothing remains of the once noble vessel but a few of the blackened timbers upon the reef, at the leeward side of the harbor. She was all ready for sea, and would have been off in a short time, in prosecution of her voyage.—[Polynesian.

☞The W. H. Shaler, supposed to be lost, is reported at Montevideo, in distress, having lost sails, jib-boom, &c., &c., off the Falkland Islands. On entering Montevideo harbor she went upon a rock not laid down upon the charts. She would be detained 2 months to repair, and may be expected here in January.

For the Friend.

Honolulu, Nov. 6th, 1849.

Mr. Editor :—As I presume that all of the contributions for the French Protestant Missionary Society of Paris have now been paid into my hands, I hand you, herewith, for the satisfaction of those who feel an interest in this matter, a full statement of the whole receipts and disbursements for that object. As, also, statement of funds, paid into my hands, for Tualatin Academy, Oregon.

Yours, truly,
S. N. CASTLE.

Receipts on Account of the French Protestant Missionary Society of Paris, are as follows :—

Capt. Laughnan, British I. Army			$5,00
A Wilcox, Waiali			10,00
A. S. Cooke			5,00
Mrs. C. L. Richards			5,00
E. H. Rogers			5,00
E. Whittlesey			2,00

S. N. CASTLE.

H. B. M.'s Consulate General for the Islands of the Pacific,
Honolulu, March 9, 1849.

It is hereby notified that Con. Gen. Miller has received a despatch from the Foreign Office, London, dated the 31st of March, instructing him to take proper steps for causing to be made known within his Consular District, that, "The Lords Commissioners of the Admiralty have offered a reward of £20,000 (twenty thousand pounds sterling,) to such private ship or ships of any country as may, in the judgment of their Lordships, render efficient service to Sir John Franklin, his ships, or their crews, and may contribute directly to extricate them from the ice."

The following is a copy of the minute of the Lords Commissioners of the Admiralty, transmitted on the occasion :—

Admiralty, 23d March, 1849.

The Lords Commissioners of the Admiralty are under the necessity of laying a supplementary Estimate for the relief of the Arctic Expeditions under Sir John Franklin and Sir James Ross, upon the table of the House.

Their Lordships having been apprized by the last letters received from Sir James Ross, that it was his intention to direct the Investigator to land all the supplies that she could spare, at Whaler Point, and to proceed to England, if no tidings of the Expedition under Sir J. Franklin were received by the whale ships now about to sail, leaving the Enterprize to prosecute the search alone,—have consulted the highest naval authorities as to the probable consequences of that step.

They find it to be the unanimous opinion of those most conversant with the Polar seas, that such a separation of the ships under Sir James Ross, would be most perilous to the ship remaining in the ice, and would neutralize the entire object of the Expedition, if Sir J. Franklin's party were to be discovered at a time when the Enterprise had nearly exhausted her own stores. They have therefore determined upon sending out a fresh supply if provisions for both ships by the North Star, which is now fitting for this purpose, at Sheerness, with orders to proceed across Baffin's Bay, and as much farther as practicable in the direction of Lancaster Sound and Barrow Straits, looking out for the Investigator or her boats.

In the event of the Investigator not being fallen in with, the commander of the North Star will be directed to land the supplies at such points on the south side of Lancaster Sound, or other places indicated by Sir James Ross, as may be accessible to the North Star in sufficient time to secure his return across Baffin's Bay before the winter sets in

The expense of fitting the North Star for the ice will be £6086, and the wages of the crew, stores, provisions on board, £6602, making £12,688 in all, which constitute the supplementary estimate now submitted to the House. But, in addition to this, Her Majesty's Government has determined to offer a reward of £20,000 to be given to such private ship, or distributed amongst such private ships, of any country, or to any exploring party or parties as may, in the judgment of the board of Admiralty, have rendered efficient assistance to Sir John Franklin, his ships, or their crews, and may have contributed directly to extricate them from the ice.

tf H. G. WARD.

MARRIED.

In Honolulu, Nov 15. at the residence of Mrs Dominis, by the Rev S C Damon, Mr. George Gilmore. of Koloa, Kauai, to Miss Ellen B Tewesbury, of Charlestwon, Mass.

DIED.

In this town, on the 2nd inst., Mr. Walter Tucker, aged 23 years, a native of New York City. He was heard to speak of Wheldon, Ulster Co as his place of residence He came around Cape Horn in bk Sutton—landed in San Francisco, in July went to the mines where he was taken sick. On returning to San Francisco, he embarked on board the Eng. br Louisa for the Sand Islands, and died a few days after his arrival. His property (including a small amount of money) has been placed in the hands of the U S Consul.

[N. York papers please insert.]

At Hilo, on the 2nd instant, of dysentery, Mr George M Moore, a native of Providence, R. I., and for the last 9 years, a resident of these Islands.

At U S Hospital, Lahaina, Oct 28, John Thomas, from ship Washington. 30, John A Perkins, belonging to Groton, Conn

Also, Orlando Simmons, boat steerer, from ship Midas.—He was taken with the scurvy a few days before arriving in port, and died soon after landing. He was a native of Woodstock, Vt, and brother of Capt Simmons of San Francisco.

At sea, Oct. 24, on board the Veloz, David Owens, a native of Bristol, England, aged about 46 years, for many years a resident on these Islands.

At sea, May 8th, on board the American whaling bark Philip I, John M. Bartlett, of New York City.

Samoan, or Navigator Islands.

In the Sept. No. of the Friend there was an interesting communication from the Rev. Mr. Mills, one of the English Missionaries at the Samoan Islands. He briefly alluded to the loss of the Gem, and the new Seamen's Chapel. We have since received the March number of the Samoan Reporter, in which we find a more detailed account of the wreck of the Gem, in a letter addressed by Captain Worth to the conductors of the Reporter.—We copy the entire letter:

WRECK OF THE "GEM."

Capt. James M. Worth, of the whaling bk Gem, of Sag Harbor, has just handed us the following sad account of the loss of his vessel and valuable cargo in January last:

"The Gem was bound from the Sandwich Islands to the United States of America, and was wrecked on the night of the 23d of January last. She struck, about 11 o'clock at night, on a sunken reef which extends around Suwarrow's Island. My mate being unwell, I took the first watch myself. My longitude being correct, I placed the ship 85 miles to the east of Suwarrow's Island, on the chart. Just before she struck, I went into the bow, and told the man on the look-out to look sharp, and looked ahead myself, but saw nothing. I walked aft and jumped into a boat, where a boat-steerer was looking out, and saw a white streak nearly under the bow of the ship. I said, "What is that?" and she struck with a terrible crash. She was going at the rate of six and a half knots; but carried away nothing except the fore-topsail sheets. She struck again, and rolled the lee rail nearly under water. I ordered them to haul up the mainsail, and let go the maintopgallant halyards. I could see no land, and the ship was laboring hard. I then got the men to clear away the larboard-quarter boat and told my mate to save her, if he could.—I then ran to another boat, and, with the assistance of my second mate and boat-steerer got her clear, and jumped into her. I called several by name to get into the boat with me, but they refused; and, fortunately, we got clear of the wreck. The mate called to me and said his boat was stove; but, shortly after, the ship's bow swung round, and left the starboard quarter clear. They then lowered her, and fourteen men jumped into her, and got clear of the wreck. I took five into my boat, which left the mate nine and myself eight, and eight on board. About twenty-five minutes afterwards, a dark rain squall came, and I lost sight of the boat and wreck; and it was fifty-six hours before I found her again. The current being strong, took us 12 miles from the wreck, round the reef. At daylight, I could see nothing but two small islands and the reef, which we followed around for about fifty miles, and found a landing place on the south side of the north-eastern island; and, supposing we had been all around the reef, hauled up our boat. The next day we searched for the wreck; but in vain; nor could we get food or water on the island. The next day we took our boat and followed the reef around on the inside; and, after pulling eight miles, found the wreck, with her masts gone, and three men on board. It was difficult to board her; but, with assistance of ropes thrown to us, we succeeded.

The men told me, that five men, the night before, had launched a boat in the breakers, and sprang into her, and the rollers took them on the reef, where they lay upon the rocks all night. They also told me, that Mr. Jennings, the mate, came to the wreck next morning after she struck, and got bread, water, nautical instruments, charts, compass, and boat-sail; and told them he would land his party somewhere, and return to their assistance. I got bread, water, and one quadrant, and the three men, and returned to the island.

Next morning, I went in search of the five men, and found them on a small island, and two stoved boats, which we towed to the larger island. We then got bread, water, and lumber from the wreck to repair the boats. and raise upon them.

I remained twenty-two days on the island, and then started, with three boats and sixteen men, for the Navigator's Islands; and arrived safe, after seven days' passage, at the island of Upolu.

The wreck was quite whole when I left.—The Gem had on board 2,230 barrels of whale oil, and 170 barrels of sperm oil, and 27,000 lbs. of bone. She was out fifteen months and twelve days.

On arriving here, I found Mr. Jennings and all who left the wreck with him: so *no one is lost.*

I found many friends at this island; and I shall ever feel grateful towards them, for their kind sympathy and hospitality.

Very respectfully yours,
JAMES M. WORTH.

Apia, Upolu, March, 1849.

Nautical Romance.—The following romantic story of real life is from the Bombay (East Indies) Telegraph and Courier:

"The Rainbow, from Southampton to Aden, arrived there about the 16th ultimo.—Capt. Arnold, her late commander, died ten days before the ship reached that port, and the chief mate was so habituated to drunkenness, that he had been confined to his cabin several times during the passage. The captain's daughter, about 16 years of age, was on board, and after her father's death the second mate, who had assumed the command, made a daring and insidious attempt to entice the young lady and run away with the ship. She indignantly and successfully repelled all his base and dastardly attempts, and although suffering under a painful bereavement at once rushed on the quarter deck and made a public appeal to the ship's crew, as British seamen, and threw herself on their protection. This well-judged resolution had the desired effect; the seamen (except two of their number, who had been led away by the second mate) declared, with that manly feeling which sailors so often display, that they would to a man protect her from all harm, and told the second mate and their misguided shipmates in very plain terms, that if he, the second mate, gave the slightest molestation to their late commander's daughter, they would pitch him overboard, and any one else who dared to follow his example should share the same fate.

Miss Arnold then, with great presence of mind, begged the ship's company would grant her one especial favor. Her character, her manners, and the well-timed appeal which she had already made, induced the crew to declare their assent to any thing she might ask. Miss Arnold then said that the safety of the ship and her own security from insult could only be insured by throwing overboard that instant every drop of spirits in the ship. Without hesitation the seamen consented, and, leaving no time for reflection, they forthwith got the spirits on deck and threw every drop overboard. From that time Miss Arnold had her screened cot secured near the wheel, and slept alongside the binnacle, and three of the crew kept a faithful watch around her during the remainder of the voyage, and these faithful guardians of one of our beloved countrywomen never failed to evince the utmost respect, and preserved the most rigid decorum, honorable in every point of view to themselves, and to that charge which they had pledged themselves to undertake.

Miss Arnold wrote a statement of all these occurrences, and forwarded it to Captain Haines, on the ship's arrival, when the second mate and disaffected were immediately arrested and sent to prison. The chief officer had indulged himself to such an excess that after the captain's death, and in the absence of all means of resort to his favorite stimulants, he was perfectly useless.

Miss Arnold became the welcome guest of Capt. Thomas at Aden, and every possible attention was shown to this noble-minded lady by the whole society there.

Subsequent to Miss Arnold's charge against the second mate, Capt. Haines applied to her for a circumstantial statement of what occurred on board the Rainbow after her father's death. The lady complied with his request immediately, and her narrative was so well and ably written, that it excited admiration on all sides. At her solicitation, her father's remains were preserved in a cask of spirits, and were buried at Aden the day after the ship's arrival. She had always kept his accounts. The second mate navigated the ship, but several of the crew knew the proper course to Aden, and all his proceedings were narrowly watched."

Every reader's mind will be struck with the remarkable good sense and presence of mind manifested by the heroine of this real romance. Two points are here admirably illustrated.

1. Property is not safe when ardent spirits are used.

2. A lady is not secure from insult, if compelled to associate with those whose minds are under the influence of intoxicating drinks.

But are not "spirits" worth anything? O, yes, They are excellent to preserve *dead* bodies. Miss A. put them to this very use.

☞Ardent spirits keep alive dead bodies, and kill living bodies! Let our spirit-drinking readers ponder those facts.

Important to Whalers.—We learn from the United States Consul at Cape Verd Islands, that "By a late law passed by the Portuguese Government, whaling ships are allowed to anchor in any of the custom house ports at the Cape Verd Islands, to trade for refreshments, refit, repair, &c., free of port charges, and remain four days, Sundays and holidays not included in the lay-days. After the four days have expired, they are charged as merchantmen. The passage of this law will be of great convenience to our whaling ships, as their custom is now to lay off and on, to avoid port charges, and send a boat in for what they require.—[Salem Register.

Census of the Islands.

In connection with the publication of the census of the islands, recently made by properly authorized officers of Government, we would offer a few remarks, and some statistics respecting the decline of the aborigines of the islands. This is probably the most accurate census which has ever been made. The estimate of Cook that, in 1779, there were 400,000, is generally believed to have been much too large. Jarves remarks in his history that 300,000 would have been nearer the truth. This one thing is very certain, there must have been a vastly larger number of people then, than now, or who cultivated the thousands of acres of rich taro land now lying waste, on all the islands? The traveller need only visit such districts as Kau, Waimea and Kohala, on Hawaii, and he will readily infer that thrice, if not four times the number of people must formerly have dwelt upon the islands.

The following statistics will show that the decrease has been rapid; population estimated in 1823—142,050; and according to the census of 1832—130,315; and according to the census of 1836—108,579.

The decrease appears to have been in progress almost from the very date of their discovery, before as well as since the introduction of the gospel. Our readers are aware of the ordinary causes assigned for this rapid decrease, but there is one which does not seem to have attracted the attention that in our judgment it deserves. It is thus alluded to in Jarves' history: "Great numbers of healthy Hawaiian youth have left in whaleships and other vessels and never returned. The number annually afloat is computed at 4,000. At one time 400 were counted at Tahiti, 500 in Oregon, 51 at Paita, Peru, besides unknown numbers in Europe and the United States. Their wives and families, left to provide for themselves, fall into vicious habits, and both evils combined tend to diminish the native population."

It is certainly no source of astonishment to us that the native population has rapidly diminished; our great wonder is that so many are left, as the late census indicates to be now living upon the islands. It should be borne in mind that last year was the "*annum mortuum*," the year of death! Measles, whooping-cough and influenza combined, seemed to sweep the islands with the besom of death. Ten thousand would probably be a low estimate for 1848 and 1849, which those epidemics took away.

In the present census, the total number of foreigners, including half-castes, is put down as 1,787. While the aborigines are diminishing, foreigners are increasing. The following remarks of Mr. Jarves show that the descendants of missionaries will undoubtedly form no inconsiderable portion of the future inhabitants of this group:

"No fact illustrates more strongly the superior influences of enlightened christianity in a physical point of view upon the human race, than the remarkable discrepancy of numbers between the children of missionaries and those of the chiefs, who are the most civilized among the Hawaiian population.—Nine of the mission families number 59 children—an average of 6,5-9 to a family. 20 Hawaiian chiefs have but 19 children among them all. The mission families within less than one generation have increased 175 per cent. At the same ratio of increase, in 100 years their descendants would number 59,535."

P. S.—Some months since the opinion was advanced in our columns that in no portion of Polynesia were the aborigines on the increase, but rather upon the rapid decrease. In conversation recently with a gentleman from Tahiti, we learn that according to a late census of that island the native population was now increasing. As he walked our streets he observed a striking contrast between the number of native children here and there. We should be glad to receive some accurate data upon the subject, from the Rev. Messrs Thompson, Howe, or other of the English missionaries resident at Tahiti.

Fatal Accident.—We are sorry to learn by a letter from Hilo, that a seaman by the name of W. H. Gardner, of Providence, R. I., was drowned on the 29th ult. at that place. He belonged to the whaleship Luminary, of Warren, and was engaged at the falls of the Wailuku in filling water for the ship, when he unfortunately slipped and fell into the basin, and was drowned. His body had not been recovered.—[Polynesian.

Information Wanted,

Respecting EUGENE LEWIS, a native of the state o New Jersey, U S. A. If alive he is now 46 years of age. A report has reached his father, residing in Morristown. N. J., that Eugene may be still alive and residing in some part of the Pacific. Any information will be thankfully received, if made to the Editor of the Friend. and communicated to an anxious parent.

Religious Books.

☞ The Seamen's Chaplain has just received an excellent assortment of Books published by the American Tract Society, including nearly all of their standard publications. These books are beautifully bound, and will be sold at an advance on the New York prices only sufficient to cover the expenses.

☞In the collection will be found some new and instructive books for children. tf

Letters

Have recently been received by the Chaplain for W. S Collins, schr. Indiana, Capt. Crosby; Mr. David Hillson, formerly painter in Honolulu, but who left on board a vessel bound to Callao; Capt. R. Allen, ship Condor; Mr. Israel Horseley, Condor; Mr James Peter Ludlow, Margaret; Mr. Sturt, formerly cooper in Honolulu, but now supposed to be in California; Mr. Samuel Rawson, watch-maker, now at the mines; Mr. Jacob P. M. Mead, ship Dromo; and Mr. Jeremiah Varney, Honolulu.

Just Received and for Sale

AT THE CHAPLAIN'S STUDY, a new and beautiful assortment of BIBLES in the English Language. They are bound in various styles, and can be had at prices varying from 37 1-2 cents, to $7,00 per copy.

☞ Seamen, and others, are informed that at the same place may be found Bibles printed in the following languages: German, Swedish, Danish, Dutch, French, Spanish and Portuguese.

N. B —Portuguese seamen are especially notified, that they can obtain copies of the Holy Scriptures in the old and new Testaments.

⁂ It is left voluntary with seamen whether they receive a copy of the Bible as a gift. or pay the whole or a part of its value Money received from the sale of Bibles is appropriated to the purchase of new supplies. tf

Information Wanted.

When the "Huntsville," of Cold Spring, left the U. S., in the fall of 1847, her shipping articles contained the name of "John Stuart." It is supposed this name was assumed for that of "THOMAS SHEPHERD." Said John Stuart left the Huntsville at Hobart Town, New South Wales. Should this notice fall under his eye, he is earnestly requested to communicate with Mr. John Shepherd, of Patterson, N. J. Should John Stuart, *alias* Thomas Shepherd, visit Honolulu, let him not fail to call at the Chaplain's study. tf

☞The above notice has attracted the attention of a man on board the Huntress of New Bedford, who asserts that a Thomas Shepherd shipped on board the Huntress in N. B., in Sept. 1847, and left her in Honolulu in Nov. 1848, and went on board the Angelina of Havre, bound for that port. He reported that he was bound home.

The Friend, sent Abroad.

Any person, by paying the annual subscription price of the Friend, ($1.50) in advance, can have the paper sent, by the earliest opportunity, to any port in the Pacific, or to any part of the U. States or England.

N. B.—By paying the additional sum of 50 cents, the paper will be sent for one year to the U. States, via California and Panama. Postage on papers to private persons must be pre-paid. The Friend, being a monthly sheet, and containing a full report of Marine Intelligence, will be found a useful and cheap method of communication with the mercantile community in Europe and the United States. tf

Information Wanted.

TAUNTON, Oct. 21, 1848.

Dear Sir—I write at the suggestion of Mr. Josephus Skinner, of Norton, respecting his son, who sailed from Bristol, R. I, on a whaling voyage, in the capacity of carpenter, on board the ship Chariot, of Bristol, sometime in 1844. From the best accounts that we can get he left that ship in April, 1845, and when last heard from was at some of the Sandwich Islands. We want to learn something of his whereabouts, if he is living, and if not, where and at what time he died. He was subject to fits.

Will you write what information you may have or can get concerning him (his name is Josephus A. Skinner)—whether you ever knew or heard of such a person. or not—and if he is there, to use your influence to have him return. By doing so, you will serve the cause of humanity and relieve an anxious family.—Direct to Josephus Skinner, Norton, Mass.

Respectfully, your friend,

C. A HOCK.

Rev. S C. DAMON, Sandwich Islands.

☞The Editor cannot, at present, furnish the desired information. Any information respecting the person referred to, will be duly communicated if made to the Seamen's Chaplain, Honolulu. tf

The Friend, Bound.

Bound volumes of the Friend, for one, or more years, can be obtained at Rev. T. Coan,s, Hilo; Rev. T E. Taylor's, Lahaina; and the Chaplain's study, Honolulu. tf

THE FRIEND.

A Trip from the Sandwich Islands to Lower Oregon and Upper California.

Leaves selected from "Our Log Book."

XXV.—INTERIOR OF ALTA CALIFORNIA.

An Excursion up the San Joaquin—Arrival at Stockton—Description of the town—Sabbath—Journey to Sutter's Fort—The Fourth of July—Visit "Mormon Islands," "The Mills," and "Kanaka Diggings"—Return to Sacramento City—Trip down the Sacramento River—Remarks.

The following letter is essentially the copy of one which I wrote from Benicia, to a friend in the United States, after my return from an excursion through the interior of Upper California :—

U. S. Propeller, Massachusetts, }
Benicia, U. C., July 17, 1849. }

Dear Sir,—In my last communication forwarded from this place about three weeks since, I endeavored to keep you duly informed of my peregrinations down to my arrival in California. Since that date, I have made an excursion into the interior of the country, having travelled, by land and water, about five hundred miles, and endeavored to make myself acquainted with the natural features of the country, its inhabitants, its mining characteristics, and future prospects. I was about eighteen days, during which period I slept in a "civilized" bed but once, seldom enjoyed the luxury of a chair, and otherwise accommodated myself to the strange scenes of this strange country.—Thinking you might be interested in a narrative of my rambles, I shall furnish a succinct diary of events. I will, however, preface these notes of the journey, by a few remarks upon the general outlines of the country through which I have passed.—About twenty miles above Benicia, or fifty miles from the ocean, the rivers Sacramento and San Joaquin unite in Suisoon Bay, being a part of the great Bay of San Francisco. The San Joaquin river rises in about the 36° of Latitude, and taking a northwesterly direction, being fed by numerous tributaries, empties into Suisoon, or San Francisco Bay. This river is very winding, being at least twice the length of a straight line drawn from its head waters to its mouth. I believe on all the tributaries of this stream, which flows from the California mountains, or the Sierra Nevada range, gold has been discovered. The river Stanislaus is a tributary of the San Joaquin. It is upon this river that some of the richest mines are now found. To correspond to the San Joaquin, the Sacramento flows from the north, rising in the range of mountainous country lying between California and Oregon. The vast regions drained by these rivers and their numerous branches, forms the immense basin of Upper California. All the rivers and streams flowing from the western slope of the Sierra Nevada range, and the eastern slope of the Coast range, empty their waters into the magnificent Bay of San Francisco, and from thence find a passage into the Pacific ocean. It was my intention, so far as I was able in a few weeks, to travel sufficiently over this country to obtain a tolerably correct idea of the portion of our country which has within a few months assumed so much importance in a political and commercial point of view. I now refer you to my journal.

An Excursion up San Joaquin.—June 27th, Wednesday. This morning embarked on board a small schooner bound up the San Joaquin to Stockton. After passing through Suisoon Bay, our vessel entered the river. We passed the "New York of the Pacific," on our left. This is the site for a city lying near the union of the waters of the Sacramento and San Joaquin. It has been surveyed and laid out. In the California papers "lots" are now offered for sale, but as yet only a solitary dwelling, and that a miserable structure, marks the spot! But in these days there is no predicting how soon a stirring town may be there located.* On entering the river, we very soon found ourselves sailing up a stream about two hundred yards wide, quite deep and having a slight current. On both sides were immense marshes covered with *tules* or large rushes, growing from ten to fifteen feet in height. Low willows, bushes, and other plants, such as grow in low and marshy places were every where to be seen. From the deck of the vessel it was possible to obtain only a narrow prospect. With a fine breeze from the N. W. we made rapid progress up the river.

28th. Last evening we came to anchor, as it would be quite impossible to navigate this river in the night. But Oh! the musquetoes! Never could persons be more annoyed. There was but little sleep on board. In the morning our mate was found to be so much poisoned, and swollen by the effect of the musquetoes that he was unable to remain on duty. During the entire day we sailed through the Tule-marshes. The features of the country remaining the same.

Arrival at Stockton,—29th. About two o'clock, to-day, we reached the thriving town of Stockton. It is a city of tents, there being only two wooden buildings in the place. The site of the town is well situated on a *slough*, (as it is called,) of the San Joaquin. These *sloughs* are quite remarkable and peculiar. The one upon which Stockton is situated, is several miles in length, being very deep and varying from 100 to 200 yards in width. It will admit vessels of 300 or 400 tons, which can come along the bank. Never could nature have formed more admirable docks. Goods are easily landed upon the bank and removed elsewhere. It is only a few months since the place begun to be built upon and now "lots" are selling from $300 to $5000, a piece. Hither resort, for supplies, the miners now digging upon the tributaries of the San Joaquin.

30th. To-day became acquainted with some of the inhabitants of the town. Mr. Belt, the Alcalde kindly furnished me lodgings at his store. I learned that a clergyman had never spent a Sabbath in the town.

*The truth of the opinion expressed in the above remarks respecting the possibility that the "New York of the Pacific," might soon become a flourishing town, is confirmed by the following notice of the place, which I copy from the "Pacific News," published in San Francisco, Sept. 29, just three months after I passed the site of the proposed city :—

NEW YORK OF THE PACIFIC.—Since our last notice of this beautiful site for a large city, we are advised that it is going ahead with rail-road speed.

There is now established from thence to Sacramento and Sutter cities, a regular line of steamers, and there is a fine river steamer building here by Capt. Blair of the U. S. Navy, that will be put upon the same route within twenty days; another is building at New York of the Pacific, by the company of the ship Mayflower, which will be in operation within the same time for the river San Joaquin. There are now lying alongside the banks of this new city, seven ships of the largest class, none drawing less than twelve, and most of them sixteen feet of water. The Sabina, Capt. Green, of Sag Harbor; Audley Clark, Capt. Dennis, of Newport, R. I.; Mayflower, Capt. Hicks, of New Bedford, Lenark, Capt. Woodbury of Boston; Henry Lee, of New York, Obid Mitchell of New Bedford, and one other name not recollected, and arrangements have been made for ten other vessels to go there in the course of the next week, besides which a Post Office has been established which is called the Junction Post Office. This name is given in consequence of its being the point where the exchange of mails which leave San Francisco, Sacramento and Sutter cities, and Stockton, at the same time will be made. A large hotel will be immediately commenced, and other buildings in addition to those already erected, are going up at various points in the town; and the piles of brick and lumber on the banks, indicate rapid and prominent improvement.

The proprietors it will be seen by their advertisement, by handbills and papers, offer most liberal terms to settlers who will make improvements, and as its growing importance is daily becoming more manifest, investments made there must be very productive.

The inhabitants never had a sermon preached in their midst On making known that I was a clergyman, arrangements were made for holding services on board a vessel now used as a store-ship, and moored alongside the bank.

July. 1. *Sabbath.*

At the appointed hour a respectable audience assembled; to which I endeavored to preach from the words of Paul recorded in Galatians 6th chapter, 7th and 8th verses. I am satisfied that to many it was most agreeable once more to hear the sound of a minister's voice proclaiming the gospel. Some had not heard a sermon before for years. After the services, I endeavored to explain the nature of my duties as a Seaman's Chaplain, and make known what our Society was endeavoring to do for the seafaring population. I heard one of the merchants remark that it had really been one of the quietest sabbaths he had witnessed in Stockton. I am satisfied that a faithful minister of the gospel would be well received by the inhabitants of this growing town.

Journey to Sutter's Fort :—July 2d. Made preparations to leave for Sutter's Fort, by land, a distance of seventy miles. A large business is daily transacted in Stockton,—probably not less than from $50,000 to 100,000. Vessels are daily arriving and departing; teams are daily leaving for the mines; hundreds of mules and pack-horses may be seen at almost any hour departing for El dorado. A daily line of stages is now established to the mines, a distance of ninety miles. It was 3 o'clock, P M., before I was able to leave, in consequence of being called to attend the funeral of a Mr. Shaw, who died the day before. I had visited him during his sickness, and learned that he was a native of Plymouth, Mass, and had been discharged a few months previously from the Whale Ship "South America" at Lahaina. Agreeable to a previous arrangement, about ten or twelve miles from Stockton, I joined a party bound to Sutter's Fort, to spend the 4th of July. We met at Dr. Isbell's. He is a nativeof Ohio, and graduate of Western Reserve College. His lady furnished us a most excellent dinner, and supper! We rode about six miles further this afternoon, and then stopped for the night, but alas, our condition was distressing. Musquetoes had no mercy. I am satisfied it would have been difficult for the good old Monk spoken of in the chronicles of Brazil, to have given thanks for the creation of Musquetoes, if he had suffered what we suffered that night. My kind host furnished me with the best lodging in his power, being a well covered western waggon, but the night slowly wore away, and I started with the dawn, upon a fleet California steed, which took me rapidly over the prairie, at the rate of nine miles an hour. We stopped to breakfast with a Mr Murphey, a native of the Emerald Isle, who has been several years in California, and gathered around him large herds of horses and cattle.

In crossing one prairie about twenty miles in width, I found but little to attract the attention, except a solitary grave, in nearly the middle of the prairie. It was that of a poor way-faring man, who attempted to cross the prairie a-foot, and alone. Weary, sick and exhausted, he laid down and died. His remains were found exposed by the road side, and at a short distance a bottle. Some friendly stranger had dug him a grave, and there was the little hillock in the midst of the prairie. I know not when I have passed the grave of a fellow mortal with more sad emotions.

The country between Stockton and Sutter's Fort, is very level, and dry. A part of the distance the traveller passes through extensive "oak openings," Weary and sunburnt, we arrived at the Fort, about 12 o'clock, having rode nearly seventy miles since 3 o'clock, of the previous afternoon.—

July 4th :—The morning was ushered in with the firing of cannon and crackers. It had been reported that Col. Fremont, Hon. T. B. King, and other distinguished visitors would probably be present on the occasion. In this respect there was a general feeling of disappointment. The Day however must not be passed unnoticed. Arrangements were made for public addresses in the Oak Grove lying between the Fort, and Sacramento City. At 1 o'clock, a numerous audience assembled when the following order of exercises was observed :—

Prayer, by Rev. S. C. Damon.

Reading of the Declaration of Independence, by Mr. Mc Lellan.

Oration by Dr. Deal.

Address, by Hon. Mr. Gwinn.

Almost every state of the Union, and part of the world had its representatives on that occasion.

Towards evening, in strolling among the trees, which occupy the site of Sacramento City, I chanced to fall upon the temporary abode of Prof. F. Shepherd, formerly connected with the department of Natural History and Chemistry, in a college in Ohio. He had just finished a cup of the beverage of China, and I spent a most agreeable hour with him conversing about the physical features of the country. Prof. S. is exploring the country, but with genuine Yankee spirit, is determined to pay his way! So having purchased an ox-team, he is engaged in the transportation of goods from Sacramento City to the "Mills." He remarked that his last trip produced a profit of $400, above his expenses! Teaming is more profitable than Lecturing!

July 5. In visiting the landing, at Sacramento City, I chanced to fall in with a miner, recently arrived. I learned that in a month he had collected $1,500, worth of gold. This man was formerly a miner in North Carolina, where one pennyweight, per diem, was considered as doing well, but in the California mines the average amount gathered by those who labor diligently is nearly one ounce. Not a few far exceed that amount, while many are discouraged and disheartened, obtaining scarcely enough to pay their board. I have met with many who have forsaken the mines, in disgust, for mining in California is hard work, severely testing the patience, energy, and constitution of the miners. As many are unsuccessful, as successful. Probably no class of miners have succeeded better than the Oregonians. They are hardy and industrious. Having crossed the Rocky Mountains, with their families, they know by experience, what it is to labor, and to labor hard.

Mormon Island, July, 6. Started this morning to visit the mines at "Mormon Island." About twenty-five miles from the Fort, situated on the South Fork. The weather was warm and the road very dusty. On my arrival I was kindly welcomed to the tent of Mr. Brinsmade and Mr Calkin, gentlemen, whom I had known at the Islands. They with a company of young men, are testing the qualities of a machine constructed on the "rocking" principle and similar to those used in the gold mines of Virginia. They were employing quicksilver to collect the particles of gold. I was glad to perceive that they were encouraged to hope their machines would not prove a failure, as a multitude of other contrivances, had proved. *

The implements of old aud practical miners, are exceedingly simple. It is a fact that an Oregonian with a hammer, axe, and saw, can in a few hours construct a good machine for collecting gold. The old fashioned New England *baby-cradles*, could, in a few minutes, be converted into machines for washing gold. Should the "Patent Baby-Jumpers" with elastic suspenders, supercede the cradles of olden times, some speculating Yankee might make his fortune, in shipping "old cradles," to California. If he should chance to send his merchandize at the favorable moment he might accumulate a fortune rivalling that of "Lord Timothy Dexter" of Newburyport, the exporter of warming pans to the West Indies!—

I found a company working at Morman Island, endeavoring to turn the current of the river and fancying that when this should be done, they would gather an immense quantity of the precious metal in the bed of the old stream. They may be successful!

The Mills.—July 7th. Left Morman Island early this morning for the "Mills" at Coloma, the spot where the gold of California was first discovered. On my arrival was kindly welcomed by the Rev. Mr Roberts, the Superintendant of the Methodist Mission. He was then eudeavoring to establish a Methodist Church. I was glad to learn that success will evidently crown his efforts. A "class" has already been organised. Mr. Roberts accompanied me through the busy and thriving village of Coloma, to the mill-race where only fourteen months, since a few small lumps of gold were found. Oh! the mighty movement throughout our globe which that discovery has already produced! It has turned the attention of the civilized world upon California.

July 8. The Rev. Mr. Roberts preached in the morning an eloquent sermon from Galatians, 6; 14, and in the afterpart of the day I endeavored to preach from the memorable words of our Saviour, "There is joy in the presence of the angels of God over one sinner that repenteth." During the interim of public worship the Sacrament of the Lord's supper was administered by Brother Roberts. Here we had the pleasure of spending the Sabbath with Capt. Gelston, of the barque Whiton, whose name is so intimately associated with efforts in behalf of Seamen, in the city of New York.

Kanaka Diggings.—July 9. Left this morning in company with Brother Roberts, to visit the encampment of Sandwich Islanders, while he would proceed to Sacramento City. About 10 o'clock I arrived at the "dig-

*Since my return to Honolulu, I have learned upon good authority, that the machines imported by Mr. Brinsmade, fully meet his expectations, and that he has succeeded remarkably well in disposing of the same.

gings" of a company from the Islands. It was exceedingly pleasant to be welcomed by many whom I had known at the Islands, and some of whom were from Honolulu. As there had been much difficulty between Americans and foreigners at other places, I was desirous of cautioning the Hawaiians to be upon their guard and not to give offence to Americans. I invited all to assemble, when about 75 made their appearance near a beautiful spring and under some excellent shade trees. There I endeavored to explain to them the causes of the difficulties between Americans and foreigners. They had some very sensible enquiries to make. I informed them that in the morning I should start, and should be happy to take letters to their friends at the Islands. Before I left, a mail of some twenty letters was made up. I was most kindly entertained during my stay among them. While there I was grieved to witness a man of my own color, an American, yes, and one who was an educated man—a lawyer—engaged in the abominable and detestable traffic of ardent spirits, with these few Sandwich Islanders. I felt indignant, and could not but express my mind to the man. He replied, "If I do not sell, others will." This old, and stale plea of the rum-seller, was all he had to offer. I was glad to learn that a majority of the Hawaiians were true to their tee-total principles, while those who were seduced had been long upon the coast and away from missionary influences! It was gratifying to learn that these people regularly assembled upon the Sabbath for Divine Service. which was conducted by two of their number, well established in the faith.

From this place I hastened my return to Sacramento City, situated at the juncture of the Sacramento river and its branch, called the American Fork. It is a rising city and place of much business. Lots are now selling at enormous prices. Should the mining business continue, Sacramento city will become one of the most prominent places in Upper California.

Trip down the Sacramento.—July 11. Embarked this morning to descend the Sacramento river. We were four days in reaching Benecia. This river far exceeds the San Joaquin in beauty, and its adaptation to navigation. It is much wider and its banks, instead of presenting an unvarying monotony of rushes, are beautifully adorned with stately forest trees. The sycamore, the willow, the cotton wood, skirt the banks. It may be said, in truth, that both rivers are now alive with numerous vessels, of various sizes, from a whale boat, to the bark of 300 tons. They are continually ascending deeply burdened with freight and their decks covered with men eager to make their fortunes at the mines. As the emigrant ships arrive at San Francisco, if they draw over twelve or fifteen feet of water, the passengers hasten on board some small vessel bound up either the Sacramento or San Joaquin river. These small vessels are now engaged in a most profitable business.

After an absence of nearly three weeks, during which period I have experienced inconveniences not a few, as a traveller, I was glad to return once more to my comfortable quarters on board the Massachusetts. The trip furnished me a good opportunity for witnessing the operations of the miners, and seeing the face of the country. In no part of California which I have yet travelled do I find any considerable portion adapted to farming purposes according to a Yankee's ideas. The immense ranges of hills and mountains are covered with a species of wild oats which furnishes at most seasons an excellent fodder for herds of horses and cattle. It is the opinion of some that the extensive *tule* marshes will eventually be drained and converted into rice-fields. This however will not take place until the mines cease to yield such rich products as are now gathered.

Remarks.—In travelling through the country I have met scores of seamen with whom I had become acquainted while at Honolulu. I was cordially welcomed, although in more than a single instance they exclaimed "*you* are the last man that we expected to see at the mines." A few words of explanation were however sufficient to set the matter right. There are vast numbers of seamen now digging in different parts of the mines, which still keeps the price of wages very high. Ordinary seamen now receive from $150 to $200, per month, and the wages of officers are in proportion. It is now exceedingly difficult to engage seamen on board vessels bound to foreign ports. One thousand dollars are offered sailors to ship on board vessels bound to the States, but they will not ship. Vessels are deserted soon after they come to anchor, unless the wages of seamen are immediately raised. It is quite impossible to foresee any material change in this order of things. It would be unreasonable to expect a change until the mines are exhausted, or the value of gold depreciates. That the latter result will not take place for years is quite certain, and to expect the mines are to be exhausted, is out of the question, for the present. This may not appear so manifest to an observer at a distance, but it is quite clear to any one upon the spot. Very many years must elapse before gold will cease to be dug in California. Mines that were worked last year are now being worked over, and the present "raise," (to use a miner's term) is nearly equal to that of last year. The mining country cannot be said to be yet explored. Parties on exploring expeditions are now penetrating the mountains in all directions. I recently heard, upon undoubted authority of one party which has been successful in discovering a very rich spot. They keep it a secret, going and returning from it under cover of darkness.

I was greatly surprised at the order and quietness that reign in the mining districts which I have visited, and I learn that this is generally the fact throughout the whole place. An occasional disturbance will occur, which will be reported in the papers, and from that the inference be drawn that such is generally the case, which is very far from being true. Personal property is much respected. Should a thief be caught, he is whipped, perhaps fined, and immediately sent out of the mining country.

At the present time, there exists a very strong prejudice against foreigners, among the Americans. Mexicans, Peruvians and Chilians, are especially subject to this prejudice. I took some pains to investigate the matter. This inimical feeling arises, first, on the general ground, that these rich gold mines belong, by right, to Americans; and that the citizens or subjects of other nations have no right to dig in these mines. They reason, other nations would not allow foreigners to work in their mines, and why should Americans allow it? Another ground of this prejudice, is the fact, that many foreigners came to work under leaders. They bring their supplies and expect to leave in a few months, having no intention of becoming citizens of the United States. The movement has already commenced, to compel them to leave the mines. Meetings among American miners have been held, and resolutions passed, strongly urging the point, that no foreigners be allowed to work in the mines. Such a meeting had been held at the "Mills" just before my visit. It has resulted in that quarter of breaking up one encampment of Chilians. A committee of Americans visited the camp and warned them off, limiting the period they would be allowed to remain, to twenty-four hours. Before the period elapsed all had quietly withdrawn. A party of Chilians had re-crossed the South Fork, and were encamped at the "Mills.' How extensive the movement will become, it is impossible now to foresee, but it is my impression that erelong none but American citizens will be found, at work, in the mining districts.

Some things exceedingly pained me, as I mingled among the miners, and one was the general prevalence of the impious practice of profane swearing. It appears to me, that I never heard so much profane swearing in the same length of time, as during my late tour. Drinking spirituous liquors is also woefully prevalent. Men too, are engaged in the traffic of strong drink, from whom better things were to be expected. Most sincerely I hope that the late emigrations from New England will exert a salutary influence throughout the territory.

It is however to be feared that vast multitudes of young men will sadly degenerate in morals, by coming to this country. I witness scenes almost daily that are sad. It does seem so strange that men, young and old, can think to trample upon the laws of God with impunity. It is exceedingly gratifying that good and faithful ministers of the gospel are directing their steps to this country.—Although wickedness may abound, yet it is an encouraging field of labor. Men are willing to listen to a preached gospel, and in many instances, even those, whose practice was any thing but what it should be, express a strong desire to have ministers of the gospel located among them There are to be found many good men in California, who do not yield to the current of wickedness. I hope their number is rapidly increasing.—They, as well as their unscrupulous neighbors, need the prayers of God's people in their behalf. From the prayer-meeting, the family altar, the house of God, and the chamber of secret devotion let supplications and prayers be incessantly offered for the people of this land. Hundreds and thousands of men are here strongly tempted to evil, and many will inevitably fall unless the grace of God interpose. Good men will come forth as gold purified in the furnace; hypocrites and false-professors will sink; while it should be the prayer of all good people that many may be, here, converted to God. Let fathers and mothers earnestly pray for their sons who have rushed and are rushing to the mines of California. Let wives pray for their husbands; let sisters pray for their brothers; let the church universal pray that

this land may become Immanuel's land. God still reigns. It is no fortuitous circumstance, that God has allowed these mines to be opened at just the moment when the American flag was hoisted over the territory.

It is no mere chance event that such an immense immigration is now pouring over the Rocky mountains, doubling Cape-Horn, and crossing the Isthmus. I should tremble, in view of the momentous results, did I not realise the fact that God reigns,—that he is at the helm. For years I have watched the movement of affairs at the Islands, and throughout the Pacific. I rejoice, in having so favorable an opportunity for observing the astonishing changes now transpiring on the Western Coast of the North American Continent. Powerful nations are now to be planted. Over the very waters of this Bay, now floating the vessel upon which I am penning these lines, a vast commerce is soon to pass. The God of Nature has so decreed. Cities to vie in magnitude with London and New-York, *must* here arise. Here is the wealth,—here tends the the tide of immigration, that tide cannot be turned aside.—It will ere long reach the Islands of the Pacific!

In a very few days,—by the earliest opportunity,—I hope to resume my labors as a chaplain to seamen at Honolulu, and by the grace of God, I hope to exert my feeble influence, in connection with my fellow christians there, to keep pace with the mighty movements of this most stirring, revolutionary, remarkable, wonder-working, and God-directing age.

Yours truly.

THE FRIEND.

HONOLULU, DECEMBER, 7, 1849.

The Trials of Ship-masters.

To the remark, that all classes of men have their trials, and difficulties, most certainly that of Ship-masters, forms no exception. It would seem as if the recent movements in California, increased those trials and difficulties a thousand-fold. An officer, or a sailor may get his discharge or do as they sometimes do, take "French leave," but not so with the Ship-master. When he takes command of a vessel, she becomes his "for better or worse," until the voyage is ended, or death separates them. He must keep in mind the owner's interests, and not lose sight of his own; he must govern his ship's company, not losing sight of their health and welfare. He has a character to sustain, and fortunate indeed, is the ship-master that fulfils all the trying, and responsible duties of his station, in a manner not to sacrifice the owner's interests or his own; not to acquire the charge of a "bad" master, yet maintain good discipline and authority on ship-board. We have been led to make these remarks, in consequence of looking over the private journal of a ship-master, which has fallen under our observation. From this journal, we have taken the liberty to copy the following remarks. The writer seems aware of the trials of his station, and speaks of a ship-master's "perplexing responsibility" in language becoming, and dignified. The journal everywhere abounds with passages indicating a thoughtful and even a philosophic turn of mind. The writer is a person remarkably fond of reading, and though his present voyage is not more than half completed yet he remarked that already he had read about "two hundred and fifty volumes."—

2*d*, *November*, 1845,—Begin with frequent showers of rain—the weather squally—winds light and variable from the southward and eastward. Several sails in company at 6 A. M. It opened to me by a call from the steward to hasten on deck, and assist the first officer in a scuffle with the cooper, who had refused to obey his orders, and had been very insolent in his language. While in the heat of passion, I thought to punish him severely, but after a little deliberation I concluded to give him a severe reprimand, which I did in presence of the whole crew, and then sent him to the mast head for the forenoon, and *promised* him for the next offence, that I would punish him, or any one else. I have so far on the voyage found him to be a very bad man—a very poor mechanic, frequently grumbling, and guilty of many other misdemeanors.

Few situations involve a more perplexing responsibility; or require a higher combination of rare talents than the commander of a ship. To be popular, and at the same time efficient, he must be able to enforce a strict and rigid discipline, without giving to it that cast of unfeeling severity, to which the despotical nature of a ship's government is extremely liable. He must be open and unreserved, and express even his sentiments of disapprobation with a freedom and frankness, which may lead the subordinate officer to that instantaneous conviction, that there is no suppressed feeling of bitterness, which may in any unexpected hour reveal its nourished and terrific strength. This plain and honest dealing, is infinitely preferable to a heartless hypocracy of manner,—it relieves all around from those disquieting suspicions which duplicity never fails to excite, and where it is united with a generous disposition, a well informed mind and a dignified demeanor, can never fail to secure affection and respect.

☞We have seen U. S. newspapers to the 15th of September, but they contain no news of special interest. The troubles in Canada occupy a prominent place. Editors rather make sport of the Cuba-Expedition! The cry is still, "Ho, for California!"

The 28th of November.

The question has, of late, frequently been asked, Why does the Hawaiian Government observe the 28th of November? The following document will afford an answer to the question:—

COPY of the Joint Declaration of France and Great Britain.

Her Majesty, the Queen of the United Kingdom of Great Britain and Ireland, and His Majesty, the King of the French, taking into consideration the existence in the Sandwich Island of a Government capable of providing for the regularity of its relations with foreign nations, have thought it right to engage, reciprocally, to consider the Sandwich Islands as an Independent State, and never to take possession, neither directly or under the title of Protectorate, or under any other form, of the territory of which they are composed.

The undersigned, Her Majesty's Principal Secretary of State for Foreign Affairs, and the Ambassador Extraordinary of His Majesty the King of the French, at the Court of London, being furnished with the necessary powers, hereby declare, in consequence, that their said Majesties take reciprocally that engagement.

In witness whereof the undersigned have signed the present declaration, and have affixed thereto the Seal of their Arms.

Done in duplicate, at London, the 28th day of November, in the year of our Lord 1843.

(Signed,) ABERDEEN, [L. S.]
" ST. AULAIRE, [L. S.]

The Day has by some been styled, that of the Hawaiian Independence. It is not uncommon, to hear persons speak of the United States Government being also a party to this agreement, but it is a mistake. The Government of the U. S., has however acknowledged the Independence of this Government, and we believe that 'Act of acknowledgment' precedes similar acts on the part of other Governments.

Shakespeare says, "*We* are such stuff as dreams are made of." The Bard of Avon doubtless said this figuratively, but a certain correspondent of the Polynesian, signing himself "Panorama" and sending his "straws from the gold coast" would apply this language literally to "us" dwellers in Honolulu. We have heard it said that a hard bed and stone pillows, make the sleeper dream most frightful dreams and see horrible sights, now, we opine, that "Panorama" must be reduced to this sad extremity! Let him beware, or "Mr. Monsieur Ave Maria Cogniac" may call him individually to account should he ever take up his abode at the Islands. Whoever reads "Straws from the gold coast, No. 11." will readily admit that "Panorama," might have appropriately taken a line of Byron, for his motto,

"I had a dream, but it was not all a dream"

An eye to Comfort and Health.—On board the Am. Whale Ship, "Orozimbo" we saw a convenient room fitted up, and provided with a stove, for the purpose of drying the clothes of the ship's company in rainy, and foggy weather. This is as it should be. The expense was trifling, but the advantages immense. If the owners and masters of ships would provide their vessels with accommodations of this description, would it not prevent much sickness, especially rheumatism among the crew? Would it not be a saving in the end? We know that "a saving" ought not to be spoken of, where life and health are at stake, yet, alas it is too true that both the health and lives of seamen would oftentimes be saved, if more attention was paid to the comfort of the crew in wet, damp and foggy weather. It is no wonder that scurvy, rheumatism and other ills afflict seamen, we have visited vessels in Honolulu harbor that we should certainly suppose would generate scurvy, fevers, rheumatism, if not the plague and cholera!

No Mail Yet.—Patience is an admirable virtue, and dwellers at the islands will need to keep it in active exercise. We have almost daily arrivals from California, but no mail. Report says it is coming, first in a Man-of-War, next in a merchant ship, next a brig, and finally it may arrive when the Whale-ships return from the coming cruise on the Line. For the gratification of all at the islands who are expecting letters, via Panama, we would state that according to the latest intelligence, *immense* quantities of mailable matter are lying in the San Francisco Post-Office, for persons at the Islands.

☞We are glad to welcome the Propeller Massachusetts, once more in our Harbor. She is now Commanded by Captain Knox, U. S. N. Since this vessel left Honolulu in the Spring, she has passed from the Quartermaster's Department of the U. S. Army, to the Navy, and is now on a visit to the islands to obtain a crew, that she may proceed on a surveying cruise along the Coast of Oregon, and California. Messrs Smith and Ogden, of the U. S. A., and Messrs. Goldsborough and Van Brunt, of the U. S Navy, came as passengers on board the Massachusetts. These Gentlemen form a joint-commission sent out by the U. S. Government to select proper sites for Forts, Dock-Yards, &c., on the Pacific Coast.

We learn that Capt. Wood, formerly in command of the Massachusetts, is now connected with the Steam Navigation Company, between Panama and San Francisco.

Small enamelled watches, set round with pearls and diamonds, are now the fashion abroad.

Speculation Mania.

Among the speculation manias of the Nineteenth Century, that in English Railroads, stands, perhaps, unsurpassed. The name of its King, Hudson, will be as immortal as Nero's or Sam Patch's. This Hudson, now prostrated under a torrent of fraud and bankruptcy, was for years the master spirit of the Rail-road mania. His audacity in his peculiar empire was as great as Alexander's. He comprehended the speculatoin like a true genius, and impressed others with a faith in his comprehension and integrity. He became the guider and controller of rail-ways in England. He built roads with a magic facility—made spleudid dividends on paper, and for years accumulated wealth, reputed to be unbounded. Widows and orphans with money to invest, and grey-headed speculators, brought their sacks of gold for King Hudson to invest, such faith had all England in his power to make gold hatch gold. Finally, the idolatry grew to such height, that a testimonial, magnificent enough for a real king, was given him. He was made Mayor of his native city, York, aud sent to Parliament from his borough. bought the estates of ancient nobility, and built residences that looked down upon the castles of dukes. Strange man—by what star watched, who could fathom? Yet, he was but a linen-draper, a moderate tradesman at the start. But all bubbles must burst. Within a few months, King Hudson has been stripped of his guise, dragged from his pedestal, and stoned by his old idolaters. His success and his wealth are discovered to be a delusion, a gigantic fraud, running undiscovered through his whole rail-way career. Exposed, ruined, and disgraced, the King's effects are to be brought to the hammer. The following is an auctioneering estimate of Mr. Hudson's estates now being, or about being brought under the hammer: Londsborough (bought of the Duke of Devonshire), £470,000; Baldersby, £108,000; Octon Grange, £80,000 Newby Park, £22,000; Gibraltar House, at Albert Gate, £18,000; making a total amount invested in lands and houses alone, within a trifle of £700,000.—[N. Y. Sun.]

☞Another Whaler Burnt.—On the morning of the 29th inst. the whale-ship Tobacco Plant, was discovered to be on fire in the forward part of the hold, and the fire had so far progressed that it was found impossible to subdue it. She was consequently scuttled, and now lies upon the reef, heeled over, a wreck. It is supposed to be the work of an incendiary, as was that of the burning of the Mercury, on the 9th inst.

Long and unsuccessful cruises, together with the strong desire to get clear of a ship and be off to California, are inducements strong enough to prompt men to the commission of crimes even of the most heinous character; among which the wanton destruction of ships and houses by fire are classed.—[Polynesian.

Filling up.—From the Pacific News of the 8th ult., we learn that there arrived at San Francisco during the months of August and Sept., by sea alone, 10,537 persons. The above is taken from the record of the harbor masters, and is supposed to be correct. It is computed that there have arrived in California, by land and sea, during four months 50,000 souls; and there is no cessation to the influx from all quarters.—Pol.

FROM OUR FOREIGN FILES.

Mr. O'Reilly has issued a circular in which he states his determination to extend the magnetic telegraph to the Pacific, as soon as Congress shall give him aid. Mr. Sandford J. Smith is immediately to traverse the route to Fort Leavenworth, to arrange with the citizens of the various towns which may be desired to be included on the telegraph line to the Missouri frontier, to be completed this summer.

The Wonder of the Age.—The town of Lawrence, in the State of Massachusetts, is only three years old. Yet it contains 13,000 inhabitants, has six and a half millions invested in manufactures—a Town Hall erected at an expense of $60,000—gas works—a public library of 8,000 volumes, and a fine park of 18 acres.

From the Lakes to California.—The Detroit Advertiser of the 13th Sept., states that the owners of the brig Eureka, one of the largest vessels on the Lake, have obtained permission from the British Government to let that vessel pass through the river St. Lawrence, and that she will leave Lake Michigan in the fall with a cargo of lumber, direct for California.

Richest Man in America.—The New York Journal of Commerce, in noticing the profit of $150,000 on the $60,000 cargo of ship John W. Carter, the first vessel cleared from New York, direct to San Francisco, after the treaty with Mexico, says: "At the time of the Carter's departure, nothing definite was known of the golden treasures in California. The substance of what had transpired relative thereto, was comprised in two letters—one from Mr. Colton, Alcalde of Monterey, and the other from Mr. T. O. Larkin, U. S. Government agent at Monterey. By the way, it may be stated that Mr. Larkin is now the wealthiest man in California. Valuing his real estate at San Francisco, at what it was worth there at the last advices, he would be doubtless, the richest man in North America."

The New York Courier and Enquirer regards Macaulay's History of England as the heaviest blow which has been struck at *absolutism* in government, since Napoleon's sword was sheathed. It is no wonder then that he should draw down on him the ire of old Blackwood.

The next number of the Edinburgh Review is looked for with great interest, as it is expected to contain a refutation of the attack made by the London Quarterly upon Macaulay's History.

A Bell, weighing between four and five hundred pounds, was brought out in the ship New Jersey, presented by Henry N. Hooper, Esq., of Boston, to the first free school established in this country.—[Pacific News.

A Hungarian lady, who was the means of delivering some Austrian officers into the hands of the Magyars, has been tried by court martial, at Presburg, and sentenced to be *publicly scourged*. This is the most brutal act on record.

Mr. Russel Tubbs, of New Hampshire, has given a thousand dollars to the Washington New Hampshire Aeademy, on condition that it be called by his name. We would not take it on the terms.

The Danish Navy.—The Danish Navy is strong and still increasing. They have 10 line-of-battle ships in commission, more that 1000 guns and about 10,000 seamen afloat—a larger number of men than is employed in the United States.

Rivets done away with.—An invention has recently been produced in Boston by Mr. S. Pratt, by which sheets of metal of any length, bands, hoops, &c., may easily and quickly be joined together without the use of rivets. Peculiar slits are made in each end of the collar ribbon, or the band of the hoop, or in the ends of the sheets of metal, which enables one sheet, or band, to dovetail into the other when a blow from the hammer joins them as effectually as by rivetting, and effects a great saving in time.

The Largest Merchant Vessel Afloat.

The following description of the fine Packet-Ship "Constellation" we copy from the "London Morning Herald" of May 30, 1849. It is somewhat remarkable to find in an English paper, so fulsome an account of a Yankee vessel, acknowledged to be "The largest merchant vessel afloat." The tables have turned since "The Bedford" Commanded by Capt. Moore, of Nantucket, came to anchor at the Downs, Feb. 3 1783. A London Journal of that date states that "She was not allowed regular entry, until some consultation had taken place between the Commissioners of the Customs and the Lords of the Council, on account of the many acts of Parliament yet in force against the *rebels* in America. She is loaded with 487 butts of Whale-Oil, is American built, manned wholly by American Seamen, wears the *rebel colors*, and belongs to the Island of Nantucket, in Massachusetts. This is the first vessel which displayed the thirteen rebellious Stripes in any British Port. The vessel is at Horsleydown, a little below the Town, and is intended immediately to return to New-England."

The splendid packet-ship Constellation, the largest merchant vessel afloat, having completed the discharge of her ponderous cargo, is now in our docks; and as she presents to those interested in the growing trade of "the good old town," as well as to the many strangers that will visit Liverpool during the present week, a field of attraction that cannot fail to awaken the enthusiasm of unqualified approbation, we subjoin the following notice of her :—

The Constellation was built at New York, by Messrs. Westervelt and Mackay, from the drawings and under the personal superintendence of William Skiddy, Esq. Her length of keel is 195 feet; her length over all, 226 feet; her beam measured from ceiling to ceiling 43 feet; and the depth of hold 28½ feet. Her tonnage, estimated by the customs (or new) measurement, is 1950 tons, but she possesses capabilities for the storage of nearly 3500 tons of ordinary goods. It would not for a moment be supposed that a vessel of such giantlike proportions would be completed without a due regard to comparative strength, nor has that important part been neglected. Her hanging and lodging knees are all cut from well-formed timber, of great thickness and depth in the throat, and each is finished in superior style. The timbering of the Constellation is excellent, and her sides, with ceiling and outer planking, form one solid mass. She has no bilge pieces, but the ceiling is from 7 to 10 inches in thickness, from the kelson to the stringer, which is 14 inches square; and thus her timbers and outer planking form a solid thickness averaging 3 feet 4 inches. Her kelson and sister kelsons are bolted perpendicularly to the keel, as well as diagonally and horizontally. The deck stancheons are kneed to the kelson, and in the upper decks are turned as pillars, but well secured by being bolted through an ornamental iron cap. In the fore peak there is an inner bow framing of great strength, and between each of the hanging knees there is a diagonal trussing running reverse from amidships, aft and forward, which adds materially to her longitudinal strength, and prevents the probability of her becoming "hogged." The Constellation is built of the very best materials, and her bolts and fastenings throughout are all square.

The appearance of the Constellation when afloat, though magnificent and mighty, is not exactly what would please a connoisseur in clippers; for in order to give her the greatest possible accommodation on deck, which is most advisable in the trade for which she is intended, the deck beam is carried so far aft that it gives her the appearance of being heavy in quarters; but we had the pleasure of seeing her "high and dry," and found her perfectly the reverse—in fact, if anything, her lines are too fine, and there can be little doubt, from her being clean fore and aft, and sharp without being wall-sided (as she is not in sailing trim till drawing 23 feet of water), she will carry a press of canvas that cannot fail to drive her through it. The stem is adorned with a well-carved figure of Commodore Truxton, the commander of the Constellation, American frigate; and the stern is relieved with beautiful scrollwork. She has all the modern improvements in rigging, and, from the royalmasts qownwards, lightning conductors of copper are let into the spars, and carried through the keel into the water, thus almost averting the possibility of accidents from electric fluid.

Many very excellent improvements are introduced for the comfort and convenience, as well as the health, of passengers, which so far exceed the ordinary arrangements that they merit the highest commendation. The Constellation has three decks, but, in order to give full light and a free current of atmospheric air, she is constructed with eight hatchways, of capacious measurement, as well as side-lights and ventilators fore and aft. The lower deck is appropriated solely to steerage passengers, with the exception of a store-room, which is latticed off. The upper deck is also divided abaft, to form a cabin, with permanently-erected state-rooms, for the more respectable emigrants, and though this only occupies a small space, being calculated for 90 persons, it is a great desideratum, as it presents an apartment far more comfortable than the cabins of many first-rate ships. The state-rooms are large, and are each distinctly lighted from the side; some are furnished with bedding, and all with toilet ware, washstand, &c. Down the centre is a long mahogany dining-table, and fitted to it are reversing seats. Each room is painted and grained in imitation of oak, and the whole apartment is symbolic of "home," "cleanliness," and "comfort."

The deck arrangements are most admirable. There is a topgallant forecastle, and a poop or quarter-deck, while amidships there are erections which are divided into several apartments, some of which serve as covered companion-ways. The passengers' galleys are all separated, so that each department of the ship has its particular allotted cooking-room. In the centre there is a sick-bay, fully fitted out, into which invalid passengers may be removed; another division forms a complete carpenter's shop, another an icehouse, a boys' room, rooms for the stowage of coals; and, in fine, every required convenience is presented. From the quarter-deck to the houses on deck there is a neat suspension-bridge, and forward gangways to the top-gallant-forecastle, making her almost a "four-decker."

Beneath the quarter-deck are the captain's cabin and the ladies' cabin, both of which are most gorgeously finished, and are not only lighted from the deck, but by stern ports. The ceiling is formed into panels by the deck beams, which are finished with neat mouldings, painted in dead white. An architrave of burnished white, relieved with graceful carvings in gold, surmounts the rich cabinet-work of the room. Pilasters enamelled in white and gold, with a relief of lake, neat gold caps, and veined marble pediments, form the state-room entrances. The intervening space at the sides, as well as all the doors, is formed in small panels, with octagon corners; the centres, as also the skirtings, are of highly-polished satinwood, relieved with deep-toned rosewood and zebrawood, the effect of which is most admirable. The couches and seats are upholstered in rich blue plush.

The state-rooms are roomy, and excellently arranged; in fact the gorgeous appearance the cabins present is at least equalled by the excellent manner in which the more important but less attractive tributaries of health and comfort are secured. But, like *Punch* with the "German Giant," this fine vessel is too long for our columns; and though we have given her measurement, we must hold a reserve for a future publication. There are many points we would notice did space permit, but one we must mention. She is pumped by a double-action machine, worked with two fly wheels. To the same shaft a powerful air-pump can at all times be attached to exhaust any foul air that may have accumulated between decks. It is also applicable to a fire-engine, and from a jet with hose of 75 feet in length an equal stream can be ejected.

A visit to this monster ship will repay amply the expenditure of time, and we feel assured that Captain Lucc will exhibit that attention and urbanity of manner to visitors which, with his thorough knowledge of the venturous career he follows, has placed him in command of the finest ship afloat. Since Thursday the Constellation has been visited by thousands; and amongst those on board yesterday was Lord Howard, son of the Duke of Norfolk, in company with Thomas Sands, Esq., (late Mayor of Liverpool), and George Brown, Esq., as well as many of our merchants. Lord Howard expressed himself highly delighted.

The Constellation is consigned here to Messrs. Spooner, Sands, and Co., but we learn that Messrs. W. Tapscott, and Co. undertake the passenger department.—*Liverpool Standard.*

Shipwreck.—The British Ship Mary Ann, arrived at Hong Kong, "reports the loss of the American whaler Ceres, with 1,400 barrels oil, on Osprey reef; crew arrived in boats at Booby Island, Torres Straits. The reef not laid down in any chart, is about lat. 13° 48, to 14° 8, S., and longitude 146° 30, East."—[Polynesian.

Religious Character of Mr. Adams.—The following is from an article in the Boston Recorder, by Rev. M. H. Smith, on whose ministry at Washington Mr. Adams was for some time an attendant:

"Nearly 25 years ago, he purchased a pew in the Second Presbyterian church in Washington. Since which time, when he has resided in the city, he has made it his regular place of worship, though occasionally he has attended church at the Capitol.

Not only so, but Mr. Adams displayed a spirit of generosity towards the church rarely equaled. It became embarrassed. That the house would be sold at auction seemed inevitable. He came forward and advanced nearly $2,000 and relieved the church. Every dollar of that sum he expended for public worship in that house. He deducted year by year his pew tax till the whole was paid.

He attended the regular services of the Sabbath when his health permitted. No distance, no storm prevented; he was an all day hearer. The great snow storm of February, 1848, which closed nearly all the churches in the country, did not keep Mr. Adams from the house of God. He was one of thirteen persons present in the Presbyterian Church at Washington, and returned home through the deep snow on foot, at the close of the service.

Mr. Adams said to me, 'I hold in great distrust all my early opinions on religion. As I advance in life I feel more and more distrust of all self formed opinions. I throw myself back upon the simple word of God. I receive what that teaches. I go where that leads. I should not, I suppose, be considered fully Orthodox, according to the standards of the Presbyterian Church. But I am not so far from them as people generally imagine. I enjoy the worship of that church. I am edified by its ministry.'

He was a christian; an humble, reverent student of the Bible; a man of daily prayer; one who endeavored to walk with God, maintaining a conscience void of offence towards God and man; one who trusted for salvation in the blood of Jesus Christ as a Lamb slain from the foundation of the world.

Religion guided him and made him what he was, a pure and a good man. And to religion belongs the great influence his character and example gave. Her power, her value, are seen in his life and death.

Young men, allow me to speak to you, and through you to the young men of the nation. Such an end you would desire, so honorable, so loved, so mourned. Be such your life. Copy this great example; the integrity, the high moral principle, the regard for the Word of God, the devotedness of the exalted dead."

THANKSGIVING.

In accordance with the laws of this Kingdom, and the excellent usage of Christian Nations, it has pleased His Majesty, in council, to appoint the Thirty-first day of December, next, as a day of public thanksgiving to God, for His unnumbered mercies and blessings to this nation; and people of every class are respectfully requested to assemble in their several houses of worship on that day, to render united praise to the Father of nations, and to implore His favor in time to come, upon all who dwell upon these shores, as individuals, as families, and as a nation.

Palace, Honolulu, Nov. 23, 1849.

Loss of Ship Niphon of Nantucket.—Capt Smith, of the Niphon, furnishes the following particulars of this disaster. The Niphon sailed from Honolulu, Aug. 6th, for home, in charge of her first officer, leaving her original captain, Gardner, at Honolulu, sick. On the 30th Dec., in lat. 36 30 N., lon. 72 30 W., experienced a tremendous gale which raged with great violence for 24 hours, and in which the ship sprung a leak of 1800 strokes per hour, requiring one pump to be kept continually at work. On the 3d of Jan., in lat. 36, lon. 71 56, another gale came on and increased to a hurricane, sudden and frequent changes, which raised a tremendous cross sea, and strained the ship very much, so that the leak increased rapidly, requiring both pumps to keep her free. When the gale abated, the 9th, only 8 men were left of the crew able to perform duty, (several being sick with scurvy) and these were fast giving out from continued exertion at the pumps. As soon as the weather would permit sail was made and the ship headed to the Northward, with a fair wind, which took us to lat. 37, lon. 70 50, when on the 12th, we experienced another hurricane in which the leak increased so as to render it impossible to free the ship, there being only 6 men, including officers, then able to do duty. On the morning of the 13th, it still blowing heavy, a sail was discovered to leeward, lying too under close reefed maintopsail, which proved to be the ship Hurculean, of Kingston, Capt. Chase, from New Orleans for Boston, who kindly consented to lay by us until the weather moderated sufficient to allow us to board her in our boats. At 4 PM. the water had gained upon us so that it was determined to abandon the ship, and all succeeded in getting on board the Herculean, with much difficulty, the gale being still very severe. The Herculean lay by the sinking ship during the night, and in the morning, the gale having abated, an attempt was made to board her to get out provisions and water, but she was found to have filled to the lower deck, and nothing was saved. The Niphon had 800 bbls sperm oil. John Manning, carpenter, was washed overboard Dec. 26, and lost. Three days after being taken off, Manuel Merches, seaman, died of scurvy. Capt. Smith desires to express his gratitude to Capt. Chase, of the Herculean, for his promptness in responding to his call for assistance, and for the kind and generous treatment extended to himself, officers and crew, while on board his ship.

The N. was a new ship, returning from her first voyage. There is insurance upon her for $10,000 in Boston, and $1,300 in Nantucket. Previous to leaving her she was set on fire, and was seen burnt nearly to the waters edge by the Chicora, of Boston.

Valuable Discovery.—The Rev. Mr. Pepper, a Presbyterian clergyman of Albany, N. Y., has invented, says the Springfield Republican, a compound of clay called Argello, which resembles in structure and appearance the richest variegated agates. It is to be used for door knobs, pavements, table tops and other ornamental articles. It surpasses in brilliancy any known variety of marble, and is equally cheap. The Hartford Whig speaks of it in the following terms: "No one, who has not seen it, can form an idea of its beauty, and illimitable variety of color. It is so hard as to resist any scratch except that of a crystal or diamond. Already Mr. Calhoun has introduced in the Senate a resolution, which passed instantly, to the effect, that all the floors of the public offices in the Capitol should be made of this beautiful material. A million dollars has been offered for the entire patent."

H. B. M.'s Consulate General for the Islands of the Pacific,
Honolulu, July 9, 1849.

It is hereby notified that Con. Gen. Miller has received a despatch from the Foreign Office, London, dated the 31st of March, instructing him to take proper steps for causing to be made known within his Consular District, that, "The Lords Commissioners of the Admiralty have offered a reward of £20,000 (twenty thousand pounds sterling,) to such private ship or ships of any country as may, in the judgment of their Lordships, render efficient service to Sir John Franklin, his ships, or their crews, and may contribute directly to extricate them from the ice."

The following is a copy of the minute of the Lords Commissioners of the Admiralty, transmitted on the occasion:—

Admiralty, 23d March, 1849.

The Lords Commissioners of the Admiralty are under the necessity of laying a supplementary Estimate for the relief of the Arctic Expeditions under Sir John Franklin and Sir James Ross, upon the table of the House.

Their Lordships having been apprized by the last letters received from Sir James Ross, that it was his intention to direct the Investigator to land all the supplies that she could spare, at Whaler Point, and to proceed to England, if no tidings of the Expedition under Sir J. Franklin were received by the whale ships now about to sail, leaving the Enterprize to prosecute the search alone,—have consulted the highest naval authorities as to the probable consequences of that step

They find it to be the unanimous opinion of those most conversant with the Polar seas, that such a separation of the ships under Sir James Ross, would be most perilous to the ship remaining in the ice, and would neutralize the entire object of the Expedition, if Sir J. Franklin's party were to be discovered at a time when the Enterprise had nearly exhausted her own stores. They have therefore determined upon sending out a fresh supply if provisions for both ships by the North Star, which is now fitting for this purpose, at Sheerness, with orders to proceed across Baffin's Bay, and as much farther as practicable in the direction of Lancaster Sound and Barrow Straits, looking out for the Investigator or her boats.

In the event of the Investigator not being fallen in with, the commander of the North Star will be directed to land the supplies at such points on the south side of Lancaster Sound, or other places indicated by Sir James Ross, as may be accessible to the North Star in sufficient time to secure his return across Baffin's Bay before the winter sets in.

The expense of fitting the North Star for the ice will be £6086, and the wages of the crew, stores, provisions on board, £6602, making £12,688 in all, which constitute the supplementary estimate now submitted to the House. But, in addition to this, Her Majesty's Government has determined to offer a reward of £20,000 to be given to such private ship, or distributed amongst such private ships, of any country, or to any exploring party or parties as may, in the judgment of the board of Admiralty, have rendered efficient assistance to Sir John Franklin, his ships, or their crews, and may have contributed directly to extricate them from the ice.

H. G. WARD.

☞ We are indebted to the *Honolulu Times* for the following "list of Officers of the U. S. Sloop of War, *St. Marys*, which vessel may be expected here in a few days, from San Francisco, via Hilo, bound to Macao, Hong Kong and Whampoa, China":—

Commander, Philip F. Voorhees. *Lieutenants*, John B. Marchand, C. A. R. Jones, Wm. E. Boudinot. *Acting Master*, A. C. Rhind.—*Surgeon*, Samuel L. Addison. *Purser*, Cameron Anderson. *Lieut. of Marines*, F. B. McNeill. Com. Sec.'y, Dabney C. Wirt. *Passed Mid.*, David Ochiltree. *Mids.*, Daniel L. Braine, Felix Grundy, Joseph L. Breeze. *Acting Mid.*, Edward T. Williams. *Boatswain*, John Crosby. *Sailmaker*, Wm. B. Feyitt. *Carpenter*, C. W. Babbitt. *Gunner*, John Brown. *Purser's Clerk*, James Conway.

DIED.

At Makawao, Nov. 5th, George, adopted son of William McLane, Esq, in the eighth year of his age. His afflicted parents and friends have much consolation in the hope, that the good seed which, I am happy to testify, was sown by the hand of Mrs. McLane, with a liberal hand, and watered with her tears, was not sown in vain. He seemed to be sustained by the hope of the Gospel, and died calmly, charging all around him "Not to weep for him." This is the fourth adopted child Mr. McLane has followed to the grave since the year commenced.

Makawao, Nov. 9, 1849. [Communicated.

At Lahaina, Charles Hoppel, a native of Prussia, and formerly of the ship Condor, of New Bedford.

On the 19th July, on board the steamer ——, bound from Chagres to New York, Geo. H. Gould, of the firm of Kelly, Gray & Gould, of Tahiti. He died of Cholera, in 36 hours after being attacked.

In Honolulu, 27th November, Thomas Davis, a Seaman, discharged from the "Capitol" He was a native of Liverpool, England, and came round Cape Horn, a seaman on board the "Tamaroo" to California.

Dec. 2d, Accidentally killed by the discharge of a gun Arthur Cooper, a Barber, late from California. He is reported to belong to Nantucket, Mass., where resides his father a preacher of the Methodist denomination.

Died in Honolulu, Dec. 2d, Mrs, Mary Holden, wife of Mr Horace Holden, now residing at San Francisco. She had for a long time suffered from a disease of the heart, but was finally called quite suddenly to bid adieu to the scenes of earth, and to leave behind a husband and family of young children to mourn her loss

A CARD.

Capt. Pendleton, late master of the Am. Whale Ship "Mercury" (burnt) desires to express his grateful acknowledgements to all in Honolulu, who have so kindly sympathised with him, in his late misfortune, but especially to his brother-shipmasters and others who have generously subscribed for his benefit.

Honolulu, Dec. 3, 1849.

Just Receved and for Sale

AT THE CHAPLAIN'S STUDY, a new and beautiful assortment of BIBLES in the English Language. They are bound in various styles, and can be had at prices varying from 37 1-2 cents, to $7,00 per copy.

☞ Seamen, and others, are informed that at the same place may be found Bibles printed in the following languages: German, Swedish, Danish, Dutch, French, Spanish and Portuguese.

N. B —Portuguese seamen are especially notified, that they can obtain copies of the Holy Scriptures in the old and new Testaments.

⁂It is left voluntary with seamen whether they receive a copy of the Bible as a gift, or pay the whole or a part of its value. Money received from the sale of Bibles is appropriated to the purchase of new supplies. tf

The Friend, sent Abroad.

Any person, by paying the annual subscription price of the Friend, ($1.50) in advance, can have the paper sent, by the earliest opportunity, to any port in the Pacific, or to any part of the U. States or England.

N. B.—By paying the additional sum of 50 cents, the paper will be sent for one year to the U. States, via California and Panama. Postage on papers to private persons must be pre-paid. The Friend, being a monthly sheet, and containing a full report of Marine Intelligence, will be found a useful and cheap method of communication with the mercantile community in Europe and the United States. tf

The Friend, Bound.

Bound volumes of the Friend, for one, or more years, can be obtained at Rev. T. Coan's, Hilo; Rev. T E. Taylor's, Lahaina; and the Chaplain's study, Honolulu. tf

Religious Books.

☞ The Seamen's Chaplain has just received an excellent assortment of Books published by the American Tract Society, including nearly all of their standard publications. These books are beautifully bound, and will be sold at an advance on the New York prices only sufficient to cover the expenses.

☞In the collection will be found some new and instructive books for children. tf

THE FRIEND.

A Trip from the Sandwich Islands to Lower Oregon and Upper California.

Leaves selected from "Our Log Book."

XXVI.—MINING ASSOCIATIONS.

After an excursion of near three weeks thro' the interior of Alta California, I was glad to take up my quarters once more on board the good and commodious ship Massachusetts.—Although I had been absent but a few days, yet I discovered that changes of an important character had taken place in Benecia, where our vessel still lay discharging her cargo. The work went forward very slow in consequence of most of the crew having run away, although their wages had been raised to $100 per month. When I left Benecia, there were only four vessels discharging, but on my return there were more than twice that number. New buildings had been erected. The keels of two small steamboats were laid, and the ship carpenters were busily at work.

One of the newly arrived vessels attracted my attention. It was the 'Leanore,' This vessel was owned by the 'New England and California Trading and Mining Association.' Having heard much respecting these Associations, and learned that nearly all had been dissolved, I resolved to make myself acquainted with the character and prospects of the 'Association' which came out on board the 'Leanore.' I heard much respecting the high character of all the members of the company, and the confident assertion made that although other associations might disband, yet this was one that would certainly hold together. A part of the company had left for the mines, others were at work upon their steamer, and the remainder engaged in discharging the vessel. Prospects were bright. I was kindly furnished with a pamphlet containing the constitution and by-laws of the Association. To these documents were appended the names of just one hundred members, nearly all of whom were from Boston and the vicinity. A public meeting preparatory to their departure from Boston, was held at the Tremont Temple, and an address was delivered upon the occasion by the Rev. Dr. Beecher.

The following is a copy of their Constitution, and as it is not long, I insert the same without abridgement :

ARTICLES OF AGREEMENT.—This indenture, made this 28th day of December, in the year of our Lord 1848, between the Stockholders of the New England and California Trading and Mining Association—Witnesseth :

That the said members, whose names and seals are affixed to the articles and by-laws, have formed, and do hereby form, a Joint Stock Company for the purpose of buying or chartering a ship, and freighting her, as the directors shall see fit, for the Coast of California, and engaging in such trading and mining operations as shall be deemed most advisable.

1. The business shall be carried on under the name of the New England and California Trading and Mining Joint Stock Company, and each party shall have a certificate of his share or interest in the capital and profits of the Company, signed by the President and Secretary.

2. The capital stock shall be thirty thousand dollars, which shall be divided into one hundred shares, of three hundred dollars each.

3. Every stockholder shall pay the three hundred dollars at such time and place as the directors shall determine, and shall incur no further liability whatever, for or on account of the Company, except his time hereinafter specified.

4. Each of the said members shall, after the sailing of the vessel, devote and give his personal attention and time, during reasonable hours of business and labor, wholly to the interests of the Company, and shall use his best skill, judgment and discretion, in promoting the profits of the business ; and during the continuance of this agreement, neither of said members shall engage in any speculation on his own separate account, or be in any way interested in any other business than that of the Association hereby established.

5. Neither said Company, nor any of said parties, shall assume any pecuniary liabilities, either in his own name or that of the Company, without the written consent of a majority of the Association, nor shall the directors nor any other officer or agent of the Company assume any pecuniary liabilities beyond the capital actually paid in, under any circumstances whatever.

6. Neither shall any of the said parties engage in or be concerned in any game of chance or skill by which money may be lost or won ; nor shall he make use of any intoxicating liquors, of whatever name or nature, unless prescribed by the physician or physicians who may accompany the expedition, under a penalty of five dollars for the first offence, ten for the second offence ; and if he still persists in offending in this manner, he shall forfeit his share in the joint stock and capital.

7. All business transactions, purchases, and sales, shall be transacted by the Directors, and for cash or barter paid down, and in no instance shall they vary from this law without a written vote of two-thirds of the stockholders.

8. No person shall be permitted to with draw from the business of the Association without furnishing a substitute acceptable to two-thirds of the stockholders, a certificate of which shall be given signed by the President and Secretary. Should sickness, accident or any other reasonable cause however, render it necessary for any member to leave the Association, he may send in a petition to the Association, and a majority of that body shall determine, a certificate of which shall be given signed by the President and Secretary ; furthermore, should sickness or any other misfortune caused by his services in the Association, render it necessary that he return home, a conveyance shall be furnished at the expense of the Company ; any person withdrawing himself in violation of the above, shall forfeit all his interest in the Association.

9. A statement of the affairs of the Association, shall be made in one year from the date of this instrument, and a division of the profits over and above the original capital invested, shall then be made *pro rata* to each and every member of the Association.

10. In case any disagreement should arise between the members of the Association, and they cannot adjust the difference between themselves, the subject of dispute is to be submitted to the Board of Directors ; and if either party refuse to join in this mode of proceeding, the other may proceed *'ex parte,'* and the decision of the Directors, in writing, shall bind the parties.

11. The accounts of the Joint Stock Company shall be kept in regular books for that purpose, and they shall at all times be open for the inspection of every stockholder.

And in testimony whereof, we have hereunto set our hands and seals, the day and year above written.

On leaving California, I resolved to keep myself informed respecting the success of the above mentioned Association. During the month of November, a vessel arrived at Honolulu, bringing one of the members.—From him I learned, that the company was disbanded—that their steamboat did not meet their expectations—that several members had died, and more were sick—that the property of the company was to be disposed of and the vessel sold, for the benefit of the parties concerned.

This however, is but one among scores, if not hundreds of similar associations, fitted out in the United States for digging gold in

California. As a new method of peopling a country, these associations are worthy the study of the political economist. California will be speedily peopled, but multitudes of individuals will be ruined in the enterprize. The sacrifice of health and life, it is to be feared, will exceed the calculations of the most desponding, yet as a whole, the mighty work of settling the country, will advance, and California speedily take her station as one of the sovereign States of the Union.

XXVII.—THE CONVENTION.

In mingling among the citizens, I observed the choice of delegates to the Convention, was a prominent subject of discussion. Although there is truth in the sarcastic remark of the poet

—"All hearts
Are chill'd into the selfish prayer for gold,"

yet the ruling passion now was a little relaxed. Political meetings were held at San Francisco, Benecia, Stockton, Sacramento City, and other places. These meetings were called in obedience to a Proclamation of Brevet Brig. Gen. Riley. All the machinery of party politics was immediately put in operation. Although the people of California might be strangers to each other, yet they did not appear to be strangers to Republican institutions. Speakers were ready at a moment's warning to harangue the people upon the importance of organizing a state government, and other questions of vital importance to the present and future welfare of California.

The results of the election I did not learn until after my return to the Islands, but it has been with intense interest that I have read the California papers showing the important results which have been so speedily accomplished. In the period of forty days the elections took place—delegates assembled at Monterey, and the Convention unanimously passed a 'Bill of Rights' which does great credit to the sound political wisdom of the people of California. As this document is of the utmost importance, being at the very foundation of the Constitution of the State, and forming a part of the history of this most singular, strange and remarkable of countries, I insert it in full.

BILL OF RIGHTS, *as adopted in Committee of the Whole in Convention, Sept.* 11, 1849.

Sec. 1. All men are by nature free and independent and have certain inalienable rights among which are those of enjoying and defending life and liberty, acquiring, possessing and protecting property and obtaining safety and happiness.

2. All political power is inherent in the people. Government is instituted for the protection, security and benefit of the people, and they have the right, at all times, to alter or reform the same whenever the public good may require it.

3. The right of trial by jury shall be secured to all, and remain inviolate forever; but a jury trial may be waived by the parties in all civil cases in the manner prescribed by law.

4. The free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall forever be allowed in this State to all mankind; and no person shall be rendered incompetent to be a witness on account of his opinions on matters of religious belief—but the liberty of conscience shall not be so construed as to excuse acts of licentiousness or justify practices inconsistent with the peace or safety of this State.

5. The privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require its suspension.

6. Excessive bail shall not be required, nor excessive fines imposed, nor shall cruel nor unusual punishment be inflicted; nor shall witnesses be unreasonably detained.

7. No person shall be held to answer for a capital or otherwise infamous crime, (except in cases of impeachment and in cases of militia when in actual service, and the land and naval forces in time of war, or which this State may keep, with the consent of Congress, in time of peace, and in cases of petty larceny, (under the regulation of the Legislature,) unless on presentment or indictment of a grand jury; and in any trials in any court whatever, the party accused shall be allowed to appear and defend in person and with counsel, as in civil actions. No person shall be subject to be twice put in jeopardy for the same offence, nor shall he be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty or property, without due process of law, nor shall private property be taken for public use without just compensation.

8. Every citizen may freely speak, write and publish his sentiments on all subjects, being responsible for the abuse of that right, and no law shall be passed to restrain or abridge the liberty of speech or the press. In all criminal proceedings or indictments for libel, the truth may be given in evidence to the jury, and if it shall appear to the jury that the matter charged as libellous is true, and was published with good motives and for justifiable ends, the party shall be acquitted, and the jury shall have the right to determine the law and the fact.

9. The people shall have the right freely to assemble together to consult for the common good, to instruct their representatives and to petition the Legislature for redress of grievances.

10. All laws of a general nature shall have a uniform operation.

11. The military shall be subordinate to the civil power; no standing army shall be kept up by the State in time of peace; and in time of war no appropriation for a standing army shall be for a longer time than two years.

12. No soldier shall in time of peace be quartered in any house without the consent of the owner, nor in time of war except in the manner prescribed by law.

13. As all men are entitled to equal political rights, representation should be apportioned according to population.

14. No bill of attainder, *ex poste facto* law, or law impairing the obligation of contracts, shall ever be passed.

15. Foreigners who are or who may hereafter, become *bona fide* residents of this State shall enjoy the same rights in respect to the possession, enjoyment and inheritance of property, as native born citizens.

16. Neither slavery nor involuntary servitude, unless for the punishment of crimes, shall ever be tolerated in this State.

17. This enumeration of rights shall not be construed to impair or deny others reserved by the people.

After reading this document, let no one deny that the Californians are novices in the science of government, civil, political and religious. Rights are here acknowledged which were extorted from King John at Runymede, fought for by the republicans of England in the seventeenth century, and by the inhabitants of the "thirteen Colonies," and such as were finally published to the world in the immortal American 'Declaration of Independence.

XXVIII.—RETURN TO SAN FRANCISCO.

Three months having elapsed since leaving Honolulu, I was exceedingly anxious to return. Embarked this afternoon, July 20, on board the Bremen brig, 'Antonie,' to sail from Benecia to San Francisco. Although homeward bound, yet I left a ship, the Massachusetts, which had proved an excellent temporary home. I had experienced kindnesses on board that vessel from commander, officers and crew, which I hope I may have it in my power to repay. In Capt. Wood, I found a true, generous and kind friend. He has not passed through life without sharing its trials and disappointments, but I trust, that hereafter he may experience none but the gales of prosperity. As a commander of a vessel, owned by the government of the United States, I was highly gratified to witness his conscientious regard to the government's interests. He was about to surrender a command which he had sustained during four years, with the highest credit, as an honest and honorable public officer. During a part of this period, the Massachusetts was in active service as a transport vessel in the Gulf of Mexico.

The "Antonie" was more than twenty-four hours in reaching San Francisco, as she was obliged to take advantage of the tides. On arriving at the anchorage, the wind blew more than "half a gale;" and the weather was cold and uncomfortable.

I learned that several vessels were soon to leave for the Islands. My arrangements were made to leave on board the schooner "Boston," Captain Cole. As she did not sail until the morning of the 27th of July, I had four days to spend among the citizens of San Francisco. The city had nearly doubled during the month I was absent in the interior. Stores and dwelling-houses had gone up in every part of the town. During the month of July, many thousands of emigrants had arrived. The great subject of excitement was the trial of the "Hounds," which I was glad to learn would undoubtedly result in the organization of a more efficient police.

XXIX.—VISIT TO SEE THE "LIONS."

The few days of leisure before the sailing of the "Boston," afforded me an opportunity of visiting the Old Presidio, the fort at the entrance of the Bay, and the Mission. But no excursion was more interesting than the one made in company with the Rev. Mr. Wheeler, to Seal-Point, situated four or five miles south of the entrance of the Bay. Although the afternoon was cold, foggy and disagreeable, in the extreme, yet we were amply repaid for our trouble, by seeing the "Lions." Long before reaching the sea-coast, we heard sounds unlike any which ever before fell upon my ears. These sounds

were apparently the combination of the lowing of oxen, the neighing of horses, the roaring of lions, the braying of donkeys and the bellowing of all other beasts, tame and wild. As we approached the shore, on a ledge of rocks, an eighth of a mile distant, we could distinctly see scores of these huge monsters. A good view of them, will prepare the mind to fully credit the following paragraph from an old voyager. "The sea-lion is a very strange creature, and of a prodigious bulk; I have seen some twenty feet long, which could not weigh less than four thousand pounds. Its shape is nearly like the sea-calf; but its skin is as thick as that of an ox; the hair is short and bristly; the head is disproportionally large; the mouth very wide; the eyes of a monstrous size, and the nose, which resembles that of the lion, has terrible whiskers, formed of such exceedingly stiff and bristly hair, that they might be used for tooth picks." Some lay motionless, others kept their heads erect as if upon sentinel's duty. Buffon in his natural history asserts that they are accustomed to keep sentinels on duty while others sleep. "They are of a very heavy and drowsy nature, and delight to sleep in the mire. Though very indolent and difficult to awaken, yet at those times they commonly fix some as sentinels near the place where they sleep, and it is said these sentinels give loud warnings when any danger is near. Their voices are very loud and of various tones; sometimes grunting like hogs, and sometimes neighing like horses." (The reader will find some curious remarks upon these animals in Buffon's Nat. History).

Long after we left the shore we could still hear their unearthly bellowings, drowning even the roar of the surf as it dashed upon the rock bound shore, or broke upon the beautiful beach stretching away to the south of the projection of land which we took as a post of observation, for beholding the *real* lions of California.

XXX, AND LAST.—PASSAGE TO THE ISLANDS.

This evening, July 26, bid farewell to my kind friends, the Rev. Mr. and Mrs. Hunt, and embarked on board the Boston. The following morning our vessel got under weigh, and quietly glided through the numerous ships at anchor in the Bay. It was a gratifying thought that I had now embarked on a homeward bound vessel, commanded by Captain Cole, a shipmaster whom I had known in former years as the commander of a whale ship. He retired from the seas and settled upon a farm in New Hampshire, but the shout "ho, for California," echoing among the hills of the Granite State aroused the spirit of the retired sea-captain, and made him bid farewell to home, without stopping to take a "second thought." He crosses the Isthmus and instead of going to the mines, purchases in company with others, the schooner "Boston," and sails for the Islands, where, in years past, he had obtained his recruits for whaling cruises.*

We had an exceedingly pleasant passage of fourteen days to Lahaina. Saw but one vessel after leaving the coast, and that was a passenger-ship with decks crowded with passengers bound to San Francisco. On landing at Lahaina, I was delighted to find the market well supplied with fruits and vegetables. The weather was warm but pleasant. Maui never before looked so charming and delightful. On landing, I was surprised not to hear every one exclaiming, "what a beautiful morning!" "How green the shrubbery!" &c., &c. This should not have surprised me, for in former times, I had loudly denounced "Lahaina dust," and the barren hills in rear of the town. The simple truth was, I had been witnessing different scenery and experiencing far different weather, from that enjoyed by the dwellers at Lahaina.

The next morning, I was permitted to look upon the mountains of Oahu. Never more shall my friends hear me complain, that the mountains, hills and valleys of Oahu are destitute of beauties, or that the climate is not the best in the world. I was glad to reach home in safety, and find all well.

*The Boston obtained a cargo of vegetables at the Islands, and on her return to San Francisco, sold Irish potatoes for $37,00 per barrel, that cost $2,00! This is one item of a profitable speculation.

Perhaps the editor owes an apology to the readers of the Friend, for occupying so much space with "leaves selected from our log book." He would simply remark, that the number might have been easily doubled, and he only regrets that those which have been selected, are not more worthy of perusal.

Fegee and Tonga Islands.

To The Editors of the Samoan Reporters.

GENTLEMEN,—In compliance with your request to furnish you with some account of my voyage to the Feejee and Friendly Islands, in H. B. M. Ship "Calypso," I beg to forward to you the following :—

Capt. Worth, having received instructions from his commander-in-chief to proceed to the Feejee and Friendly Islands,—to inquire into certain complaints which had been made relative to the murder of British subjects and other foreigners by the natives, to countenance and protect the Missionaries laboring on the various islands, and to assure the natives generally, that it is the wish of the British Government to be on the most friendly terms with them, so long as they act kindly towards foreigners residing among them or visiting their ports,—it was thought desirable, that I should accompany him.

We left Upolu on the 2nd of June, 1848, and in a few days were at anchor at the Feejees. Immediately upon our arrival, we were informed, that some of our countrymen had been cruelly murdered, without giving any provocation, and devoured by the savage cannibals. To prevent these diabolical acts in future, it appeared absolutely necessary to demand redress for the most recent act of the kind, which was the cool, deliberate murder of two industrious and well-behaved foreigners, who called at Ngunduvau, a village on the large island of Vitilevu, for the purpose of bartering with the natives for yams, fowls, &c. Having collected all the information necessary for the conviction of the parties, H. M.'s vessel was removed near the village where the horrid deed was done. The murderers were demanded, but the people refused to give them up; consequently, Capt. Worth had to commence hostilities. About one hundred men, with their officers, landed, under cover of the large guns. In little more than an hour, they were again in their boats, having thoroughly destroyed the village, killed six of the natives, and wounded many.

Another case was brought before us, which seemed to demand redress; but, upon investigation, there was reason to believe, that the foreigners had given some provocation which led to these tragical proceedings. Four foreigners had been murdered in the most brutal manner. The natives hauled up their schooner, killed and ate three of them immediately. The fourth, though cut badly with an axe, was bound and taken on shore, where they cut pieces off his body, roasted and ate it in his presence, telling him, that, ere long, they should eat the whole of him. After keeping him in this horrid state till the third day, they clubbed him, baked and ate him. A letter was addressed to the chief at whose instigation, it is said, the foreigners were murdered, informing him, that he must not consider the case as settled; that, if satisfactory proof can be obtained that this foul act was committed without just cause having been given by the foreigners, he would certainly be punished for such unheard of cruelty.

At Solevu, a village on Vanualevu, there are about thirty foreigners, mostly English and Americans, who are conducting themselves well. They have native wives, and some of them large families. They have four or five schooners, in which they go about trading with the natives. They have this village to themselves. We found it very neat and clean; doing great credit to those who reside in it. For the maintenance of good order and discipline, we recommended them to enact a few laws, which they appeared determined to do.

There are nine Mission families in this group, connected with the Wesleyan Missionary Society, occupying five stations. We visited them all; and were happy to find, that the indefatigable exertions of these servants of the Most High God had been crowned with such a large measure of success. More than *three thousand* have abandoned their heathen practices, and are now under Christian instruction. The whole of the New Testament has been translated, and is in the hands of the natives. Many of the books of the Old Testament will soon be ready for the press. Applications are continually being made from other islands in the group for Missionaries to reside among them. They have the assistance of *sixty* local-preachers and *thirty-four* catechists; but double that number might be usefully employed, if they could be obtained.

The Missionaries preferred no charges against the natives, demanding redress. Those who have embraced Christianity treat them very kindly; and, latterly, the heathen chiefs have been respectful in their behaviour towards them.

There are certain foreigners on the various islands, whose conduct is far worse than that of the heathen, and who prove a great hinderance to the progress of the Gospel. In many instances, their vile proceedings with the natives have been the cause of of the horrid murders which have been committed.

The Feejee Islands form an interesting group. The climate is good, the soil excellent, and the native produce usually

abundant. The number of inhabitants is estimated at 300,000, which is a mere fraction of what they are capable of supporting. The commerce of these islands is not very extensive. The vessels visiting the Feejees are mostly from Sydney and America, to collect Biche-de-mar, which they usually take to Manilla. Whalers touch occasionally for supplies; their number is not great, owing chiefly to the many reefs and shoals which abound in the immediate neighborhood of the islands.

On leaving the Feejees, we proceeded to the Friendly Islands, calling first at Tongatabu. On this island, there are five Wesleyan Missionaries, with their families, and two French Roman Catholic priests. There are about 10,000 inhabitants; 6,000 nominally Christian, and 4,000 heathen. George Tubou, usually called King George, is the ruling chief; but, as some of the heathen party are averse to him, he lives mostly at the other islands.

We next called at Kifuka, in the Haapai Groupe. Here we had the pleasure of meeting King George and his family. They visited the "Calypso," and appeared much gratified with what they saw and the attentions paid them. On their leaving the vessel, a salute was fired.

From Lifuka, we proceeded to Vavau, where we found everything going on well. At this island there is a printing establishment and four Wesleyan Mission families. Here, and at the Haapi Groupe, all are professedly Christian. On the faithful and untiring labours of his servants on the Friendly Islands, the Lord is pouring out His Spirit, though, perhaps, not so largely as in some former times; yet, the effects, at present, are such as to fill every Christian heart with joy. The Word of God, in their own language, is daily dispensed, knowledge is increasing, sinners are converted, and souls are ripening for glory.

The climate and productions of the Friendly Islands are similar to those of the Fejees. Their commerce is confined chiefly to cocoanut oil. Vavau is visited more by shipping than other of the Friendly Islands. This is principally owing to its having an excellent harbor for vessels of any size. Wood and water may be obtained and all kinds of supplies in abundance.

On leaving Vavau, we bent our course to Samoa, where we arrived on the 4th of August. Capt. Worth and his officers, with myself, were much interested with our visit to the various islands. We had abundant opportunities of witnessing the triumphs of the Gospel over the superstitious prejudices and cruel practices of the benighted heathen.

We found the charts by Capt. Wilkes, of the United States Exploring Expedition, together with his works, of essential service.

Your's respectfully,
GEORGE PRITCHARD,
H. B. M. C.

British Consulate, Upolo, Feb. 1849.

Advices from the Cape of Good Hope to the 15th of July, have been received.

The vessel which sailed from Bermuda, some time since, with the patriot Mitchell on board, had not arrived. The greatest excitement continued to prevail in regard to making the colony a convict settlement.—Several Government officers had resigned, and those who filled their places were attacked by a mob and their houses destroyed. The military were called out and several of the rioters wounded before they could be dispersed. It is thought that when the convict vessel arrives, there will be serious troubles.

THE FRIEND.

HONOLULU, DECEMBER, 20, 1849.

End of Vol. VII.

This number concludes the 7th volume of The Friend. Thanks to our worthy contributors and generous patrons. Your assistance has been of vital importance to the success of our enterprise. The many warm assurances that our sheet is a welcome visitor among the thousands of the sea-faring community in the Pacific, and the foreigners on the Islands, encourage us to announce that Volume VIII will commence on the 1st January, 1850. This date reminds us that we are now approaching the close of the first half of the nineteenth century—a marked era in the world's history. During what period of fifty years since the world was created, have so many remarkable events taken place as during the period from 1800 to 1850.—We leave the subject for our readers to reflect and moralize upon, as our limits will not allow us to follow out a train of thought here suggested. We conclude however, in the beautiful language of Professor Longfellow, the Poet: "*Look not mournfully upon the past: it comes not back again! Wisely improve the present; it is thine. Go forth to meet the shadowy future, without fear and with manly heart!*"

☞ The communication respecting the Preble's visit to Japan, by some unaccountable delay, did not reach us, via California, until after the arrival of the vessel in this port. We feel much indebted to a gentleman who so promptly forwarded the article for the columns of our paper. Of late we have had persons make inquiries respecting Japan.—Should any desire additional information, they may find articles relating to that country in the following numbers of the Friend, viz. Feb. 2, 1846, Sept. 15, '46, Dec. 2, '47, May 1, '48, Dec. 1, '48, and Oct. 1, '49.

☞ We copy the following extract from a letter of the Panama correspondent of the N. Y. Herald, of Sept. 15th. It appears "our" letters are safe!!

'There are upwards of four hundred letters addressed to individuals in California and Sandwich Islands, lying in this Post office. They are all from the United States. They will remain where they are, until the transit postage of one rial is paid on each.—Where is the mail agent, who was appointed a few months since, at a salary of $600 per month? He is certainly not on the Isthmus.'

☞ It was recently announced in the newspapers at the Islands, that the 8th of August would be observed as a National Fast Day throughout the United States, in view of the prevalence of the cholera. The following interesting remarks respecting the observance of the day in the city of New York and vicinity, we copy from the N. Y. Spectator of August 9th:

"We venture to assert that a day set apart for public humiliation and prayer, by recommendation of any Executive, was never more solemnly observed than yesterday was in this city, and so far as we can form an opinion from the sentiments expressed in our exchange papers, it was in like manner observed throughout the country. It has been seldom, since we became an independent nation, that a call from the supreme Executive for a day of public fasting, humiliation and prayer—only thrice, we believe—has been made; and we have no doubt that yesterday a larger number assembled for the purpose designed in the recommendation of the President of the United States, than was ever gathered on a like occasion. Hundreds of thousands were brought together, at the same hour and for the same purpose. Let us trust that the petitions offered to Him who holds in His hands the destiny of nations, were heard and will be answered; and that the poet's sentiments, so finely sung at one of the churches yesterday afternoon, will be realized by our favored nation:

'If vapors, with malignant breath,
Rise thick, and scatter mid-night death,
Israel is safe; the poisoned air
Grows pure, if Israel's God be there.'

The above remarks will apply also to the city of Brooklyn during the early part of the day, and to the respectable portion of the citizens during the whole day. The stores were generally closed, and the city had all the appearance of Sabbath quietness and decorum.'

☞ The opinion we heard expressed a few days since, was that when the whale-ships had sailed, Honolulu would assume its former quiet. This is however, far from being true. We are having almost daily arrivals from San Francisco, with many passengers, whose cry is "Away, from California!"—and lo, there come scores and hundreds from New South Wales, whose cry is "Ho, for California!" Our streets are thronged with strangers, our merchants are busy making shipments to the coast, and our market is well nigh exhausted of every thing in the 'eatable line.' Although we should be most heartily glad to supply our neighbors in California, with all they desire of a vegetable nature, yet we must say it is a source of rejoicing, that all kinds of vegetables will not keep to reach there, so that we shall not be reduced to famine. We hope soon to learn that cargoes of flour are on their way hither. The little at present in the market, is selling for 25 and $30 per barrel.

☞ We learn that a letter has been addressed to Capt. Roys of the American whale

ship Superior, by the British Admiralty, accompanied by 'copies of all the recently published Admiralty Charts,' in acknowledgement of the information which he furnished respecting the new whaling ground in the Arctic Ocean—(see Friend, Nov. 1, '48.) This is highly praiseworthy on the part of the British Admiralty, and should 'provoke' the Government of the United States to be more mindful of the enterprise of her citizens. The English Government looks after the interests of British subjects abroad, far more than the Government of the United States does after those of her citizens. If some American merchant vessel or whale ship should discover a northwest passage, we doubt whether the Government would think it worthy of notice! We recently noticed the fact in the newspapers, that the English Government had presented the master, officers and crew of an American whale ship with £1000, for rendering assistance to a British merchant vessel in distress on the coast of Brazil. The truth is, we should be glad to see Brother Jonathan a little more grateful for favors conferred by his sons and others. He might learn a lesson from Sir John Bull that would be of essential service to the interests of science and discovery, commerce and trade.

☞ The following description of a large piece of gold, weighing over fourteen pounds we copy from the Alta Californian of Aug. 2. When in San Francisco, our attention was called to it by Mr. Hooper, of the firm of Cross, Hobson & Co. and we took some little pains to see it. There was a report that a piece weighing twenty-five pounds had been found, although the report was not generally credited.

'We were shown last week at the store of Messrs. Cross, Hobson & Co. the largest specimen of gold we have yet seen. It is an irregular shaped *boulder*, composed of gold and quartz, and measures 7 inches in length by an average thickness of 2 1-2 inches, and varies in width from 6 3-4 to 3 inches. About three-fourths of its bulk is quartz, which we should think constitutes about one quarter of its weight. The weight of the piece is 14 pounds, 9 1-2 ounces, Troy, which at $16 the ounce, would give $2,840 as its intrinsic value were it all gold. Deducting one quarter for the stone it contains, and its value is $2,130. The specimen has been purchased of Don Francisco Leon of Mazatlan, for $3,500, and it is supposed to be intended for the cabinet of Queen Victoria.'

Fire, at Kailua, Hawaii.—The following extract from a letter of Rev. Mr. Taylor dated Lahaina, Dec. 7th, furnishes information respecting a destructive fire at Kailua:

'On the 27th of Nov. at midnight, the Rev Mr. Thurston's study was seen to be on fire. In a few hours, the building and all its contents were consumed. It was only by timely aid from the natives, in bringing water, that his dwelling house was saved. It seemed so evident that it must burn, that every thing was taken out in great confusion.—With the loss of his study is to be enumerated the loss of all his sermons, notes, and papers of all kinds, which had accumulated during the last thirty years—a loss to him which no money can repair. His desk, watch, chain, every pair of boots and shoes, except those he had on, and much valuable property, were also destroyed.'

Mr. Thurston is the only male missionary at the Islands, who belonged to the first company which landed here in the spring of 1820. He has never visited the United States or taken a foreign voyage. His labors have mostly been confined to the region in the vicinity of Kailua.

☞ In consequence of the irregularity of the Panama mails, and the non-existence of any definite arrangement with the San Francisco Post-office, we are disappointed in not receiving regular files of American papers. We would acknowledge our indebtedness to those gentlemen, Mr. Ladd and others, at San Francisco, who have forwarded late papers. We would also acknowledge a file of the Boston Courier from Lieut. Marchand, U. S. S. St. Mary. Persons arriving at the Islands with files of late papers, will confer a special favor by forwarding them to our office. The editor is desirous of both obtaining late news for the columns of the Friend and of keeping the Seamen's Reading Room supplied with newspapers from various parts of the world.

Wreck of the Brig Potapsco.—This vessel, 150 days from Boston, bound to San Francisco, touched at this port On Thursday night, the 13th inst. her cables parted and she was driven upon the reef, a severe gale blowing from the S. W. The crew was compelled to seek a safe retreat in the foretop until morning. No lives were lost. The vessel bilged and the cargo is much damaged, being a general assortment of 'Boston Notions.'

☞ Among the scores of the newly arrived, we are heartily glad to welcome those who propose to establish a Book store. Had they arrived three months earlier with a good stock of Books and Stationery, their encouragement would have been greater than just at present. Should Messrs. Bailey & Chapman keep on hand a good supply of 'goods in their line,' we are confident they will meet with encouragement.

A pious seaman, who has recently returned from a two years' voyage, says thirty whales were taken by the ship's crew during their absence. Three of these were taken on the Sabbath; but in taking these three, five boats were destroyed, and five men were destroyed, and five men were seriously wounded, two having their limbs broken, and one his skull fractured. In taking the remaining twenty-seven whales, only four boats were injured, and one man slightly hurt.—*American paper.*

The New York Evening Post gives the following account of a present to Mr Morse—'Our countryman, S. F. B. Morse, has received this morning, from Constantinople, an ornament of gold, set in about two hundred diamonds. It is the decoration of the 'order of Glory,' called the 'Nishan Istikar,' and is of the second class, the Sultan wearing the first. Mr. Morse has received this magnificent present from the Sultan, as a testimony of his approbation of his system of telegraphing.

Erratum.—Page 90, third column, second line, for *deny*, read, *say*.

For the Friend.

U. S. Ship Preble,
Hong Kong, China, May 27, 1849.

Mr. Damon:

Sir,—The following brief account of the visit of this ship to Japan, to procure the release of sixteen Americans imprisoned there, may be interesting to your readers.

Commodore David Geisinger, the Commander of the United States East India squadron, in January last, received information of the imprisonment, at Nagasaki, of fifteen men who reported themselves as the survivors of the shipwrecked crew of the American whaleship Lagoda, of New Bedford. The Preble was immediately ordered to proceed to Japan, and Captain Glynn was instructed to demand of the Japanese Government the release of the men.

We left Hong Kong on the 13th of Feb., to proceed on our cruise. When, however, but a few days out, having on account of a strong westerly current, made but little progress, the small-pox broke out on board, and the ship was forced to return to port. On the 7th March, when the ship was supposed free from contagion and was about to again proceed on her cruise, a second case made its appearance; which detained her until the 23d of March, when she finally sailed.

After our first return to Hong Kong, Capt. Glynn saw a copy of the Friend, of Dec., 1848, which contained an account of Ranald McDonald, who left the American whaleship Plymouth, when off the Japan Islands, in June, 1848, with the intention of endeavoring to learn something of that strange country and its inhabitants. This intelligence about McDonald was procured in an entirely accidental manner, and, although, by enquiry we afterwards heard more concerning him, yet it is not likely but for this paper we would have known that he was in Japan, before we sailed for that port, and from our observations of Japanese character we have good reason to believe that they themselves never would have mentioned to us the fact of McDonald being in their country. It is said that while the U. S. S. Columbus and Vincennes were at Yedo in 1846, there were seven Americans in prison in the vicinity of that place, and yet not a word was said to Com. Biddle about them.

After touching at the Loo Choo Islands, we arrived off the vicinity of Nagasaki, (on the west side of the island of Kinsiu) on the evening of the 17th April. We lay off and on that night, with the intention of running in the next morning.

On the morning of the 18th, we stood in for the harbor. As we approached the entrance we perceived several boats pulling off towards us. In a short time we could see persons standing up in the two foremost, waving large mats *from themselves towards us*, as much as to tell us to go away or stop.—To this we paid no attention but kept steadily on. The boats then pulled directly ahead of the ship, apparently endeavoring to intimidate and stop us, but on seeing that we did not mind them, got out of the way, all the boats then pulled away, but one, which came alongside, and one of the Japanese threw on board the ship three folded papers, which were stuck in the split end of a piece of bamboo. Captain Glynn ordered the stick and papers to be thrown overboard. The boat had separated from the ship after putting the papers on board, but on seeing them thrown overboard, pulled up, and one of the crew immediately jumped into the water and recovered them. All the boats then put off towards the shore, and the ship came to anchor.

The crews of these boats were almost entirely naked, and made a terrible outcry as they neared the ship. We have since learned that they reported the great haughtiness of the captain of the ship, both in refusing to stop and throwing overboard the papers.—Each boat had, in addition to a gray colored flag, a small blue one with Chinese characters upon it, which our interpreter said meant "Imperial service."

At 1, p. m., a Japanese interpreter named Morreama Einaska, who spoke English, attended by seven other Japanese, came on board "to enquire our object in coming to Japan, and to know why we had not anchored outside the northern Carallos, as ordered by a paper which had been put on board."

To these questions Captain Glynn replied "that he had important business with the Japanese Government, and that a paper or papers had been put on board the ship, but not considering such a proper manner of making a communication, he had ordered it thrown overboard. This interpreter then left the ship, and we got underway and stood into the harbor. While going in we met the interpreter in his boat, and he informed the captain that "permission had been given for the ship to anchor where she pleased." We anchored in sight of the city of Nagasaki, about two miles distant. We could see at anchor, three large Chinese junks, with a large number of Japanese junks, and with a glass the Dutch flag on the island of Desima. As soon as we were anchored about twenty boats bearing the small blue flag before mentioned came and anchored about us.—Besides these, we were soon surrounded by large numbers of other boats, each containing many Japanese, who appeared to gaze at the ship with great curiosity.

At 4 p. m., two Japanese officers of rank attended by the interpreter and a suite of about thirty gentlemen came on board.—They stated that they were sent by the Governor of Nagasaki to learn why the Preble had come to Japan. Captain Glynn replied that he was sent to procure sixteen shipwrecked American seamen. The officers said they would report this answer to the Governor. They left, to be copied, the three papers which had been thrown on board the ship in the morning and required a promise that their injunctions would be complied with. I have procured a copy of these papers, which I send herewith.* The originals were written in English and French. I understand that copies of these papers (except those parts which refer particularly to the port of Nagasaki) are kept ready, everywhere on the coasts of Japan, to be put on board foreign vessels approaching. We were about three miles inside the Northern Cavallos, when these papers were put first on board.

These officers and all the persons with them, wore each two swords, which is said to be a sign, in Japan, that the wearer is a *gentleman*. The officers themselves were distinguished from the other Japanese, by the superior richness and length of their swords. All the Japanese were dressed in a loose sort of gown, with light upper covering, a piece of silk or cotton, coat loosely around the legs, fastened at the waist, and straw sandals with blue cotton socks, such as were brought to Honolulu in the "Otaheite," in the fall of 1847. The *petticoat-trowsers* of the officers were of richer materials than those of their attendants.

Every available spot of land we saw about Nagasaki was under a high state of cultivation. By the mode of *terracing* peculiar to the Chinese and Japanese, every hill was cultivated to its very top, and we saw wheat growing half way up the highest, rockiest mountains.

The boats we saw were all moved with sculls, no oars being used. Each boat carried two or more flags. We often saw processions of boats moving from one part of the bay to another, which were all painted alike and carried the same kind of flag. At night each boat hoisted two lanterns, one at the bow, and another at the stern. Besides these, numerous lights, regularly disposed in rows, were seen burning on shore during the whole night. A gentleman of the Dutch factory told us that these lights were kept burning only during our stay in the harbor. We think that they were no doubt intended to represent lights seen through the ports of extensive fortifications. We were led to think thus from seeing in the day time, in the same place where the lights burned through the night, long rows of canvass stretched along and painted so as to represent forts.

On the 19th of April, Captain Glynn wrote in English to the governor of Nagasaki requesting the release of the shipwrecked seamen.

---

* *To the Commander of the vessel approaching this Empire (Japan) sailing under Dutch or any other colors.*

By express order of the Governor of Nagasaki you are requested, as soon as you have arrived near the Northern Cavallos, to anchor there at a safe place, and to remain there until you will have received further advice.

Very disagreeable consequences might result in case this order should not be strictly observed.

DESIMA.

Translated by the superintendent of the Netherlands trade in Japan.

To the Commander of the vessel approaching this Empire, sailing under Dutch or other colors.

By expressly order of the Governor of Nagasaki you are requested, as soon as you have arrived near the Northern Cavallos, to anchor there at a safe place, and to remain there until you'll have received further advice.

Please to answer as distinctly and as soon as possible, the following questions.

What is the name of your vessel?
What is her tonnage?
What is the number of her crew?
Where do you come from?
What is the date of your departure?
Have you any wrecked Japanese on board?
Have you anything to ask for, as water, firewood, etc.?
Are any more vessels in company with you, bound for this Empire?

DESIMA.

By order of the Governor of Nagasaki.
Translated by the superintendent of the Netherlands trade in Japan.

(Signed,) J. H. LEVYSSOHN.

WARNING.

To the respective commanders, their officers, and the crews of the vessels approaching the coast of Japan, or anchoring near the coast, or in the bays of that Empire.

During the time foreign vessels are on the coast of Japan, or near, as well as in the bay of Nagasaki, it is expected and likewise ordered that every one of the ships company will behave properly towards, and accost civilly the Japanese government officers, and all the Japanese subjects in general. No one may leave the vessel, or use her boats for cruising, or landing on the islands, or on the main coast; and ought to remain on board until further advice from the Japanese government has been received.

It is likewise forbidden to fire guns or to use other fire arms on board the vessels, as well as in their boats.

Very disagreeable consequences might result in case the aforesaid should not be strictly observed.

THE GOVERNOR OF NAGASAKI.

The boatswain, in one of the ship's boats, went out in the morning to "square yards," a duty which is performed on board a man-of-war every day while lying in port. Several of the guard boats gathered around him, stopping him from going out as far as he wished, and making signs for the boat to return to the ship. An under interpreter shortly afterwards came on board and remonstrated against any boat leaving the ship, saying it "was no good, not Japanese custom." He got no satisfaction, and the boat afterwards went out in the mornings without being molested, although several of the guard boats invariably followed.

During the 20th and 21st, nothing was heard from the Japanese authorities. We counted twenty-seven guns on four forts on the heights overlooking she ship, most of which had been mounted since our arrival.

We also, on the 21st, noticed the arrival of numerous boats from the seaward.

April 23.—This morning Captain Glynn sent for the interpreter to know why he had not received an answer to his letters to the Governor. The interpreter said that he would report this question. In the afternoon two Japanese officers came on board, and to them the Captain reported his question.—They replied, that they did not know. On being asked when the Governor would do so, they made the same answer.

Capt. Glynn then assumed a firm and positive manner, and told them, that *to-morrow* he must have a positive answer as to *when* his letters would be replied to, or when the men would be delivered up, if at all.

The day after our arrival, Capt. Glynn had put up a quantity of the latest newspapers he could procure for Mr. Levyssohn, the Superintendent of the Dutch Factory—to whom, from his isolated position aud restricted means of procuring intelligence from other parts of the world, they must be particularly acceptable—and had written him a note, requesting his acceptance of them. At that time the interpreter had refused to take them on shore, saying that he could not do so without the Governor's permission. This day he said he would take them, but wanted a copy of the note, which Capt. Glynn indignantly refused to give, saying that the matter was of no consequence, and that he could either take the note as it was, or leave both it and the papers. He finally took them.

On the afternoon of the 25th, two officers and the interpreter came on board the ship. After much talking and a great deal of evasion, they finally said, that in two days more the Dutch Superintendent would come on board, and the day after, the men should be delivered up. The Captain, without doubt, hastened their conclusions, by telling them that he *must* be immediately informed whether the men would be given up, or the ship would leave the bay without delay.

April 25th. This afternoon two officers and the interpreter came on board. After they had got into the cabin, they stated that Mr. Levyssohn was sick, and had been unable to leave Desima; but that one of his assistants had come in his place, and was waiting in the boat alongside. Capt. Glynn immediately ordered the officer of the deck to ask the Dutch gentleman aboard. The interpreter, however, interfered, and told the Captain that the gentleman could not leave the boat without the permission of the Japanese officers—who accordingly sent a person to tell the Dutchman that he could come on board.

Mr. Bassle, the Dutch gentleman, proceeded to read and verbally translate a document presented by the Japanese officers, written in Japanese Dutch; which gave a brief history of the imprisoned Americans since their first arrival in Japan until the present time. This account stated that the party of fifteen men had landed at Matsmai on the 8th of June; that they were immediately taken in charge by the Japanese authorities, and were finally sent from Matsmai to Nagasaki. Several of them had at different times, broken out of the house in which they were confined. One white man, named Ezra Goldthwait, had died in prison of fever, and a Sandwich Islander, named Maui, had committed suicide by cutting his throat. We were pleased to hear Macdonald's name numbered among the surviving fourteen men. Mr. Bassle informed us that but five Dutch are allowed to live at Desima. The number allowed in 1839 was eleven.

April 26th. Two Japanese officers, accompanied by the interpreter and two Dutch gentlemen, came on board in the afternoon to deliver up the men. According to the Japanese custom, the men had been given to the Dutch Superintendent, Mr. Levyssohn, who was to deliver them on board the ship.

Before the men came on board, the Japanese officers asked Capt. Glynn if he was ready and would leave the harbor as soon as he had got the men. The Captain replied that he had nothing more to detain him after he had got his countrymen. Mr. Bassle then read and translated two documents which the Japanese officers had brought on board. One of them purported to be an extract from the Japanese laws, the substance of which was, that shipwrecked seamen who were cast upon the shores of Japan, would remain in Japan, and be treated well, and sent, by the first opportunity, to Batavia in the Dutch ship, or to China in one of the Chinese junks. The document recommended that American vessels should not come so near the coasts of Japan.

The Japanese officers having left the ship, the men were brought on board. They all looked pale and thin, probably from long confinement. The boats in which they came to Japan, four in number, were brought alongside the ship. Their sheets and bags of clothing, and the oars, harpoons, and other whaling gear of the boats, were also brought on board.

By their own account, the men appear to have been very well treated before any of them attempted to escape from confinement. After that, they were put in the common Japanese prison, where they suffered greatly from want of clothing and by cold. Macdonald does not complain of ill treatment.

Each man was forced to trample upon a crucifix, to show that he was not a Catholic. Some of them endeavored to avoid stepping upon the crucifix, but the Japanese *forced* them to do so.

The Japanese interpreter 'Morreama,' told me that he acted as interpreter between Capt. Cooper of the Manhattan and the Japanese authorities at Yedo.

We sailed from Nagasaki on the morning of the 27th April.

The depositions of the men have been taken, and much valuable information about Japan has been procured, all of which will no doubt ultimately be laid before the public, and cannot fail to prove extremely interesting.

H.

"If you drink, you're dead men."—This is the language of Sir C. Napier, to the "96th Regt." on the 11th of May, 1849. In the "London Evening Mail" of June 30, we find an extract from the "Calcutta Star," giving an account of the review of Her Majesty's 96th, Regiment, by the Commander-in-chief, Sir C. Napier. At the close of the review, he addressed the soldiers, and the following are his concluding remarks.

"I am very glad to meet the 96th again. We have both been a good deal about the world since we were last together, and I am very glad to hear such a good account of the regiment. Your colonel tells me that you are good in conduct—that you have very few men in hospital. Now, this all right, and I hope you will continue to bear a good character. But let me give you a bit of advice—that is, don't drink. I know young men do not think much about advice from old men. They put their tongue in their cheek, and think they know a good deal better than the old cove that is giving them advice. But let me tell you, that you are come to a country where, if you drink, you're dead men.—If you be sober and steady, you'll get on well; but if you drink you're done for. You will be either invalids or die. I know two regiments in this country—one drank, the other didn't drink. The one that did'nt drink, is one of the finest regiments, and has got on as well as any regiment in existence. The one that did drink has been all but destroyed. For any regiment for which I have a respect (and there is not one of the British regiments whom I don't respect,) I should always try and persuade them to keep from drinking. I know there are some men who will drink in spite of the Devil and their officers; but such men will soon be in hospital, and very few that go in in this country ever come out again. I wish the 96th Regt. every success, and am very glad to see it in the state it is."

This is a good and sound advice to soldiers, but every word is fully applicable to sailors. Teetotalism is the only safe rule, for soldiers, sailors, and all other classes.—Intoxicating drinks kill those who use them. So say Physicians, and so say thousands of dying drunkards. If this be true, will not those making and selling intoxicating drinks, come in for a share of the guilt of killing their fellow men?

Lilliputian's Watch.—A watchmaker in New Orleans has completed a tiny watch, which is regarded as an extraordinary specimen of workmanship. The Picayune says of it: 'This wonderful time-piece is perfect; keeps good time. It is about as thick as three half-dimes laid one upon another—including case, crystal and all—and measures in circumference just the size of a half-dime. It has a spring case of enamel, gold dial and steel hands, cylinder escapement, with ten holes jewelled in ruby. It runs twenty-five hours without winding up. Besides it is so arranged as to admit of being either worn in a broach or finger ring.'

EDITOR'S TABLE.

"The Island Queen."

This is the title of "A Poem" in IX Books, by Mrs. ELLIS, author of "Women of England" and other popular works.—Pomare, the Tahitian Queen, is the Heroine of the work, which appears, from various allusions, to have been written during the period that the French were at war with the Society Islanders. To the reader familiar with the history of missions, generally, and the characterics of the French aggression at Tahiti, this is a work that abounds with interesting passages, by no means devoid of poetic merit. The authoress takes the ground that the English Government was wrong in not defending the rights of Queen Pomare, at the mouth of the cannon, or rather she blames the British public, not excepting the professedly religious portion, for its criminal apathy.

"Ours is the shame, that proud enlightened men,
And women too—nay even Christians—when
That cry came o'er the deep with fearful swell,
Scarce lent a listening ear, but turned to tell
Their sordid gains, as if a breeze had passed,
Or some frail leaf had fluttered in the blast.

"Here lies the stain upon our country's fame;
Here too begin the first low steps of shame."

* * * * * *

In the IXth book we find a passage referring to Captain HUNT, who commanded the British ketch *Basilisk*, on board which vessel Queen Pomare fled for protection. We are confident many of our readers will rejoice to see his services, not inappropriately celebrated in the poetical effusions of one of his fair countrywomen :—

"And must we then be still, nor feel, nor move,
When these sad tidings reach us o'er the sea—
Be still, nor weep—poor Island Queen—for thee?
Forbid it Earth! as thou forbid'st it Heaven!
Why was that deep, that noble impulse given,
Which glows so warmly in a generous breast,
And burns to aid the helpless and oppressed;
If we must sit and speak not of thy cause,
Nor of thy grief—poor, injured Queen—because
Thy foe is powerful, and thy kingdom weak,
And thy proud heart unpitied left to break.

"Who could believe that England would be still?
With such a cause gone forth, all hearts to thrill,
Would rest unmoved, intent alone to ply
Her busy arts, regardless of that cry?
'Twould seem as if e'en British seamen bold
Forgot the kindling themes they loved of old,
Save that amongst her friends—the faithful few
Who round Pomare pity's mantle threw,
True British seamen were the first to feel,
The last to leave her—warmer in their zeal
Than kings or statesmen—prouder to defend.
And there was one, a staunch and fearless friend,
Who bore the trembling sufferer to his bark—
Mid those rude billows safety's peaceful ark.
And there she paced the deck from morn till night
Stretching across the main her aching sight
For help that came not—there from day to day
She thought of one, her sister far away,
England's young Queen; but never failed her trust
That help *would* come; for was her cause not just?
And he too trusted. Who like him would not?
And gently soothed the royal exile's lot;
But not by him the glittering sword was won,
A monarch's gift, for gallant service done.
No; hushed in silence sleeps that not noble deed,
With all Tahiti's Wrongs—the hearts that bleed
Along her silent shores, once echoing low
The sound of prayer, where breathes no worship now;
But clang of arms resounds along the vale,
And soldier's laugh floats idly on the gale."

* * * * * *

If we have been correctly informed, Capt. Hunt's services were subsequently brought to the notice of the British Government, and he was promoted on their account.

THE FRIEND.

Visit of the French Sloop of War Bonite, to the Sandwich Islands, in 1836.

(*Translated from the French of Adolphe Barrot, for the Friend*).

Leaving Guayaquil, August 14th., 1836, we came in sight of Hawaii in the night of September 29th. From early morning we we looked with impatience, in the direction where we supposed the island would appear. According to the accounts of navigators, we ought, at a great distance, to perceive Mauna Loa, the mysterious summit of which had not, for a long time, been visited by any European. It entered into our plans to explore its almost inaccessible gorges, to cross over the snows which crown it, and inscribe our names upon its most elevated peak: this, for some days was the almost constant subject of our conversation. In vain the recital of the numerous accidents to which we should expose ourselves; in vain did they tell us of M. Douglas, an English naturalist, who had perished under the horns of a wild bull while engaged in a like enterprise; danger seemed to impart new attractions to our scientific expedition, and our eyes sought to distinguish, through the clouds, the theatre of our approaching explorations; but a thick curtain of vapors concealed it all day from our view. Yet this often happens; for the clouds, driven almost the whole year by the N. E. trade winds, are obstructed in their passage by the wall formed by this group of islands and rest upon the summits of the mountains.

The night came, and, about an hour before day, the noise of the breakers announced to us that we were near land. We tacked about, and at day break, found ourselves ten or twelve leagues from the island of Hawaii. We saw Mauna Loa rising with an almost imperceptible ascent, and we were astonished,—we even regretted not to find it more elevated. It will soon appear that we misjudged the difficulties which awaited us.

All day we were either becalmed, or the winds were so light that we were unable to approach the land; and it was not till the next day, Oct. 1st, that we went on shore.

Yet the 29th of September did not pass without affording some satisfaction to our curiosity. When four or five leagues distant from land, we saw a canoe approaching, manned with four savages. The desire to see us must have been strong indeed to induce them to venture so far in so frail a craft. We perceived that they were naked, their heads wreathed with foliage. It was the first specimen of man in the savage state, that the most of us had ever seen; and our disappointment may be easily imagined when we perceived that instead of altering our course to approach them, we were passing them as if scarcely worth our notice. I pitied the poor creatures; the ship passed within a hundred fathoms of their canoe; they seemed astonished; they stopped a moment, wiping the sweat from their faces with the back of their hands; then, as we receded we could see them making signs to us with their paddles: was it in token of friendship? or did they intend to reproach us? At length they turned their canoe towards the shore, upon which we discerned, by the aid of our spy-glasses, a number of huts in the midst of a grove of cocoa-nut trees.

The next day, our disappointment was more than made up. As we approached the land, an innumerable multitude of canoes put off towards us, and in less than an hour, the deck of the Bonite was covered with islanders. The first hesitated to come on board, but soon it was necessary to station sentinels at the ladders, in order to avoid a complete invasion. Almost all were naked, with the exception of a sort of girdle called *maro:* some, the aged principally, were tattooed; the names of many appeared, in large letters, on their arms or breasts. It was easy to perceive that they were beginning to

be accustomed to the sight of Europeans. From their bargains we were assured that civilized men had been here: *tala tala* (dollar) was what they most generally asked of us. In exchange for shells, fowls, hogs &c., which they brought us, they were willing to take nothing but money, or clothing.—And surely, to see the airs of importance which he arrogated to himself among his companions, who found himself the fortunate owner of a watchcoat, a shirt or any part of European apparel, easily convinced us of the value which they attached to such articles.

We were disappointed, for these were not the islanders of Cook, and although the influence of the savage state still bore sway in the physical and moral constitution of each individual, it was no longer that of simple and guileless nature, which we were expecting to study. Yet, in the first part of our intercourse with them we were the best able to discover the traces of what the Sandwich Islands were, at the time of their discovery: later, we found the villages more European; and the people almost as vicious as those who have civilized them.

A Portugese, who had lived on the island for a long time, and whom it would have been somewhat difficult to distinguish from a savage, served us as a pilot, and at noon we were anchored in the bay of Kealakeakua. More than 200 canoes were around the Bonite, yet we had not seen a single woman. This surprised us; for the accounts of divers voyagers had informed us that no sooner was a vessel arrived than it was surrounded by a crowd of women; veritable water-nymphs, who dove and swam around, pointing to the land and making known to the sailors, by their lascivious postures, the pleasures to be enjoyed there; but the pilot soon explained the mystery: "Ships," said he, "are *tabu* to women; it is a law of the missionaries." He gave us an account, at the same time, of several measures taken by the missionaries for the promotion of morals and religion: but more of this hereafter.

The bay of Kealakeakua extends four or five leagues from North to South; the deepest part is a sort of cove formed by two points of low land projecting into the sea on the right and left. This cove is commanded by a mountain, or wall of blackish lava, four or five hundred feet in perpendicular height. On the left is the village of Kaawaloa; to the right, surrounded with cocoa-nut trees, we perceived the village of Kealakeakua, which has given name to the bay, and beyond, towards the extremity of the point, another village, the name of which I do not remember. Upon the high lands, which overlook the bay, we distinguished a number of houses, and among them, one which seemed built in the European style: "it is," said the pilot, "the house of the missionary Forbes; the village is called *Upper Kaawaloa.*"

In the afternoon we went to Kaawaloa. We had some difficulty in landing; yet with the assistance of the Indians, many of whom plunged into the water to bring us aid, and after some falls upon the rocks, we found ourselves on terrafirma. The village of Kaawaloa seemed to be composed of only about fifty houses. The bread-fruit and cocoa-nut trees give to it a picturesque appearance. A species of English sailor, steward of Kapiolani, chief of this district, came to inform us that his mistress was ready to receive us. We readily accepted the invitation of the noble lady, and we found her seated outside of the enclosure which surrounds her house, in the shade of a bread-fruit tree. She was about fifty years of age, of a colossal stature, five feet and eight or ten inches at least, very corpulent and very ugly. She received us politely. I hesitated a moment whether, according to what I had read in Cook's voyages, I should not salute her in the ancient manner of the country, by rubbing my nose against hers; I looked to see if some gesture would not show that this was her desire; but, not observing anything in her attitude which betokened the necessity of the Hawaiian salutation, I was satisfied with taking the hand which she offered me. Some seats, real European chairs, were brought us and we seated ourselves around Kapiolani. Behind us were five or six women clad in immense sacks which they called robes, and in which they seemed very much embarrassed. All around us was the population of Kaawaloa, lying flat upon the rocks, supporting the chin with their hands and gazing upon us with fixed attention.—Kapiolani was entirely dressed in the European fashion; a gown of flowered English muslin, a sash of blue silk, and shoes, composed her toilet. Two tortoise shell combs secured her hair. On her fingers were three or four silver rings. The people around us formed as singular an assemblage as could any where be found. The only clothing of one was a watchcoat without buttons; of another, a shirt, and of a third, a pair of pantaloons: the most part were naked, with the exception of the indispensable maro. All the women, if not clothed, were at least covered. Some were clad like those mentioned above; the others, by far the greatest number, were merely enveloped in a sort of large shawl of Hawaiian cloth, (kapa).

Our conversation with Kapiolani was not long; the English sailor acted as interpreter. For the most part, a sort of grunt was the only reply she made to the long compliments which individuals of our party addressed her; yet there was upon her countenance a singular expression of kindness and natural goodness, and when we mentioned a desire to go to the upper village, on the morrow, to attend divine worship, the design appeared to give her great pleasure, and she offered to furnish us with horses and a guide.

On leaving Kapiolani we went to see the place where Captain Cook had been assassinated; it was where we landed. They pointed out to us the rock on which he was standing, when he received the fatal thrust. Looking around, we saw ourselves surrounded by the same people that had assassinated him.

The death of Cook was indeed a great misfortune; but perhaps it ought to be attributed only to himself and to the violence of his character; at least it so appeared this day. There has not been, nor is there now anything sanguinary in the character of this people; but they manifested an almost boundless respect for those foreigners, whom they considered as gods. There was need of all the horror, which the sacrilege committed by Cook, he seizing the king of the island, inspired, to urge them to this excess. We could see traces of the vengeance inflicted by the companions of Cook, after his death; they showed us cocoa-nut trees pierced by balls, and rocks shivered by the artillery.

The next day, we found at Kaawaloa the horses and guide, which Kapiolani had promised. Horses were imported into the Sandwich Islands from California, and they began to be numerous. Some of the horses sent for our use were furnished with English saddles, and the others with clumsy Mexican saddles. The distance between Lower Kaawaloa and Upper Kaawaloa is about three miles. There is a very good road between the two places, leading up the side of the mountain. This road is due to the missionaries, who resorted to a singular expedient to accomplish the object. They caused a law to be enacted, by which every person man or woman, convicted of adultery, should pay a fine of fifteen dollars (seventy-five francs), or in case of non-payment, should labor on the roads four months. The plan of the missionaries has been so much encouraged by the people, that this road was completed in less than two years, and that another road from Kaawaloa to Kailua (large town), a distance of about twenty-five miles, is almost finished: and so, thanks to the amorous propensities of the Hawaiians, we accomplished, very easily, the three miles which we had to pass over.

As we ascended, the appearance of the land changed. All these islands have evidently been formed by successive eruptions of sub-marine volcanoes; and as a proof of their origin, lava is everywhere found. It is seen near the shore such as it was, at the moment when it became hard. The different strata, one above another, can be distinguished; since, in proportion to the elevation, the lava, owing to the alternate action of heat and moisture, is more and more decomposed. On the table land where the rains are abundant, the lava is found changed into fertile soil; and there grows in abundance the *kukin* (candle-nut tree), from the nut of which is extracted a very clear oil, which is very good to burn. This oil has already become an article of exportation. The bread-fruit tree, the orange, the mulberry (imported from Manilla), the banana, the sugar cane, the taro (arum esculentum), its root growing in the water and which constitutes the principal food of the islanders, are also abundant. Through the crevices of the rocks escaped some dwarf shrubs, a species of the caper bush, the *nai-hi*, the root of which, as we were informed, serves the natives for tea. There was also the *tapa*, from which they make their clothes, and the flower of which, of a saffron yellow, rivals in brilliancy the magnificent blue, white and red convolvulus which bordered the road.

About midway between the two villages is the monument erected, in 1825, by Lord Byron, commandant of the English frigate Blonde, in memory of Cook. It is at the place where had been interred all that could be found of his scattered members: it is a post fixed in the midst of lava rocks, which have been piled up so as to form a sort of tumulus. A copper plate, upon which is engraved the name of Cook, is fastened to the top of the post. The epitaph, which accompanies it, has become illegible. The post is covered with the names of English sailors, who came to render homage to the

memory of the celebrated navigator. But this is a niggardly monument, and one is astonished that the English government has not been able to acknowledge, in a more suitable manner, the immense services rendered to navigation by Captain Cook. In the vaults of Westminster Abbey repose ashes, which have not so good a claim upon the gratitude of the people, as that which lies forsaken under the lava of Hawaii.

JOHN BUNYAN.

CHANGE OF PUBLIC OPINION.

Our readers are aware of the remarkable revolution which has and is now taking place in the public mind in England and other parts of the world, with reference to the prominent characters who flourished in England during the seventeenth century. The character of Cromwell, as delineated by the historians of the reign of Charles II, stands in striking contrast with the character of the Protector as portrayed by Carlyle and Macaulay. In regard to no individual, has public sentiment been so thoroughly revolutionized, as in the case of the character and genius of John Bunyan. Late in the eighteenth century, Cowper even, did not venture to do more than allude to him as the author of the Pilgrim's Progress, without mentioning his name.

"O thou, whom, borne on Fancy's eager wing
Back to the season of life's happy spring,
I pleased remember, and, while memory yet
Holds fast her office here, can ne'er forget;
Ingenious dreamer, in whose well-told tale
Sweet fiction and sweet truth alike prevail; [style
Whose humorous vein, strong sense, and simple
May teach the gayest, make the gravest smile;
Witty, and well employed, and, like thy Lord,
Speaking in parables his slighted word;
I name thee not, lest so despised a name
Should move a sneer at thy deserved fame;
Yet e'en in transitory life's late day,
That mingles all my brown with sober gray,
Revere the man, whose *pilgrim* marks the road,
And guides the *progress* of the soul to God."

The following sketch of Bunyan's character, drawn by the great reviewer and historian, Macaulay, is highly creditable to the writer, and is a most striking illustration of the change which is now going forward in public opinion. In one century, an illustrious poet ventures not to introduce his name lest it 'should move a sneer;' in the following century, the greatest historian of the age asserts —'Bunyan is indeed as decidedly the first of allegorists, as Demosthenes is the first of orators, or Shakspeare the first of dramatists.'

"To the names of Baxter and Howe must be added the name of a man far below them in station and in acquired knowledge, but in virtue their equal, and in genius ther superior, John Bunyan. Bunyan had been bred a tinker, and had served as a private soldier in the parliamentary army. Early in his life he had been fearfully tortured by remorse for his youthful sins, the worst of which seem however, to have been such as the world thinks venial. His keen sensibility and his powerful imagination made his internal conflicts singularly terrible. He fancied that he was under sentence of reprobation, that he had committed blasphemy against the Holy Ghost, that he had sold Christ, that he was actually possessed by a demon. Sometimes loud voices from heaven cried out to warn him. Sometimes fiends whispered impious suggestions in his ear. He saw visions of distant mountain tops, on which the sun shone brightly, but from which he was separated by a waste of snow. He felt the devil behind him pulling his clothes. He thought that the brand of Cain had been set upon him. He feared that he was about to burst asunder like Judas. His mental agony disordered his health. One day he shook like a man in the palsy. On another day he felt a fire within his breast. It is difficult to understand how he survived sufferings so intense, and so long continued. At length the clouds broke. From the depths of despair, the penitent passed to a state of serene felicity. An irresistible impulse now urged him to impart to others the blessing of which he was himself possessed. He joined the Baptists, and became a preacher and writer. His education had been that of a mechanic. He knew no language but the English, as it was spoken by the common people. He had studied no great model of composition, with the exception, an important exception undoubtedly, of our noble translation of the Bible.—His spelling was bad. He frequently transgressed the rules of grammar. Yet his native force of genius, and his experimental knowledge of all the religious passions, from despair to ecstacy, amply supplied in him the want of learning. His rude oratory roused and melted hearers who listened without interest to the labored discourses of great logicians and Hebraists. His works were widely circulated among the humbler classes. One of them, the Pilgrim's Progress, was, in his own life-time, translated into several foreign languages. It was, however, scarcely known to the learned and polite, and had been during near a century, the delight of pious cottagers and artisans before it was publicly commended by any man of high literary eminence. At length critics condescended to inquire where the secret of so wide and so durable a popularity lay. They were compelled to own that the ignorant multitude had judged more correctly than the learned, and that the despised little book was really a masterpiece. Bunyan is indeed as decidedly the first of allegorists, as Demosthenes is the first of orators, or Shakspeare the first of dramatists. Other allegories have shown equal ingenuity; but no other allegorist has ever been able to touch the heart, and to make abstractions objects of terror, of pity, and of love.

"It may be doubted whether any English Dissenter had suffered more severely under the penal laws than John Bunyan. Of the twenty-seven years which had elapsed since the Restoration, he had passed twelve in confinement. He still persisted in preaching; but that he might preach, he was under the necessity of disguising himself like a carter. He was often introduced into meetings through back doors, with a smock frock on his back and a whip in his hand. If he had thought only of his own ease and safety he would have hailed the Indulgence with delight. He was now, at length, free to pray and exhort in open day. His congregation rapidly increased; thousands hung upon his words; and at Bedford, where he ordinarily resided, money was plentifully contributed to build a meeting house for him. His influence among the common people was such that the government would willingly have bestowed on him some municipal office; but his vigorous understanding and his stout English heart were proof against all delusion and all temptation. He felt assured that the proffered toleration was merely a bait intended to lure the Puritan party to destruction; nor would he, by accepting a place for which he was not legally qualified, recognise the validity of the dispensing power. One of the last acts of his virtuous life was to decline an interview to which he was invited by an agent of the government."

The Sandwich Islands.—The suggestion occurs in a New York paper, that it would be well for the United States to annex the Sandwich Islands to the Union, giving the whole group the name of the State of Hawaii. The importance of these Islands, in view of the trade of the Pacific, being nearly midway between Oregon and China, is prominently urged, and the fact, no doubt, will be generally admitted. The depopulation which for some cause or another, has been going on throughout the group since its discovery by Capt. Cook, is also alluded to as indicative of the inevitable result that the Islands must, sooner or later, come into the possession of some civilized power. Thus we go —Annexation seems to be the word. 'Manifest destiny' is doubtless in the ascendant. A great country this, when it shall be fenced in.—*Baltimore Amer.*

This opinion does not seem to be popular at present, even among those strong in their American feelings. Uncle Sam—or some of his boys—seem to have got the idea that all the world desires to become annexed to the great North American Republic. His family, we think, is now quite too large, and to add 'the State of Hawaii' to the rapidly increasing sisterhood of States of the Union, seems rather premature. Suppose His Majesty, Kamehameha, and His Majesty's loyal subjects, do not wish to be annexed—what then? If the 'government organ' be the exponent of their views, such is far from being the case. To change the figure, if Brother Jonathan really desires to form a family alliance in this quarter, it would be *civil*, to use the mildest term, for him to make a fair proposition, and then wait for an answer!—Perhaps this is the very way Brother Jonathan would 'pop the question.' He may not think it best upon the whole, for Mr. Secretary of State to write His Majesty's Minister of Foreign Affairs upon so delicate a subject and hence prefers to have the preliminaries arranged by *we* the editors. The Friend being rather disinclined to interfere in matters of a political nature, would refer the affair over to his neighbors, the Polynesian and Times.

☞ The women in England are asserting their rights. They have established a club in Salisbury for cricket playing, and at the last advices, a match was about to be played between two elevens, one consisting of married and the other of single women.

THE FRIEND.

HONOLULU, JANUARY 4, 1850.

VOL. VIII OF THE FRIEND, AND HISTORY OF ENGLISH NEWSPAPERS IN THE PACIFIC.

As we enter upon another volume of our paper, we are reminded of our own history and that of other English newspapers in this part of the world. When we spread our sheet to the breeze, not another inscribed with English characters was anywhere to be seen along the whole extent of the western coast of North and South America, from Cape Horn to Bhering's Straits, or in any part of Polynesia. We can hardly realize this fact, when we consider that more than a dozen have since been undertaken. We shall first refer to those which were published, but became extinct, before the establishment of the FRIEND.

SANDWICH ISLAND GAZETTE, published weekly, at Honolulu, from 1836 to 1839.—S. D. Mackintosh, Editor. For about twelve months the *Sandwich Island Mirror* appeared monthly in place of the Gazette, in consequence of the want of printing paper.

THE HAWAIIAN SPECTATOR, published quarterly, at Honolulu, from January 1838 to Oct. 1839, conductedby "an Association of Gentlemen."

THE POLYNESIAN, *First Series*, published at Honolulu, from June 6, 1840 to Dec. 4, 1841. J. J. Jarvis, Editor.

THE FRIEND, published at Honolulu, from Jan. 1843, to the present time. During '45, 6 and 7, it was issued semi-monthly, but the remainder of the period, monthly.

THE POLYNESIAN, *Second Series*. Revived in May, 1844, by J. J. Jarvis, who has been succeeded by the following gentlemen as Editors—C. E. Hitchcock, C. G. Hopkins, and E. O. Hall.

THE HAWAIIAN CASCADE, published at Honolulu, from Nov. 1844 to Aug. 1845, by the Hawaiian Total Abstinence Union.

THE MONITOR, published monthly, at Honolulu, from Jan. to Dec. 1845, Rev. D. Dole Editor.

THE SAMOAN REPORTER, published half-yearly, at Navigator's Islands, from March, 1845, to present time.

OREGON SPECTATOR, published at Oregon City, O. T., semi-monthly, from Feb. 1846 to Feb. 1849.

THE CALIFORNIAN, published weekly, first at Monterey, A. C., in July, 1846, but subsequently removed to San Francisco.

THE CALIFORNIA STAR, published weekly at San Francisco, from 1846 to 1848.

THE NEIGHBOR, puhlished monthly, at Valparaiso, Chile, from Jan. 1847, to the present time.

THE OAHU FOUNTAIN, published monthly at Honolulu, from Jan. to Oct. 1847, by the Oahu Temperance Society.

THE SANDWICH ISLAND NEWS, published weekly, at Honolulu, from 1847 to 1849.

THE OREGON FREE PRESS, published weekly, at Oregon City, from April to Dec. 1848.

THE OREGON AMERICAN AND EVANGELICAL UNIONIST, published semi-monthly, at Tualatui Plains, O. T., from June 1848, to June 1849.

THE ALTA CALIFORNIA, now published at San Francisco, may be considered as succeeding the *Californian*, which was discontinued at the breaking out of the gold fever. For a short time the *Californian* and *Star* were united.

THE PLACER TIMES, published weekly at Sacramento City, from April, 1849, to the present time.

THE PACIFIC NEWS, published tri-weekly, at San Francisco, from Sept. 1849, to present time.

HONOLULU TIMES, published weekly, at Honolulu, from Nov. 1849, to present time.

About two years since, a semi-weekly paper was started at Lima, in Peru, but whether now published we are unable to state.—During the occupation of the city of Mexico by the American army, two daily papers were published there. We are are not aware as any other English papers have ever been started in those regions which may be styled *Pacific*.

For many years papers in the Spanish language have been published in Peru and Chile. A French lithographic paper was once published at Tahiti, and for many years papers have been published in the Hawaiian language.

SAILORS RUNNING AWAY FROM SHIPS.—It may seem like attempting "to dam up the waters of the Nile with bulrushes," for us to make an effort to dissuade sailors from running away from ships. Because this practice has become so common here and in California, does, by no means make it right for sailors to do so. When sailors ship on board vessels it is upon certain conditions, now when they run away it is manifest that on their part, they are unwilling to fulfill those conditions—they deliberately violate their solemn engagements. Not only do they violate their word, but a contract to which they have affixed their names. For men on land to trifle with their solemn engagements is looked upon as disgraceful, and when men do not fulfill their contracts they are treated as out-casts, or out-laws. Among seamen, a somewhat different code of laws and honor has obtained a footing. This is certainly to be deprecated. It tends to degrade them. Their word becomes of no value, and the contract, with their name affixed has no more binding power over their consciences, than a rope of sand to moor a ship. This ought not so to be. We have heard "the thousand and one," of sailor-excuses for running away, and are aware of the sailor's lot, yet, to justify their running away would be far from our thoughts. Rarely, very rarely, have we known a sailor to improve his condition, while not unfrequently his lot is worse than it was before. Sailors, no, no, you are running fearful risks in leaving your vessels until you have fulfilled your engagements.—An increase of $1, $5, or $100, per month, is by no means a sufficient compensation for leaving a vessel, before your engagement is up. Let masters and officers beware how they *force* men to runaway, and let sailors beware how they runaway for slight and trifling causes.

SOUND LEGISLATION IN WISCONSIN.

"No person shall hereafter be allowed to vend or retail spirituous liquors until he shall, in addition to any other requirements of the law, have executed to the treasurer, or other proper officers of the county, city, town, or village in which he may reside or carry on such business, a bond in the penal sum of one thousand dollars, with three or more sufficient sureties, who shall be residents of the place where such business is carried on, conditional to pay all damages the community or individuals may sustain by reason of such traffic; to support all paupers, widows, and orphans; pay the expenses of all civil and criminal prosecution made, growing out of, or justly attributable to, such traffic.

The fourth section is as follows:—

"It shall be lawful for any married woman to institute and maintain in her own name, a suit on any such bond, for all damages sustained by herself or children on account of such traffic; and the money when collected shall be paid over to her, for the use of herself and children."

Well done, Legislators of Wisconsin! May your example be followed by your brethren in other States, and lands, cursed with the traffic in intoxicating drinks. Why should not the vendors of strong drink support pauper-drunkards? Why should they not pay damages to that poverty stricken wife and children, whose husband and father they have robbed of his property? Why should they be allowed to fill the land with paupers, drunkards, and criminals, then call upon the community at large to pay the necessary tax? Most admirable is that feature of the act, making it lawful for the inebriate's wife to institute a suit for damages! We hail this law as a bright star in the west! May the lawmakers of other lands catch a glimpse of its mild rays. We are glad to observe the law highly commended in the public journals.—Keep it before the people.

HAWAIIAN THANKSGIVING.

Among the many good imports into this Kingdom, we rejoice that on the last day of 1849 a National Thanksgiving made its appearance. His Majesty, Kamehameha, could not have made an appointment that would call up in the minds of Americans in his dominions, more pleasing and time hallowed associations. Thanksgiving is a season as fondly cherished and observed by the descendants of the Pilgrims, as Christmas is by the people of the 'old countries.' To be sure, Thanksgiving on the 31st of Dec., when that occurs on Monday, rather shocks our ideas of the festival, which we have always been accustomed to celebrate on Thursday, and that Thursday ordinarily the last of November ; but not supposing it possible for the King to err, we would merely express the wish that his ministers will consult their almanac next year before making the appointment. This is however, of minor importance —we come to matters of graver moment.— Our design will now be briefly to record the public proceedings on the First Hawaiian Thanksgiving in the capital of the kingdom.

Under the general direction of the Rev. Mr. Armstrong, Minister of Public Instruction, all the Protestants Schools in Honolulu were assembled at ten o'clock at the stone Church. It was a pleasant spectacle, on a most charming Monday morning, to witness group after group of neatly dressed children wending their way to the place of gathering, conducted by their respective teachers.— Soon after the audience was seated, His Majesty, the Queen, the Premier, the Minister of Foreign Relations, and others, took their seats upon the platform. The following order of exercises was observed :

Singing, a chaunt,	by Native Choir.
Prayer, in Hawaiian,	Rev. L. Smith.
Speech, "	His Majesty.
Speech, "	the Premier.
Singing,	Pupils of Mr. Fuller's School.
Address, in English,	Mr. Wyllie, M. F. R.
Declamations,	Six pupils Mr. Fuller's school.
Temperance Song,	Native Choir.
Address, in English,	Mr. Turrill, U.S. Consul.
Singing,	Mr. Fuller's Pupils.
Address, "	Rev. Mr. Bond.
Singing,	Mr. Fuller's Pupils.
Prayer,	Rev. Mr. Clark.

We are unable to furnish translations of those addresses made in the native language or even present in full those delivered in English. That of Mr. Wyllie was written and delivered in English, but was translated by Mr. Armstrong. The general subject was the importance of industry among the native population. In the course of his remarks, we understood him to announce distinctly that the King was about to give lands, in fee simple, to all of his native subjects who would cultivate the same. His remarks were plain, practicable and sensible. Would that every sentiment he advanced was engraven upon the minds of all Hawaiians. To this end we hope a faithful translation will be made of his address, and copies sent to every grass hut from Hawaii to Niihau.

The remarks of the U. S. Consul were confirmatory of those expressed by Mr. Wyllie, besides containing a spice of teetotalism.— Those of the Rev. Mr. Bond, were well timed, and well calculated to impress the minds of the large assemblage of children present, that, if they were temperate and industrious, with the blessing of God, they might expect to be successful in life. He dwelt felicitously and forcibly upon the importance of the young taking correct ground upon the temperance question. They must not infer that because they were young and small, therefore they were destitute of influence:—

> " What if the little rain should say
> So small a drop as I,
> Can ne'er refresh these thirsty fields,
> I'll tarry in the sky," &c., &c.

Our limits will not allow that we enter more fully into a report of the exercises, but we will add, that to us, they were interesting throughout, although for years we have been accustomed to attend similar gatherings among the Hawaiians, hence we infer that to the numerous strangers present the exercises were not devoid of interest. The singing was good, and the declamations, excellent, although more than one of Mr. Fuller's pupils might have said :—

> " You'd scarce expect one of my age
> To speak in public on the stage."

After the closing of the exercises, the several schools marched in procession, with banners unfurled and streamers flying, to the Rev. Mr. Smith's church, where a feast was prepared a la Hawaiian. The tables were well supplied, although they did not " groan" as we have seen them, ere the Californians made such heavy drafts upon our markets. The building was crowded to overflowing, and all seemed delighted with the idea of enjoying so happy a thanksgiving. Among the amusing things at the feast, we could not but observe natives eating *poi* with a spoon, and their pale faced neighbors accomplishing the same *feat* with their fingers!

Thus, upon the whole, this teetotal, educational and festival mode of celebrating Thanksgiving being very agreeable, and we hope, useful, may His Majesty appoint another similar day, before the year 1850 shall end.

☞ We have several anonymous communications on hand, and most sincerely regret the contributors did not furnish their names. This ought in all cases to be done. Those who spend their time to write for the columns of a newspaper, are very liable to labor in vain, unless their communications are accompanied by their names, although their communications may be published anonymously. Editors, most of all people, dread imposition.

MELANCHOLLY OCCURRENCE.

HANALEI, KAUAI, Nov. 20, 1849.

Rev. S. C. Damon----My dear Sir----Capt Johnson of the brig Regia, in which vessel I came from Honolulu, requested me to acquaint you with a circumstance that took place during our passage down. On Sunday, the 11th inst, at 3 o'clock, p. m, and about eight miles from the land off Barber's Point, the steward, James Y Rogers, jumped out of the cabin windows into the sea, without any apparent cause whatever, It was blowing very hard at the time, and the vessel was running very nearly before the wind. The Captain, who was on deck, brought the vessel to the wind as soon as the alarm was given, and stood for a short time on the starboard tack----he then put the vessel about and stood on the other tack, until we judged we had passed over the spot where the man jumped overboard, but without discovering any thing of him,--- Unfortunately, Capt Johnson having lost both quarter boats in his passage to California, had none to lower. Some of the men on board the vessel said that he was an excellent swimmer, and they had no doubt he would reach the shore; but one man said that he had heard him say previous to his shipping in the Regia, that he intended to destroy himself. He was but a few days on board, and Capt Johnson, to whom I am indebted for much kindness and attention during the passage down, thought that the man's friends, should he be drowned, might obtain some knowledge as to his fate, through your instrumentality. I am, my dear sir.

Your humble servant, G. RHODES.

IS IT A HOAX?----Having long since given up expecting a vessel called " Smith Tuttle," from Newburyport, and commanded by Capt Sylvester, we were not a little surprised on reading the following in the New York Herald of July 7th Such a vessel we know, sailed about the time specified, for Oregon, via Sandwich Islands, and nothing has ever been heard from her, unless the following truly marvellous letter makes known her fate.

The following letter, says the Bridgeton, N. J Chronicle, June 30th, was found on the shore of the Delaware Bay last week, at Jones' Island, and brought to this office by Josiah Shephard, Esq, of Hopewell. It was found enclosed in a small vial, tightly corked and secured from dampness by sealing way being put on the cork. Whether it is really what its purport seems to indicate, or whether it is the product of some wag who delights in 'wonderments,' we are unable to say, We give it without vouching any thing further than that it was found as described, The folks 'down East' will be apt to know whether there is any reality in it or not.

"The American brig Smith Tuttle, of and from Newburyport, Nov. 29, 1846----This morning, while leisurely progressing along, and repairing the damages of a tremendous gale which occurred on Nov. 16, and which was very severe, we discovered to the east of us a large ship bearing American colors. She rapidly neared us, and when within about three miles, lowered the star spangled banner, and hoisted the bloody piratical flag. She still continued to near us very rapidly, and when at a distance of about a mile, two men were brought up from below and thrown overboard, and then shot, She appears to be a Spanish ship of 900 tons burthen or more ---as near as I can ascertain, there are about one hundred and twenty-five men on her. She carries a long tom, and also a large gun forward, which is on a pivot, besides numerous smaller ones. That we must all be murdered is certain, but we are going to die like free men in defence of our lives.---- One of my men has already fallen from a shot from the long tom. Generous stranger, who e'er thou art that findest this, do the kindness to an unfortunate man to publish in the nearest journal or newspaper, and you will oblige and confer a favor on SYLVESTER MCAPTE.
10 o'clock 7 minutes, a. m.

☞ There was received by the various lines of steam-ships of the West India and Oriental Mail Company, at the port of Southampton, during the six months ending June 30th, 1849, the enormous amount of $17,402,000 in gold and silver. Of this immense aggregate it is represented that $9,920,000 came from the mines of Mexico, Peru, and other parts of South America, and $950,000 in gold dust was brought over the isthmus from California. The total amount of gold and silver coin, bullion, and dust or grains from North or South America was $10,570,000. Of the balance nearly $3,000,000 was received from India in the shape of remittances from the East India Company, about two and a half millions from Constantinople, and one and a half millions from Portugal and Spain. If this entire amount had been in silver, it would have weighed four hundred tons; if it had consisted entirely of gold, it would have weighed thirty-five tons.

Seamen's Friend.

SCENES IN THE FORECASTLE.

January 6, 1846. At noon we saw St. Helena right ahead, and if the sight of land ever gladdened the hearts of any crew, it did the hearts of the crew of the ship H—, at this time. We had been out only sixty-three days from China, during which time we had seen land often, and once had communicated with the natives of an island, and from them had obtained fruits, vegetables, and live stock in abundance. We did not want provisions and our supply of water was ample, so that the sight of the island did not give us joy by promising to satisfy any gastronomic wants; neither were our sailors so much seized with historic romance, nor were they so much in love with a place made famous by witnessing the fulfillment of the destiny of a great man, that they would joyfully overhaul and get in readiness the chain and ground tackle of the ship, or cheerfully get out the anchor which for a time would hold them to a place hallowed by such scenes; neither did they care enough about witnessing the vacant tomb of Napoleon, nor desire so much as to gaze upon the rocky hill from whose brow he had surveyed the ocean, that they would joyfully and with alacrity go through the disagreeable duty which is attendant upon bringing a ship to anchor in a deep harbor. No, the gladness arose from a very different source.

In the forecastle of that ship, in a narrow berth, lay a young man just twenty-one years of age, who was wasting away with a slow disease, which was like the consumption, only it was unattended by any cough. This disease had defied the limited skill of the mate backed up by a medicine chest, and three ponderous volumes from the ship's library, by virtue of the reading of which, our chief officer had assumed the responsibility of prescribing for any among the crew who were sick. St. Helena was the invalid's last hope, and his only chance for life lay in his leaving the ship at that island, for nothing on board could avail him anything, and disease was fast, very fast, wasting him away, seeming desirous of leaving as little as possible for the grasp of death which was so near.

When the island hove in sight, the sick man was instantly put in possession of the joyful intelligence. The news seemed to give him a new hold on life, for a time the progress of his disease appeared to be stayed, and he rallied himself to make a few preparations for going on shore.

It was the prospect of having our shipmate restored to health, which caused joy in the hearts of the crew, at the sight of that island. We desired to have something effectual done for his recovery. We had long been pained by seeing him dying before our eyes, and the sight was indeed painful, for besides witnessing the hopeless condition of our shipmate, we were continually reminded of the uncertainty of life. Feeling all the time that death was in our midst, a train of thought was started in our minds which we could not avoid, and which we cared not to pursue. This train of thought was disagreeable to us, and we hoped to remove it by the removal, and consequent recovery of our shipmate.

We neared the island slowly. The trades which had blown very fresh before, now almost died away. Death seemed to have seized upon the winds that they might not hurry from his grasp the young victim so nearly his own. Our progress was so slow, that it was far into the night before we were well up with the island. The night was very dark, and the captain was not acquainted with the entrance to Jamestown harbor, indeed, he did not know exactly where the entrance was, and the night was so dark that we could not distinguish many of the landmarks laid down on the chart. As we floated by, we saw lights, but so scattered, that our captain did not suppose that they could be the lights of a town, he therefore kept on his way, hoping to see the harbor when we should get beyond a point of land which loomed up ahead. But he was mistaken; the sail round the point showed us no harbor, and revealed to us the light of no town.

The captain was at a loss, and he evinced the perplexed state of his mind by his hurried step on the quarter deck, and by the rapidity with which he gave orders.

While in this state of uncertainty, we saw through the darkness, an object moving by, and hearing the sound of oars, we concluded that it was a boat belonging to the island.—The captain hailed, and was answered. He then inquired where Jamestown harbor was. The answer was returned, that we had passed it, that it was just round the point which we had left astern. This information was by no means pleasant to the captain or to us, the crew. We feared that the captain might not turn back, and then we saw nothing but certain death for poor Jack.

The result proved our fears to be correct. The captain dove down into the cabin, apparantly in great rage; and for a few minutes we were in suspense. This suspense soon gave way to the worst certainty, for when he came on deck again, he gave the unwelcome order to keep the ship on her course, and to loose the fore and mizzen top-gallant sails and the main royal.

It was vexatious to be kept up as we had been all night, humbugging at the braces and swinging the yards for every little breath of air that came off shore, and this vexation and weariness but poorly prepared our minds for the absolute agony of disappointment, or for the melancholy duty of telling Jack that his doom was sealed. When we told him that we had failed in making the port, but were now pointed for home with a fair wind, and when we bade him keep up his courage by thinking how soon he would be with his friends, he exclaimed with a voice choked by bitter disappointment, 'I shall never see home again—never!'

The ship kept on her course, and with us the routine of ship's duty went on as before. We soon forgot our disappointment, or remembered it only when thinking of the sick man. From *him* hope had fled. As we removed the anchors from the bows, the anchor of hope seemed to be torn from his bosom. Day after day he wasted away and grew weaker, till he required the constant presence of a watcher. The best berth in the forecastle was given up to him, and the most delicate and nourishing food was prepared for him, and he received from all hands fore and aft, every attention which could be given. All were desirous of making his last moments as comfortable as possible.

Until this time he had read a great deal, but now he was too weak to hold a book and too ill to apply his mind long to any subject. He would once in a while call in some one to read to him from the Bible, but he could seldom endure more than one chapter at a time. I often read to him in this way, and the questions which he asked showed that he took great interest in the exercise. As I sat by him and read portions of scripture, I would have given all I possessed had I known how to converse with him about the concerns of his soul; but he never asked any questions upon this topic, and at this time I was very indifferent about myself, and very thoughtless, and consequently not the one to direct a person's steps towards the path which I cared not to tread.

The mate was a pious man, and often prayed in the forecastle, and conversed with the sick man, but no good results were apparent after the conversation, for the dying man seemed as indifferent as he had been through life.

Thus matters went on till we had crossed the line and entered the latitude of uncertain and boisterous weather, when one dark, rainy night I was ordered to go forward and watch with Jack. I went forward and sat down by the side of his berth and took his hand in mine that I might keep account of his feeble pulse. The forecastle, although on deck, was very close and damp, and the water which had found its way in through the seams on the weather side, and around the catheads, ran across the deck in a dirty stream and hid itself behind the chests down to leeward. An old lamp which gave a dubious light, was suspended from a beam overhead, and by its faint flickerings the outline of the forecastle could be dimly seen with its double tier of berths in some of which could be discerned the upturned faces of the watch below.

The ship was going about one point free, and as there was some sea on, she pitched badly and took in considerable water over the bows. Every wave that struck the ship shook her from stem to stern, and as they beat against the bows with trip-hammer force they seemed as it were the furious knocking of the angel of death impatient for admittance.

Jack seemed conscious that he was failing fast, and once or twice asked how his pulse beat, but was unable to say much. All at once his pulse stopped, and I thought that he was dead, but it soon commenced again, and with more force than before. He then revived a little, and asked me to call the mate. I ran aft and told the mate that Jack was dying, and asked him to come forward. He started and came forward with me. When we entered the forecastle, we found Jack partially raised up and gazing about him in the wildest manner. His features, by reason of long sickness, had become sharp and ghastly, and his eyes were lit up by the fire which was consuming him. The sight of him glaring out from his berth, combined with the almost sepulchral appearance of the forecastle, was a spectacle which never will be effaced from my mind. I never wish to see the like again.

As soon as the mate entered, Jack asked him to pray for him. By this time some of the watch below had been awakened and had turned out, and some of the watch had come in from off deck. The mate kneeled among them, and lifted up his heart to God in an eloquent and fervent prayer. During the prayer Jack was silent, but at the close he made

a great effort, and raising himself so as to be seen by all present, he exclaimed, 'Oh, I wish I could pray. I don't think now as I used to think. I once disbelieved in future punishment, thinking that all the punishment that we were to have was given us here. I don't think so now! I am lost! I am lost! I wish I could pray! Oh, that I could pray!'

This effort was his last; he sank back upon his pillow, and in a short time he calmly and quietly breathed his last, and yielded up his spirit laden with the account of twenty-one years, to Him who gave it.

The eyes of most of the crew who witnessed this scene, were filled with tears in spite of their exertions to the contrary; and there is no doubt that the impression made upon the minds of all present was for good.

It is not for us to judge this young man, or to say that he was lost. The last words of a dying man are generally considered to be his truest words, but in this case, owing to some circumstances, there is reason to hope that so much of his speech as related to his being lost was not true. But we do say, and from this case we see, that it is dangerous to put off the subject of religion till a future day, for in so doing, we may leave to the mercies of a death-bed hour,

'The vast concerns of an eternal scene.'

The next morning at ten o'clock, with appropriate ceremonies, we consigned the body of our shipmate to a sailor's grave. After the burial the ship again turned towards home, and hurried away from the place as soldiers hurry from the grave of a departed comrades.

During the rest of the passage home, Jack's name was seldom mentioned, on account of the dislike which sailors generally have of referring to the subject of death. The sail-maker, who was both on board and on shore, Jack's most intimate friend, sometimes conversed about him, and he generally ended his remarks something after this manner: 'Jack was a whole-souled fellow—he would share his last crust with a shipmate. I have been with him through a great deal, and I deeply regret and repent that I have countenanced him and gone hand in hand with him in much that was evil. Had my influence on him been better, my conscience would now be more easy'—and many of his companions could say the same.

How much better it would be, if instead of chiming in with such remarks as the sail-makers, it could be said to young men when their companions are taken away,

'And Oh, if 'tis pain to remember how far,
From th' pathway of light he was tempted to roam
Be it bliss to remember that thou wert the star,
That arose on his darkness and guided him home.

Sailor's Magazine, March, 1849.

☞ The subject of the following article from the "Samoan Reporter," we should be glad to see attracting the attention of the Government and foreigners on the Sandwich Islands.

Introduction of Foreign Plants.—He who introduces but a single plant into a country, says some writer, may be considered a public benefactor. We look with interest on the magnificent orange and tamarind trees which still stand at Point Venus, on Tahiti, planted by Bligh; and on the shaddock tree, which till lately, stood at Huahine, planted by the hand of Cook. But the most humble native-teacher, who now conveys to other islands the orange, the lime, the banana, sweet potato, pine, custard, and papaw apples, &c., is no less worthy of the thanks of our country than the greatest of our navigators. It is interesting to observe, that, when these worthy agents of our Missionary Society bring on board the Mission Ship their little odds and ends of property, to embark on their mission of mercy to other islands, they have almost invariably a box of plants, or a parcel of roots and seeds.

It must not be thought, that the islands of the Pacific are now the solitary abodes they once were. They are visited by hundreds of whalers and traders; and, consequently, it is of the greatest benefit, in preserving the health of their crews, to be able to get fresh supplies of vegetables and fruits. At the same time, it confers a benefit on the natives, by giving, in exchange for their produce, our hardware, cutlery, and cottons. The benefit is even more extended in opening up markets for our home manufacturies.

In after years, it will be interesting to know who first conveyed to the several islands many of the finest tropical productions Even now, short as the period is, it would be difficult to ascertain who first introduced many of them.

Of all the foreign plants which have been introduced into Samoa, none have been more extensively propagated and valued than a species of banana, previously unknown in the South Seas, although in Samoa alone upwards of fifty different species of the Musa are found. From the excellency of its fruit and its great weight, together with the adaptation of its lowness to resist violent gales, it promises to take the precedence of every other variety usually cultivated. Some notice of its history, therefore, is worthy of record.

When our late lamented Missionary Mr. Williams returned from England in the "Camden," in 1838, his Grace the Duke of Devonshire kindly supplied him with some cases of plants, in one of which was one designated "Chinese Banana"—(most probably, the *Musa Cavendishii*, the origin of which is said to be the Isle of France). Mr. Williams not having a settled place of residence for some time after he landed, the cases were left under my care. Little vitality seemed to remain; but, anxious to preserve, if possible, some of them, I had them carefully transplanted into my garden. This Chinese banana was the only one which survived. In about twelve months, it produced a bunch weighing nearly a hundred pounds. From this single plant have sprung the thousands to be seen everywhere in Samoa; and they are fast spreading in other groups east and west. It is surprising to see, in the short space of ten years, a plant so extensively propagated. But, when we calculate, by geometrical progression, what a plant, which will average but six suckers a year, will eventually produce, the result is amazing.

The value of the banana in these seas can scarcely be estimated. What Baron Humboldt says of it in Mexico may be quoted here, and applied to Samoa. He doubts "whether there is any other plant on the globe which, in so small a space of ground can produce so great a mass of nutriment. Eight or nine months after the sucker has been inserted in the earth, the banana begins to form its clusters, and the fruit may be gathered in less than a year. * * *

A spot of 1,076 square feet may contain, at least, from thirty to forty plants, which, in the space of a year, at a very moderate calculation, will yield more than 4,410 lbs. avoirdupois of nutricious substance. The produce of the banana is to that of wheat as 133 : 1, and to that of potatoes as 44 : 1."

WM. MILLS.

AMERICANS AND JAPANESE.

When Christianity was finally extirpated throughout Japan, and the remnant of trade with Europe committed to the Dutch factory at Dezima, the resolute seclusion of the insular empire was long respected and left undisturbed by other nations. The slight attempt made by the English under Charles II which the Dutch foiled, by proclaiming the English Queen to be a Portuguese Princess can hardly be called an exception.

This abstinence from any endeavor to transgress the prohibitory laws of Japan, allowed the strong feeling in which they originated to die away, and towards the close of the last century, the continuance of the system appears to have proceeded rather from indifference to foreign trade and respect for existing customs, than from hatred or fear. Whilst the public mind of Japan remained in this easy state, although no trade, no unnecessary intercourse was allowed, foreign ships in distress were freely suffered to approach the coast, and their wants were cheerfully relieved.

The first aggression upon the Japanese prohibitory code was made by the Americans and originated in the war between England and Holland, when the latter nation was compelled to engage neutrals to carry on their trade with Japan. The first North American ship thus hired was the Eliza of New York, Capt. Stewart, in the year 1797; and her appearance at once aroused Japanese suspicion. A vessel bearing the Dutch flag, but of which the crew spoke English, was an anomaly that struck the Nagasaki authorities with consternation. It cost the President of the Factory (Doeff, a Dutchman,) some trouble to convince the Governor that these English were not real English, but 'English of the second chop,' as the Americans are designated in China, living in a distant country and governed by a different king. All this however, was of no avail: the main point was to prove that the Americans had nothing to do with the trade, being only employed by the Dutch as carriers, on account of the war. The governor became at length satisfied, and consented to consider the vessel as a Dutch ship. * * *

Capt. Stewart met with accidents upon his second voyage, which compelled him twice to put back for repairs. From his increased intercourse with the Japanese, it seems, he contemplated establishing a connexion independent of his employers, but in this however, he failed. The following year he again made his appearance, in a different vessel, and under a different character—told a piteous tale of shipwreck, of the loss of his own all, as well as the Dutch vessel—that he had been enabled by a friend at Manilla to buy and freight the brig, in which he had now come, for the purpose of discharging, by the sale of his cargo, his own property, his debts to them for the repairs of the Eliza. An energetic president had, however, succeeded

this very inefficient one, who saw through the scheme, and caused Capt. Stewart's cargo to be sold in the usual manner, and his debts to be paid from the proceeds; but he procured no return cargo for the brig, and sent the Captain in the Dutch ship of that year, to Batavia, to be tried for the loss of the Eliza.

Pending the investigation, Capt. Stewart made his escape, and again appeared in 1803, in Nagasaki bay—this time more openly declaring his purposes. He now presented himself under the American flag, brought a cargo avowedly American property, from Bengal and Canton, and solicited permission to trade, as also to supply himself with water and oil, the last request only was granted, and when his wants were supplied he was compelled to depart; he now gave up his interloping scheme, and returned no more. —*Abridged from the Asiatic Journal for the N. Y. Express.*

To Seamen and Landsmen who read the Friend

Dear Friends: On the commencement of a new year, allow me affectionately but faithfully, to address you a few words of expostulation and entreaty.

"Whatever thy hand findeth to do," is the exhortation of the wise man, "do with thy might, for there is no work, nor device, nor knowledge, nor wisdom, in the grave whither thou goest." This consideration is a very solemn one. It is addressed to all classes and conditions of men. It is a consideration which should act constantly on the minds o. men in all the circumstances of life, as a powerful motive to prepare for the day of account. It points to the grave, which has closed over many, who but a little while ago were with us engaged in the active, bustling scenes of life, and to the grave which will soon open for each of us. Where are the tribes of men who once, both on the land and on the bosom of the deep, were busied in the scenes which now occupy our thoughts and our hands? Gone, gone, forever! Each in his turn, closely following his predecessor, performed his brief part, and made way for another, just as wave follows wave in quick succession, and roars and dashes and dies on the shore. And where are we? Hastening to the same destination. Time bears us on her rapid wings, nor will business, pleasure, nor indifference impede her flight.

Borne thus swiftly along, dear friends, we have just closed an old and entered upon the scenes of a new year. Here, for a moment, time seems to pause, that we may review the past and resolve what we may do in future. Standing by the newly covered grave of the year, so to speak, let me ask you, what have you done during the year to forward the great object of your existence? Christian, what have you done for God, for your fellow-men and for your own future and eternal blessedness? Have you honestly labored to glorify Him who died to redeem you? Have you brought to bear upon the great and good work to which you have consecrated your life, all your powers—devoted to it all your time and strength and influence? And have you so labored and prayed that you can perceive a growing attachment to heaven and eternal realities? Are your sails trimmed, your canvass all filled with heavenly breezes, which will carry you swiftly upward till you enter the heaven of rest? Man of enterprise, what, during the past year, hast thou done for God and for eternity? I do not ask how many plans for worldly aggrandizement you have laid and carried out, but what has thou done to provide for the well being of thy soul? Man of pleasure, what hast thou done the past year? In all your plans to procure self gratification, hast thou thought of the pleasures which flow at God's right hand, and hast thou done any thing to secure them? How is it, dear friends, in these respects! Examine well, I pray you, one and all. In whatever respect any of us have failed during the year past of discharging our duty to God and our souls, let us ingenuously repent and earnestly seek the remission of our sins; and now that we have entered upon a new year, let us resolve that we will devote it to God, to the good of our fellow men, and to the great business of preparation for eternity.

AMICUS.

FURTHER FROM THE SEARCH FOR SIR JOHN FRANKLIN.—Sir George Simpson returned on Monday last from his annual tour of inspection through the Hudson's Bay Territories and North Western settlements of this Continent. We learn with regret from him, that no clue had been obtained to the whereabouts, or the fate of Sir John Franklin and his gallant companions. Sir John Richardson, indeed, is on his way back from the frozen regions, and may be expected in Montreal early in September. His exploring party will, however, continue their search, under the orders of Dr. Ræ, of the Hudson's Bay Company, Sir John's second in command throughout the summer. Although it would be almost criminal to abandon hope in such an enterprise, it is impossible to conceal from oneself the unwelcome truth, that the chances to a successful issue become fearfully diminished by the lapse of time.—[Montreal Courier, August 16.

ORDINATION.—Ordained and installed pastor of the church at Kahuku, Island of Oahu, Dec. 21st, Rev. James Kekela, a gradnate of the Seminary, Lahainaluna, and for several years a beneficiary of James Hunewell, Esq., Charleston, Mass. formerly a merchant at these islands.

Reading of the Scriptures and introductory prayer by Rev. J. S. Emerson; sermon by Rev. L. Smith; ordaining prayer by Rev. E. W. Clark; change to the pastor elect by Rev. J. S. Emerson; right hand of fellowship by Rev. E. W. Clark; charge to church and people by Rev. L. Smith; benediction by the Pastor.

All the native churches on Oahu were invited to take part in the Ordaining Council, and nearly all were represented, but owing to ill health and bad weather, several of the pastors were unable to attend. Rev. J. Kekela is the first Hawaiian, who has been ordained to the Gospel Ministry. Several others are licentiates.—[Communicated.

EDITOR'S TABLE.

Bell's Weekly Messenger.

There has recently fallen into our possession a file of Bell's Messenger for 1814, with an occasional number for 1815. Those were stirring times. England was allied with the nations of continental Europe to put down Napoleon. He was banished to Elba, but on a sudden re-appears upon the theatre of action. Immense armies are speedily organized, and meet at Waterloo. The history of that period is familiar to our readers, but the best history fails to bring before the mind so vivid a picture as is presented in the pages of a weekly newspaper, and that paper edited with rare ability.

As we are not favored with regular files of newspapers fresh from the presses of Europe and the United States, it is certainly a good substitute to meet with a file of papers more than thirty years old. Buonaparte is the grand and prominent figure in the picture of that age.

In the paper for March 27th, 1814, the first of the file, we have a despatch of Lord Wellington, detailing a signal victory which the allied army had obtained over the French at Orthes, and then of a rapid march upon Bordeaux. Then follows a long list of the 'killed, wounded and missing.' The thanks of Parliament. Marshall Soult's proclamation to the French occupies a prominent place. Besides these important matters, the editor presents his readers with an ordinary supply of news, relating to deaths and disasters, bankruptcies and commercial affairs. It appears that patent medicines, producing wonderful cures, were remarkably in vogue at that period.

Our narrow limits will not of course permit us to make lengthy quotations, although on every page the eye falls upon interesting articles. The fall of Napoleon and his banishment to Elba, formed a fruitful theme for newspaper discussion. It was a theme which roused the poet Byron to touch his lyre. In a beautiful Ode addressed to Napoleon on his fall, and published in the Messenger of April 24th, we find these spirited lines:

The Roman, when his burning heart
Was slaked with blood of Rome,
Threw down the dagger—dared depart,
In savage grandeur, home.
He dared depart, in utter scorn
Of men that such a yoke had borne,
Yet left him such a dream!
His only glory was that hour
Of self upheld abandoned power.

But thou—from thy reluctant hand
The thunderbolt is wrung—
Too late thou leav'st the high command
To which thy weakness clung;
All evil spirit as thou art,
It is enough to grieve the heart
To see thine own unstrung;
To think that God's fair world hath been
The footstool of a thing so mean.

And earth hath spilt her blood for him,
Who thus can hoard his own!
And Monarchs bow'd the trembling limb,
And thank'd him for a throne!
Fair Freedom! we may hold thee dear,
When thus thy mightiest foes their fear
In humblest guise have shown.
Oh! ne'er may tyrant leave behind
A brighter name to lure mankind!

It was during the year 1814, that the Emperor of Russia and the King of Prussia, visited England, and were entertained in a style becoming royalty. In the columns of the Messenger we have a full report of their progress, and the splendid entertainments prepared on their account.

There were many sad accidents connected with the domestic affairs of the royal family of England, which found their way into the public journals. The aged and venerable George III, is afflicted with insanity; the Prince Regent, subsequently George IV, quarrels with his wife, and otherwise conducts himself in a manner that will forever associate the most dishonorable epithets with his name and memory.

At this period England was at war with the United States. In publishing an account of the burning of Washington by the British army, the editor remarks, that while it was proper to destroy "the dock yards, the arsenals, and the public treasury at Washington," yet the army went too far in destroying "the capitol and President's palace."—"Washington," remarks the editor, "is a capital city, rising in the woods of America; it is the temple, as it were, from which American civilization is to be produced. It is almost the only object of interest to travellers and strangers in that new and naked country; the capitol and President's palace were the pride of the Union, and their destruction therefore, inflicts a greater wound. To say all in a word, we would have preferred that these buildings had been spared, and the spoil only of the town, and the honor of the capture brought away by the conquerers."

The English might well congratulate themselves in being permitted to gratify their palates around a table spread for President Madison, and decorated with decanters of choice wines! "The champagne was in coolers—a fine desert set out on the sideboard, etc. So the British officers ordered in the supper, and Gen. Ross drank His Majesty's health at the head of the table with the President's wine!"

While the English politician was smiling over these facetious remarks, it must have been far different with ship-owners in Liverpool and London, as they glanced over Lloyd's list of British vessels captured by American privateers.

The most interesting numbers of the Messenger are those of the 9th of July and 15th of August, 1815, immediately subsequent to the battle of Waterloo.

Visit of the French sloop of war Bonite, to the Sandwich Islands, in 1836.

Translated for the Friend, from the French of Adolphe Barrot.

No. II.

The house of Mr. Forbes is in the midst of a garden, which seemed to have been somewhat neglected, and surrounded by a quick-set hedge of ki—the ki is a shrub with large leaves, and its root when cooked has the taste of calomel or burnt sugar. The natives formerly extracted a very strong liquor from it, but at present the Missionaries have prohibited, under severe penalties, the distillation of this root.

Mr. Forbes received us very cordially, and introduced us to his family, consisting of his wife, a native like himself, of the UnitedStates and two lovely children. Kapiolani joined us and very soon the bell called us to church.

The church of Kaawaloa is in every respect, like the houses of the country; it is a great shed in the form of a lofty cone, or rather, of a roof resting on the ground, the sides being supported by a frame held together by cords—for nails are not used in the construction of houses. This forms a sort of lattice work covered on the outside with the leaves of the pandanus, the cocoanut tree, or sugar cane. In the houses of the chiefs, the thatching is concealed by mats which line all the interior. The length of the church is about eighty feet, its width about forty, and its greatest height about fifty. It is capable of containing more than a thousand. About six hundred Islanders were kneeling or sitting upon coarse mats. A number of chairs had been placed for us near the minister's pulpit. It was interesting to see this multitude assembled to hear the word of Christ, where, scarcely fifty years before, they offered human victims to abominable di-

vinities. There are it is true, very few real christians among the natives, and almost all retain in the interior of their villages and of their houses, their absurd superstitions ; yet it is much to induce them to come occasionally to hear words too mystical, without doubt, and of which they understand nothing, but which contain lessons of christian morals so sublime, so simple and so well adapted to disclose to them, by degrees, the means of civilization. The men were on one side and the women on the other. No individual was admitted naked, but Mr. Forbes was obliged not to be too particular in respect to the form of the garment. For the most part, the men were enveloped in large pieces of native cloth in the manner of a cloak. Many of the women wore straw hats, and some were enveloped from head to foot in unbecoming cloaks such as English females still wear in the country. Individuals in the congregation had prayer books, printed at Honolulu and Lahaina in the Hawaiian language, and when according to the Presbyterian form, Mr. Forbes commenced singing the psalms of the ritual, voices, hesitating at first, and then more confident, accompanied that of the missionary. In fine, with the exception of some want of attention, occasioned no doubt by our presence ; with the exception of some enticing glances from the women near us, all passed off decently—but it was easy to percieve notwithstanding, that the great majority of the congregation were present by necessity. Kapiolani was arrayed in her best; her dress was of black satin, and she wore upon her head a cloak of native fabric as glossy almost as satin. She seemed to follow with attention the divine service in the book before her ; her countenance was not wanting in dignity, and a pair of battered spectacles on her nose, gave to her an appearance which even in Hawaii, appeared to us very singular.

On the morrow, I went to visit the village of Kealakeakua, accompanied by M. Eydoux surgeon of the corvette, and M. Hebert. To land with dry feet was impossible, and we were obliged to swim in some manner in order to reach the shore. This failed not to excite the mirthfulness of the population around us. It is certain that the customs of the country were much better adapted to the occasion than our own. A crowd of boys and girls immediately surrounded us. Although scarcely two miles distant from Kaawaloa, the population of Kealakeakua appeared to be far less under the influence of the missionary. We could perceive this without difficulty in the clothing of the islanders and in their conduct towards us. Here the *maro* was the only article of clothing worn by the men, and scarcely were the women better clad. But the manner in which the women received us, proved beyond a doubt, that their actions were not so immediately under the control of Mr. and Mrs. Forbes as those of the inhabitants of Kaawaloa. They employed every possible art to attract our attention and to win our favor ; but it is true that the rings and necklaces distributed by these gentlemen to the prettiest, were not without influence upon their friendly dispositions.

The itch seemed to be a prevailing malady among them, almost all were more or less affected with it. This circumstance, joined to the copper color of their skin and to the sluttishness of their clothing, diminished very much the strength of their attractions. As the men that we had seen up to that time, seemed to have a preference for money and clothing, so the women at Kealakeakua appeared to have preserved the taste for toys noticed by the first navigators. A string of glass beads, a copper ring with a colored stone, filled them with joy.

Towards noon, the entire female population of Kealakeakua assembled to bathe in a small bay surrounded by lava rocks ; one rock served the bathers for a screen, and they plunged thence entirely naked, into the waves which were breaking upon the shore ; a plank, six or eight feet in length, and pointed at one end, enabled them to sustain themselves on the crest of the waves. It was indeed, a singular picture—a swarm of young women passing far out to sea, then returning with the swiftness of an arrow, borne upon the foaming crest of the surges which break with the noise of thunder on each side of the bay. I expected every moment to see them dashed against the sharp points of the rocks, but they avoided the danger with surprising address ; indeed, danger seemed to delight them, and they set it at defiance with a courage which astonished me. The least movement of their body gave to the plank which sustained them, the desired direction, and disappearing for a moment in the midst of the breakers, they very soon arose from the foam and returned at their ease to run the same race again. I saw a mother, who having placed her child, scarcely a year old, upon a plank two feet long, pushed it before her to a great distance, and then abandoning it to the fury of the waves, she followed, directing only now and then the plank which sustained it.

I had expected to see this population such as Capt. Cook found it, free and independent, and the contrast I avow, did not appear to me in favor of the present, when I afterwards saw these women covered with dirty rags.

The difficulties we had experienced in landing, suggested the idea of returning on board the Bonite in a canoe. We had been able to appreciate during the day, the advantages possessed by these light and easily worked canoes in a rough sea over our heavy boats. We entered a canoe of about fifteen feet in length and a foot or more in width. This canoe, like all those of the Pacific islands, had an out-rigger made of a piece of light wood and fixed parallel to the canoe by means of two transverse bars four or five feet in length. Our Indians waited for what is called a *calm*, that is the moment when the waves which usually succeed one another to the number of four or five, seem to cease for an instant, then they drew the canoe rapidly some distance from the shore, when springing upon their seats and paddling vigorously they were able before the next wave rolled in to gain such a distance that we experienced only two or three strong undulations. We reached the Bonite safe and sound.

The next day I spoke to Mr. Forbes concerning the extraordinary dexterity in swimming which I had observed on the preceding day among the natives. "You can have no adequate idea of it," he replied, "they are more at their ease in the water than on the land." To confirm this assertion, he related an adventure which seemed too interesting to be omitted here.

The natives in their canoes frequently pass over the channels which separate the different Islands of the archipelago. One day, a native accompanied by his wife and two small children, put off in a canoe from the northern point of Lanai with the design of landing on the southern part of Molokai, a distance of seven or eight leagues. When he had put to sea the weather was fine, but suddenly a dark cloud blackened the sky, a gale commenced and the sea became very rough. For a long time the skill with which the islander guided his frail skiff in the midst of the waves preserved it from being wrecked; but at length a sea broke the out-rigger and the canoe capsized. The children were too young to be able to swim. He seized them at the moment when the sea was about to swallow them up, and placed them upon the canoe, which being made of light wood floated, although bottom up. Then he and his wife swimming at its side, undertook to urge it along to the nearest shore. They were then near the middle of the channel.—After many hours of fatiguing exertion, and when they had almost reached the shore, they met a very strong current which urged them back into the open sea. To struggle against the force of the current would have been to expose themselves to certain death, they therefore decided to direct their canoe towards another part of the island. Yet the night came on and they began to feel cold. The woman was the first to complain of fatigue, but the desire so natural to escape death, and the sight of her children whose life depended upon the preservation of her own, gave her courage, and she continued to swim near her husband, pushing the canoe before them. Soon the poor children became fatigued, for they could not long cling to the round and polished surface of the canoe without a continued effort, and they were also chilled with cold. Soon they relinguished their hold, and fell one after the other, into the sea. Their parents seized them and placed them again upon the canoe, striving at the same time to encourage them. Alas! their strength was exhausted—their little hands could no longer retain their grasp, and the sea engulfed them for the third time. It was no longer necessary to think of preserving the canoe ; the parents therefore took the children upon their backs and swam towards the land which was scarcely visible in the darkness. An hour later, the woman discovered that the child which she was carrying was dead, and she broke forth into bitter lamentations. In vain did her husband persuade her to abandon the child and to take courage, pointing out to her the shore which now seemed near. The unhappy mother would not separate from her lifeless child, and she continued to carry her precious burden until she felt her strength nearly exhausted, when she told her husband that she must die, for she could swim no further ; yet, notwithstanding her husband's earnest entreaties, she would not relinquish her burden.—He then endeavored to sustain her with one hand and to swim with the other, but nature could not prolong the struggle, and she disappeared beneath the waves. The husband continued to swim on in sadness. The desire to save his surviving child alone sustained him. At length, after many hours of unspeakable hardship, and when almost dead,

he reached the shore. His first care was to embrace the son he had saved, for he alone remained to him of his beloved family. But on taking him into his arms, he perceived that he was dead, and he fell senseless upon the sand. He was discovered at day-break lying prostrate on the shore, by some fishermen. He revived, but he died soon after in consequence of his sufferings, and perhaps also, from grief. He had been in the water eighteen hours.

We were at Kealakeakua six days, visiting the natives at their houses and collecting such information as seemed to possess any interest. We were informed that Kapiolani together with Kaahumanu, wife of Kamehameha, was the first to embrace the christian religion, but her conversion was not very sincere at first. "For twelve years or more," said Mr. Forbes, "she was a very bad woman. She was constantly drunk and she had four or five husbands. Even after having received baptism, she retained two; and it was only in consequence of our expostulations that she came to the conclusion to have but one." At present she is a virtuous woman, and she has become the firmest defender of the moral and religious innovations on Hawaii. Kapiolani has given many proofs of great energy. It once happened that a sailor belonging to an American ship, was arrested and put in prison, having been convicted of the offence for which persons were sentenced to labor on the roads of Hawaii. The captain of the ship waited upon Kapiolani and threatened to fire the village unless the sailor should be instantly released.—"Here is my law," said Kapiolani, "the sailor shall pay the fine of fifteen dollars or he shall work four months on the roads—the same as his associate in guilt. Now if you have the force, fire the village; but while Kapiolani lives, her law shall be executed in her country." The captain was obliged to pay the fine, in order to obtain the release of the sailor.

In spite of all the zeal of Mr. and Mrs. Forbes—and the latter participates in all the labors of her husband—the number of real christians has scarcely increased in the district of Kealakeakua. Mr. Forbes being alone in this district, and his school at Kaawaloa demanding his uninterrupted attention, he has not the leisure to make distant excursions. Consequently his influence is scarcely felt at a short distance from Kaawaloa, and the natives retain almost all the superstitions of their old religion. I should have earnestly desired to visit those parts of the island where no missionaries reside, in order to see the natives in their nearest approaches to the primitive state; but my lot being found closely connected with that of the Bonite, even until my arrival at Manilla, it was necessary to be content with seeing only those parts where civilization has penetrated.

Kapiolani treated me with great kindness; she made me a present of a magnificent *kahile*, a sort of feather broom—among the chiefs this is a token of authority. She invited me to visit her house at the lower village, and also the one she was building at the upper village. The latter has the advantage of being near the missionary, and it has assumed a certain European aspect. There was building on the same lot a stone house of two stories. Her house in the lower village, with the exception of the doors and windows, which have been enlarged, continues the same that it was before the discovery of the island. As a general thing, the houses of the natives are sufficiently comfortable; the floors are commonly covered with mats excellently braided, upon which they spread a bed of dry ferns. Formerly there was but a single room in a house, and that was used for a dining room, drawing room and bed chamber. The missionaries are now persuading the people to make divisions in their houses, and for this purpose they generally employ large curtains of *tapa* or of English calico. These separations form the sleeping apartments. The bed is composed of a great number of mats laid one upon another, so as to form an estrade, the coarsest being placed at the bottom. This place is *tabu* (prohibited) to all the world.

Near Kapiolani's house is the tomb of her husband—a large stone edifice with a roof of boards. This man was a powerful and very rich chief; but at his death, a son that he had by his first wife, took from Kapiolani almost all that she held from him, and she is now comparatively poor.

A few calabashes for *poi*, (fermented paste made of taro,) one or two *kahiles*, sometimes a line and some paddles, constitute the entire furniture of a Hawaiian house. Fish slightly salted and very often raw, and poi, comprise their principal food. I took a notion to taste of poi, but it seemed detestable. It possesses the color and consistence of starch and an acid taste is very perceptible. At Kealakeakua butcher's meat is never eaten. All that Europeans can find here to sustain animal life, are fowls, pigs, cocoa-nuts and a few kinds of fruits.

The importation of intoxicating liquors are prohibited; we could however perceive that the islanders are not destitute of the fondness for ardent spirits, which has been observed, exists among all nations. Even the women opened their mouths with avidity to receive the brandy which we gave them. The islanders as a general thing, are restrained from giving themselves up to their old practices not by conviction of truth, but from fear of punishment. Whenever occasion offers they hasten to throw off the yoke which has been imposed upon them. Four or five months before, Kauikeaouli, King of the Sandwich Islands, with a part of his court, made a visit to Hawaii, and he gave himself up to excesses in which not only those who accompanied him took part, but the whole population of Kealakeakua also. Neither Kapiolani nor Mr. Forbes ventured to make the least remonstrance—they waited impatiently in their houses until the country should be delivered from the presence of the wicked.

Sir John Franklin.—An English paper states that the Rev. Dr. Scoresby delivered a lecture last month in England, "On the Hopes and Fears concerning the absent Arctic Expeditions." The lecturer, who has explored these regions himself, and whose father made several important discoveries in arctic navigation, first entered into an historical account of the different discoveries made in these parts, and then entered into the more immediate subject of the lecture. He (Dr. S.) is of opinion that the hopes of Sir John Franklin and his company ought yet to outweigh the fears, for many reasons; first, because the first summer they were out has been proved to have been a bad one for making researches in those seas, which would of course delay them; secondly, that Sir J. Franklin, knowing that this would be the last expedition that in all probability would be sent out, would naturally endeavor to make the most of it; and thirdly, that although he only carried out provisions for three years, yet when seeing that he was likely to be longer detained he would lesson the quantity of victuals served out to the men, as one half the full quantity allowed is sufficient to keep men in health, and therefore he was not likely to suffer on that account, saying nothing of the occasional supply of seals, birds, &c., which abound in those regions. The lecturer also showed from a map the different places where he supposed they could quarter safely for the winter. He thought, however, after all, that if we received no intelligence from them before the end of the autumn, the chances in their favor would be greatly lessened.—[Boston Transcript.

Death of W. B. Tappan.—This Christian poet, whose name is associated with some of our most familiar hymns, has been called to that "peaceful rest" which was so often the theme of his song. He died at Needham, Mass., on Monday last, of cholera, after an illness of but eleven hours.

Mr. Tappan was truly a good man, humble, affectionate, sincere, benevolent, devoted. He loved Christ, His people, and His cause. He was particularly interested in Sabbath-schools, to which he consecrated, not his time only, but some of the choicest productions of his genius. At the time of his death he was a General Agent of the A. S. S. Union which office he had held for several years.

The impression which Mr. Tappan made upon all who knew him, was that of quiet, unassuming, but deep and fervent piety. He breathed much of the spirit of Christ and of heaven.

As a poet he did not hold the first rank even among the poets of his own country and time. His reputation had been better if he had written less. A ready faculty of improving incidents, hints, allusions and affections, betrayed him into a passion for turning everything into rhyme, so that instead of clothing the passing event, however trivial, with a rich and shining garb of spiritual philosophy, he sometimes gave only a jingling narration of the event itself. Yet he had in his heart the well-spring of poetry, which ever and anon bubbled up and sparkled in the sunlight, and poured forth life and sweetest melody. Enough that his memory will be embalmed in the affections of the Church, when at the opening of public worship they sing,

"Holy be this, as was the place
To him of Padan-aram known;"

or, meditating on a Saviour's passion, find utterance in that pensive strain,

"'Tis midnight—and on Olive's brow,
The star is dimmed that lately shone;"

or, when assembled to pray for the coming of Christ's kingdom, they raise the triumphant anthem,

'Wake! Isles of the South, your redemption is near!'

or, when in the midst of storms and trials, they seize the lay of comfort and hope,

"There is an hour of hallowed peace,"

or rise exultingly towards the world of "hallowed peace,"

"Where purity with love appears,
And bliss without alloy;
And they who oft have sown in tears
Shall reap again in joy."

N. Y. Independent, July, 1849.

THE FRIEND.

HONOLULU, FEBRUARY 1, 1850.

Late News from Arctic Ocean.

Cruise of the 'Nancy Dawson'—discovery of new Islands—party start overland for Baffin's Bay, and death of Capt. Shadden.

By a late arrival from California, Mr. Shannon arrived as passenger, who was recently chief-officer of the 'Nancy Dawson.' He reports as follows—

The Nancy Dawson, the Royal Thames Yatch Schooner, owned by her commander, Capt. R. Shadden, and manned by twenty-four seamen, left China in April, and touched at Loo Choo Islands, where they saw Dr. Bettleheim. While there one of the seamen fractured his arm on firing a salute on the Queen's birth-day, which was amputated by Dr. Bettleheim. On the 4th of July, the vessel left the Russian settlement at Kamscthaka, and on the 18th entered the Arctic Ocean. On the following day visited Kotsebue's Sound, where H. M. S. 'Herald' and 'Plover,' were at anchor. These vessels immediately got under weigh, and the Herald stood to the westward, towards the Asiatic coast. Previously, however, a boat expedition was fitted out from the vessels, composed of the Herald's launch, (the Owen,) the Plover's pinnace, and two whale boats. This expedition stood to the north, along the American coast, in company with the Nancy Dawson. They parted in the fog, to the north of Icy Cape. The Nancy Dawson went as far north as 72°, and experienced heavy gales of wind, which drove the ice so as almost to wedge up the passage, and at one time it was feared the vessel would not escape. The Nancy Dawson at length rounded Point Barrow, and entered Elson's Bay, where she fell in with the boats. The boats reached a point eighty miles east of Point Barrow. Lieut. Pullen of the Plover, and Mr. Hooper, mate of the Plover, with a company of about fifteen men, and sixty days provision, embarked in the two whale boats, to proceed as far as possible by water, and then to get over land with all possible despatch to England, by way of Baffin's Bay.

We now return to the Herald's cruise.—She reached the 73° north, and on the 17th day of August, in latitude 71 16, and west longitude 174 45, discovered a group of Islands. All the vessels again made Kotsebue's Sound, the place of rendezvous. At that place the Plover is wintering. The Herald and the Nancy Dawson, left the Sound on the 1st of Oct., just as the ice was beginning to make. Both vessels steered for Mazatlan, Mexico. From thence the Herald went on a surveying cruise up the Gulf of California, and the Nancy Dawson left for England, under command of Mr. Hill, master of the Herald. At Mazatlan, died Capt. Shedden, of the Nancy Dawson, which vessel was owned and fitted out by him. She had been about two and a half years from England, having visited all the ports of importance between England and Bhering's Straits, via Cape of Good Hope.

Most sincerely do we regret to add that no report is brought in any way relating to Sir John Franklin.

Sir John Franklin's Expedition.—In several late papers from the United States we notice articles relating to the probability that Sir John Franklin and his fellow explorers may yet return. Intelligence has been received at the British Admiralty, through the master of an English whaler, that "two of the ships had been frozen up for four years on the west side of Prince Regent's Inlet, and that the other two had been frozen up on the east side for one year; that the two ships which had been there the longest, had tried to get beyond Cape Rennell, but not being able, had come into Prince Regent's Inlet to winter, where the ice had not broken up since—and that the Indians had been on board all the four ships in March last, and they were then all safe."

This report is founded upon the statement of certain Indians, who made their report "without special questioning." This intelligence is furnished by the owner of the whale ship, residing at Hull, England, who writes the Secretary of the Admiralty under date of Oct. 4th. Until something more definite shall be heard, we may certainly cherish the pleasing hope that the long lost adventurers may yet return and report to the world the narrative of their trials. We can scarcely imagine an event which Englishmen would hail with greater joy and national enthusiasm; and we are confident that Americans, and other nations, will cordially unite in a general burst of generous and heart-felt delight.

Examination of Mr. Fuller's School—It may be a fancy of ours, but a School Examination is among the most choice delights that sweeten our cup of human happiness.—What more interesting than to witness the improvement and development of the minds of children and youth? At each successive examination you can mark their progress.—The High School under Mr. Fuller's instruction, is among the pleasing features in the educational aspect of affairs in Honolulu.—The average attendance has been about thirty five, embracing pupils engaged in the various studies pursued in the best academies of the United States, and unless our memory has proved treacherous, the standing of the scholars would favorably compare with that of the scholars of the same age elsewhere.—In the department of sketching natural scenery and maps, great neatness and skill were displayed. The interludes of singing gave a gratifying variety to the performances.—While referring thus to drawing and singing we would not have the inference drawn, that the severer studies were slighted. When the young gentlemen were heard to declaim in the language of Lord Chatham, Daniel Webster, and other orators, it made the youthful blood again course through the veins of not a few of the spectators who had received their education in the schools of England and the United States. One feature of the school was apparent, that pupils of Hawaiian extraction, fairly maintained an equality in point of scholarship with those who could boast that they were of Americo-Anglo-Saxon descent.

Viewing the school with a pedagogue's eye, we might perhaps discern some defects that a little care would readily remove, but our columns are not the place to point them out. Most sincerely we desire to call the attention of parents and the friends of education in Honolulu, to the importance of rendering Mr. Fuller a generous and cordial support. We moreover hope the day is not far distant when some beautiful site in Honolulu, or its environs, will be adorned with a school edifice that shall prove a temple of knowledge to the youth of our prosperous town. An institution, such as we would have, would in an eminent degree exalt the tone of education here, and reflect true glory upon our community. Who will second the movement?

A Hint to Pursers in the U. S. Navy.—Some years since, a worthy sailor, native of Finland, but serving on board a United States' vessel of war, was left at the Hospital in Honolulu. After recovering his health, another "States' vessel" took him away. On his arrival home he was subject to unnecessary expense in collecting his wages, which he alludes to in the following language, copied from a letter which we have just received from him, bearing date New York, Nov. 24, 1848.

"Leaving Valparaiso we touched at Rio, and arrived in Norfolk, Va. in the beginning of March. The 10th I went on shore. You are not aware that the Purser on board the — charged on my account all the bills, amounting to near $300, relating to my expenses while in the Hospital. Coming on shore in the United Siates, I repaired to

Washington to claim my wages, and was detained there a fortnight, and after I was finally paid off, I found I was about $50 short of what I expected, for my case would not admit of any allowance for travelling expenses. This I have mentioned, that if such a case should come under your notice, I know of no better way to avoid the difficulties, than when asked to sign the accounts, refuse to do it. The United States Government makes allowance for the sick, and expects every purser to be acquainted with the rules and regulations of the navy, so as to be able to settle the bills of a sick man."

☞ That this sailor did not make an improper use of his money when it came into his hands, the reader may learn by referring to "The Friend" for March, 1849—See p. 21.

Oregon.—We have received intelligence from Oregon to 22d of Oct. We rejoice to learn that the interests of education are substantially cared for by the prominent men of the country. An act has passed the Legislature incorporating the Klackamus county Female Seminary, to be located in Oregon City. Tualatin Academy has also been incorporated. A good Common School law has also passed the Legislature. By an act of the United States Congress the sixteenth and thirty-sixth sections of every township are appropriated to create a School fund.

Writes the Rev. Mr. Atkinson—

"Our citizens have been returning from California, both by land and sea, almost weekly since you left. Some have again gone to the mines, but the tendency is now to dwell at home and improve the lands. Many return in poor health. Frequently we hear of deaths of Oregonians. But few emigrants have come into this valley. Three hundred soldiers are quartered in town. Rents are very high. Little cabins command $30 per month," etc. etc.

Murder of Missionaries.—The London Church and State Gazette states that Dr. Bettleheim and his family have all been murdered at the capital of Loo Choo, where they were residing. Dr. Bettleheim, who went to Loo Choo under the auspices of the Bishop of London, was a native of Hungary, was originally of the Jewish persuasion, and was educated for the surgical profession, but afterwards joined the Church of England.—He was a young man of much talent, and no inconsiderable experience. His wife was a native of London, and it is said that they had two children. The disastrous fate which has fallen upon them is said to have visited the Roman missionaries also.

We copy the above remarks from the N. Y. Observer of Nov. 18, 1848. The statement in regard to the murder of the missionaries must be erroneous, for the U. S. ship Preble visited Loo Choo in the spring of 1849 and at that date Dr. Bettleheim and family were enjoying good health. The Loo Choo Islands are under the Japanese Government, and the local authorities of the Islands are extremely jealous of foreign influence, so much so, that Dr. Bettleheim is exceedingly restricted in his missionary labors. The common people were prohibited from even selling him articles in the market. If he attempted to hold intercourse with them in the streets, they would run from him through fear of the government, although it was his belief that the common people would "have heard him gladly."

Efforts to support Religion in California.—We quote as follows from private letters of the Rev. Dr. Hunt, dated San Francisco, Dec. 20th.

"A church is also being erected for myself, 25 by 50 feet, on Jackson street above Stockton. I have been raising subscriptions both for the lot and the building, and have raised between 6 and $7,000. I hope to dedicate the church by the first Sabbath in January, 1850. The Rev. Mr. Mines (Episcopal,) has now a church edifice. Dr. Ver Mehr has one erecting—the Methodists have one, the Baptists another, so that mine will complete the fifth. Five months since we had not one! This rapid growth is in keeping with the city and state. The Presbyterians have a small church on the way from the States, and like ourselves, have no service on the Sabbath at present."

At Sacramento City there are four church organizations, viz. among the Methodists, Baptists, Congregationalists and Episcopalians.

The estimated population of San Francisco is from 20 to 30,000. Sacramento City from 8 to 10,000. Total of the Territory over 100,000.

According to recent intelligence from California, much sickness prevails throughout the country—the rains render the country almost impassable. The tide of immigration flows in unabated. Sixty-seven vessels are reported in the Boston papers, as having left the Atlantic States for San Francisco in the month of October.

Loss of Four Greenland Whalers.—This season has been one of the most disastrous on record to the whaling vessels. Intelligence has already been received of the entire destruction of four; and rumor has it that others have shared a like fate. These four are—the Superior, 400 tons burden, belonging to Peterhead; the Lady Jane, 390 tons, Captain Paterson, of Newcastle; the Prince of Wales, 380 tons, of Hull; and a large American ship, Mc Lellan,—the whole crushed to pieces by the icebergs. The particulars are thus described: "On the 12th of June last, three of the above named vessels were fishing in company with eight other vessels in Melvelle Bay, Davis's Straits. Four days previous the gales had been frequent and terrific, and the sea tempestuous in the extreme. About 11 o'clock in the forenoon an alarm was raised of the floating ice setting upon them. So suddenly did it bear down, and with such force and immense masses, that the Superior, the Lady Jane, and the American ship McLellan of New London, had not the slightest chance of escaping it, and were speedily cut in pieces. The first vessel destroyed was the Superior, and immediately afterward the Lady Jane was literally cut in two, the masts at the same time falling overboard, and in less than two hours not a vestige of the ship was seen so completely had the ice covered her.—From the time the Lady Jane was first struck to the time she disappeared, the crew, consisting of fifty souls, succeeded in securing the seven boats belonging to the ship, together with some clothing and provisions. As to the American vessel, although dreadfully shattered, the crew, aided by those belonging to the Superior and Lady Jane, made an effort to keep her afloat. After remaining in the ice till the 16th, and finding all attempts to save the vessel abortive, the provisions were divided and the crews got the boats ready and launched them, and at 7 o'clock P. M., with the wind N. E., and clear weather, they sailed southward along the edge of the ice, sometimes having to encounter large fields of ice, which caused them to drag the boats over it to gain the open sea. Captain Paterson's party made land on the 19th, though the weather was thick and foggy, and after each boat's crew had obtained refreshments, they set sail again and made for the nearest Danish settlement, keeping the land in view as they proceeded. Thus exposed to the weather, sometimes rowing and sometimes sailing, and contending with heavy falls of snow and gales of wind, they succeeded in gaining Opernawick. Leaving two boats with their crews, Captain Paterson proceeded with the other five boats, all of which reached Lively, another settlement of the Danes, 500 miles from Melville Bay, June 29, where they were kindly received, and every hospitality shown them, as far as the means in possession of the natives could afford. The unfortunate crews of the other vessels were, we are happy to say, equally successful; not a life was lost, and they eventually gained the latter-named settlement in safety, whence they were forwarded to the Orkney Islands by the first vessel that touched the settlement. The Prince of Wales, whaler, was wrecked in another part of the Davis' Straits, under precisely similar circumstances. She was caught by the huge masses of ice, cutting her up in a very short time, the crew barely having time to save their boats. They gained the Orkney Islands in safety, and have, ere now, we trust, reached their respective homes. It is worthy of remark that one of the above vessels was the oldest whaler in the Greenland service—the Lady Jane; she had been employed in the fisheries nearly 70 years. The destruction of the four ships is computed at a loss of nearly £50,000.—[John O'Groat's Journal.

Yankees in Russia.—Major T. S. Brown, Chief Engineer of the N. Y. and Erie Railroad, has made an engagement with the Czar of Russia, to take the place of the late Maj. Whistler in the superintendence of the great railroad from St. Petersburgh to Moscow.—Maj. Brown is to receive $12,000 a year, with some perquisites which will swell his salary to $15,000, and the engagement is to be continued for five years. He will take his departure on or about the first of next month. The grading of the whole line of railroad (nearly 500 miles) is completed, but only about 18 miles have been laid. All the necessary iron is on the road, and so are the locomotives and cars.

Facts for Scoffers and Sceptics.

The old proverb runs, "one fact is worth a thousand arguments." It would be folly to think of arguing with scoffers and sceptics, with any hope of leading them to adopt common-sense and reasonable views upon religion, yet it often happens, that they will stumble upon facts that shut their mouths and compel them to cease, for a time, their impudent railing against Christianity. We commend the following to their consideration:

The Malay's Test of Honor.—A new England sea-captain, who visited "India beyond the Ganges," was visited by a Malay Merchant, a man of cosiderable property, and asked if he had any Tracts he could part with. The American, at a loss how to account for such a singular request from such a man, inquired "What do you want of Tracts?—you cannot read a word of them." "True, but I have a use for them, nevertheless. Whenever one of your countrymen, or an Englishman, calls on me to trade, I put a Tract in his way, and watch him. If he reads it soberly and with interest, I infer that he will not cheat me; if he throws it aside with contempt or a profane oath, I have no more to do with him—*I cannot trust him!*"

Anecdote of Dr. Mason.—To a young infidel, who was scoffing at Christianity, because of the misconduct of its professors, said the Doctor—"Did you ever know an uproar to be made because an *infidel* went astray from the path of morality?" The infidel admitted that he had not. "Then, don't you see," said the Doctor, "that by expecting the professors of Christianity to be *holy*, you admit it to be a *holy religion*, and that is the highest compliment in your power." The infidel was silent!

A Hindoo's notion of the Sabbath.—Rev. Dr. Stenkopff relates that an English sailor in Calcutta had gone on shore one Sunday to perform some work. While he was engaged in it, a Hindoo observing him, said to him, "Do you call yourself a Christian?" To which he replied that he did. "Why" said the Hindoo, "does your God require you to work on the Sabbath day?" To which he did not attempt to make an answer; but, on returning to the vessel, he found these questions incessantly recur to his mind, till they brought him on his knees to acknowledge his ignorance and sin; and from that moment he dated his conversion to God.

Importance of Supporting Religious Worship.—Last Sabbath evening, in the Tabernacle, the pastor, Rev. Mr. Thomson, said that some years since, the majority of the people in a village in Massachusetts declared they would dispense with religious worship. Property consequently declined in value, and the habits and character of the people speedily degenerated. After the disastrous experiment was satisfactorily tried, the observance of the Sabbath and public worship of God were resumed, and the moral character and prosperity of the place were again visible. A shrewd and energetic, but worldly man in a manufacturing town gave sundry lots of land for the erection of churches. Three things, he said, were requisite for such a place; an abundance of water, good air and plenty of orthodox preaching. Some leading men in Lowell have remarked, that if every church in that city should be destroyed, it would well repay the manufacturers to rebuild them, even at an expense of $100,000.

COMMERCIAL STATISTICS.

Statement of Imports, Export Duties, &c., at the Port of Honolulu, Oahu, Hawaiian Islands, for the year ending December 31, 1849.

SIR JOHN FRANKLIN.

The news of the probable safety of this celebrated polar navigator has been received with great pleasure by all. In fact, we question, whether in England itself, a stronger interest has been felt for him than in the U. States. Our millions of newspaper readers have been made familiar with his history, and with the object for which he has exposed himself, his officers and crews to four rigorous winters. During this long period he has been shut out from all civilized society, and nearly so from all human beings; his ships enclosed in ice, with misery and starvation staring him in the face.

In case the late accounts received by the whaling ships from the Esquimaux are true, that two large ships have been for four years frozen up in Regent's Inlet, and that these ships are Sir John Franklin's, what means have they to escape? All who are familiar with the polar regions, (we mean through books, as we presume few of our readers have had personal experience there), know that their great straits and channels are sometimes closed with ice for years. That when from an unusual cold season this ice does not break up, the following winter renders it more solid. This sometimes follows for several seasons, when a barrier of ice is formed of such magnitude, that it remains for years impassable; in fact, great channels and inlets are sometimes rendered so, and even the open coasts are unapproachable for a century. A few facts will sustain this assertion.

About a century and a half ago, the eastern coast of Greenland was approachable; it is laid down in all old maps, and was, no doubt, visited by whaling ships alike with other parts of this inhospitable region. But in late times, or since the period named, the immense barriers of ice, piled mountains high, have prevented all approach to the coast. Captain Scoresby explored the coast from Cape Farewell as far North as 65°, when he was obliged to leave it and pass round to the 70th deg. before he could again approach it, when he found no difficulty in his further progress northward. Captain Graah, who was sent out by the Danish Government some 20 years since, expressly to trace the coast and explore eastern Greenland in search of the ancient Danish colony, known as "Lost Greenland," made every effort with his ships and boats to reach the coast, but could not for the ice. Lancaster Sound was never entered until Capt. Perry passed up it in one of his explorations in search of a north west passage. It has been passed by repeatedly, by ships, during two centuries, but being choked up with ice during this period, navigators knew not the existence of such a sound or strait as opened itself to Captain Perry. The same ignorance existed with regard to other openings. For a long period they would remain closed, and a mild season, attended by favorable winds would alone open them.

Our fears now are, that Prince Regent's Inlet having been shut up for four successive years, the probability of its opening again becomes less every year. The fact that Capt. Ross's ships, which were sent to relieve Sir John Faanklin, having been enclosed in the ice in the same Inlet for a year, (according to the Esquimaux), seems to favor this view. They were described by the Esquimaux as being on the opposite side of the Inlet; but their situation is as perilous as that of the ships they went to rescue.—The question now is, what can be done for these daring but unfortunate men, to rescue them from their situation. The present season is, of course, too late, nor can we now expect Sir John and his crew can reach England, even if all the accounts we have received are true. We beg, therefore, to submit the following plan for the consideration of our Government.

Early in the Spring of next year send a vessel with coal to the Danish settlement at Cope Farewell, on the southern coast of Greenland, and another to Disco Island, on the eastern shore of Baffin's Bay, in the 70th degree of latitude, or at some point on the opposite shore. Reckoning Sydney as one station for coals, there would then be three ports from which a steamer could get her supplies. As early, then, as practicable, send a steam *propeller* with a screw so constructed that it might be shipped or unshipped as necessities might require. At Sydney, in Nova Scotia, she might take her supply of coals to carry her to Greenland, she would wait till the season was sufficiently advanced to proceed. She might then proceed to Lancaster Sound and endeavor to reach Prince Regent's Inlet. In case this should prove impracticable, two parties should then be formed to proceed on the ice on the eastern and western shores of the Inlet in search of the missing ships; and in case they are found, to conduct them to the steamer in Barrow's Straits or Lancaster Sound, if she should not have approached nearer. If it is impracticable to proceed northward through Prince Regent's Inlet, and equally so to proceed southward toward Melleville Island, with the hope of reaching Hudson's Straits in their ships, the only alternative will be to take the shortest cut by land across Cockburn's Island to some point on Baffin's Bay, say at Pon's Bay, where the northern whaling vessels stop. Here as well as at other places, provisions should be placed, and stakes stuck up at all prominent points indicating where the provisions are to be found. We have no means for knowing whether an overland journey is practicable at the place mentioned, but as the distance from Prince Regent's Inlet to Baffin's Bay does not exceed 250 miles, it does not seem so unsurmountable when the lives of a hundred men or more are at stake. The expense of such an expedition would be trifling, and we have no doubt that competent officers can be found who will gladly embark in so praiseworthy an undertaking. Hundreds of daring seamen, too, would at once offer their services.—[Providence Journal.

Father Mathew at the Massachusetts Blind Asylum.—By invitation of Dr. Howe, Superintendent of the Perkins Asylum for the Blind, Father Mathew visited the Institution on Thursday, in company with several friends, and was highly delighted. There are between 80 and 90 blind persons at this excellent institution. Among the number are two blind boys, *twins* about nine years old, with flaxen hair. They are from the State of Maine, and arrived at the Asylum only a few days since. They were hardly tame, or easy, so long had they run wild at home. Father Mathew was particularly interested in Laura Bridgman, the *deaf*, *dumb* and *blind* girl, having never witnessed such a case before. On being informed that she was shaking hands with Father Mathew, Laura expressed great pleasure, by her animation. He presented her with a temperance medal and she wrote on paper in reply, "I thank you most sincerely for the medal; we are all very glad to see Father Mathew." He thanked her, and remarked, "I shall keep the writing and put it in a frame, and take it home with me to Ireland." Eighteen of the scholars expressing a wish to take the pledge, it was administered to them with great interest, and each received a medal and certificate, with which they were much delighted.—[Boston Traveller.

New Line of Steamers.—The steamships Sarah Sands and New Orleans have been purchased and despatched for the Pacific, by J. Howard & Son, who are thus establishing another line between Panama and San Francisco. There will doubtless be business sufficient for two lines, though prices will probably fall in consequence of the opposition. We hear that Messrs. Everett & Co. are to be the agents at San Francisco,—*Polynesian.*

☞ We have been informed that the Post Master General in London, was about to order that a sealed mail bag for the Hawaiian Islands, be made up there, every month, to come by way of Panama and San Francisco.

American Consul for the Port of Honolulu.—Elisha H. Allen, Esquire, of Maine, was appointed Consul, as above, on the 18th of October last, and we hear was to have left the United States for these Islands in December.

☞ If Sir John Franklin should make his appearance, the friends of Mesmerism will keep a Jubilee !

The Manchester Guardian contains a long account of the second interview between Mr. Haddock, a friend of Sir John Franklin, and the Bolton clairvoyante. She professed to have had interviews with Sir John Franklin and Sir James Ross, described their position in the ice, with sundry other minutiæ. She said she had had some refreshment with Sir John Franklin, who had his provisions in thick tin boxes. He had also some hard meat in a big tub. Sir John, she said, would be out of the ice in less than nine months.—That it was ten minutes past eleven by Sir John's time ; and a quarter past ten (a good while after) by Sir James Ross' time. That she went a good way further than Sir John Ross, where it was very dark, and the stars went round and did not twinkle, but she was sure it was quite ridiculous to attempt to find a road for ships over there. That she found Sir John in a house made of large blocks of ice, about nine yards from the ship. That Sir John had been a great way over the country, but had returned to his ships. That Sir John had seen the natives, but not Sir James Ross ; and that there were two ships on their way home, which would bring good news. The statements of this girl have excited great interest all over the country.

Hon. and Rev. Baptist W. Noel.—The author of the admirable "Essay on the Union of Church and State," has united himself with the Baptists, been re-baptized, and become the minister of a congregation in Gray's Inn Road, London.

DIED.

In Honolulu, on Sunday morning, Jan 6, at the U. S Hospital, Mr. Abram T. Alfress, of Bristol, Ct. where his family now resides. He came from San Francisco on board the Flavius, and died three days after his arrival. His remains were deposited in the Nuuanu Valley Cemetery.

Also, 6th, Mr. Smith, belonging to Oregon.

Also, 18th, at the U. S. Hospital, Dennis Rich, a seaman, and native of Palmyra, N. Y., who belonged to the Preble. He shipped on board the vessel at Callao

Also, 20th, Mr. John Beatty, (tinman,) aged 43, belonging to the city of New York. He had been for 14 years a resident on the Islands.

At Lahaina, Dec. 16, at the hospital, of consumption, Mr. Albert S. Harding, belonging to Newport, R. I. but had been a resident of Lahaina for two years.

Also, Dec. 31, at the hospital, Ezekiel Cuffee, from the American whale ship John Elizabeth, Capt. W. M. Chapel.

On board the English brig Spencer, off Honolulu, Jan. 21, Mr. Daniel Lynch, of London, a passenger from California.

At Honolulu, on board schooner Lola, Jan, 25, Mr. George Suvrp, of New York city. He came passenger in the ship Samoset from the United States. ☞ Papers in New York please copy;

Also, 28th, at the U. S. hospital, Mr. Frederick Dunn, of Patterson, Sydney, N. S. W. He came to Honolulu passenger on board the Flavius, ☞ Sydney papers please copy

Also, 28th, on board the brig Cononicus, William Gibson, an American seaman.

Drowned at the Falls in Nuuanu Valley, Sabbath afternoon, 27th, Mr. Edward Parrot, passenger on board the H. B. Company's bark Cowlitz, bound to Vancouver's Island.

The Friend, sent Abroad.

Any person, paying the annual subscription price of the Friend ($2,00) in advance, can have the paper sent to China, Sydney, Tahiti, San Francisco, or overland, via Panama, to the United States or England. According to the U. S. Post Office laws, newspapers sent from the office of publication, the postage may be paid by the person to whom the paper is addressed, but otherwise the postage must be pre-paid.

☞ If we have been correctly informed, there is not that irregularity about letters and papers going to the United States, that there is about their conveyance hence. tf

A CARD.

The subscriber, having been left destitute in Honolulu, and through misfortune been compelled to undergo an amputation of his left leg, returns his sincere thanks to all those merchants and others who have so generously subscribed $80,50 dollars for his benefit. He desires especially to acknowledge Dr. Lathrop's gratuitous surgical and medical aid.

JOHN GRACE,
Native of Pico, W. Islands.

Honolulu, Jan. 1, 1850. tf

Visit of the French sloop of war Bonite, to the Sandwich Islands, in 1836.

Translated for the Friend, from the French of Adolphe Barrot.

NO. III.

Kuakini visits the Bonite—his appearance and character—his appetite and fondness for wine—a specimen of Missionary influence—population of Hawaii—burial places—expedition to Mauna Loa given up, and consequent disappointment—the Volcano and the Goddess Pele located in the eastern part of the Island—the writer visits Kailua—the church—scene in the house of Kuakini—the Fort—arrival at Honolulu—the Government alarmed—visit from the King's secretary.

During our stay at Kealakeakua we were visited by Kuakini, Governor of Hawaii and one of the principal chiefs of the Sandwich Islands. He resides at Kailua, and is well known by the name of "John Adams." He came in his double canoe, managed by a score of stout Indians. He is a man of six feet and three inches; a blue vest, grey pantaloons, shoes without stockings, and a straw hat, constituted his accoutrement. We had been previously informed concerning his fine uniform and his large epaulettes.

Kuakini speaks very good English, and has the reputation of being an intelligent, but at the same time, an avaricious man.—There was no proof however, of his avarice in his sale of provisions to the Bonite. We were informed, it is true, that these provisions cost him nothing, except the trouble of sending his people for them among the poor islanders; such is the custom of the country the chiefs may lay claim to every thing.—Kuakini received from the corvette a certain quantity of iron in bars and some tools. He was accompanied by another chief named Hekili, (thunder,) not surpassed by the Governor himself in stature. They came every day on board the Bonite, the table and the wine of which, having, no doubt, strong attractions for them. Their appetite was insatiable, and in perfect keeping with their immense corpulency. The wine of Bordeaux, and more especially Muscat wine, seemed perfectly to their taste, notwithstanding the temperance laws established in the country. We also had a specimen of the influence exerted over this people by the Missionaries. Dining with us one day, in company with Mr. Forbes and Kapiolani, Kuakini scarcely dared to pour the least quantity of wine into his water; but when Mr. Forbes was not present, he carefully avoided having any water put into his wine. Yet Kuakini, they say, is utterly opposed to the missionaries. He reads and understands English very well, and accuses them of not having translated the Bible faithfully. As to poor Kapiolani, she never made the slightest gesture, without a glance at Mr. and Mrs. Forbes.

The population of Hawaii scarcely amounts to 29,000—when discovered it exceeded 90,000. The causes of this fearful diminution we will investigate before closing this article. The weather at the shore is very warm, Fahrenheit's thermometer ranging generally between 86° and 89°, (about 25° of Reaumur's) while at the upper village the air was fresh and pure, a sea breeze was felt, and the atmosphere seemed entirely different.

On my first going ashore, I had observed numerous holes in the precipice which overlooks the bay. These holes seemed to me to be the work of the natives, nor was I deceived. They are sepulchres for their dead. The excavation is usually closed up with wood work. There is at the present time in the village where Mr. Forbes resides, a cemetery where those are buried who die in the Presbyterian religion.

The principal object of our coming to Kealakeakua was not accomplished; we were obliged to relinquish our design of exploring the summit of Mauna Loa. From all the information we could obtain, it was evident that in our circumstances, our intended expedition was impracticable. We were assured that it would take eight days at least, to reach the summit of Mauna Loa, and nearly as long a time to return. They represented, with exaggeration I doubt not, the dangers and obstacles we should meet with in our excursion. This last consideration could not have the least influence on the determination of the gentlemen who had planned the ramble; but time was wanting. The days of our stay at Hawaii were numbered; in two months we were under the necessity of being at Manilla. We had to visit Oahu, the residence of the King. The ordinary chances of the sea might render our voyage much longer than we anticipated, and we were compelled to abandon our project. Our young officers, and especially M. Gaudichand, the botanist of the expedition, regretted it exceedingly. Indeed, I was certain that the exploration of Mauna Loa would be followed with beneficial results, and that natural history would be enriched through the assiduity of Messrs. Eydoux and Gaudichand, by a great number of interesting discoveries. As the snows on the summit of Mauna Loa and its famous crater, said to be twenty-five miles in circumference, had been for a long time the subject of our conversation and the object of our desires, we all lamented the necessity of the sacrifice.

Nothing can be more picturesque than Hawaii, as it appears from the sea. Near the shore it is very much broken and the soil appears every where covered with richest vegetation; but the eastern and northern part of the Island is much more pleasant and fertile than the part we visited, which is almost entirely destitute of running water.—The inhabitants of Kealakeakua are under the necessity of going five or six miles for their water, or else of drinking that which is brackish in no slight degree. Water might easily be conducted from the mountain to the sea by means of pipes; the rapid descent of land being very favorable; but a long time will pass before the inhabitants of this Island can be in a condition to perform such a work. The eastern and northern parts of the Island are well watered; there are many streams and many ponds of sweet water which serve as reservoirs for the regular inundations of the taro patches. The inhabitants of this part of the Island are much more numerous than where we visited, and the climate is also better. It is in the eastern part that the famous volcano, Mauna Kea, raises its sublime head and by its frequent eruptions, keeps the inhabitants in a constant state of alarm. Here the Goddess Pele has her residence. The traditions concerning this divinity of the Sandwich Islands have been related in so interesting a manner by M. Dumont d'Urville in his "Voyage around the World," that I should only impair the poetic picture of this navigator by undertaking to repeat them.

We sailed Oct. 6th, and at noon we were off Kailua, the residence of Governor Kuakini, who had come on before us. The corvette lay to, and we went on shore. As we could remain only three or four hours, we wished to make the most of our time. We first went to visit the church, which was unfinished. It is built of stone, and is the work of an Englishman. It is one hundred and twenty-five feet in length, forty-eight feet in width, its walls are about twenty-four feet high and the height of the steeple is one hundred and thirty feet. The interior is finished with a good degree of elegance. It is furnished with a broad gallery of carved wood, containing seats for a part of the congregation. The pulpit or desk of the missionary is of koa, a wood slightly resembling mahogany. In fine, a person here might imagine himself in an European temple, and the most of our villages are far from having churches comparable to that of Kailua.—

Kuakini went with us to show us the church, appearing very proud of what he called his "monument," and evidently enjoying our admiration. He then took us to his house, which appeared very much like that of Kapiolani. Extended curtains of English calico concealed the secret apartments of the women from vulgar eyes. Upon the estrade of honor, was lying at full length, a gigantic woman, clad in a gown of azure satin. I never saw any thing more monstrous or more hideous than this woman. It was Mrs. Kuakini. Her height could not be less than five feet and ten inches, and she was completely round. All the chiefs that I have seen appear to belong to a gigantic race. To be small and lank is, with them, a mark of low birth. M. Eydoux and myself passed among the islanders for great personages, and we were much more respected by them than if we had been destitute of such a degree of corpulence as never fails to incommode us in this hot latitude. To attain to this so much desired corpulence, nothing can be better adapted than the manner of living in vogue with the chiefs. They pass their lives, so to speak, reclining on their mats; very seldom do they take a walk, and they eat from morning till night.

A numerous company surrounded the estrade of honor. The young daughter of Kuakini was squatting near her mother. A number of women were waving *kahilis* above the princesses, in order to keep away the flies, which, in revenge, came to devour us. The principal inhabitants of Kailua were reclining upon mats around the room. Kuakini seated himself upon a settee, and motioned us to take some chairs placed near him. We were very thirsty, for the heat was excessive, and we had been two hours at least, in the boat; but Kuakini did not seem to think of our wants. He who had received a thousand attentions every time he came on board, and who seemed to regard as excellent the wines which were always offered him, thought not to provide the refreshments we so much needed. We were under the necessity of asking him for water, and this decided him to order us some Madeira.

Before leaving we enjoyed the pleasure of seeing the Governor and his family take their dinner; but he was very careful not to give us an invitation. He perceived without doubt, that we should find difficulty in adapting ourselves to his manner of eating, and truly, there is nothing more disgusting. A glance only at their food might suffice to drive appetite away. It consisted of baked pork, salted fish uncooked, and poi, which, among the Islanders, is the staff of life—without poi, they do not make a single meal. Each sort of food was contained in an enormous calabash. Kuakini stretched himself at full length near his agreeable wife, and then commenced a sort of contest to see who should eat the most ravenously and with the furthest remove from neatness. Each, in turn, thrust his fingers into the calabashes for food. This surprised me, for at our table Kuakini had shown that he was far from being unacquainted with the use of knives, forks and spoons. One cannot imagine the quantity of pork, of fish and of poi, which this monstrous couple devoured. Were I to attempt to give an idea of it, I should be afraid of being charged with exaggeration. All the calabashes were emptied in a trice. The manner of eating poi, is this—plunging two fingers into the paste, they give the hand a circular motion until a sufficient quantity is collected, when it is conveyed to the mouth. During the repast, their attendants observed them with respectful silence. When the calabashes were emptied, a servant took the one which contained the poi—then collecting with his fingers the morsels that had been left adhering to the sides, he formed therewith a ball so attractive that Kuakini swallowed it in a twinkling.

We were so much the more surprised at Mrs. Kuakini's appetite, as her husband had just informed us that she was dangerously sick, and had requested Dr. Eydoux to see her. Her illness appearing to be simply the result of excessive corpulence and unbroken indolence, the Doctor recommended exercise and attention to diet; two prescriptions which it would be difficult for her to put in practice, as Kuakini informed us. That she could not move without difficulty, was sufficiently evident, and from the manner in which she devoured her dinner, half an hour after the Doctor's prescription, we could judge that she would not, voluntarily, impose any restraint upon her appetite.

After their Excellencies had finished their dinner, we went to visit the Fort, in which are about twenty pieces of artillery of different calibres, mounted on wooden carriages. In the interior of the fort is the *morai*, or sacred house, where are deposited the remains of Kamehameha, the founder of the present dynasty. Wooden gods, with unseemly features, are stationed as sentinels at the corners and seem to forbid approach. These are the last external vestiges of the old religion.

The aspect of Kailua, although considered the capital of Hawaii, did not give us a very favorable idea of the civilization of the inhabitants. A few huts, scattered here and there, without order or symmetry; a crowd of ragged men and women following us every where and watching even our slightest motions with fatiguing curiosity—this is what we found at Kailua, and what we were destined to find again at Honolulu, the capital of the Sandwich Islands, for which place we were about to sail.

At daybreak, Oct. 8th, we were in sight of Oahu, and at six o'clock we cast anchor outside of the reef, which forms the harbor of Honolulu. The appearance of Oahu is more pleasant than that of Hawaii; the land is more broken, less striking perhaps, but more varied, more verdant, and more picturesque. The town of Honolulu is situated on the seashore, in the midst of a rich plain, five or six miles long and two broad. We could perceive back of the town and upon the slopes of the hills, numerous taro patches. The town has a sort of European aspect. To the right of the harbor is a white-washed fort, through the embrasures of which we saw thirty cannons of all sizes, whose muzzles, painted red, seemed any thing but formidable. In the midst of the scattered houses are seen a number of lookouts, steeples and cocoa-nut trees. We perceived at a distance, white fronts, green balconies and roofs built in the European manner; while the green hills which overlooked the harbor, extended to the horizon. On our right were two craters, one of which is called the "Punch Bowl;" the summit of this is indented and forms embrasures, where cannon of a very large calibre have been stationed. On the right and left of the harbor are coral reefs, over which the sea breaks with violence and which are almost entirely covered at high water. Through these reefs is an opening seventy or eighty fathoms wide, and this is the entrance of the harbor. Natives were advancing on these reefs even to the breakers, where some were bathing, some fishing, and others were taking shell-fish.

Our arrival, as we were afterwards informed, occasioned the Government some alarm. It was supposed that we had come to demand satisfaction for the arbitrary sending away of the French Catholic Missionaries. Scarcely had we cast anchor, when the King's Secretary, accompanied by the American Consul and the Editor of the Oahu Gazette, came on board, in order, doubtless, to find out the real object of our arrival; for, as soon as he was informed that our mission was of a peaceful character entirely, his countenance, which betokened much solicitude when he came on board, assumed a joyous expression.

Few canoes had put off from the shore to visit us, and it was easy to perceive that the arrival of a large ship, and even of a ship of war, was no new thing at Honolulu. We could already perceive a great difference in the clothing and manners of the natives.—The Secretary of the King wore a frock coat and a military cap; his watch-guard was a black ribbon, and his shirt of figured cambrick was becoming.

Honolulu has become the seat of Government; it is the entrepot of the commerce of the whole country. Of this we were convinced when, on our arrival, we saw at anchor many English and American ships discharging their cargoes, or taking on board the products of the Islands. Yet it was the season when the smallest number of vessels are found in port; and we have since learned that the whalers, who come here for refreshments or repairs, generally arrive in November and February, and that sometimes there are thirty or forty ships in the harbor. The American sloop of war Peacock, bearing the broad pennant of Com. Kennedy, was in port; as also many Hawaiian vessels, among which we noticed a brig of American construction. This was the King's yacht, and was called "Harriet-ta," after his sister—much better known by her true name, Nahienaena.

Dreadful Suffering at Sea.

We have received a letter from Capt. Hosmer, late master of the whaling bark Janet, of Westport, furnishing an account of the privations and sufferings of a boat's crew belonging to the Janet, comprising the captain and five others, which is almost without parallel in the annals of the whale fishery. It is substantially as follows:

"On the coast of Peru, June 23, 1849, in latitude 3° north, longitude 104° west, while cruising for whales, a shoal of sperm whales appeared in sight from the Janet, and three boats lowered in pursuit. Capt. Hosmer's boat's crew consisted of himself, Francis Hawkins, third mate; Edward H. Charlez, Joseph Cortez, Daniel Thompson, and James Fairman, seamen, It blowing fresh at the time, the boats soon separated, each having made fast to a whale. After Capt. Hosmer had succeeded in "turning up" his whale and was towing him to the ship, from some inadvertence on the part of the third mate in putting about, the boat capsized with loss of

boat keg, lantern keg, boat bucket, compass, paddles, etc. The crew succeeded in righting the boat, and lashed the oars to the thwarts across the boat to prevent her from overturning, she being filled with water, and the sea continually breaking over her.

"Two waifs, or flags, were immediately set as a signal of distress, the other two boats being in sight at a distance of about one and a half miles. Capt. Hosmer saw the other two boats take their whales alongside of the bark, which was then kept off in the direction for his boat, but when within about one mile of him, they kept off on another course until sun-down. The crew of the captain's boat then got on to the whale alongside and tried to bail the boat, but could not succeed. They then cut the line attached to the whale, and succeeded in setting some pieces of the boat sail and steered towards the bark, then about three miles distant. During the night they saw a light at intervals, and in the morning the bark was about the same distance off. Every expedient was resorted to by making signals to attract the attention of those on board the bark, but in vain. They saw them "cutting in" the whales, and apparently indifferent to the fate of their comrades. In this perilous condition the unfortunate boat's crew made another attempt to bail the water from the boat, but owing to their consternation, they did not succeed. They then continued on their course as before, hoping to regain the bark, but soon found that she receded from them, and it was then determined to put about to the wind and remain, whatever the consequences might be. On the second morning, the weather being more favorable, all the whale craft was thrown overboard, and another attempt was made to bail the boat, which resulted in the loss of one man, and without accomplishing the purpose. The effort was renewed again in the afternoon, the weather being yet more favorable, and they finally succeeded in freeing the boat from water, but with the loss of another of her crew—all on board having been up to their arms in water during the last forty-eight hours. Two of the survivors were seized with delerium ; all of them having been without a morsel of food or drink, and suffering painfully from thirst. Thus disabled, no one on board being able to ply at the oars, and with only a small fragment of the boat's sail remaining, it was determined to make for Cocus Island, on the Peruvian coast, a distance of about one thousand miles, as the nearest land. Accordingly, the piece of the sail was used to the best advantage, and the ceiling of the boat was torn up and also employed as a wind propeller, and they steered in a north-easterly direction. Capt. Hosmer writes nothing occurred worthy of remark until the seventh day, the crew having in the meantime been without a particle of food and drink, and not a drop of rain having fallen. In this dreadful state of suffering, it was mutually agreed to cast lots as to which of the number should be sacrificed to prolong the lives of his companions, and the unfortunate victim upon whom the lot fell met his fate with perfect resignation and willingness. At the close of the day, a shower of rain proved a very great additional relief. Being without compass or instruments of any kind, Capt. Hosmer was compelled to rely entirely upon his judgment respecting the course, aided only by an occasional glimpse of the North Star and the rolling swell of the sea from the south. On the eleventh day, another of the number died from exhaustion. It was found necessary to pursue a more northerly course in the hope of rain, none having fallen during the last four days. On they next day they were favored with another shower, and this benefaction was followed by the remarkable circumstance of a dolphin leaping from among its finny companions directly into the boat. Several birds also approached so near to the boat as to fall a prey to the necessities of the crew, administering greatly to their relief. On the 13th of July, land was discovered in an easterly direction, which proved to be Cocus Island, (uninhabited,) lying in 5° 27 north and 87° 15 west.

Capt. Hosmer and the other survivors succeeded in reaching it, but in an almost helpless condition. They however, caught a pig and drank its blood, which revived their exhausted strength, and also obtained a plentiful supplyof birds and fresh water. After remaining two days upon the island, they were overjoyed by witnessing the approach of a boat, which belonged to the ship Leonidas, whaler, Capt. Swift, then lying at Chatham Bay, for the purpose of procuring wood and water, and were relieved from their dreadful sufferings by being taken on board the ship and treated with every possible attention and kindness.

"The names of those who perished on board the boat, are Francis Hawkins, third mate, of Augusta, Me ; James Fairman, of Ohio, Daniel Thompson of Philadelphia, Edward H. Charlez, place of residence unknown, seamen.

Capt. Hosmer renders his grateful acknowledgments to Capt. Swift of the Leonidas, and also to Capt. Cleaveland of the bark Valparaiso, both of New Bedford, for their prompt and generous efforts in administering to the relief of himself and his companion. Capt. Hosmer arrived at Payta, August 21st, from which place his letter to us is dated.

We have also been favored with an extract of a letter from James A. Crowell, late first mate of the Janet, to Henry Wilcox, owners' agent, in Westport, dated at Payta, August 1st. Mr. Cowell, after mentioning the fact of the three boats putting off for whales, as above stated, adds :

"At 3 P. M. I had my whale alongside, and soon the ship came to me, and when I got on board, there was but one boat in sight, and that was five miles to leeward of the ship. I went down to it with the ship, and found that it was the second mate's boat. He had seen Capt. Hosmer two hours previously fast to a whale, and went to the leeward of him when last seen from his boat. We proceeded in the direction in which the captain's boat had been seen, and lay to all night with all sails set, and with all our lights fixed. In the morning we saw nothing of the boat. We cruised three days, but unfortunately without any trace of her. In the meantime, four of our hands were sick from fatigue, and we were under the necessity of maktng the best of our way to this port, (Payta.) We had taken one hundred barrels of oil for the last ten days previously, and lost two hundred barrels, during the same time by losing lines. I expect the captain's boat was taken down by a foul line, as he had a new line in his boat coiled two days previous to the accident. We saved one whale the day the accident happened, and lost another that night."—*Sailor's Magazine. Dec.* 1849.

A Description of Plymouth in 1627.

By Isaac de Rasieres, Dutch Ambassador from the New Netherlands to New Plymouth. A lately discovered document.

New Plymouth lies on the slope of a hill stretching east towards the sea-coast, with a broad street about a cannon shot or 800 [yards] long, leading down the hill ; with a [street] crossing in the middle, northwards to the rivulet, and southwards to the land. The houses are constructed of hewn planks, with gardens which are also enclosed behind and at the sides with hewn planks, so that their houses and court-yards are arranged in very good order, with a stockade against a sudden attack ; and at the ends of the streets there are three wooden gates. In the centre, on the cross street, stands the Governor's house, before which is a square inclosure, upon which four patereros [steen-stucked] are mounted, so as to flank along the streets. Upon the hill they have a large square house, with a flat roof made of thick sawn plank, staged with oak beams, upon the top of which they have six cannons, which shoot iron balls of four or five pounds, and command the surrounding country. The lower part they use for their church, where they preach on Sundays and the usual holidays. They assemble by beat of the drum, each with his musket or firelock, in front of the Captain's door ; they had their cloaks on, and place themselves in order three abreast, and are led by a sergeant without beat of drum.

Behind comes the Governor, in a long robe ; beside him on the right hand, comes the preacher, with his cloak on ; and, on the left hand, the Captain with his side arms and cloak on, and a small cane in his hand,—and so they march in good order and each sets his arms down near him. Thus they are constantly on their guard night and day.

Their government is after the English form. The Governor has his council, which is chosen every year by the entire community, by election or prolongation of term. In inheritance they place all the children in one degree, only the eldest son has an acknowledgment for his seniority of birth.—They have made stringent laws and ordinances upon the subject of fornication and adultery, which laws they maintain and enforce very strictly ; indeed, even among the tribes which live amongst them. They [the English] speak very angrily when they hear from the savages that we should live so barbarously in these respects, and without punishment. Their farms are not so good as ours, because they are more stony, and consequently not so suitable for the plough. They apportion their land according as each has means to contribute to the Eighteen Thousand Guilders which they have promised to those who have them out ; whereby they have their freedom without rendering an account to any one ; only if the King should choose to send a Governor General, they would be obliged to acknowledge him as sovereign chief. The maize seed which they do not require for their own use, is delivered to the Governor at three guilders the bushel, who, in his turn, sends it in sloops to the North, for the trade in skins among the savages. They reckon one bushel of maize against one pound of beaver skin : in the first place, a division is made according

to what each has contributed, and they are credited for the amount in the account of what each has to contribute yearly towards the reduction of his obligation; then, with the remainder they purchase what next they require, and which the Governor takes care to provide every year. They have better means of living than ourselves, because they have the fish so abundant before their doors. There are also many birds, such as geese, herons, and cranes, and other small-legged birds, which are in great abundance there in the winter.

THE FRIEND.

HONOLULU, MARCH 1, 1850.

Proposed Museum.

All classes of laborers and artizans may rightfully claim the reward and honor of the work of their hands. The farmer tilling the soil and producing a fine crop of grain, is justly proud of his labor and industry. The mechanic skilfully making a watch, a carriage, an article of furniture, an house, or any instrument demanding mechanical skill, may justly feel a conscious pride, in being a good workman, and the community will award him due praise. The man of science guards with a jealous eye any discoveries which he may make in the field of scientific research. The author places his name, (with its titles) upon the title-page of his books. The orator, the statesman and the philanthropist readily secure a tribute of praise from their fellow men. On the same principle, why should not the maker and vender of intoxicating liquors be equally proud of their achievements? Why should not the miserable drunkard be paraded by them, before the world, as an illustration of their skill and labor in transforming the man of intelligence, wealth and refinement, into a companion for the inmates of the sty?—Why should not the rich distiller and the wholesale dealer in London or Boston, when his drawing rooms and parlors are brilliantly lighted, and the sideboards "groan" beneath the beautiful array of decanters, introduce amidst the gayeties of the scene, a *victim* that the policeman is conducting from the gutter to the watch-house? On such an occasion, how appropriately the distiller or wholesale dealer might remark, "Gentlemen and Ladies, Look at my fellow citizen about to find lodging at the public expense, and enjoy the hospitality of the city authorities. I am extensively engaged in making such wrecks of humanity! I am this week shipping spirituous liquors to Africa, Asia, and the Sandwich Islands."

Why should not the retailer secure the services of a skillful painter, and have portrayed upon his sign-board a drunkard dying in all the horrors of "delirium tremens," and in the back ground, have sketched a prison, alms-house, and gallows? On the principle that the laborer should be proud of his work, Dr. Sewell's plates representing the effects of alcohol upon the human stomach, should adorn the apartments of the maker and vender of ardent spirits.

If all those engaged in the manufacture and sale of intoxicating liquors throughout the world, were to combine and establish a splendid Museum for an exhibition of their works and the fruit of their labors, what a collection of "subjects" and variety of "victims" might be easily gathered! Only think of it, reader; the British Museum would no longer rank "No. 1." Just imagine all the drunkards, or rather their "embalmed remains," (preserved in alcohol) gathered in one spacious temple dedicated to Alcohol! Imagine, then, distillers, wholesale dealers, retailers, and the whole fraternity of "bottle-washers" serving as door-keepers and *cicerones*, upon the numerous public invited to witness the exhibition of "rum's doings!"

Report says, that rumsellers in California, have things very much after their own way, if so, then San Francisco might be considered the most advantageous spot for the proposed Museum; yes, let it face on Portsmouth Square! The different halls or wings of the establishment might be appropriately named, "European," "Asiatic," "American," "Polynesian." The small apartments, or alcoves might be called after the great towns, or cities, for example, in "European Hall," and alcove "London" might be found placed for exhibition specimens of inebriates forwarded by Mr. Redface, keeper of Gin Palace, in street so and so. In "American Hall" and alcove "Boston," specimens forwarded by Mr. Break-the-pledge, keeper of Brigham's Saloon. In "Asiatic Hall" and alcove "Calcutta," specimens forwarded by several East India merchants. In "Polynesian Hall" and alcove "Honolulu," specimens forwarded by —— ——.

The plan, you will perceive, reader, is very simple, and although involving considerable expense, it might be defrayed by the enormous profits of the traffic. Should it, however, fail, we would propose as a substitute, an exhibition of San Francisco Cemetery!

Let "touch not, taste not, handle not," be your motto, reader, for death is in the bottle!

Abolition of the Grog-ration and Flogging in the U. S. Navy.

In several late political and religious papers from the United States, we have read the reports of public meetings upon this subject, which appears to be exciting more attention than at any former period. Facts of this description are calculated to arouse public attention:—the frigate Independence during her late cruise in the Pacific, was absent nine hundred and ninety-six days, and during that period forty-five thousand eight hundred and thirty lashes were inflicted, or more than two dozen, per diem. In view of this statement, Com. Stewart wrote a letter declaring that if "our naval service could not be maintained without such means, he thought the wisest course would be to break it up altogether." The advocates for flogging and grog-rations assert that the former is necessary to maintain good discipline, and the latter to keep sailors in the service! To this it is replied, if the present rate of wages will not induce seamen of "good" character to enlist, then raise the wages, and obtain men that will do their duty without being "drugged or flogged." If it is proper to flog a seaman for drunkenness, why not an officer?—thus argue the opposers of flogging. We opine, if a law should be passed by Congress that all commodores, post-captains, commanders, lieutenants and midshipmen, proved guilty of intoxication, should be punished by "a dozen," the flogging system in the Navy would very soon go "by the board." It is perhaps worse for Jack to get *drunk* than for a captain to get "excited"—or for a marine to get *intoxicated* than for a lieutenant to get "a little tight."

The following is the letter of Com. Stewart referred to. It was addressed to Barnabas Bates, Esq. of Philadelphia.

Philadelphia, July 28, 1849.

My dear Sir—I am in receipt of your favor of the 22d inst, with the enclosed slip containing a statement of the flogging on board the United States ship Independence, on her last cruise. The number of lashes stated to have been inflicted, appears to me to have been enormous—the amount (45-830,) certainly carries with it an amount of depravity in the crew, or one of oppression and cruelty in the commander, wholly unwarrantable. That there is tyranny and officers of cruelty in the service, there can be no doubt, and I think I have pointed out, in my letters on naval subjects, (to Secretary Upshur, some time since,) the primary cause of their existence in the Navy, and how they have been fostered through the recruiting service or the existing system. The experience of the naval service has demonstrated the necessity of some prompt and effective mode of restraining insubordination in the men, and thereby preserve the essential discipline of the naval service.

If this cannot be effected, the wisest policy would be to break up the Navy, and save the millions drained from the Treasury for its support, extinguish its cruelty and oppression, and put an end to a service so wholly and completely aristocratic, that it has not, even under monarchs, its equal in existence. Some portion of blame for this exhibit of severity may be attached to the law governing the naval service; it leaves no discretion in the mode of punishing; many slight irregularities and offences might be punished with-

out the lash, but the law requires whipping to the extent of, or not to exceed, twelve lashes. The officers, therefore, by law, are confined to whipping, and cannot punish otherwise, as it would be unlawful, and they liable to prosecution.

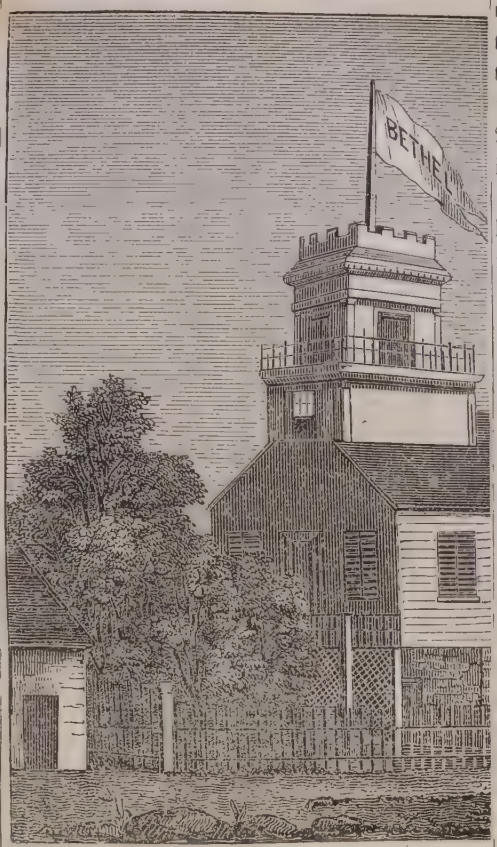
I hope the Congress, before they act in either the case of withholding the seamen's allowance of grog, or the lash, will consult with such of the officers on the subject in whom they have confidence, or cause a more suitable code of rules and regulations for the naval service as will govern it more efficiently, and render it more appropriate to the national object for which it is established and supported.

I hope Congress the next session, will advance towards your object of cheap postage; hitherto it has been, from its enormous expense, highly oppressive to the business community. It is time we should be released from the whole support of the post establishment; they have already taken one good step towards it.

I am very much pleased to hear from you, my good friend, and hope you will forward me the copy of the dialogue. Accept the assurances of my high respect and esteem, from your obliged friend.

CHARLES STEWART.

PRAYERS AT SEA.—Our own observation is precisely similar to that of "Observer" in the following communication. Having frequently passed from island to island of this group in native vessels, we cannot now recollect the instance where prayers were not offered, either morning or evening, and sometimes on both occasions. The practice has always deeply impressed our mind, and led us to regret that the practice was not more common among that portion of the sea-faring community professing a far higher degree of enlightenment and civilization than the natives of the Sandwich Islands!



EDITOR OF THE FRIEND.—I have on several occasions, voyaged among the Islands in native vessels. and have never been in one where either the native captain or some pious sailor did not, morning and night, offer up a prayer to God, and commend the crew and passengers to His keeping, who holds the winds in His fists and the sea in the hollow of His hand.

But how different the case on board the schooner Sophia, an account of whose loss with the captain and several of her crew, was published in the last Polynesian. A clergyman being a passenger on board, prayers were offered by him, but they elicited the *mockery* of the captain and his foreign associates.

Now mark the result. No sooner were his passengers landed, than his vessel is driven from her anchors, and in a fierce tempest she goes down, taking with her those who had impiously mocked the worshippers of Jehovah, and they were thus unprepared ushered into His holy presence!

How sad the thought! For He has said "I will laugh at your calamity, and mock when your fear cometh! When your fear cometh, and sudden destruction is upon you!" Truly "the ungodly shall not live out half their days!" Oh, that men were wise!

OBSERVER.

Front view of the SEAMEN'S CHAPEL, Honolulu.

Chaplain's Report.

Below will be found a summary statement of the expenditures and receipts relating to the late alterations and repairs upon the Seamen's Chapel.

Paid for altering and repairing Chapel, including erection of Reading and Vestry Rooms, -	2,944 41
Paid for eight pairs of blinds, - -	100 00
Paid interest on loan, - - - - -	57 00
	$3,101 41
Received from Subscribers on board ninety one American whale ships, - - - - -	1,515 62
Received from subscribers on board American merchant vessels, - - -	113 50
Received from subscribers in the United States Navy, - - - - - -	141 00
Received from subscribers in the United States Revenue Service, - - -	30 00
Received from subscribers on board British merchant and whaleships, - -	142 75
Received from subscribers on board ships in the English Navy, - - -	21 00
Received from subscribers on board German vessels, - - - - - -	57 50
Received from subscribers on board Chilian vessels, - - - - - -	11 00
Received from subscribers on board Bussian vessels, - - - - - -	4 50
Received from the American Seamen's Friend Society, - - - - -	497 13
Received from various sources, as acknowledged in the Friend, - - -	567 41
	$3,101 41

In connection with the above statement, the Chaplain would remark that during the period (of two years and three months) which he has been collecting funds for liquidating the debt upon the Chapel, it has been necessary to appropriate a sufficient amount to defray the incidental expenses of the establishment, including sexton's salary, lighting the Chapel, &c. At this date, (Feb. 20, 1850,) there is a debt for painting and incidental expenses, of $122 88.

The Chaplain would here insert the following note suggested, by the announcement in the February No. of the Friend, that the Chapel debt was paid:

ROSEBANK, 20th Feb., 1850.

MY DEAR AND REVEREND FRIEND:—I have this moment read in the Friend of the 1st inst., that the debt of $3,101 41, created by the enlargement of the Bethel Chapel, is now all paid. Having attended the meetings at which the enlargement was discussed, I much admired the spirit with which several Captains of American whalers, insisted upon preserving the Chapel, as one belonging *by right*, to seamen, and only open through courtesy to Foreign Residents. Taking that ground, which was a very just one, they virtually pledged themselves to carry you through with the enlargement, independent of the foreign community, and therefore I abstained from contributing any thing to the expenses of that enlargement, lest I should be understood as implying a doubt that the powerful and respectable body of the Captains of American whalers frequenting Honolulu, would fully redeem their pledge.

I understand they have redeemed it, and I believe since they commenced the good work of so providing for the spiritual interests of their crews, Providence has signally favored the exertions of these crews, in the adventurous fishery which they pursue in this ocean. If I remember right, some one, at the meetings aforesaid, ventured to predict that it would be so.

But, as one of the Foreign Residents, who through courtesy, have been permitted to sit in the Seamen's Chapel, and who have participated in the religious instruction dispensed by you, as Chaplain, every Sunday, I beg now to be allowed to send you $20, to be applied, at your discretion, to the incidental expenses of your very useful Chaplaincy.

Hoping that you may be spared many years, to labor in this community, preaching and distributing religious tracts and books, to the seamen of all nations, conferring with and advising them and visiting them while sick, as assiduously as it is your custom to do,

I remain my dear and Rev. friend,
Yours respectfully,
R. C. WYLLIE.

Rev. SAMUEL C. DAMON, Seamen's Chaplain, &c, &c, &c.

NEW SEAMEN'S CHAPLAINCY.—Another Chaplaincy has just been established by the American Seamen's Friends' Society, in the most important port of South America—Rio de Janeiro. The number of arrivals of vessels there from foreign countries in 1848, was 1147; coastwise arrivals, 2402—making 3549 in a year. The Rev. J. Morris Pease, Chaplain, is about sailing from this port to raise there the standard of the cross, and tell its story to the thousands of ocean wanderers. In the meantime, the Rev. T. H. Newton, commissioned by the same Society, will occupy the Chaplaincy at St. Thomas, in the West Indies.—*N. Y. Observer.*

The Sabbath Wrecks.

A LEGEND OF DUNBAR.

It was a beautiful Sabbath morning in the autumn of 1577; a few small clouds, tinged with red, sailed slowly through the blue heavens; the sun shone brightly, as if conscious of the glory and goodness of its Maker, diffusing around a holy stillness and tranquillity, characteristic of the day of rest; the majestic Frith flashed back the sunbeams, while on its bosom slowly glided the winged graneries of commerce; there, too, lay its islands glorying in their strength—the May, shrouded in light, appeared as a leviathan sunning in its rays—and the giant Bass, covered with sea-fowl, rose as a proud mountain of alabaster in the midst of the waters. A thousand boats lay along the shores of Dunbar. It was the herring season, and there were many boats from the south and from the north, and also from the coast of Holland.

Now, tidings were brought to the fishermen that an immense shoal was upon the coast; and, regardless of its being Sabbath morning, they began to prepare their thousand boats, and to go out to set their nets.—The Rev. Andrew Simpson, a man possessed of the piety and boldness of an apostle, was the minister of Dunbar; and he went forth to the kirk to preach to the people, he beheld the unhallowed preparations of the fishermen on the beach, and he turned and went among them, and reproved them sternly for their great wickedness. But the men were obdurate—the prospect of great gain was before them, and they mocked the words of the preacher. Yea, some of them said unto him in the words of the children to the prophet, "Goup, thou bald head." He went from to boat to boat, counselling, entreating, expostulating with them, and praying for them

"Surely," said he "the Lord of the Sabbath will not hold ye guiltless for this profanation of his holy day." But at that period, vital religion was but little felt or understood upon the borders, and they regarded not his word.

He went to one boat which was the property of members of his own congregation, and there he found Agnes Crawford, the daughter of one of his elders, hanging upon the neck of her husband, and their three children also clung around him, and they entreated him not to be guilty of breaking the Sabbath for the sake of perishing gain. But he regarded not their voice; and he kissed his wife and his children, while he laughed at their idle fears. Mr. Simpson beheld the scene with emotion, and approaching the group, "John Crawford," he exclaimed, addressing the husband, "you may profess to mock, to laugh to scorn the words of a feeble woman, but see that they return not like a consuming fire into your bosom when hope has departed. Is not the Lord of the Sabbath, the Creator of the sea as well as of the dry land? Know ye not that ye are braving the wrath of Him before whom the mighty ocean is a drop, and all space but a span? Will ye then glory in insulting His ordinances, and delight in profaning the day of holiness? Will ye draw down everlasting darkness on the Sabbath of your soul?—When ye were but a youth, ye listened to the words of John Knox—the great apostle of our country—ye have trembled beneath their power, and the conviction that they carried with them; and when ye think of those convictions and contrast them with your conduct this day, does not the word *apostate* burn in your heart? John Crawford, some of your blood have embraced the stake for the sake of the truth, and will ye profane the Sabbath which they sanctified? The Scotsman who openly glories in such a sin, forfeits his claim to the name of one, and publishes to the world that he has no part or communion with the land that gave him birth. John Crawford, hearken to my voice, to the voice of your wife, and that of your bairns, (whose bringing up is a credit to their mother,) and be not guilty of this gross sin."—But the fisherman, while he regarded not the supplications of his wife, became sullen at the words of the preacher, and springing into the boat, seized an oar, and with his comrades, began to pull from the shore.

The thousand boats put to sea, and Mr. Simpson returned sorrowful from the beach to the kirk, while Agnes Crawford and her children followed him. That day he took for his text, "Remember the Sabbath day to keep it holy;" and as he fearlessly and fervidly denounced the crime of Sabbath-breaking, and alluded to the impious proceedings of the day, his hearers trembled, but poor Agnes wept aloud, and her children clung around her, and wept also, because she wept. But ere the service had concluded, the heavens began to lower. Darkness fell over the congregation, and first came the murmur of the storm, which suddenly burst into the wild howl of the tempest. They gazed upon each other in silent terror, like guilty spirits stricken in their first rebellion by the searching glance of the Omniscient. The loud voice of Psalms was abruptly hushed, and its echo mingled with the dreadful music of the elements, like the bleating of a tender lamb, in the wind that sweepeth howling on the mountains. For a moment, their features, convulsed and immoveable, were still distended with the song of praise; but every tongue was silent, every eye was fixed. There was no voice, save heaven's. The church seemed to rock to its foundations, but none fled—none moved. Pale, powerless as marble statues, horror transfixed them in the house of prayer. The steeple rocked in the blast, and as it bent, a knell, untolled by human hands, pealed on the ears of the breathless congregation. A crash followed. The spire that glittered in the morning sun, lay scattered in fragments, and the full voice of the whirlwind roared through the aisles. The trees crouched, and were stripped leafless; and the sturdy oak, whose roots had embraced the earth for centuries, torn from the deep darkness of its foundations, was uplifted on the wings of the tempest. Darkness was spread over the earth. Lightnings gathered together their terrors, and clothed in the fury of their fearful majesty, flashed through the air. The fierce hail was poured down as clouds of ice. At the awful voice of the deep thunder, the whirlwind quailed, and the rage of the tempest seemed spent.

Nothing was now heard save the rage of the troubled sea, which, lashed into fury by the angry storm, still bellowed forth its white billows to the clouds, and shouted its defiance loud as the war-cry of embattled worlds. The congregation still sat mute, horrified, death-like, as if waiting for the preacher to break the spell of the elements. He rose to return thanks for their preservation, and he had given out the lines—

"When in thy wrath rebuke me not,
Nor in thy hot rage chasten me,"

when the screams and the howling of women and children, rushing wildly along the street, rendered his voice inaudible. The congregation rose, and hurrying one upon another they rushed from the church. The exhortations of the preacher to depart calmly were unheard and unheeded. Every seat was deserted, all rushed to the shore, and Agnes Crawford and her children ran, also, in terror, with the multitude.

The wrecks of nearly two hundred boats were drifting among the rocks. The dead were strewed along the beach, and among them wailing widows sought their husbands, children their fathers, mothers their sons, and all their kindred, and ever and anon an additional scream of grief arose as the lifeless body of one or other such relations was found. A few of the lifeless bodies of the hardy crews were seen tossing to and fro, but the cry for help was hushed, and the yell of death was heard no more.

It was, in truth, a fearful day; a day of lamentation, of warning, and of judgment. In one hour, and within sight of the beach, an hundred and ninety boats and their crews were whelmed in the mighty deep; and dwelling on the shore between Spittal and North Berwick, two hundred and eighty widows wept their husbands lost.

The spectators were busy carrying the dead, as they were driven on shore, beyond the reach of tide-mark. They had continued their melancholy task for near an hour, when a voice exclaimed—"See! see! one still lives, and struggles to make the shore."

All rushed to the spot from whence the voice proceeded, and a young man was perceived, with more than mortal energy, yet labouring in the whirling waves. His countenance was black with despair. His heart panting with suffocating pangs. His limbs buffeted the billows in the strong agony of death, and he strained, with desperate eagerness, towards the projecting point of a black rock. It was now within its grasp, but, in its stead, he clutched the deceitful wave that laughed at his deliverance. He was whirled around it, dashed upon it with violence, and again swept back by the relentless surge. He threw out his arms at random, and his deep groans and panting breath were heard through the sea's hoarse voice. He again reached the rock—he grasped, he clung to its tangled sides. A murmur moaned through the multitude.—They gazed one upon another. His glazed eyes frowned darkly upon them. Supplication and scorn mingled in his look. His lips moved, but his tongue uttered no sound. He only gasped to speak—to implore assistance. His strength gave way—the waters rushed around the rock as a whirlpool. He was again uplifted upon the white bosom of the foam, and tossed within a few yards of the wailing but unavailing crowd.

"It is John Crawford," exclaimed those who were able to recognize his features. A loud shriek followed the mention of his name—a female rushed through the crowd, and the next moment the delicate form of Agnes Crawford was seen floating on the wild sea. In an instant a hundred plunged to her rescue; but before the scream of horror and surprise, raised by the spectators, when they

beheld her devoted but desperate purpose, had subsided, she was beyond the reach of all who feared death. Although no feminine amusement, Agnes had delighted in buffeting the waters from a child, and she felt at home upon their bosom, and now the strength of inspiration seemed to thrill through her frame. She was hidden from the gaze of the marvelling spectators, and a deep groan crept along the shore. She again appeared, and her fair hand grasped the shoulder of the drowning man. A shout of wild joy rang back on the deserted town. Her father, who was amongst the multitude, fell upon his knees. He clasped his hands together. "Merciful heaven!" he exclaimed, "Thou who stillest the tempest, and holdest the waters in the hollow of thy hand, protect—protect my child!"

The waters rioted with redoubled fury.—Her strength seemed failing, but a smile of hope still lighted up her features, and her hand yet grasped her apparently lifeless burden. Despair again brooded on the countenances of her friends. For a moment she disappeared amongst the waves, but the next, Agnes Crawford lay senseless on the beach, her arm resting on the bosom of him she had snatched from a watery grave—on the bosom of her husband.

They were borne to their own home, where in a few minutes, she recovered, but her husband manifested no sign of vitality.—All the means within their power, and that they knew, were resorted to, in order to effect his resuscitation. Long and anxiously she wept over him, rubbing his temples and his bosom, and at length, beneath her hand his breast first began to heave with the returning pulsation of his heart.

"He lives! he breathes!" she exclaimed, and she sank back in a state of unconsciousness, and was carried from the room. The preacher attended by the bedside, where the unconscious fisherman lay, directing and assisting in the operations necessary for restoring animation.

As John Crawford began to recover, the film of death that had gathered over his eyes began to melt away, and he gazed around in bewilderment, but unconscious of where he was, and he sank into a troubled sleep; and as he so slept, and his strength returned, he cast forth his arms, in imagination yet grappling with death. He dreamed, and in his dream he shouted for help. He prayed, and in the same breath he blasphemed, and reviled the trembling spectators, that his troubled fancy still pictured on the beach.

In a few hours the fisherman awoke from his troubled sleep, which many expected would have been the sleep of death. He raised himself in the bed—he looked around wistfully. Agnes, who had recovered and returned to the room, fell upon his bosom.—"My Agnes! my poor Agnes!" he cried gazing wistfully in her face—"but where—where am I—and my bairnies, where are they?"

"Here, faither here," cried the children, stretching out their little arms to embrace him.

Again he looked anxiously around. A recollection of the past, and a consciousness of the present, fell upon his mind. "Thank God!" he exclaimed, and burst into tears; and when his troubled soul and his agitated bosom had found in them relief, he inquired eagerly, "but, oh, tell me, how was I saved? was I cast upon the beach? There is a confused remembrance in my brain, as though an angel grasped me when I was sinking, and held me. But my head is confused, it is fearfully confused, and I remember naething but as a dream; save the bursting awa' o' the dreadful storm, wi' the perishing o' hunders in an instant, and the awfu' cry that rang frae boat to boat, "a judgment has come ower us!" And it was a judgment indeed! O Agnes! had I listened to your words, to the prayers o' my bits o' bairns, or the advice o' the minister, I would hae escaped the sin that I hae this day committed, and the horrors wi' which it has been visited. But tell me now, or in what manner I was saved."

"John," said the aged elder, the father of Agnes, "ye was saved by the merciful and sustaining power of that Providence which ye this morning set at naught. But I rejoice to find that your heart is not hardened, and that the awful visitation—the judgment as ye have well described it, which has this day filled our coast with widows and with orphans, has not fallen upon you in vain; for ye acknowledge your guilt, and are grateful for your deliverance. Your being saved is nothing short o' a miracle. We a' beheld how long and how desperately ye struggled wi' the raging waves when we knew not who ye were, and when it was na in the power of any being on the shore to render ye the slightest assistance. We saw how ye struggled to reach the black rock, and how ye was swept round it; and when ye at last reached it, we observed how ye clang to it wi' the grasp o' death, until your strength gave way, and the waves dashed you from it. Then ye was driven towards the beach, and some o' the spectators recognized your face, and then cried out your name. A scream burst upon my ear—a woman rushed through the crowd—and then John—oh, then!"—but here the feelings of the old man overpowered him. He sobbed aloud, and pausing for a few minutes, added—"tell him some o' ye." "Oh, tell me," said the fisherman, "all that my father-in-law has said, I kenned before. But how was I saved—or by whom?"

The preacher took up the tale. "Hearken unto me, John Crawford," said he, "ye have reason this day to sorrow, and to rejoice, and to be grateful beyond measure.—In the morning ye mocked my counsel and set at naught my reproof. True, it was not the speaker, but the words of truth that were spoken, that ye ought to have regarded—for they were not my words, and I was but the humble instrument to convey them to ye.—But ye despised them, and as ye sowed so have ye reaped. But as your father-in-law has told ye, when your face was recognized from the shore, and your name mentioned, a woman screamed—she rushed through the multitude—she plunged into the boiling sea, and in an instant she was beyond the reach of help!"

"Speak, speak on," cried the fisherman, eagerly, and he placed his hands on his heaving bosom, and gazed anxiously, now toward the preacher, and again toward Agnes, who wept upon his shoulder.

"The Providence that had till then sustained you, while your fellow creatures perished around you," added the clergyman, "supported her. She reached you—she grasped your arm. After long struggling, she brought ye within a few yards of the shore; a wave overwhelmed you both and cast you upon the beach, with her arm—the arm of your wife that saved you—upon your bosom!"

"Gracious heaven!" exclaimed the fisherman, pressing his wife to his bosom—"my ain Agnes! was it you? was it you? my wife—my saviour!" And he wept aloud and his children wept also. "There is nae merit in what I've done," replied she, "for wha should have attempted to save ye, had I no! ye were everything to me, John, and to our bairns."

But the feelings of the wife and mother were too strong for words. I will not dwell upon the joy and gratitude of the family to whom the husband and the father had been restored as from the dead. It found a sorrowful contrast in the voice of lamentation and of mourning, which echoed along the coast like the peel of an alarm bell. The dead were lain in heaps along the beach, and on the following day, widows, orphans, parents, and brothers, came from all the fishing towns along the coast, to seek their dead among the drowned that had been gathered together; or, if they found them not, they wandered along the shore to seek for them where the sea might have cast them forth.—Such is the tale of the Sabbath wrecks—of the lost drave of Dunbar.

FOR THE FRIEND.

Temperance Men Overboard.

Lost overboard, in a recent voyage, belonging to the ship Washingtonia, a number of men. The facts in relation to this sad catastrophe cannot be definitely gathered from the conflicting reports. The Washingtonia has been near the country of gold; but it does not appear that the miserable men, who were lost, deserted her with the intention of swimming ashore that they might go to the gold mines. It would rather seem that some fatal infatuation had seized them—some charm, like that of the rattle-snake, which caused the billows to appear unto them as a pleasant terra firma, where they might forget all their sorrows. And like the gold fever, this strange infatuation seemed to be infectious; for hardly, in the first instance, had the fearful cry, "A man overboard!" ceased to resound through the ship, before another made the dreadful plunge! And so far had this frenzy proceeded, that there were not men enough left to navigate the ship!

But these wretched men have not all sunk beneath the waves.

"*Apparent rari nantes in gurgite vasto.*"

Occasionally one is seen struggling in the waves. It is said that some of these appear well nigh exhausted, and it is thought that they cannot hold out much longer.

It is with much pleasure we hear that efforts are about to be make to ship a crew for the good ship Washingtonia, and we sincerely hope that volunteers may be found to man the life-boats for the purpose of finding and saving the men overboard. And there is need of energy and haste—for the most are gone beyond hope!

Ye Washingtonians! where are ye?—Who will volunteer to save the perishing? Up! to the rescue! The cause of humanity—the cause of God calls you! L. E.

GOVERNMENT OF THE UNITED STATES.

Zachary Taylor, Louisiana, President,	Salary	$25,000
Millard Fillmore, N. York, Vice-President,	"	5,000
John M. Clayton, Delaware, Sec. of State,	"	6,000
Wm. M. Meredith, Penn., Sec. of the Treasury,	"	6,000
Geo. W. Crawford, Georgia, Sec. of War,	"	6,000
Wm. B. Preston, Virginia, Sec of the Navy,	"	6,000
Thos. Ewing, Ohio, Sec. of Home Department,	"	6,000
Jacob Collamer, Vermont, Postmaster-General,	"	6,000
Reverdy Johnson, Maryland, Attorney-General,	"	4,000

REVENUE AND EXPENDITURES OF GOVERNMENT FOR YEAR ENDING JUNE 30, 1848.

RECEIPTS.

From Customs,	$31,757,070
Public Lands,	3,328,642
Miscellaneous sources,	351,037
Treasury Notes and Loan,	21,256,700
In Treasury, July 1, 1847,	1,701.251
Total receipts,	$58,354,701

EXPENDITURES.

Civil List,	$5,598,064
Foreign intercourse,	335,935
Miscellaneous,	5,246,215
War Department,	27,829,143
Navy do.,	9,394,391
Public Debt,	9,846,419
Total expenditure, apart from loans,	$58,241,167

The House of Representatives is composed of representatives from each state, in the ratio of one to every 70,680 of the population. The present number of members is two-hundred and thirty-one. The compensation of the members is $8, and that of the Speaker $16 per day during the session, and $8 for every twenty miles' travel in going and returning.

Expenditures per Minute, of the U. S. Government.—The expenditures, per minute, of Washington's administration, were $3,82; Adams the elder, $2,58; Jefferson, $9,95; Madison, $34,88; Monroe, 25,18; Adams the younger, $24,35; Jackson, $35-15; Van Buren, $65,78; Tyler, $43,95; Polk, $145,88.

Iron in the United States.—The value of iron produced in the United States in 1845, was $42,000,000.

Moderate drinkers, in nine cases out of ten, labor to deceive their friends in relation to the amount of liquor they consume.

Arrival of Capt. Sir John C. Ross.—Capt. J. C. Ross, and his vessels, the Enterprise and Investigator, have arrived in England, from his search after Sir John Franklin. The gallant officer appeared rather the worse for his perilous voyage, but was animated with his characteristic energy. It is his confident opinion, that neither Sir John Franklin nor any of his brave companions, are eastward of any navigable point in the Arctic regions, and if there be any chance of their existence, it is in the supposition that he proceeded in a westerly direction—and in such case we can only expect to hear from the missing adventurers by the Makenzie detachment, or by Her Majesty's ship Plover, Com. Moore, by way of Russia.

Capt. Ross traversed at least two hundred and thirty miles on the ice. They penetrated as far as the wreck of the Fury, where he found the old tent standing, and every thing about it in a state of the best preservation. At this point Capt. Ross deposited a large quantity of provisions, and also the screw launch of the Enterprise. In the whole course of his researches, it is said that Capt. Ross never met with a single Esquimaux.

The intelligence which reached New York on the 20th Oct, by the bark M'Lellan from Davis Straits, is confirmed by a communication from Kirkaldy, dated Nov. 1st.—*N. Y. Tribune.*

Expedition for the Relief of Sir John Franklin.—Lieut. Lynch, the commander of the Dead Sea Expedition, has volunteered to head an expedition to start as early as practicable next year, to relieve Sir John Franklin. He proposes for the government to sanction the attempt, and afford officers and men (all volunteers,) and provisions—and in case there should be a question as to the legality of paying the expenses of such an expedition, he thinks he could raise sufficient from private sources to charter, strengthen and equip a steamer to carry out the object.—*Phil. Amer.*

Donations.

		For Chapel.	*For Friend.*
R. C. Wyllie, Esq. Honolulu,		20 00	
Mr. Fox,	"	3 50	
Mr. G. E. Webster,	"	10 00	
H. Sea, Esq.	"	10 00	

☞ The Collection in the Chapel, Sabbath morning, January 27th, in behalf of the Rev. E. Bond's Society, Kohala, Hawaii, (together with a few dollars since received for the same object,) amounted to $100 93. Considering the fact that no previous notice had been announced of the contemplated collection, this amount is larger than we anticipated. Ere long we hope to hear that Mr. Bond's society have succeeded in re-building their beautiful Meeting-house which suffered so much by the gale in December.

PASSENGERS.

Per British Schooner Petrel, Turnbull, fr. Tahiti. R Graham, lady and four children, Mrs Jordan and child, Messenger, McKay, Manfred, Lirain, Mary Bradfield, Morris, Mrs Dyball, Bradridge, Somerville, Turner, Willoughby and son, Ervin, Bryson.

Per American ship Constantine, Winsor, fr California, William P. Scott, Lucius Sanborn.

Per Peruvian bark Empresa, White, fr San Francisco, A. R Nevers, Auguste Hanke, Francisco Volkner, Henry Fornolstine, William Jaques.

Per American schooner John Allyne, Corwin, fr San Francisco, J. V. Sullivan, M. D. Plumer.

Hawaiian bark Don Quixote, Dudoit, fr California, West, West, Ray, Ray, Andrew Gardner.

MARRIED.

In Honolulu, Feb 27th, by the Rev. S. C. Damon, Mr. Rich'd Messenger to Miss Mary Bradfield.

DIED.

In this town on the 16th inst. Caroline Sophia infant daughter of Henry and Ann Maria Dimond aged one year.

Visit of the French sloop of war Bonite, to the Sandwich Islands, in 1836.

Translated for the Friend, from the French of Adolphe Barrot.

NO. IV.

Walk in Honolulu—appearance of the natives and town—-contrasts—-Seamen's Chapel—native Church—visit to the King—the three widows of Rihoriho—the King's visit on board the Bonite—reported apprehensions before his visit and while on board—the officers of the Bonite invited to a feast at the Pali—French and Hawaiian horsemen—-Nuuanu Valley—-magnificent view from the Pali—preparations for dinner—luau.

A wharf, built of large timbers and filled in with stone, rendered our landing easy, and we found ourselves in the capital of the Sandwich Islands. We were immediately surrounded by this idle population, for the employment of which, civilization had as yet, found no means. They were, as on Hawaii, covered with rags and the itch; but it was a sight to which we had become accustomed, and it no longer surprised us. The population of Honolulu had an appearance of neatness more general than the people of Hawaii, but there was something in them more repulsive. The men appeared more polite, but at the same time, more deceitful, and vice seemed to have set a mark upon the faces of the women. I enter into these details, because I am speaking of a people which has had intercourse with European nations scarcely sixty years. There ought to be some interest in seeing the moral and physical changes which this people has experienced, and here opens to our observation a vast and fertile field.

The town of Honolulu does not appear attractive on close inspection. The houses around the landing place, are merely cabins, built in the ancient style of the country.—From them came out a crowd of ragged women and children to see us pass. Leaving the fort on our right, the white walls of which were set off by the thatched roofs around, we made our way into the town. The streets were sufficiently wide and quite straight.—We saw a number of pretty European dwellings, some public places, and a number of well cultivated gardens.

The contrasts before our eyes could not but greatly interest us. This constant mingling of civilization and barbarism, produced a singular effect. Here passed a chaise in which were a gentleman and lady, the complexion of the latter giving evidence that she was born in the Sandwich Islands. Further on, a native, whose only covering was a *tapa* mantle fastened by a knot on his right shoulder, was mounted, without saddle, upon a mettlesome horse which he managed skillfully. In a court, a number of white children dressed in the European manner, ornamented frocks and calico pantaloons, were engaged at their sports; and near them was shining in the sun the naked and brown skin of native children, whose only garment was the indispensable *maro*. Here spacious stone houses presented to view the products of European industry; and at the gate, an Indian, clothed, and with a garland of banana leaves around his head, stopped us in order to dispose of some land shells, lobsters or birds. Sometimes we could distingush, through the half opened blinds, the elegant scarfs and fair countenances of ladies who were watching the newly arrived as they passed in the midst of a throng of islanders, who, with dishevelled hair and naked limbs, endeavored by fixing upon us their roguish eyes, to provoke some mark of attention.

There are three churches in Honolulu.—The most important of these is the Seamen's Chapel, where the aristocracy of the country, the white population, worship on the Sabbath. Under the same roof is a reading room, where are found, often of remote date it is true, the principal newspapers of the civilized world. Adjoining the reading room is the cabinet of natural history, all the specimens of which are confined to some shells of the country and the coast of California, and to a dozen bows and arrows from the Fejee Islands. The second church is that of the natives, and this, without dispute, has the most interest for an European. It was in this church that I attended divine service; but as I have already spoken of a similar service on Hawaii, I will only say that here, the costumes were not so singular as at Kaawaloa. The church itself, built of stone, with its steeple, and its bell, its carved pews and its seats already polished by age, could not be compared with the church of Kaawaloa, with its walls and roof of thatch, its timbers bare and held together by cords, its mats and its modest desk. The native population were in their best attire, and in the crowd we noticed numerous hats very comically worn, and hoods shading coarse and brown faces which needed not this ornament in order to be singular. There were scenes there truly worthy the pencil of Hogarth.

The next day after our arrival, we made a visit in due form to the King. He received us in the house of his sister, Nahienaena. It was because his own house was at some distance that he received us here, and he did not wish to compel us to take a long walk under a burning sun. This house, like all those of the country, contained but a single room, the partitions having been removed.—A large estrade of fine mats occupied the further end of the hall. The walls on the inside as well as the ceiling or roof, were covered with mats, to which were appended green branches for the purpose of attracting the flies and relieving the company from their annoyance. In front of the estrade, sitting in arm-chairs, were the King, Kauikeaouli, and the three sisters and wives of Rihoriho, his brother and predecessor. A number of chairs to complete the circle, had been placed far us. Behind the King and Princesses were the principal chiefs, some of them standing and some reclining upon the estrade.—The chiefs were in uniform. We were presented by the Governor of the Fort. His Hawaiian Majesty wore a blue coat with military buttons, and large epauletts. He is about three or four and twenty years of age; his countenance is expressive, although somewhat marred by a broad flat nose and thick lips. He is strongly made, and is about five feet, three or four inches in height. He received us very cordially; but we imagined that we perceived in him a certain embarrassment, which probably resulted from the apprehension occasioned by our arrival, or perhaps from his being little accustomed to formal presentations. This embarrassment, however, gradually disappeared, and his countenance assumed an expression of frankness and good humor. Kinau, widow of Rihoriho, and regent during the minority of Kauikeaouli, was seated at his right; at his left, was Kekauluohi, another widow of Rihoriho, and at the right of Kinau, a third widow of Rihoriho, called Liliha.

Of the many sons of Kamehameha, the first king of the Sandwich Islands, Rihoriho and Kauikeaouli are the only ones, concerning whom we have any information. After the death of Kamehameha, Rihoriho was called to the throne under the regency of Kaahumanu, his mother. Rihoriho died in England. Why he went to that country is not well known. He had five wives, three of whom were his own sisters, and the other two, half sisters. His favorite wife died in England a little before himself. A second wife died at Maui not long after. Three widows of Rihoriho survive, and these were the three women before us. Kanikeaouli succeeded Rihoriho, and at Kaahumanu's death, which occurred during the minority of Kanikeaouli, the regency devolved upon Kinau, who occupied the highest rank among the surviving widows of Rihoriho. She retained the power till Kanikeaouli became of age; but it would appear that her influence outlived her office, and that, being herself

completely under the authority of the American Missionaries, she exercises an absolute control over the young king.

The princesses were arrayed in silk, and by their size, reminded me of Mrs. Kuakini. To see three women of such immense corpulence seated together in a saloon, would certainly be considered a monstrous thing in Europe. The smallest was at least five feet seven or eight inches in height, and they seemed to vie with each other in presenting the largest circumference to the admiration of the vulgar. Corpulence, as I have already remarked, is a mark of distinction on the Sandwich Islands, and few women surely could lay claim to greater eminence in this respect, than those before us. The King, although very athletic, cannot compare with his sisters in plumpness, and as he is accustomed to ride on horseback, to fence, and take other exercise, it is doubtful if he ever becomes a *great* man, according to the Hawaiian acceptation of the term.

We were received very politely by the whole court. The King speaks English very well; but as the commander of the Bonite was not familiar with this language, and still less with the Hawaiian, the conversation, of necessity, languished. During all this interview, the King, as I imagined, before replying to a question, consulted Kinau. The expression of her countenance and the vivacity of her glance, betokened an absolute character.

Mr. Charlton, the English consul, who had accompanied us, inquired of the King if it would be agreeable to him to have his portrait taken by some officers of the corvette who were present. He assented, after having exchanged glances with Kinau. The young gentlemen set about the work, and in half an hour, they had sketched with a good degree of accuracy, the portraits of the King and Princesses. On their examining the portraits, each of the women appeared only half satisfied with her own portrait; but each laughed heartily on viewing those of her sisters. The interview ended by a promise from the King to visit the Bonite on the morrow.

On the 11th, he came on board, accompanied by Kinau and many officers. He was in full Windsor costume, with white plumes in his hat. This suit of clothes was a present from George IV. It was not without fear, as we were informed, that he came on board the French corvette. He also apprehended at one time while on board, that some violence would be inflicted on him in order to obtain reparation for the act which I have already mentioned. This information was probably false; at any rate, the distinguished reception which he received on board the Bonite, must needs have allayed his fears, if indeed he had experienced any. He wished to see every thing in detail and requested to witness the cannon and musket exercise—but what amused him most, was the staff exercise, in which many of our sailors were adepts.

Kauikeaouli's tastes, from what we could observe, are altogether martial. He is somewhat acquainted with naval matters, and pointed out the difference between the rigging of the corvette and that of other ships, which he had seen. He often makes excursions to the neighboring islands in his brig, the 'Henrietta,' and he managed her, in part, himself. Unfortunately, his education is very defective, and the missionary Bingham, whose pupil he is, seems to have made it his business to shut up his mind from those branches of knowledge which would have been the most necessary for him to learn in order to govern well. He is also, as I have already said, completely under the influence of his sister-in-law, Kinau, who rules in his name. He possesses, nevertheless, intelligence and memory, and his questions, sometimes judicious, indicate an ardent desire of knowledge. The time will perhaps come, when he will seize the reins of empire and call Kinau to account for her administrarion, and the missionaries for their counsels. The King and his suite left the Bonite perfectly satisfied with their reception, and with what they had seen.

Some days after, the King proposed to make a feast for the officers of the Bonite, and he requested Mr. Charlton to give me an invitation. Upon this I congratulated myself, for the feast was to be in the country, two leagues from Honolulu, and was to be, as they told us, disencumbered of all etiquette. We were to have a dinner in a grove, and then songs and ancient dances of the country —the singers and dancers were to be clothed in the ancient costume. I looked forward to the appointed day with impatience. It came at last. We met at the King's house. We set out at ten o'clock, forming a cavalcade of thirty or forty persons. In front was the King, mounted upon a beautiful white horse, and surely it would have been difficult at the time, to find a better or more elegant horseman. We rode on, without order, and if the native horsemen excited our curiosity, we afforded them amusement also by our manner of riding. Some of our young officers took their first lesson in horsemanship on this day, and at the end of half an hour or more, their movements were no more easy than at the moment of their starting.—On the contrary, all the natives who accompanied us, were excellent equestrians. The servants of the King, mounted on horses without saddles, brought up the rear. They reminded me, by their steadiness and even by their graceful attitudes, of those Roman knights we have seen upon ancient engravings.

Thus we proceeded six or seven miles in the midst of a green valley, shut in between two mountains, which seem to have been once joined together, so much analogy and resemblance was there between the opposite irregularities. On our right was a river, or rather a torrent. Concealed for the most part from our eyes, we occasionally saw its silver cascades leaping from the black lava rocks. We could judge of the fertility of the valley, from the rich plantations of taro on all sides of us. This root, less farinaceous than the potato, must be exceedingly productive; for a little spot not more than five rods square, as I was informed, would sustain the year round, a family or seven or eight persons. On our right and left were scattered cabins, from the doors of which peered forth the brown faces of the owners. A dense herbage covered the uncultivated parts of the valley, and the mountains seemed to be covered with the kukins, the silver foliage of which contrasted finely with the dark rocks from the midst of which it sprung.

At length we reached the end of our excursion. During our ride we had been constantly ascending, almost insensibly at first, and then towards the extremity of the valley we found outselves in the midst of precipices which the King ascended and descended with remarkable intrepedity. And now if the only object of our excursion had been the magnificent spectacle before us, we should have been more than paid for our trouble. Rising to a very great height above us, were the threatening summits of the mountains, whose dry and naked peaks seemed ready to fall on our heads. Behind us, stretched the valley of Honolulu, and beyond, the sea and the ships in the harbor. At our feet, and at a depth of two or three thousand feet perpendicular, we saw the tops of the trees which border the beautiful valley of Kaneohe.—This valley extends with a gentle inclination to the sea, which, on that side of the island, as well as the other, furnishes for the picture a frame of breakers. It would be impossible to sketch with the pencil, and much more so, to describe with words, the varieties of scenery so great and so picturesque, which makes from this point of view one of the most magnificent panoramas that nature can offer to the enthusiasm of her admirers. We were upon the wall of mountains, which divides the island into two equal parts. We were at the *Pali*. This is a place celebrated in the history of the Sandwich Islands. It was here that His Majesty's father, Kamehameha, who subdued all the chiefs of the adjacent islands and who attained to absolute power, gained his last victory. This is the Thermopylæ of Oahu. Here the king of Oahu, vanquished and a fugitive, preferred a voluntary death to the cruel fate which the conqueror had designed for him. He precipitated himself, they say, from this perpendicular wall, together with all his warriors who had escaped the weapons of the enemy. It is said that Kamehameha stationed a guard behind his troops, that all hope of escaping death by flight being taken away, his soldiers might fight with greater courage.

From the top of the Pali we saw the preparations for our dinner. The inhabitants of the valley were scrambling up the foot path that winds along the side of the mountain, bearing on their heads the provisions which the King's attendants had demanded of each one; for, at the Sandwich Islands, the king is absolute master of the fortunes of his subjects. A roof covered with leaves, had been raised during the night. Green ferns were spread on the ground, then a cloth, and upon this cloth were arranged European bottles, plates, etc. All this show of civilization did not please me, I acknowledge; it was too much like a dinner of our good citizens of Paris upon the greensward of Montmorency. I should have preferred the old Hawaiian manner. But it was necessary to be satisfied with what we had. I noticed that the porcelain was of English manufacture, and the table cloth was American.—These two nations, have in reality, invaded the whole commerce of America and India. Dinner was announced, and we all reclined upon the ferns. At the King's order the *luau* was served up. A gastronomic feast is called *luau* at the Sandwich Islands. It takes its name from an indispensable dish of young taro leaves boiled, or cooked in fat. In an instant, the cloth was covered with young pigs, fowls, fish, sweet potatoes, luau, etc.—

all these having been enveloped in leaves and cooked in the earth by means of red hot stones. We were all pleased with the excellent relish of what was spread before us. The fish especially, cooked in taro leaves, was delicious, and we were all constrained to acknowledge that we had never eaten any thing so good. One thing only seemed wanting. We had anticipated being regaled with the flesh of the dog, but we were disappointed. The missionaries probably, have forbidden the use of this viand. One of my neighbors, however, whispered in my ear his suspicions that one of the pigs lying before us without a head belonged to a nobler genus. It is said that the flesh of these dogs, which are exclusively fed on fish and poi, is exactly like that of pigs. Besides, the natives do not eat every species of the dog, one only having been set apart for this purpose, and this was the terrier species, with a long nose, short hair and short ears.

The serving was performed with a good degree of skill. A crowd of waiters surrounded us; some clad in pantaloons and vests, and others wearing the cool and commodious livery of the country. I noticed that always before serving up a dish, they opened the leaves which enveloped it, and took a morsel with their fingers, to taste it.—I was informed that this was the practice at the King's table, and that nothing was served up there without having been tasted by the servants.

FRIEND OF TEMPERANCE.

Wine and Beer Drinkers Beware!

Many in the community denounce the low and vulgar practices of the toper, and would despise the habits of the spirit drinker, yet maintain that wine and beer drinking are harmless, and on no account should be banished from fashionable society. We earnestly entreat such reasoners and all addicted to the practice of wine and beer drinking, to read and ponder the following statement of facts respecting one of *their* number. Late English papers contain accounts of the death *by suicide*, of Dr. Thomas Morton, in London, on the 1st. of November last. He held the offices of Surgeon to the University College Hospital and Surgeon to the Queen's Bench Prison, and was widely known and highly esteemed as a man of superior intellect, benevolence and honor. His home was graced with an estimable wife and child, his pecuniary circumstances were easy, and his professional prospects all that he desired.—But the disclosures at the coroner's inquest left no room to doubt that he had become a slave to private intemperance, and that the mortification arising from the consciousness of this fact, had driven him to temporary madness and suicide. Among the documents submitted, was a kind of diary of rules and reflections on this subject, which he had penned at various times during the last four or five months. The following are extracts:

'Shun wine, beer and spirits.

'To drink little or no beer or wine.

'Pray morning, noon and night to be strong against the temptation.

'It is the system of 'Well, one glass more,' which breaks a man down.

'Beer or wine makes a man heavy, bilious, bad tempered, violent, and, next day, feeble.

'Remember the happy lightsomeness of a water drinker.

'I fail because I am not firm to resist temptation. Also, because I try myself and run into danger.

'Let me not forget my dreadful feelings (*delirium tremens,*) after taking two or three pints of ale. Drink only water, and never exceed of beer one pint or one glass. When I fail, it is by thoughtlessness and want of firmness, also by an opinion that I can bear a good deal of beer. The health, temper and character of a beer drinker are undermined. One should never exceed a pint of beer a day. I am better on water. I never was so happy as on water. Take plenty of exercise in the open air, and live on water.

'I have only to remember my dreadful sufferings the mornings after taking so much beer or wine. Low suicidal feelings, despondent and gloomy thoughts, pulse one hundred to one hundred and twenty, head dizzy, limbs tremulous, pains about the heart, flatulence and eructations, incapacity for duty of any kind, temper irritable and overbearing, expensive habits, loss of time, forgetfulness of engagements, every thing in disorder—and all for what? *Because I choose to take two pints of ale or a bottle of wine!*"

Mr. Ereichsen, a surgeon, who examined the head of the deceased, testified that the arachnoid was in that morbid condition often found in persons of intemperate habits, and which leads to irritability and despondency of mind. He died in his bed, with an open bible in his hand, which the servant testified he was much in the habit of reading. The servants had noticed for a month the strangeness of his appearance, irritable temper, occasional staggering, expensive habits, forgetfulness, low spirits, etc.

If drunkenness was confined to the ignorant, debased and vulgar classes of society, it would be some alleviation to the sickening picture of truth, but alas, intemperance enters the circles of fashion, learning, science, literature, and even of *professed* piety. How melancholly a feeling of sadness does the announcement excite in the minds of all true lovers of poetry, that the gifted American poet, Edgar A. Poe, (the author of that remarkable poem 'The Raven,') should have died of "delirium tremens!" Almost every gale wafts to our ears the tidings that some of nature's most gifted sons have fallen victims to intemperance. Reports, but too true, have already reached these far off Islands of the Pacific, that some of the most talented men in England and America are allowing habits of intemperance to obscure the lustre and splendor of their intellectual powers. The world shudders at the murder of Dr. Parkman, but the victims of rum-sellers are a hundred to one more numerous than those consigned to the untimely grave by the murderer's arts.

Death of the Arch-deacon Jeffreys of Bombay.

We regret to see announced the death of this distinguished advocate of the temperance cause in India. He had spent over thirty years in India, but at the time of his death by the cholera, was on a visit to England.—He died at Exeter, Oct. 9. Only four days previous to his death, he addressed a large meeting in London, on the subject of temperance. In portraying the destructive and injurious influence of the drinking practices of Englishmen in India, he employs the following language:

"For one really converted christian as a fruit of the missionary labor, the drinking practices of the English had made one thousand drunkards! This was a sad thought—but it was the solemn truth. If the English were driven out of India to-morrow, the chief trace of their having been there would be the number of the drunkards they left behind."

Although the evils of intemperance are so wide spread, yet the advocates of total abstinence principles, are frequently, denounced as narrow minded fanatics, and that by some who even profess to be christians.—How it is possible for any person professing to have the least spark of christian principle in his soul, not to be in the fullest and most thorough-going sense a teetotaler, is beyond our powers of reasoning! We can readily perceive why the pleasure and wine-loving gentry, the low-minded and besotted frequeners of the dram-shop, and the lovers of mammon, should adhere to the drinking practices of society. But to repeat the idea, we cannot conceive it possible for a real christian to be any thing else than a firm and decided advocate of teetotalism.

"I Inherited the Appetite—I cannot refrain."—A few days since a most affecting instance of death by Delirium Tremens was related in our hearing. The unhappy man, belonged to one of the most wealthy and respectable families in the State of New York. Among the crowd rushing to California came —— ——, amply supplied with funds to enter upon business. Before leaving home, he had made the most solemn pnomises that he would not drink intoxicating liquors; but alas, the temptation proved to strong. Friends remonstrated, and every thing was done to induce him to refrain, but his reply was, "*I inherited the appetite—I cannot.*" He then referred to several near relatives who had been carried off by the Delirium Tremens. How wretched and miserable an inheritance are those parents, indulging in the use of strong drink, in danger of leaving to their children!

☞ British vessels are now admitted to all the ports of Sweden on the same footing as Swedish vessels.

THE FRIEND.

HONOLULU, APRIL 1, 1850.

FOREIGN INTELLIGENCE.

A New York correspondent writes as follows, under date of

NEW YORK, Jan. 15, 1850.

News from the West and East have made the last 48 hours lively enough. From California, more than HALF A MILLION OF DOLLARS in gold dust, the mines inexhaustable, and more coming! A State Government organized, and officers elected! Her commercial influence and destiny already perplexing the civilized world! What is she to *be*, and *do* socially, commercially, politically, morally, who can tell? The Pacific whaling fleet, never did better.

From Europe latest dates Dec. 29; Liverpool, cotton risen one farthing per pound in a few days. Corn and wheat improved in prices. American securities firm; money plenty; business good; commercial accounts from India cheering, and the prospects of a new year encouraging.

The question of the severance of Canada from the mother country is gravely discussed in the Cabinet, and the avowal is distinctly made that England would be no looser, but an actual gainer, were the Canadians to carry their secession threats into execution.

Austria is in trouble from the civil rebellion of 120,000 of her best troops.

Russia has also aristocratic troubles of her own, and is sharpening her teeth for a bite at Turkey.

France is sunny or cloudy just as the sun happens to rise.

The Pope has not yet returned to Rome, having fish to fry elsewhere; and when he does come, if ever, he will find any thing but a blind and stupid subserviency to his spiritual despotism.

United States.—A commercial review of the past year shows a great gain in most of the industrial pursuits, and a very desirable stability in most of the governmental and private business operations. Congress and several State Legislatures are now in session. With many eddies and counter-currents, the great stream of social and moral improvement is onward. In our headlong haste to get rich, our principal danger is that we shall neglect God, and forget that there is a merchandize better than the merchandize of silver. Cases of daring crime increase with the great increase of our population; the most prominent now before the public is the alleged murder of Dr. Parkman by Prof. Webster. Popular sentiment pronounces him *guilty*, in keen and awful tones. Very soon a safer tribunal, a court of justice, will speak, and its tones will vibrate most fearfully. We have perhaps in New England never had a more horrid tragedy. Such scenes are dark spots on our sun.

Yours, truly. J. S.

MARINE INTELLIGENCE.

Brig Brothers—A Remarkable Escape.

In the early part of the month of February, this vessel after completing a valuable cargo, at the Islands, sailed for San Francisco. On the morning of Feb. 18, she was discovered to be on fire, in the hold. During fourteen days the fire raged, but by the persevering efforts of all hands, it was extinguished four days before reaching port. Holes were cut in the deck, and water poured in, but the heat at times was so great that it was impossible to think of going into the cabin, or of going below, at all. During the period that the fire raged, the wind blew a gale, that alone threatened the destruction of the vessel. To add to the alarm, the powder was stowed in some unknown place, and serious fears were entertained that they might by suddenly blown up. It was finally discovered that fire approached within about two inches of the powder. The fire being extinguished, it was entirely destroyed and the vessel much injured. We copy the following remarks from a narrative of the disaster published in the Polynesian of March 16.

To much credit cannot be given to Capt. Soule for his untiring watchfulness and vigilance during the whole time of the disaster. Also much praise is due to the crew for their faithfulness and promptness in the discharge of their duty.

After baffling about four days, we finally arrived safely at Honolulu. As yet we have not been able to discover the cause of the fire.

The following is a list of the persons who were on board the brig Brothers:

Master—Cornelius C. Soule.

Mate—Richard Lloyd.

Crew—Lemuel Burton, Arthur Bradlet, William Taylor, William Bailey, Edwin Merrill, Thomas Thompson—George Evans, steward, and two Hawaiians.

Supercargo—David N. Hawley.

Passengers—N. S. Bailey, G. W. Wheeler, J. R. Williams, and Mrs. G. Evans.

Loss of the 'Speculateur."

This schooner, of 40 tons, left Tahiti, for California, August 13th, on the 8th day at sea a gale threw her upon her "beam ends." The wreck was abandoned—the boats were lashed together, to which an outrigger was attached. After navigating the broad ocean for twenty-six days, in this perilous situation, they succeeded in reaching the Navigator Islands in safety. A son of the English Missionary Barff, of Huahine, was a passenger on board, and he publishes a detailed account of the disaster, in the Samoan Reporter, of November 1849. No lives were lost.

☞ From ship Caroline, at Hilo, absconded, 2nd mate, Mr. Dow, his brother John Dow, boat-steerer, carpenter, blacksmith, and Francis Sawyer, seaman. They took a boat, provisions, quadrant, watch, &c. They are supposed to have left for ElDorado.

☞ While the whale ship, "Philip 1st," Capt. Woodruff, was recruiting at the Marquesas Islands, a boat's crew left, taking a boat. After the ship left, the natives robbed them of their boat and clothing, leaving them destitute on the beach. The Marquesans, have, doubtless, laid aside the mildness and innocence of their natures, since the visit of Melville among the dwellers in the Typee Valley.

☞ The English Missionary bark "John Williams," late in the autumn of '49, left for England. During the last two or three years she has been occupied in visiting all the English Missionary stations in the South Pacific, under the patronage of the "London M. Society."

☞ The Royal Yacht "Wanderer," on her passage from Tahiti, when approaching Hawaii, picked up twelve natives, who were drifting about at the mercy of the winds and waves. In a short time they would all have perished, their means of sustaining life were almost exhausted.

☞ The American bark "Maria," now lying in port, is 14 months old, and has made the following passages:

From Baltimore to London, 19 days.
" London to Cadez, 17 "
" Cadez to Gibraltar, 12 hours.
" Gibraltar to Cadez, 12 "
" C. de Verd to Rio Janeiro, 18 days.
" R. J. to New Orleans, 33 "
" N. O. to Philadelphia, 14 "
" Phila. to San Francisco, 126 "
" S. F. to Honolulu, 10 "

Her passage from the coast to Honolulu, is believed to be the quickest on record.

THE BRIG "TUSCAR".—This vessel bound to San Francisco, with a cargo of lumber, was dismasted on the 22d of February, and after erecting jury-mast steered her course for this port, where she arrived on the 14th ult. The principal part of her cargo has been sold at auction.

☞ The long looked for clipper bark "Wm. H. Shaler" arrived on the 30th of March, having experienced a variety of disasters. She was obliged to put into Montevideo for repairs. On her passage through the Straits of Magellan, she picked up the crew, (ten in number) of the American schooner "Andes," belonging to New London, Ct., and landed them at Valparaiso. The Wm. H. Shaler touched at Tahiti, on her passage hither.

"The Coffin to be Carried by Sailors."

The above sentence, is a part of the dying commands or directions of Her Majesty the late Queen Dowager of England, who departed this life on the morning of the 2nd of December, 1849, at Stanmore Priory. We suppose her Majesty was pleased thus to honor British sailors, from the fact that her husband, His Majesty William IV, was connected with the Royal Navy, and rose from the rank of Midshipman to that of the Lord High Admiral. From various accounts, we are led to infer that Queen Adelaide, was most highly esteemed for her private virtues and truly christian-like characteristics. She was the liberal patron of many benevolent and charitable institutions. This is her dying avowal, "I shall die in peace with the world, full of gratitude for all the kindness that was ever shown to me, and in full reliance on the mercy of our Savior Jesus Christ, into whose hands, I commit my soul." She left directions that her funeral should take place, in as private a manner as possible. She says, "I particularly desire not to be laid out in state, and the funeral to take place by day light; no procession; the coffin to be carried by sailors to the Chapel."

California.—The rush, to that part of the world, flows in unabated. One hundred and eight vessels are reported to have left the Atlantic States, for San Francisco, during the month of December. We have received San Francisco papers to the 2nd of March, but discover no special items of news. Steamboats are rapidly increasing on the bay and its tributary rivers, the San Joaquin and Sacramento. The rage is for new cities. The mines continue to yield the usual amount of gold, and no sign of being exhausted. The freshet and overflowings of the numerous streams and rivers, are reported to increase the amount of gold in the "diggings." The incipient steps have been taken for a raidroad from Sacramento city to Coloma, or the Mills, about 40 miles.

Oregon.—The Oregonians living on the Willamette river, have experienced much injury, by a high freshet, which occurred in December. The water rose on the Willamette, and tributaries so high as to sweep away dams and mills. At Oregon city several houses and stores were carried off or damaged.

☞ December 30th, the French vessel, L'Albert was wrecked at Tahiti. The pilot and crew narrowly escaped.

☞ The brig "Brothers" sold at auction, in Honolulu, March, for $3,575.

☞ Three unsuccessful attempts have been made to sell the Chilian brig Copiapo.

American Annexation of the Sandwich Islands—an old story.

While hearing and reading so much about American annexation, we have been somewhat surprized to find that it is only the old story of thirty years' standing. In the very first communication sent by the American Missionaries to their patrons in the United States, it is the topic of remark. Recently our attention was arrested in glancing over an old volume of the Missionary Herald of 1821, which contains the first reports of the missionaries. It appears that a part of the missionaries desired to settle on Hawaii, and the remainder proceed to Oahu, or Honolulu. The following paragraph we quote from page 118:

"The King said (to the missionaries,) you wish to go to Woahoo, because provisions are so plenty there; all the white men wish to live in Woahoo—intimating at the same time, that he feared the Americans intended to get possession of the Island. It is said that some inconsiderate American seamen—perhaps in the independent spirit of patriotism which often breathes itself out in high sounding words—have told this too credulous people that America would take these islands, and it is believed that some English residents have insinuated and maintained the same thing."

It is somewhat interesting and instructive to read these old documents. What may lie concealed in the undiscovered future, we know not, but of this one truth we are fully confident, that had it not been for that very influence, which thirty years ago, King Rihoriho seemed so much to dread, his brother, Kauikeaouli, would not at the present time, hold the sceptre and wear the crown of an independent sovereign among the nations of the earth.

Twilight Musings.

There are not a few here and elsewhere who question whether Missionaries have done any good by going to different parts of Polynesia. It is not our purpose, at present, to reason these opinions out of their minds.—Any attempt on our part would doubtless be vain, but we have an inquiry to make—Why do not our anti-missionary friends pass by those parts of Polynesia where missions are established, and direct their course to the Fejeean or Marquesan groups? We would especially recommend their settlement, with *their families*, among the Marquesans—the true sons of nature—Melville's happy Typeeans! We have lately met voyagers from the Marquesan group, who describe the present condition of things as by no means tinctured with the sombre coloring of Protestant missionary influence. We would earnestly recommend the dashing Melville, who has won such laurels among the literati of the old and new world, to take a trip with his young bride to scenes of earlier days—it may be, the gentle Fayaway would stand upon the beach to extend a cordial welcome. Why linger amid the fashionable circles that grace the saloons of New York, or cling to the refined habits of the Athens of America! No, embark for the Marquesan Isles, where

"with lavish kindness
The gifts of God are strewn."

but where there are no Bibles, no Sabbaths, no Sanctuaries, *nothing*, to remind one that Jesus Christ came to seek and to save that which was lost! This is not quite true—Capt. Woodruff, just from those islands, informs us that one solitary Catholic priest is there engaged in the duties of his calling. This man is indeed a reproof to the Protestant world, for missionaries of the London Missionary Society, and missionaries of the American Board, have both attempted to plant the standard of the Cross on those islands, and have abandoned the enterprize. We are ready to ask the friends of Missions why that group should be thus abandoned? Why should the powers of darkness be there suffered to hold universal sway? Has not the mantle of the martyred Williams fallen upon some noble hearted lover of the perishing heathen, who will ere long hasten to preach the glad tidings of the Gospel among the cannibals of Marquesas? For the honor of our common christianity, and the credit of the modern missionary enterprize, we hope the day is not far distant when a manly and powerful effort will be made to introduce the gospel among the aborigines of the Marquesan Islands. Capt. Woodruff reports that the king of one of the Islands, expressed the earnest wish that a missionary might be sent among his subjects.

☞ We would invite the reader's attention to the successive articles which appear on the first page of our paper, being faithful and elegant translations by the Rev, Mr. Dole. Our readers are doubtless familiar, perhaps wearied with the publications of English and American tourists and voyagers in the Pacific, but it is seldom that the Frenchman's "*impressions of scenes and scenery*," find their way before the English reader. M. Adolph Barrot appears to have been a careful observer, and although his views and sentiments, in some points, may somewhat differ from those usually dessemi-nated through the columns of this journal, still we are, by no means, disinclined to read what he may have to offer. Many even, of our ultra-Missionary readers, we are confident will sympathise with us in these sentiments.

☞ Mr. G. C. Miller, who has been for some time acting as British Consul at Tahiti, has been commissioned, as Consul, to reside at that Island.

☞ It is reported that the British Ministry will propose to Parliament at its present session, the reduction of the army.

☞ Although the following description of Mr. Webster's farm is somewhat lengthy, yet we are confident our American readers will peruse it with much interest. It certainly is highly creditable to America's greatest living orator and statesman, that he should be also one of her best farmers.—The same was equally true of the immortal Washington. America has rarely produced practical farmers to equal "the Father of his country."

DANIEL WEBSTER'S FARM.

Revere House,
Boston, July 24, 1849.

There is a portion of the Commonwealth of Massachusetts, which juts out into she ocean, not unlike a boot in shape, as delineated on the maps. This portion of the "Old Bay State" has enduring historical associations—a celebrity as broadcast as the universality of the Yankee nation; for it was upon this spot that the puritanical seed was first sown, and although a dry and sandy soil, it took root, and produced, and is producing an abundant harvest of hardy, energetic, enterprising Yankees. Here are Barnstable, Plymouth, Duxbury, Marshfield, Cape Cod, and Plymouth Rock—places and localities notable in American history, as the first landing-place of our Puritan progenitors, and as the dwelling places of those heroic men and women who planted, nurtured and defended the American Liberty Tree.

Within the limits of this "first settlement" and within a few miles of Plymouth Rock, in the midst of this "peculiar people," are the farm and home of Daniel Webster.

As there is no American citizen now living, who has contributed more largely to the imperishable glory and distinction of our country—no one whose intellectual superiority is so universally acknowledged at home and abroad—whose name and fame are destined to be pre-eminent and enduring, so long and wherever constitutional liberty exists—whose forensic, senatorial and popular speeches and orations will be read and admired as long as and wherever the English language is read and spoken—I have supposed a brief description of the home of Daniel Webster would be acceptable to your readers particularly, and to the public generally.

The farm and dwelling-place of Mr. Webster, is situate in the south-east part of the town of Marshfield, bounded on the east by the ocean, and contains over fifteen hundred acres of land. A goodly portion of this fifteen hundred acres is "light poor land," naturally, but made productive by frequent and expensive manuring; another goodly portion is marsh land, producing excellent grass; another portion is woodland, native and planted; and still another portion is very fine land, having a rich soil and producing abundantly. As a whole, this farm, in location, variety of soil and surface, beauty of landscape, its superior condition in agricultural improvements, buildings, fences, and general husbandry—its splendid prospects "o'er sea and land"—its daily invigorating and rejuvenating ocean breezes—its cod-fishing, brook trouting, and game hunting—its tortuous, undulatidg foot and bridle-paths, and extended gravel carriage roads—its quiet retirement from the world's "noise and confusion," and yet within two hours' access of the great eastern mart of trade and commerce—all this, with many other attractive beauties and advantages of improvement and location, render the farm and home of Daniel Webster, as a whole, the most desirable, delightful and valuable estate and residence in the country.

The first purchase of Mr. Webster made some twelve or fifteen years ago, consisted of only two hundred acres, including his present mansion house—since enlarged and improved. Subsequently, and from year to year, he added to his acres by purchasing the adjoining farms, until his estate now exceeds fifteen hundred acres, including the lands and venerable residence of Governor Winslow, of colonial notoriety. The extensive marshes or salt meadows, with their beautiful islands of shrubbery, resemble most strikingly in appearance and beauty, the rolling prairies of the West, with their islands of timber. Upon the farm also is a prominent elevation, from which an extensive view is had of the ocean, and the surrounding country, including Plymouth, Duxbury, Marshfield, &c. On this elevation, Mr. Webster has erected a liberty pole, from the top of which the stripes and stars can be seen, proudly waving, from a great distance at sea, and from several miles inland.

The mansion house is a large, comfortable and imposing wooden structure—situated on an elevation as regards the lands towards the sea, but in a lovely semi-circular valley as regards the lands towards the west. A circular avenue, lined with well trimmed hedges and ornamental trees, leads to the house; in front is an extensive lawn, adorned with flower beds, clusters of evergreens, shrubs and forest trees. In close proximity are two beautiful lakes or ponds, only a few rods apart, the one fresh and the other salt water, where may be seen useful and ornamental waterfowls of all sorts and sizes. The garden, consisting of several acres, is highly and tastefully cultivated, producing every variety of fruits and vegetables in abundance.

The carriage houses, stables, barns and sheds appertaining to the mansion house, are substantially built and finished off with more conveniences and appropriateness than any buildings of the kind I have before seen.—The chickery is very large, filled with every variety of domestic fowls, having "elegant apartments" suited to their habits and the climate.

Attached to the mansion house, and communicating with it, is the library of singular architectural beauty, filled with statuary, paintings, and one of the most extensive collections of books that can be found in any private library in the Union. The office is in the garden, quite concealed amidst locust, catalpa, chestnut, and willow trees and flowering shrubs—here his splendid law library, Congressional documents, &c., are deposited and systematically arranged. In speaking of his library, Mr. Webster remarked, "I only wonder how I found money to purchase so many books." He has a large number of octavo volumes of English Reports that cost twelve dollars a volume. The general character of his library is History, Classical Books, Standard books in poetry and prose, Miscellaneous Literature, Treatises on Public Law, Collections of Treaties, American History, Law and Politics.—I noticed all the volumes of Parliamentary Debates, copy of the English Statutes at large, volumes of the English Annual Register from its commencement in 1759, all the English political writers of distinction, Encyclopedias, Dictionaries in all languages, &c., &c.

The mansion house, which I have said was a large and imposing structure, is painted white, with a piazza quite around it, and is finished and furnished tastefully and substantially, combining great comfort and elegance.

Another prominent object which belongs to the mansion house, or rather villa, I have omitted to mention—it is a venerable and majestic elm about eighty years old, standing so near the house that some of its branches rest upon the roof. Its shape is perfectly symmetrical, and its huge outstretching branches (the extremities reaching the ground) form a beautiful and circular arbor. The majestic proportions of this elm, and the beauty and spaciousnesss of the ar, bor, formed by the over hanging branches may be appreciated by stating that the diameter of this arbor is exactly ninety feet.—

Such are some of the prominent objects and things of interest in, and immediately contiguous to, the mansion house.

I will mention a few things noticeable elsewhere on the farm. I saw eight capacious barns, filled to repletion with the hay and grain already harvested. A short distance from the mansion are the farm house for the workmen, and the barns, sheds, stables, &c, for the stock. There are stables for the oxen and stables for the cows—extensive sheds to protect the young cattle from the frosts of winter—hog houses and pig pens, with the most comfortable apartments, and every convenience and facility for preparing the feed. The floors of the stables are moveable plank, beneath which, every fall, is deposited large quantities of "muck" or loam, which is removed in the spring, making the richest manure for dressing land.

Mr. Webster has the best blooded cattle in New England. His milch cows are mostly of the Ayrshire breed, regarding them as a race of good milkers, healthy and hardy, enduring the New England winters, and living and thriving on pastures none of the best. He has the Alderney breed, often called the cottage cow, in England, admirable for quantity and quality of milk, but are tender and require great care and good living. He thinks the Ayrshire and selections from native stock a good cross, of which I saw beautiful specimens. He has a cow of the mixed breed, which this year and the last, in the heighth of the season, gave fifty two pounds of milk per day, equal to twenty six quarts—she is milked three times daily.

His farm is principally cultivated by oxen, and for this use he regards nothing equal to the Devonshire, or, what is much the same, the New England breed. He says the finest working oxen are the dark red, found in Worcester county, Massachusetts, and Connecticut.

His hogs are of the best breed, and he has a male of the Mackay breed, nineteen years old. This breed is close and square built, small heads and short noses, fatten well and make excellent pork. Of this breed he furnishes largely every year, to New York, Vermont and Massachusetts. I saw ten pigs

of this breed, and of the same litter, that will now average 200 pounds each, and will average this fall, he says, not less than 400 pounds each.

He has large fields of corn, potatoes, turnips, beets, beans and grain; his corn and potatoe fields the finest, by far, I have seen this year. He has a potatoe field of twelve acres, from which he expects to take 2000 bushels for market, that will realize to him two thousand dollars. He has a field of corn of about twenty acres, manured entirely with kelp, which is very stout and promising. Kelp is a sub-marine weed, which is thrown upon the sea beach in winrows during the upheaving of the ocean.—This is gathered and spread upon the land, making an excellent manure. Large quantities of fish were also taken from the sea and spread upon the land for manure.

It is thus by continuous hard labor, and the practical application of the most thorough knowledge of farming, that Mr. Webster has made his extensive estate productive. His whole farm is in admirable condition, fences durable, and in excellent repair—no weeds, bushes, briers nor thistles, anywhere visible—his gates, roads, barns, sheds, &c., in perfect order and repair—a place for everything and everything in its place—and all under the personal direction and supervision of Mr. Webster himself.—He is emphatically *the* farmer of Marshfield—*the* farmer of New England.

That which Mr. Webster seemed to regard with the greatest pride and satisfaction, was his planted forests. He has now growing over one hundred thousand forest trees, which he has raised himself, mostly from the seed. A beautiful forest of many acres, covering a gentle elevation, in view from his house, is from his own planting; and another wide belt of forest trees of various kinds, extending half a mile, to protect his mansion from the cold north-east winds, is also of his planting. There are oaks, pines, horse-chestnuts, chestnuts, catalpas, locusts, elms, sassafras, and trees from the west and south-west, such as white oak, buck-eye, American lime, red-bud, &c. His repeated efforts to raise live oaks, have entirely failed.

Mr. Webster's uniform habit is to rise at 4 o'clock in the morning—attend to his correspondence, &c.—breakfast at 8 o'clock, then ride and walk over his extensive farm, direct and superintend the work—dine at 3 o'clock, and then devote himself to the entertainment of his family and friends until about 10 o'clock, at which hour, and generally earlier, he retires. He is very fond of hunting and fishing, and has an abundant supply of fast sailing barges, boats, cod-fish lines, trout-rods and appurtenances, guns, dogs, &c.; and in these manly and healthy sports, he freely indulges.

Daniel Webster was born in Salisbury, New Hampshire, January 18, 1782, and is, of course, now in the sixty eighth year of his age; yet he has the physical strength and activity of most men at the age of fifty. Indeed, there is not, I believe, a man now living, who has done as much intellectual labor, and is now capable of as much in a given time; and few men of his age, of any profession or calling, are as physically vigorous or capable of enduring as much bodily exercise and labor.

I have thus mentioned some of the prominent objects and things of interest connected with the home of Daniel Webster; but to be appreciated in all their beauty and worth, they must be visited and seen. It is certainly a matter of extreme gratification to his friends and admirers, (and who does not admire his pre-eminent abilities, and feel grateful for his great and invaluable public services?) to find him surrounded with all the comforts and substantial elegancies so fitting his age, his position and his worth.

Mr. Webster has but one child living—Mr. Fletcher Webster—who has a very fine country residence, overlooking the sea, adjoining his father's estate, and about one mile distant from the mansion house. A daughter and son, Mrs. Appleton and Captain Edward Webster, died within the past year; and I cannot refrain mentioning an affecting incident in this connexion and conclusion.

Having spent the day in riding and walking over the farm, we returned to dinner; and just as we were entering the house, Mr. Webster remarked that there was one thing more he desired to show me. I followed on the piazza to the front of the house; he there pointed to two beautiful trees, the earth around their roots yet fresh. "There," said he, "are two weeping elms—I call them Brother and Sister." The tears gushed from his eyes, and without another word, he suddenly left me. I required no explanation, for I had known the brother and sister.—Otsego.—[Cor. of the Cin. Gaz.

Gen. Washington's Farm.—The farm of Gen. Washington, on Mount Vernon, contained about fifteen square miles. It was divided into farms of convenient size, at the distance of two, three, and five miles from his mansion house. These farms he visited every day in pleasant weather, and was constantly engaged in making experiments for the improvement of agriculture.—Some idea of the extent of his farming operations may be formed from the following facts:

In 1787, he had 580 acres in grass; sowed 600 bushels of oats; 600 acres with wheat, and as much more barley, corn, potatoes, beans, peas, &c., and one hundred and fifty with turnips. His stock consisted of one hundred and forty horses, one hundred and twelve cows, two hundred and thirty six working oxen, heifers and steers, and five hundred sheep. He constantly employed two hundred and fifty hands, and kept twenty four ploughs going during the whole year, when the earth and the state of the weather would permit. In 1786, he slaughtered one hundred and fifty hogs, for the use of his family, and provisions for his negroes, for whose comfort he has great regard.

Fifth House of Worship in San Francisco.—We congratulate our Reverend Brother, Mr. Hunt, in the success which has attended his efforts for the erection of a Congregational Meeting House in San Francisco. We copy the following from a late California paper:

The fifth house of public worship in this city was opened for divine service last Sunday. The building is situated on the corner of Jackson and Virginia streets, plain and unpretending in its structure, though exceedingly neat. It is capable of comfortably seating three hundred persons. In the consecrating services the ministers of the various denominations in the city participated. The sermon was by the pastor, Rev. T. Dwight Hunt—his subject—"The glorious gospel of the blessed God." And warmly and eloquently did he advocate its claims, not merely as the only way of salvation, but as the great moral lever of civilization by which only the nations of the earth are to be lifted from their deep degradation. Mr. Hunt is an interesting speaker, and an elegant writer, and we anticipate for the First Congregational Church under his charge, the fullest measure of success.—[Pacific News.

Aristocracy and Democracy in England.—The aristocracy of England is constantly receiving members from the people, and constantly sending down members to mingle with the people. The yeoman is not inclined to murmur at dignities to which his own children may rise. The grandee is not inclined to insult a class into which his own children must descend.

Thus our democracy is the most aristocratic, and our aristocracy the most democratic in the world; a peculiarity which has produced many important moral and political effects.—[Macaulay.

Missionaries to Foreign Ports.—Mr. J C. Knapp, a recent graduate of the Princeton Theological Seminary, was ordained a few days since, by the New Brunswick Presbytery, as a Missionary of the American Protestant Union to Valparaiso. The services were conducted by Rev. Drs. Baird, D. V. McLean and A. Alexander.—*Am. paper.*

The Hon. Abbott Lawrence, Envoy Extraordinary and Minister Plenipotentiary from the United States, had an audience of her Majesty at Windsor Castle, on Saturday the 29th of October, to deliver his credentials.

New Bedford Oil Market, Jan. 7, 1850.—Sperm—The market continues very firm, with a demand fully equal to the supply, and prices have further advanced. The sales since our last embrace a cargo of 1360 bbls. understood to be upward of 118 cts. per gallon, and yesterday a parcel of 1200 bbls. at 119 cts.

Whale—Is more quiet, and we have only to report a sale of 200 bbls. handsome N.W.Coast at 48 cts.

Whalebone—We hear of no transactions in this market. In New York sales were made on New Bedford account of 10,000 lbs. N.W.Coast at 35 cts. and 6000 lbs. Polar at 38, cash.

Department of Foreign Relations,
Honolulu, 20th March, 1850.

Be it known to all whom it may concern that the Commission of Elisha H. Allen, Esq., from the President of the United States, having been presented to this Department, and found to be in due form, he the said Elisha H. Allen, Esq., is hereby acknowledged by order of His Majesty, as Consul of the United States, for the Hawaiian Islands; and all his official acts as such, are ordered to receive full faith and credit, by the Authorities of this Government.

Given under my hand, and the seal of the Foreign Office, at Honolulu, this twentieth day of March, 1850.

(L. S.) R. C. Wyllie.

It has pleased His Majesty to approve of the appointment of Henry A. Paterson, Esq., as *Consular Agent* of the United States, for the Island of Maui.

The Whig Almanac, and U. S Register,--for 1850.

Published at "Tribune office," N. Y.

To the Post Master at San Francisco, we tender our grateful acknowledgements for late papers, and a copy of "the Whig Almanac." Now, if all good Whigs thoughout the United States should have their heads as full of facts, statistics and literary information as this Almanac, then surely they would prove a match for an equal if not greater number of good Democrats. The articles upon various leading topics are excellent, viz: "Postal Reform," "Flogging in the Navy," "Public Lands," "Finances," &c., &c. This is just the book that should be read by every American citizen abroad.

If figures speak the truth, one would suppose, that Yankees might be content with the present area of the country, when their remains unsold 245,913,344 acres of public lands, on the 1st of January, 1849!

Shipwreck.—The British bark Caroline, Capt. Perry, was wrecked on the reef opposite the harbor of Honolulu, on Monday last.

The Caroline was 140 days from Adelaide, and 109 from Hobart Town, and had experienced a succession of adverse gales during the entire passage. She had a large number of passengers, including several families, and with the crew, numbered 102 souls on board. For 10 or 12 days they were entirely destitute of water, and were obliged to subsist upon porter, and provisions from the cargo, her stores having been also exhausted. She, however, touched at Kauai, a few days since, and procured a supply to enable her to reach this port.

On Monday morning, the 25th inst., she came to anchor off the mouth of the harbor, the wind then blowing on shore from the S. E., and, as it has since proved, just the commencement of a gale of about 36 hours continuance. During the day on Monday, the wind continued to increase, and towards night the ship was pitching at a tremendous rate; and as it was deemed impossible for her to hold on during the night, the cables were slipped, her jibs hoisted, and the pilot, who was on board, ran her ashore in the best position he could secure. Soon after she struck, her main and fore-masts went by the board, which much relieved the ship, and she finally settled down, and remained from that time comparatively easy. When the main-mast went over the side, it took with it the mizen top-mast, and a part of the cross-trees fell on deck, striking and breaking the left arm of the surgeon of the ship, who was holding on by the mizen rigging. The next roll of the vessel carried away the fore-mast, and a seaman by the name of John Wilson, a Fin, was knocked overboard by a block and drowned. His body was found, and brought on shore on Tuesday. These are the only serious disasters to persons, attending this unfortunate wreck. The women and children were all landed on Monday, without accident; but about 30 persons remained on board over Monday night. Six boats were stove in, in endeavoring to take off passengers. On Tuesday, the wind was still increasing, with a tremendous sea, and although many attempts were made to board her with boats from the shipping in port, none could approach her.

In compliance with a request from Consul General Miller, to render such succor and aid, in saving the lives of the passengers and crew, as might be in his power, the Governor manned and despatched the largest canoes to be found; but they, too, were unable to board her, and the Governor's own canoe was disabled and capsized, and some of the people were oblige to swim ashore.

The ship had seven feet water in her hold, but will probably hold together till her cargo can be got out, which consists, principally, of lumber, flour and porter. A large part of her cargo will be in a damaged condition.—*Polynesian.*

DIED.

In this town, yesterday, Mr. Martin S. Rogers, aged about 37 years, a native of Orange Co., N. Y., and a resident for the last twelve years, of this island.

At Maloaa, Kauai, in January last, John B. Brosseau, a Canadian Frenchman, and long resident of these islands.

Feb. 22, at Wailua, Kauai, Oliver Chapin, one of the Circuit Judges of the island

On board the Bremin ship Republic, Jan. 10th, Mr. J. McDonald, chief officer of said ship. Also at Nukaheiva, Jan. 11th James Frazier, steward of the same ship.

At Lahaina, Feb. 8, William Taylor, aged 63. Mr T. was a native of England. He died suddenly, after a residence at the Islands of more than eighteen years. "In such an hour as ye think not, the Son of Man cometh."—[Com.

Drowned July 16, 1849, Mr. Aaron J. Wheeler, S. S., on board the American whale ship James Allen, while cruising on the North West Coast.

Suddenly March 14, at Koloa, Kauai, Mr. Henry Hall, a native of Ireland, but more recently from New York, via San Francisco.

MARRIED.

In Honolulu, Wednesday Evening Mr. Wm. F. Studley to Miss Sarah Gavin, by Rev. S. C. Damon, at the residence of Mr. R. A. S. Wood.

Lahaina Chaplaincy.

Mr. Editor:—Will you give this notice of the Lahaina Chapel, an insertion in your paper?

During the last month there has been expended upon the Chapel at Lahaina and the ground around it, the sum of $392 00 for the following purposes:

Fence around the Chapel yard, - -	$149 00
For finishing a room under the Chapel, for a study for the Chaplain, - - -	201 43
For incidental expenses, ringing bell, taking care of the house, fixing roof, etc.,	41 57
	$392 00
During this time I have received, for the purpose of defraying this expense,	246 25
Present debt, - - - -	$145 75

This amount has been received chiefly from seamen, and leaves the Chapel, at this date (March 16th 1850) with a debt of $145 75. I wish this statement published in your paper, 1st, That those who have contributed may know how their donations have been expended, and 2d, That seamen and others, visiting Lahaina, and the foreigners residing here, may know that there is a channel open for their benevolence. A hint to the generous is sufficient.

Very truly yours, T. E. TAYLOR,
Seamen's Chaplain, Lahaina,

Information Wanted.

Respecting William Woodland, a Seaman belonging to West Cowes, Isle of Wight, England. He left England in 1842, a seaman, on board the 'Carysfort' frigate. He has subsequently been heard from as a boat steerer on board the American whaling vessels Monmouth and Hambleton. Should this notice attract his attention, he is desired to report himself to his friends, or should he visit Honolulu, to call at the Chaplain's study, where he will find a letter to his address.

Charts for sale.

An old East India ship-master has left some new and old Charts, at the Chaplain's study, to be disposed of for his benefit in sickness. The following are among them: Charts of Canton river, East Coast of China, China Sea, The Strait of Sunda, China Sea No. II, Strait of Malacca, &c., &c. Also

AN EXCELLENT SEXTANT.

POET'S CORNER.

THE HOUR GLASS.

BY JOHN QUINCY ADAMS.

Alas! how swift the moments fly!
How flash the years along!
Scarce here, yet gone already by,
The burden of a song.
See childhood, youth and manhood pass,
And age with furrowed brow;
Time was—Time shall be—drain the glass—
But where is Time, is *now?*

Time is the measure, but of change;
No present hour is found;
The past, the future, fill the range,
Of Time's unceasing round.
Where then is *now?* In realms above,
With God's atoning Lamb,
In regions of eternal love,
Where sits, enthroned, I AM.

Then pilgrim, let thy joys and tears
On Time no longer lean;
But henceforth all thy hopes and fears
From earth's affection wean:
To God let votive accents rise;
With truth, with virtue live;
So all the bliss that time denies
Eternity shall give.

CHILDHOOD.

How little is the happiness
That will content a child;
A favorite dog, a sunny fruit,
A blossom growing wild.

A word will fill the little heart
With pleasure and with pride;
It is a harsh, a cruel thing,
That such should be denied.

And yet how many weary hours
These joyous creatures know;
How much of sorrow and restraint
They to their elders owe. L. F. L.

☞ "Donations" and "subscriptions" for the support of the Friend are ever acceptable, but when an acknowledgment of favors received is reciprocated in the shape of a "terrapin," the "donation" is fully appreciated. Capt. Whelden of the "James Maury" has our thanks for a specimen of the products of the Gallipagos Islands, which he sent us a few days since. See "notes of a Terrapin Hunt" in the Friend of May 15, 1847.

Visit of the French sloop of war Bonite, to the Sandwich Islands, in 1836.

Translated for the Friend, from the French of Adolphe Barrot.

NO. V.

Drinking healths — Leleiohoku—Kalanimoku —Songs and Dancing at the King's country house—the party return to Honolulu—the French guests disappointed—changes produced by Missionary influence—Nahienaena—Young—mistakes of the King—Indian dance—Honolulu society—Mr. Charlton—Marini—anecdotes of Kamehameha and Marini—Marini's opinion of Missionary influence.

Madeira and Bordeaux wines circulated freely, and healths were drank in the English manner, and gaiety reigned during the repast. We proposed the health of Kamehameha III., and he returned the compliment by proposing the health of *His Majesty, Louis Philippe, King of the French.* Our luau was then, the place excepted, very much like a European dinner. About thirty of us were at the table: no ladies were present.—Among the guests I noticed the two sons of a Frenchman, who has been established many years at the Sandwich Islands as a sail-maker. The two young gentlemen spoke English fluently, and one of them had the kindness, after dinner, to interpret for me the songs of the natives. Opposite to me was Leleiohoku, son of Kalanimoku. He is better known by the name of Pitt. He was baptized in 1819 or 20 on board the French corvette *Uranie*, commanded by M. de Freycinet. Kalanimoku was generalissimo and first minister of Kamehameha. Considering the country and the period in which he lived, he was a wonderful man. Leleiohoku is now one of the principal chiefs; he has married Nahienaena, sister of the King.

After dinner we all mounted our horses again and started for the King's country house, where we were to hear Hawaiian songs and to see Hawaiian dancing. On our way to the Pali we had left this house on the right. Every thing had been previously arranged: mats were spread in front of the cottage, and chairs were placed in a circle, and first, five singers appeared and kneeled down. Each of them was armed with a large calabash, which was made thin towards the middle; this calabash, held in the left hand by a string, aided the expression of their gestures in a singular manner. They were naked to the waist; their arms and breast were tattooed, and loose folds of tapa of various colors covered the lower part of their bodies. Their songs were a sort of recitative, or of modulated conversation, animated or slow, as the subject required.

The theme they had chosen, or which had been suggested to them, was a eulogy of the king. They spoke at first of the love which his people had for him. "A flower," said they, "grows upon the mountain height.—When the stars hide themselves, and the sun comes out from the sea, it turns of itself and holds out its cup for the morning dew. We climb to the mountain's summit and pluck the flower that we may bear this health-giving dew to Kauikeaouli."

Then they extolled his prowess in war.—"His horse turns his head to look at him, for he knows that he does not bear a common man. His lance is always red with the heart's blood of his enemies, and his battle-axe bristles with the teeth of warriors, who have fallen under his blows. When he speaks, his voice is heard beyond the mountains, and all the warriors of Oahu hasten to range themselves around him, for they know that under such a chief, their feet will speedily tread in blood."

It may be perceived that Hawaiian poets also indulge in some license, and that court flatterers are everywhere the same. Kauikeaouli listened to it all with the greatest indifference.

But what was admirable in this song, which however had a compress of only two or three notes, was the perfect accordance with which the five singers spoke and gesticulated. They must have rehearsed many times to attain to this degree of perfection. Each one of the five pronoûnced, at the same time, the same note, the same word, made the same gesture, and moved his calabash in the most perfect time, either to the right or to the left, or striking it against the ground he caused it to give forth sounds somewhat similar to those of a bass drum.—It might be said that they were all moved by the same impulse of thought and will. Sometimes the gestures varied and became inconceivably rapid, yet I was never able to discover a mistake. The voice, the hands, the fingers, the calabashes, the bodies of the five singers were always extended, moved, regulated by a spontaneous movement.

These singers were succeeded by three others, who were clad like the former, but garlands of leaves encircled their foreheads, while strings of the yellow fruit of the *pandanus odorantissimus* ornamented their necks and arms. All three were of admirable proportions, and of a beauty of countenance seldom seen on these islands. They sung of love and pleasure;—of love, Hawaiian, in its characteristics, a little too material, perhaps, and which was expressed by gestures none too modest. Pleasure the most sensual was indicated by the looks, the gestures, the words, and even the tones of these young men. At one time their countenances became dark, they waved with violence the feather fans which they held in the left hand, and the base of which, formed of a small

calabash filled with shells and struck by the right at regular intervals, performed the office of castanets. Thus they sung the frenzy of jealousy.

Their song, like that of the first singers, was nothing more than an animated conversation. No other song, in fact, is known at the Sandwich Islands.

The instrumental music of the islanders, which is still found at a distance from the ports, and some vestiges of which we observed on Hawaii, consists of tamtams and a sort of flute with two holes. Instead of the lips, the nose is used in blowing this instrument,—a graceful way, forsooth. The notes given forth by this instrument are not more varied than those of their vocal music.

The dancing was, at length, announced. But the time is past when the swarms of male and female dancers assembled on the green grass, and there, in their graceful dances accompanied by songs, recounted the glorious achievements of warriors. Singers and dancers were the historiographers of the country. In their memory the ancient traditions were preserved. The details of a war formed the subject of a song, and from the songs of the ancient Hawaiian bards have navigators drawn materials for their descriptions. It is then with regret that I have seen these national songs prohibited, under the pretext of their being profane. As well almost, might Homer and Virgil be prohibited! Dancing has also fallen into great disfavor in consequence of missionary influence. The dance which we witnessed felt the effects of this disposition.

Only one female dancer appeared. Formerly, graceful and easy, the upper part of the body of these dancers was entirely naked. Pieces of cloth, suspended from the hips, and hanging in graceful folds, imparted a sort of originality to their movements.—Necklaces composed of the fruit of the pandanus, garlands of leaves or of feathers, bracelets of teeth either of the dog or whale encircling the arms and legs, and shaking in regular time, composed their apparel. The one who presented herself before us, wore a calico shirt. Her dancing appeared monotonous. She sung at the same time, and a singer behind her, lent the assistance of his song and marked the time, by striking a calabash against the ground. Only one thing appeared remarkable in this dance; and that is, that the dancer regulated the measure, and, from time to time, gave to the musician the subject of his song. The musician endeavored to make his time accord with the movements of her feet, and he succeeded with remarkable precision. Yet, at the end of half an hour, the dance began to seem long. The king perceived that we were becoming weary, and, as it had not been possible to procure other female dancers, we listened to a few more songs, after which we mounted our horses to return to Honolulu.

We had spent the day agreeably; yet we had been disappointed. This king of the Sandwich Islands, clad in vest and pantaloons, these chiefs apparelled in the European manner, this serving almost European, these common and familiar manners had the power almost of making us believe that we have just passed some hours in the society of one of the lower classes of a civilized nation. Then, again, the dancing, so mean and monotonous, was far from realizing the ideas we had formed of it. Only the singing and singers appeared to have preserved all the originality of ancient times. The picturesqueness of the scene, however, did not diminish. Behind us, a cottage built in the aboriginal style of architecture; around us, a crowd of Indians, naked or clad in the most fantastic costumes; before us, the singers seated upon mats, with their characteristic countenances and their strange songs; the sea appearing in the horizon, and in the midst of us a grove of green trees enamelled with flowers. All this together formed a charming picture, which exercised the pencil of our artists in copying.

Formerly the women were passionately fond of these sports and these public dances. Many females even of the royal family had the reputation of being finished actresses; for this people once had plays, and the members only of distinguished families appeared on the stage. Now, this taste has yielded to the counsels of the missionaries. Perhaps also the fear of their reprobation alone prevents the women from giving themselves up to their old practices; at any rate, we were completely excluded from the society of the ladies of the King's family.

On the morrow the king gave us, in the city, a repetition of what we had seen the day before; but the fascination of the country and of novelty was lacking, and the soirée was dull enough. Still, justice requires us to say that the king did his best to render our stay at Honolulu agreeable.—His urbanity was extreme, and his good humor never failed for an instant. Every time that we went to see him he gave us the most cordial welcome, and seemed delighted to receive us.

I called one day with Mr. Charlton, on Nahienaena, the king's sister. When informed that she was only twenty years of age, I was surprised; she seemed to me much older. She was, however, hardly recovered from a long and wasting sickness.—She received us very graciously. Like all the distinguished women of the country, she is very large; and she must needs be very fat in her ordinary state of health. We admired the smallness and elegant form of her feet and hands. She was surrounded by women of honor, among whom we observed a daughter of the Englishman Young, who had been taken by Kamehameha from an English ship, on board of which he was boatswain. He attached himself to the fortunes of this conqueror, and died at Honolulu seven or eight years ago, at the age of 95 years. He was interred in the tomb of the kings, and his sons hold, at the present time, a very distinguished rank in the country.

Mr. Charlton accompanied me one day in a call upon the favorite mistress of Kaukeaouli. The history of the amorous chief king with this woman is quite romantic. He was obliged to remove her, so powerful had the influence of the missionaries already become in this country, where twenty years since the Christian name was hardly known. Yet, in spite of their severe reprimands, he lives with her in concubinage, her birth being too obscure to allow of his marrying her.

The evening preceding our departure, we witnessed at the residence of Mr. Charlton, an exhibition altogether foreign: this was an Indian dance. The performers were from the N. W. coast of America. One of the vessels engaged in the commerce carried on between these Islands and that coast was in port, and had a score of those Indians on board. The consignee had the kindness to have them arrayed in the costume of their country, and in the evening, by the light of kukui nut torches, they gave us a representation of their warlike and religious dances. This was certainly the most savage display that we saw at the Sandwich Islands. Grotesque figures painted with vermillion, feathers inserted in the lips and in the gristle of the nose, the costumes, the yells, the postures, the gestures, all combined to give us a vivid idea of a savage dance; but these poor fellows, accustomed to an extraordinary degree af cold in the latitude of 50 and 55 degrees, appeared to us to suffer exceedingly from the heat, and we exerted ourselves in their behalf.

Honolulu already numbers four or five hundred foreign residents, while at Kealakeakua there is only one or two. Almost all, who possess any claim to respectability, are Americans, and the commerce of the Sandwich Islands is almost exclusively in the hands of Americans. But the laborers and mechanics are generally Englishmen. We everywhere received the most cordial welcome, and all the world was eager to feast us. Hardly a day passed during all the time of our stay at Honolulu, without our having been invited by some one to a dancing or musical soirèe; but the passengers and officers of the corvette were almost the only dancers and musicians. Much more than this, surely, ought to be expected in a city of the Sandwich Islands. Among all those persons, the recollection of whom we shall retain, I will mention the family of Mr. Charlton, the English consul, whose open hospitality rendered my stay at Honolulu infinitely agreeable, and who furnished me with much interesting information. Nor shall I soon forget Don Francisco Marini, who arrived at these islands 40 years ago.—Having attached himself to the fortunes of Kamehameha, he accompanied him in the long wars which he was under the necessity of carrying on, in prosecuting his conquests. He told us of the many wounds he had received, and of the great valor he had displayed in the divers battles, in which he had been engaged. We were also informed concerning some singular adventures which had befallen him.

One day Kamehameha fell dangerously sick. A Frenchman, by the name of Rives, was his physician. I know not whether the great king had received some intimation similar to that which furnished to Alexander the occasion of such an admirable proof of the confidence he reposed in his physician, or whether he had no great faith in the skill of his Esculapius. Be this as it may, he ordered him to prepare double potions of his remedies, and then made Marini take one of the potions, and not until he had seen the effect produced by the medicine upon the poor patient, would he consent to swallow his part. But Marini was far from having any confidence in the medical skill of Dr. Rives, who, as he well knew, was anything but a physician. Of necessity, therefore, he had as ardent a longing for the recovery of Kamehameha as Kamehameha himself, and never, perhaps, did a courtier wish good health to his king so sincerely as poor Marini.

But he met with another adventure much more tragic. Kamehameha commanded him,

one day, to cut off a prisoner's head, and Marini was obliged to obey, using for this purpose a carpenter's saw. Some one wished to know if this anecdote was true, and asked him about it; a shudder seemed to pervade the body of the Spaniard. "Alas!" said he, "what could I do? If I had not cut off the prisoner's head he would have cut off mine. It is better to eat the head of a wolf than to be eaten by him."

Yet Kamehameha was not naturally cruel. It was he who abolished the custom, handed down from time immemorial, of slaughtering the prisoners after the battle. He also abolished the horrid practice of putting those to death, who, through inadvertence or ignorance, had entered a *tabu* or sacred place.

Yet Marini had lived very happy at the Sandwich Islands. He has had 52 children; but he was not, I imagine, so much in favor of monogamy as Goldsmith's good vicar. I inquired of him if he had any hope or idea of returning to Europe: "God only knows," he replied. "I should like very much to see my country again; but without doubt all my relatives are dead, and I should no more find there a single friend. Moreover, since I have become accustomed to this country, I live here happy and tranquil. As I am 65 years old, it is too late to form new habits. When I arrived here, this country was very fine. That was a good time for Europeans. The manners were simple and unaffected, and foreigners were respected. That time has passed. Savage men have become civilized, and civilized men have become savages. The missionaries have spoiled every thing," added he, lowering his voice and looking to the right and left to see if any one was within hearing; "they have changed the character of the population. They have occasioned bigotry and hypocrisy, which was once unknown among us." Then, fearing perhaps lest he had said too much, he added, "But without doubt, their institutions are good. They believed that they were doing good."

I talked a long time with this honest man, for I was interested in his conversation. He has seen the origin of civilization at the Sandwich Islands, and he has witnessed its development, every day, even to its present state. He has lived here a long time, free and happy, without any other restraint than that imposed upon all men by natural law, and by the instinct of good and evil. Some disagreeable incidents have scarcely cast a shade upon his life. At the present time, he sees a religion, which is not his own, invading the country, ruling it, and subjecting it to its own demands. He himself cannot leave the narrow circle which this religion has drawn around the population. He sighs for the liberty of conscience and of worship which he has enjoyed for forty years.—When he reflects upon the past, he thinks that he may justly complain of the present and dread the future. Nor is it astonishing that he is discontented. It is said, however, that he is rich, and that, in consequence of his strict economy, his fortune is daily increasing.

California Gold.—The amount of Gold dust received from California at the mints at Philadelphia and New Orleans, during the year last past is about $7,000,000.

Iron.—The value of iron produced in the United States in 1848, was $42,000,000.

From the Sailor's Magazine.

Sabbath Whaling.

Seven Whales in six days and one Whale in seven.

New London, Nov. 30th, 1849.

Dear Sir:—I herewith transmit to you a few facts in relation to my last whaling voyage. The first Sabbath after sailing, the ship's company were mustered aft, and our obligation to honor the day spoken of, and my own determination to abstain from pursuing our business on the Sabbath, made known to all. At the same time, as no such arrangement had been made previous to sailing, each one could decide for or against it as he chose. The assent to abstain was universal; and during the voyage I had no cause to repent of the step then taken. A few on an occasion of peculiar temptation did wish to give chase on Sunday. We had worked hard from Monday morning until Saturday night, but owing to the extreme shyness of the whales, without success.

On Sunday morning while lying at anchor, a large whale was discovered very near.—Excitement of course ensued, but no confusion; the majority remaining firm to their first purpose. There the whale remained for four hours, so near that a boat could have been rowed to him perhaps in three minutes. Such a thing occurred more than once afterwards, but our boats were never lowered for whales on the Sabbath, and our success was uniformly good.

I do not believe that success in our temporal affairs must necessarily follow the observance of the Sabbath, but this, and our own exertions combined, will, I feel sure, secure the divine blessing. I have every reason to feel assured that such was the case with us. Most ships lose many whales after they are well fastened to; many sink after being killed. Often as many as one half are lost. We took 3000 barrels, and saved every whale we struck, except three; and these were "bad chances,"—either at too great distance, and moving so fast as not to be approached, or at too great a depth to be effectually reached with the harpoon. This of course shows the good qualities of our officers and crew. Such a thing is seldom known. Our whales, too, were large and fat, differing much from those generally taken at the same place.

Again, in the course of our voyage we fell in with several ships which prosecuted their business on all days alike, and we were always uppermost in "good luck." In one instance while in company with a ship which whaled on the Sabbath, *we took seven whales working six, while they took but one, working seven days.*

The Rev. Mr. Coan has in his excellent tract on the "Sailor's Sabbath" written much of very great interest to the whaling fleet, to every one, from the owner to the cabin boy. It would be well were it on board every ship, and its precepts attended to; for although the owners of ships have done much for the benefit of the sailor, as a general thing, while away upon the ocean he has not his Sabbath, there is still too much truth in the assertion of Mr. Coan, "there is no Sabbath for the sailor."

This I say in many instances is too true; it cannot be denied, however, that the condition of the sailor has in a few years past, vastly improved, both in a temporal and spiritual point of view, of which I have had an opportunity of judging in a service of twenty-six years at sea. A sailor's condition, bad as it is, is not so hopeless as some may be led to imagine.

FORECASTLES.

While on my last voyage I obtained a few late copies of the Sailor's Magazine from an outward-bound ship. One No. contained an article in which the writer speaking of the accommodation of sailors, compares the forecastle of a "whaleship" to the castle of giant Despair; and goes on to say "while we pity the man whose ungovernable restlessness, or insatiable love of gain, or of ambition of advance to favor and office, makes him at home and contented even for one voyage in the forecastle of an ordinary whaleship, we would despair of elevating a man who could so servilely put his neck to the degradation as to feel no indignance at the insult, or feel happy there." To the suggestion, "it is just as well, they only go there to sleep," he replies, "No wonder, who would wish to do anything else there?" and goes on to say, "What wonder there is so little taste for reading! Such a taste cannot with comfort be indulged. Reading that requires but little reflection, or that is of an astounding character, is all that the accommodations of foremast hands will ordinarily admit of. Did they enjoy a light and roomy cabin, they might often be tempted there to inform their minds, but storms and cold and fatigue alone drive them there." He speaks of the darkness and desolation of the place, with a single smoky lamp, scarcely flickering its doubtful light upon their cheerless berth; the whole being a comment upon the sufferings and privations of sailors in the *whaling service*, and the inexcusable penuriousness of the owners. I have spent the greater part of my life at sea, have been in nearly all kinds of vessels, and with all sorts of men, and moreover have visited many strange ships while away from home, and for humanity's sake I rejoice to say that I never saw things like these here spoken of. I have been the inhabitant of more than one forecastle, and never was so miserable; never saw things so dark and gloomy; never considered the case of myself and shipmates so utterly hopeless and disgraceful; and if the author of the above remarks could have visited a forecastle in which I was not long ago seated, he would have seen a ship's crew as comfortably enjoying themselves as possible away from home and friends. In that place was the prayer meeting, sailors joining their voices in singing praises, hearing the word of truth, and kneeling by their chests in praise and prayer to God. Lights and a good fire were always in abundance in that forecastle; a good library also with a bountiful supply from the American Tract Society. The crew were glad to go and spend their time in other ways than in sleeping, and at other times than in storms and when fatigued, as they would all testify if called on. That forecastle, and many others, are not the repulsive holes they are so often represented to be.

It is well known that when a ship leaves the merchant for the whaling service, her forecastle is always made much more spacious and comfortable. To say nothing of the abundance of time allowed the crew in addition to what is allowed in a merchant

ship, the superiority and abundance of their provisions, stores, &c., it seems to me, as it must to others, that the most necessary thing now to be done for the sailor is to let him enjoy his Sabbath, give him that, and other things needful will follow, and I believe if those who ought to be the friends of sailors would labor, as the friends of temperance have done, and as the friends of the abolition of slavery have done, the work will be accomplished, and that soon the abundance of the sea will be converted unto God.

Wishing you and all the friends of seamen great success in your labors,

I remain most truly yours,

JNO. W. BROWN.

☞ We would earnestly recommend the foregoing remarks of Capt. Brown (formerly master of the "Hannibal," 1844-45) to his brother-ship-masters in the whaling business. Here we have the testimony of a ship master upon a most important moral question. O, that *all* forecastles would justify his remarks! It is only of the few whale ships that the remarks can be made, "Lights and a good fire were always in abundance," and "a good library also."

THE FRIEND.

HONOLULU, MAY 1, 1850.

Foreign Items of News.

SYDNEY.—A correspondent writes under date of March 10: "There are no favorable accounts from California, at present, but there are nearly twenty vessels from this port and Hobart Town, "laid on" for California. The bad accounts do not deter people from going." Throughout all the "colonies," there is a general movement to embark for California.

TAHITI.—The French are reducing their Military and Naval Forces. Comparatively little business is transacted. Most of the Foreign population has left for California..

MARQUESAS.—The French have entirely withdrawn their Military and Naval Forces from this group—abandoned their dwellings and fortifications, reported to have cost 4.000.000 of francs.

CALIFORNIA.—Reports are unfavorable in regard to business. Markets overstocked with most kinds of goods, particularly lumber. Real estate in San Francisco was falling. Sacramento City at present increasing the most rapidly. The mines continue to yield the usual amount of gold. New mines of great richness have been discovered on Trinity river.

OREGON.—At the last accounts miners were about starting for California. During the winter, rents had been enormously high in Oregon City. Many soldiers had deserted the U. S. Army, and fears were entertained that all would leave. The "Josephine" had been wrecked at the mouth of the Columbia River, through the carelessness of a drunken Indian Pilot. She was fully freighted with lumber and Oregon produce, bound to California. Another vessel had been lost on "Tongue Point."

UNITED STATES.—Late papers from the United States are crowded with congressional news. Great excitement prevailed in regard to the Slavery question. A New York correspondent thus writes under date of Feb. 7:

Last night the Steamer "Empire City," from Chagres, arrived, bringing passengers and the mail, and Two or Three Millions of Dollars in Gold Dust! Only 36 days from San Francisco! We can't stand such tardiness and such small remittances much longer! We must have an iron horse—instar montis—that shall leap from the Pacific to the Atlantic on the parallel of about 40° within six days, and drawing a car as capacious as the valley of the Mississippi, and then be not half as well satisfied as now.

TERRIBLE CATASTROPHE.—A steam boiler for driving the machinery of a shop in this city, has just exploded, laying a 6 or 7 story building, with 70 or 100 human beings inside, in mass of ruins. 45 dead bodies have been recovered, and probably 30 more will be got out to-day.

CONGRESS.—Henry Clay is in the midst of a brilliant speech, the object of which is to put a permanent veto on the extension of Slavery in free territory and calm the angry waves of disunion. His stand against certain Slaveholders is certainly noble, and great good is predicted as the result.

WHALING INTELLIGENCE.—The whaling news from the Pacific communicated through the "Friend," has been received with great interest by those engaged in the whaling business. Yours, &c., J. S.

BOSTON.—The Parkman tragedy is still the engrossing topic of conversation. The Grand Jury have indicted the accused, and what was somewhat unusual, the vote was unanimous as to his guilt. As to the counsel which Webster has secured, I think he has been fortunate in securing two such able men as Messrs. Mesick and Sohier. Mr. Choate was applied to, and so was Mr. Webster. The latter, I am informed, was offered $2,000, but declined the invitation. It is said that Mr. Choate, on being asked to plead the cause of Webster, said that if he did it, it would be on the ground that Dr. Parkman on entering Webster's room was taken with the fever and ague, and shook so hard that the fragments of his body were found deposited in different places of the building.

The trial will take place on the 1st of March, and it will be unquestionably one of the most interesting and exciting criminal trials ever had in our country. The facts which will be divulged at that time, will startle everybody, and the confessions of Mr. Webster at the time he was arrested will convince the jury and the world that he is guilty.—[Corres. N. Y. Tribune, Jan. 23.

Whaling Business in U. States.

The Whalemen's Shipping List, of Jan. 8, contains statistics of interest and importance to all connected with the whaling business.

During the year 1849, 71 ships and 1 brig were withdrawn; leaving on the 1st of January 1850, 510 ships, 20 brigs, and 13 schooners engaged in the business.

During 1849, there were 197 arrivals of ships, brigs and schooners, bringing into the U. S. 100.954 barrels of sperm, and 248.492 of whale oil; besides 2.281.100 lbs. of bone.

During 1849 the average price of Sperm oil was $1.08; whale oil 39c; bone 31c.

While 100.944 bbls. of Sp. oil were imported into the country, 93.875 bbls. were exported, principally to England.

At the last accounts oil was rising.

NEW BEDFORD OIL MARKET.

[For the week ending January 7, 1850.]

SPERM—The market continues very firm, with a demand fully equal to the supply, and prices have further advanced. The sales embrace a cargo of 1360 bbls. understood to be at upwards of 118 cts. per gallon, and yesterday a parcel of 1200 bbls. supposed at 118 cts.

WHALE—Is more quiet, and we have only to report a sale of 200 bbls. handsome N. W. Coast, at 48 cts.

WHALEBONE—We hear of no transactions in this market. In New York sales were made on New Bedford account of 10,000 lb. N. W. Coast at 35 cts., and 6000 lbs. Polar at 38, cash.

AGRICULTURAL MEETING.—On Monday evening, April 29th, agreeable to a notice which had appeared in the Polynesian, a meeting for the promotion of agriculture was convened at the Vestry Room of the Chapel. Judge Andrews was called to act as Chairman, and Mr. Bishop, as Secretary of the meeting. The object of the meeting was then stated by Judge Lee, and remarks upon the importance of forming an association for the promotion of agriculture, were offered by Messrs. Marshall, Newcomb, Fuller, Reynolds, Armstrong and others. A committee consisting of the following gentlemen, Judge Lee, Mr. Marshall. Dr. Wood, Dr. Newcomb, and Mr. Reynolds, were appointed to publish a circular, and call a general meeting in August. It is understood that efforts will be made to assemble planters, farmers and others, interested in this important subject, and it is to be hoped that delegates to the meeting will come from all parts of the group. Hitherto the subject has been most lamentably neglected, but now a market has been opened for every description of Island produce, it is of immense importance that it should no longer be suffered to slumber.

The following remarks upon "Fruits and Vegetables" were prepared for our last No., before hearing of the project to establish an Agricultural Association.

Foreign Fruits and Vegetables.

It is much to be regretted that no systematic effort has ever been made to introduce foreign plants and vegetables at the Sandwich Islands. When they were discovered, there were but a very few fruits or vegetables. From time to time, a few seeds or slips have been brought, but as yet it is not known what the Islands are capable of producing, if the proper pains should be taken. Vancouver brought the first orange seeds, and Mr. Charlton coffee, if we have been correctly informed. Shipmasters, visitors and residents have occasionally, and as if merely by accident, introduced different fruits and vegetables. We would respectfully ask, whether the time has not arrived for the Hawaiian Government to take the subject up, in good earnest,—employing some scientific and practical gardners—cultivating an extensive garden—offering premiums for the best specimen of fruits and vegetables, and employing agents abroad to send all kinds of tropical seeds. In the mean time we would call the attention of foreign visitors and our sea-faring friends to this subject. Should any person have seeds in his possession and feel desirous of parting with them for the sake of *experimenting* on the Islands, we would suggest that he forward the same to different parts of the group. Frequent application has been made to us for seeds, should any person, therefore, have seeds to dispose of, *by donation*, we shall most gladly put them in a way of cultivation. This is a subject of the utmost practical importance, and deserving of far more attention than it has hitherto received. Will not some lover of the Botanical Science prepare for our columns, or that of the Polynesian, some useful article upon this subject.

Wreck of the "Margaret."—The American whale ship "Margaret," Captain Fales, was wrecked on the 25th of February, at Huahine, one of the Society Islands. The vessel was going in, for slight repairs. A native pilot was taken on board, who most unfortunately run the vessel on the reef, the sea being smooth, weather pleasant and wind favorable. The "Margaret" had 2200 barrels of oil on board. It was sold at auction, Capt. West, of the "Jeannet" was the purchaser, at $2 30 per barrel. They succeeded in saving 2100 barrels of the oil. The vessel was almost a total wreck, being sold for a small amount. Capt. West was the purchaser, who freighted his vessel and sailed for the United States. Capt. Fales and family embarked on board the Jeannet. Some of the crew left for Tahiti. Mr. Spooner, 1st officer, and Mr. Jordan, 2d officer, have arrived in Honolulu, passengers, per French vessel.

DOMESTIC INTELLIGENCE.

Hawaiian Legislature.—The "Legislative Chambers" of the Hawaiian nation were opened on the 10th ulto., by a speech from the King. The ceremony took place at the large Native Church. There was an unusually large attendance of both foreigners and natives. All the Foreign Representatives and Consuls were present.

Report of the Minister of the Interior.—From this report we glean the following statistical facts, relating to the Hawaiian Kingdom during 1849-50. Coasting vessels licensed, 1850, 46—tonnage 1580. Registered vessels licensed, 1849, 27—tonnage 1458.

Marriages, 1810 during 1849.

Whole number of Naturalized Foreigners

" Great Britain,	147
" France,	18
" Portugal,	37
" Germany,	18
" Other Nations,	111
Total	693

Land Sold.—It appears that up to March 31st, 1850, the Government had granted fee-simple deeds, for 27,292 acres of land sold for $51,086,71. Avails from the department of the Interior, paid into Government Treasury, for the year ending March 31, 1850, $52,263,57.

☞ From the report of the Minister of Foreign Relations, we learn that the Hawaiian Kingdom is represented in foreign nations, by the following officers. In the United States, by Schuyler Livingston, Esq., as H. H. M's Consul General. In Great Britain, by Archibald Barclay, Esq., as H. H. M's Charge d'Affaires. In Peru, by Thomas R. Eldridge, Esq., as Charge d'Affairs; at San Francisco, by G. S. Oldfield, jr., Esq., as Vice Consul; in China, by Joseph Jardine, Esq., as Consul General; at Hong Kong, a British Colony, by Daniel Jardine, Esq., as Consul; at Hamburg, by John Henry Gossler, Esq., Consul General; for Van Diemen's Land and N. S. Wales, Thomas W. Campbell has been appointed Consul General; for the Island of New Zealand, John Watson Bein, Esq., has been appointed Consul.

Our Exchanges.

As commmunication is becomming more speedy and direct with other parts of the world, we are glad to reap the benefit in the way of exchange newspapers. Hitherto "exchange" has been rather against newspaper publishers at the Islands. By late arrivals the following papers have been received: "American Traveller," N. Y. "Tribune," "Independent," "Observer," "Herald," and "Express;" also "Alta California," "Pacific News," "Journal of Commerce," "Oregon Spectator," "Adelaide Register and Observer." This plentiful supply both enables us to glean items of intelligence for the "Friend," and furnish the "Seamen's Reading Room" with a greater variety of Foreign newspapers than we have, in years past, been able to do.

Late United States Consul.—Joel Turrill, Esq., late United States Consul, embarked with his family for the United States, via California, on the 21st ulto. In a communication to H. H. M's Minister of Foreign Relations, Mr. Turrill remarks. "During the time that I held the office of Consul, more than *twelve hundred American vessels* entered the ports of these Islands, having on board about 36,000 seamen."

The Watchman.—Americans in California, true to their love for newspapers, have established presses at various places, but in San Francisco already three well conducted "dailies" make their appearance. We are glad to welcome a monthly, "The Watchman," which may in size, tone and appearance claim a fraternal relationship with "The Friend." It is published at the office of the "Daily Journal of Commerce," and conducted by the Rev. Albert Williams, pastor of the First Presbyterian Church, in San Francisco.

Sydney Bethel Union.—The ninth report of the Sydney Bethel Union has lately been received. We rejoice to learn that the Chaplaincy for seamen finds encouragement from among christians of various demominations in Sydney. The present chaplain, the Rev. L. E. Threlkeld, was formerly connected with the English Mission at the Society Islands. Income of the society, for 1849, £247,3.

FRIEND OF TEMPERANCE.

The Guide to Glendalough,
OR, YOUNG IRISH TEETOTALER.

BY S. C. HALL, F. S. A.

As a recent visit to Ireland has enabled us to test the progress and good effects of Temperance in that country, we think a few anecdotes gathered during our journey, may be welcome and agreeable, as well as encouraging to our readers. The happy change for the better in the Irish people, will be best shown by the incidents we shall relate; but we cannot, at the outset, omit to state, that although there have been partial back-sliding, the great mass of the people are not only true to THE PLEDGE (the "long pledge," the only efficacious and really valuable pledge), but that conviction of its incalculable benefits is now the principle that almost universally prevents the breach of it: the act that had its origin in remorse, or wild enthusiasm, perhaps in superstition, is now the result of reason upheld by experience. We entreat our readers to give no credence to the evil reports of enemies; or the apprehension of timid or lukewarm friends—that Ireland is lapsing into intoxication: but it is not so; the very opposite is the fact. The Irish never *can* be again a drunken people: drunkenness is now such a reproach among all classes, that a gentleman intoxicated would not dare to enter a drawing-room; while a farmer or peasant drunk, will sculk to his home through bye-ways, ashamed or afraid to have his condition known to his neighbors.—The usual fruits of sobriety are seen everywhere: the old reproach of the traveller, that "he never knew what the English beggars did with their cast-off clothes until he went to Ireland," is now removed forever; the cottages are far more cleanly than they were ten years ago; few are without whitewash; the pig is seldom "the parlor inmate;" the dung-heap rarely stagnates before the "hall door;" faction-fights are relics of gone-by history; and now that it has pleased the Almighty to visit to land with famine, Temperance will preserve the lives of tens of thousands who would inevitably perish, if, when hunger forced them to seek food, it drove them also through the gates of distilleries and the doors of public-houses.

Heroes, they say, look back with pleasure to the first triumph that procured fame; and lovers, we know, call to mind with deep joy their earliest tokens of affection; no satisfaction can to an author ever equal that he felt at first seeing himself "in print;" the sweetest moment in an artist's life is that which gave the idea of a great picture; and the man of science reverts with rapture to the mere thought, out of which grew a discovery to enlighten and benefit mankind.—For my own part, few incidents of a busy and somewhat varied life, afford matter for more true enjoyment than my first lesson in temperance—a lesson which led immediately to reflection, subsequently to consideration, and ultimately to the adoption of a principle, which I have ever since continued to regard as a blessing, second only to that of Christianity in its influence on my mind and heart. That lesson, which by Divine mercy has been made to produce fruit for my own great benefit, and I humbly hope for the benefit of others, was given me by a poor boy, a guide, who accompanied me about four years ago, from the village of Enniskerry to the far-famed Seven Churches in savage Glendalough,

> "Whose gloomy shore,
> Skylark never wanders o'er."

The youth was perfectly unconscious of the train he was laying—of the seed he had planted for the hereafter; he as little fancied, perhaps, that I should become a "tee-totaller," as that I should be crowned king of the ancient territory of the O'Tooles, over which we were tramping, and to this day remains in ignorance that his simple story carried with it such conviction as to have led to many blessings in his neophyte—improved health, augmented income, greater intellectual strength, infinitely higher motives for continuous labor, a surer foundation of domestic happiness, and a perpetual safeguard from self-reproach; the youth as little knew that the brief hour he spent with me was productive of benefit not to me alone—that he was making me his instrument of good to others, adding to the cause of temperance one member, who devoutedly hopes to be the means of largely increasing the number of those who see in temperance religion's best auxiliary, and, next to religion, the safest teacher of duty to God and man.

My anecdote is briefly told: I took the youth somewhat suddenly as my guide from a cottage door, beside which he was standing, and bade him at once mount the car upon which I was proceeding to visit the marvels of the gloomy lake. The evening was cold and raw, and I had in my pocket a flask of "mountain dew;" the poison, so called in mockery of the delicious draughts which Nature sends each morning to the bees and flowers. Having drank of it myself, I offered it, as a matter of course, to my companion; he declined it, to my surprise, for the temperance movement in Ireland was then new to me, and I had little notion of the spread it had even at that time made; having little faith in a revolution so un-Irish, and being, moreover, anxious to test its strength, I pressed the liquor upon him, and at length went so far as to offer him a crown if he would drink some of it. "No," said he, "not for a thousand crowns, nor for all o. Lord Wicklow's lands, if they were offered me: and," he added, after a pause, "if your honor knew as much about me as I know about myself, I do not think you would be after asking me to do so bad a thing." A very little persuasion led to his telling me his simple story:—

"I have been a guide to the Seven Churches," he said, "almost ever since I could streel the distance; and many's the half-crown and more I got for my day's walk; I earned a dale in the week—and spint it. When I'd get my day's hire, though the gentry I'd be with would give me drink enough, it's for more drink I'd go with the money. You would'nt give three ha'pence for the dirty rags I carried. I never stretch'd on a dacent bed, but mostly in a neighbor's outhouse, and oftener in a gap of a ditch. I had the fever once, and I lay there like a dog to die. My old grandmother was begging about the country at the same time. Augh! yer honor, I was drunk morning, noon, and night, and the bastes I used to be amongst had more sinse than I. Well, how is it now?" he added, and he drew himself up with honest and truly dignified pride. "Yer honor took me of a sudden, or it is'nt in this coat I'd have been with ye; for I have two better, and a top-coat besides; and I've as nate a cabin as you'd wish to see; and my grandmother keeps in it, spinding her old days in pace; and I've five pounds ten in the savings bank, in case of the sickness: and in the place of being a blackguard nobody would trust, I'm respected by the gintry, and lock and kay is never put upon anything that comes into my hands; and more than that, there's a purty colleen that thinks I'm a'most good enough for her, and her father's been to see if the cabin would suit; and all this change, yer honor, glory be to God! because I would'nt buy poison, or take it when 'twas handed me!

"And now," he added with emphasis, approaching solemnity, "I lave it to yer honor's self if you'll ask me to take the drop you carry."

My answer was at once, "Indeed, my good lad, God forbid that I should tempt you: but I owe you a compliment, and will pay it freely." I took the flask and flung it far over a rock into the waters of the lake beneath. The scene is before me at this minute, as vividly as when it happened: the youth literally danced for joy: capered backward and forward on the mountain summit, absolutely intoxicated by a pure draught of pleasure; the compliment touched his warm Irish heart; it went so far beyond his expectations; it was so practical a comment upon his story, so comprehensible a mark of its approval. I never saw pleasure expressed in a manner so impossible to be mistaken.

It is likely that the youth has long since forgotten the transaction, but I have not forgotten it, and never can forget it. That day was a white spot in my life. The moral of this simple anecdote is obvious: every temperance advocate, no matter how humble may be his position, weak his intellectual powers, and apparently inefficient his means, cannot say what may be the amount of good he is doing, when he tells to many, or to *one*, the blessings conferred by temperance on him. I date my conversion to Total Abstinence from that evening. My teacher was a rude lad, who could neither write not read; but I, and with me those who have been influenced by my counsels and example, owe a deep debt of gratitude to that youth—my humble Guide to Glendalough.

TOLERATION AT ROME.—The correspondent of the London Daily News writes from Rome on the 20th Dec.:

"An American Protestant minister had twelve of his countrymen joining him in worship at his own house last Sunday, in the Via S. Bastianello. The police were acquainted with the circumstance before night, and the American Charge d'Affaires, Mr. Cass, was apprized that if the offence was repeated, the minister would be sent away from Rome immediately."

We wonder if the good people of Rome have in their possession a copy of Paul's Epistle to the Romans, dated about the year A D. 60. Among other sentiments inculcated was this, "Thou shalt love thy neighbor as thyself;" xiii; 9.

☞ The sum collected in New York as a testimonial to the Captain of the vessel which saved the passengers of the Caleb Grimshaw, amounts to $8,000. It is to be appropriated thus: To Captain Cook, $5,000; to the first mate, $700; to the second mate, $400; to the carpenter, $350; to each seaman, $125; to each ordinary seaman and boy, $100.

Preaching in Congress.

Late papers contain full reports of Congressional proceedings. The political sky seems overcast with dark clouds, and storms are apparently gathering, but it is hoped that a brighter day will dawn, so long as the members of Congress are willing to assemble on the Sabbath and listen to "a plain, old fashioned Presbyterian sermon." A correspondent of the New York Tribune writes as follows on the first Sabbath in February :

Mr. Gurley preached a plain, old fashioned Presbyterian sermon before Congress today, at the capitol ; and after observing his manner and listening attentively to his argument, I felt satisfied that the choice made of a Chaplain was a discreet one. The object of his discourse was to inculcate the propriety or necessity of throwing aside expediency in matters of clearly revealed duty, and of doing that which is right, *come what will.* His text was appropriately taken from Daniel, relative to the three Hebrews who would only worship the God of their fathers, whether they were thrown into the fiery furnace or not. They had implicit faith in God that he could preserve them whatever the danger : "But if not (said they) be it known to thee, O King, that we will not serve thy Gods, nor worship the golden image which thou hast set up."

Returned recently from Africa, where he has been aiding the Colonization system, by which he intended to raise the most barbarous people on the globe in the social scale, Mr. Gurley contrasted their wretched condition with that of the citizens of these United States, and rightly ascribed to the benign influence of Christianity, the ennobling, elevating influence of our free institutions, and to the want of religion, the depressed condition of the unhappy Africans. To the influences of Bible Christianity he unhesitatingly ascribed American liberty and our unrivalled prosperity.

As Chaplain, he thanked the House for the honor it had conferred upon him, adding that when the fear and love of God had united the Representatives of the Republic, and the principle set forth in the text had been adopted as the rule of action, the permanence of the Union would be thereby secured. If he ventured to suggest a remedy for their dissensions, it would be the laying aside their passions, so that all who turned their eyes to these Halls might be able to say, "Behold how good a thing it is for brethren to dwell together in unity."

The Hall of the House of Representatives, and it is a magnificent one, was filled by an attentive congregation, and the strife of opinions on week-days happily exchanged for harmony and concord.

The Chaplain is a stout, farmer-looking man, probably about 40 years old, his hair is getting gray, his voice and manner are winning and persuasive, without the least tincture of servility or affectation. He seems kind, benevolent, anxious to promote peace and good will—unassuming, unambitious.—He is said to have suffered many and very severe privations, while in Africa ; is poor ; has a large family ; appears to be far more earnest about the next world than this ; and neither in prayer nor sermon did he make the slightest allusion to party politics. I feel quite at home while listening to Mr. Gurley.

Practice and Preaching both.—A clergyman in the Mediterranean for five years, related the following interesting anecdote, which occurred during that time :

"The commodore was a frank and generous man, who treated me with marked attention, and I used to preach in all the ships but one. This was a small frigate, and its captain was an irreligious and profane man. He used to say he wanted no Methodist parson for a pilot, and he embraced every opportunity of annoying me. Being a person of violent temper, he took offence and insulted the commodore, who meant to send him home. When I heard of his intention, I waited on the commodore, and said I had come to ask a particular favor of him.

"That shall be granted. I am always happy to oblige you. What is it."

"That you will overlook the conduct of Captain S——."

"Nay, nay. You can't be serious. Is he not your greatest enemy? and I believe the only man in the fleet who does not wish to see you on board his ship?"

"That's the very reason why I ask the favor, commodore; I must practice as well as preach."

"Well, well, 'tis an odd whim; but if, on reflection I can grant your request without prejudice to His Majesty's service, I will do it."

"The next day I renewed my petition."

"Well," said he, "if Captain S—— will make a public apology, I will overlook his conduct."

I instantly got into a boat and rowed to the frigate. The Captain met me with a frown on his countenance, but when I told him my business, I saw a tear in his eye, and taking me by the hand, he said : "Mr. ——, I really don't understand your religion, but I do understand your conduct, and I thank you."

The affair blew over, and he pressed me to preach in his ship. The first time I went there the whole crew were dressed in holiday clothes, and the Captain at my right hand.—I could hardly utter a word, my mind was so much moved, and so were the whole crew.—There seemed a more than ordinary solemnity among as.

That very night the ship disappeared, and not a soul survived to tell the tale. None ever knew how it happened, but we supposed as there had been a gale of wind, she had foundered and went down in deep water.

How cheering the thought that the men thus suddenly summoned into eternity, had listened to the blessed message of the gospel and that too, under circumstances which, through the blessing of God, were so peculiarly adapted to prepare their minds to welcome and receive it!

Sale of Washington's Farewell Address, and other valuable relics.—The Rotunda of the Merchant's Exchange was crowded to overflowing last evening, on the occasion of the sale of the original manuscript of Washington's farewell address, and other valuable relics. The sale commenced at seven o'clock, and the address was put up by Mr. Thomas, auctioneer, and Mr. Richard Willing offered as the starting bid $500. He did not appear willing to advance, and others entered into competition with considerable spirit. $550 was next bid, then $600, then $650, and then a jump was made to $1000, quickly $1100 followed, $1200, $1300, $1400,, and so on until the sum of $2300 was named, and the document was knocked down to the Rev. Dr. Boardman.—In a few moments Mr. Thomas said that he was authorised and pleased to state that the document would not go to Washington, D. C., as it had been purchased by Mr. Boardman for a gentleman who resides some distance from that place, as well as from Philadelphia. The announcement that the paper was not to go to Washington was received with considerable applause. The gentleman for whom it was purchased, resides, so we have been credibly informed, in the State of Virginia. The portrait of Washington was also purchased by Rev. Dr. Boardman for the sum of $150. A letter of recommendation of a French General from Gen. Washington, to Gen. Mifflin, President of the Continental Congress, was sold for the sum of $20—Mr. John Wilson purchaser. A volume of the American Advertiser, containing a copy of the farewell address set up from the original manuscript, was sold for the sum of $12—Mr. Joseph A. Mickley purchaser. —[Phil. Sun.

The Arctic Expedition.—The Enterprise and Investigator, vessels commissioned to proceed on a searching expedition to Bhering's Straits, will be out of the hands of the shipwrights at Woolwich dockyard on the 28th inst., and will almost immediately proceed in the first instance to the Sandwich Islands. Bills have been issued saying that able seamen are wanted for both vessels, and that double pay will be insured to the crews on rounding Cape Horn. Lady Franklin is in town every day, and is still unceasing in her efforts to insure a further search for her gallant husband, Captain Sir John Franklin, and the officers and crews of the Erebus and Terror. It is gratifying to know that several distinguished officers of the Royal Navy are aiding her ladyship, and it is expected that two gallant officers holding the rank of commanders, will proceed early in the spring to the Arctic regions, one in one of the Hull whalers, and the other in a whaler belonging to Peterhead. Those officers will not take any command in the whalers, but simply lend their aid and advice when they reach Davis' Straits, Lancaster Sound, or any other place in the Arctic regions where there is any probability of meeting with any of the parties of the missing expedition. It must be satisfactory to the public to know that such great exertions are about to be made in the ensuing season, and it is hoped the result will realize the most sanguine expectations of the friends of the absent voyagers.—[London Watch., Dec. 26.

Commissioner to the Sandwich Islands.—Charles Bunker, Esq., of Nantucket, has been appointed Commissioner to the Sandwich Islands. His acquaintance with the wants of our whalemen fits him peculiarly for the situation, and will enable him to be of great service to the whaling interests.—[Am. paper.

☞ There is no way to fly from God's judgment, but to fly to his mercy by repentance.

☞ Over 3,000 tierces of American beef have been sold to the contractors for the British ships of war during the past year.

COMMERCE AT SANDWICH ISLANDS.—During 1849, the gross amount of imports, $729,-739,44, and nett duties received at the Custom House, $71,943,49.

☞ Contribution at the Bethel, Sabbath morning, April 14, $50 17, for building native church at Waimea. To this amount there has been added a donation of $25 from Dr. Wood, for the same purpose. Total, $75 17.

The Market House Regulations and Prices, Rarotonga.

No charge for water, except the FEE to the natives the Captain may engage, to fill the casks.

MARKET HOUSE PRICES.

Potatoes	$1 per brl,	Taro	$1 per brl,

REGULATIONS.

I. The appointed SALES MAN is to arrange all trade with the Captain, and the Captain to pay him his fee; in cloth or cash as he may agree on.

II. Should the Captain wish to engage natives to take his supplies to the boat; $1 a day is the charge for each man.

III. No boat or canoe from shore shall be allowed to take off trade to ships, to be sold on board. Boats may be engaged to take off supplies bought on shore. Charge, $5 the first day and $3 each day after.

IV. No boat or canoe from shore shall be allowed to go off to ships when making the land, except the one appointed by the authorities.

V. It is requested that no Captain secretly engage, or take away on board his vessel, any natives from the shore. Any Captain wishing to engage natives for a cruise, are requested to make arrangements, before proper witnesses on shore, with any willing to go. A contrary procedure will be reported to the nearest Consul, of the nation to which the ship belongs.

VI. It is requested, that on the desertion of a man from a vessel, the Captain give immediate information to the Chiefs of the Station, and that the vessel do not leave the Island until the deserter be apprehended. That for every deserter delivered by the natives to the Captain two pieces of cloth to be paid, one to the Chief of the station, and another to the parties who secured his apprehension.

VII. That in case the deserter be not found until after the vessel has left the island, when apprehended, he shall become a prisoner and be employed in public work, until he leave the island.

VIII. That, in any case considered necessary for a Captain to leave a man on shore, the sum of $30 be paid for each individual so left. tf

DIED.

In this place on Sunday last, 7th inst. MARY, wife of Mr. A. H. Fayerweather, daughter of the late Capt. Geo. Beckley, aged 29 years.

In this town, on the 15th instant, Mr. CHARLES BENT, a native of Boston, Mass., aged about 33 years, and a resident of these Islands for the last 13 years.

In San Francisco, March 2, at the residence of her son-in-law, Capt. Tibbey, Mrs. FRANCES STAGG, of Somersetshire, England, aged 77.

On board Hawaiian schooner Kalama, on the 15th April, at sea, five days from California, Mr. J. Bartow Brown, belonging to Lowell, Mass. He came to San Francisco, passenger on board the "Leanore" which brought out the "N. E. and California Mining Co." His friends reside in Palermo, Me. A fellow passenger, Mr. McKean, of Charleston, Mass., on board the Kalama, has taken charge of his trunk and property and will see them returned.

On board the "Kalama," April 24, Mr. John Smith, belonging to Oregon City. His remains were deposited in Nuuanu Valley Cemetry.

April 27, on board American ship Argonant, in Honolulu harbor, Mr. George Foster, belonging to Wareham, Mass.

In Honolulu, April, Catherine Clark, aged 7 years and 9 months, daughter of Mr. Wm. Clark. The family came as passengers on board the "Caroline," wrecked off Honolulu.

In Honolulu, April, Mary Lovelock, infant daughter of Mr. George Lovelock, who were also passengers in the Caroline.

At San Francisco, January, 1850, Capt. W. H. Cox, formerly master of a whale ship in the Pacific.

In Honolulu, at the U. S. Hospital, April 16, Geo. Ward, a native of Brading, Isle of Wight, England, where it is supposed his parents, family and friends now reside. The deceased was left at the Hospital by the U. S. S. Preble, a few months since.

PASSENGERS ARRIVED.

In Duke of Roxboro' from San F.—Jas. Ramsey, T. Fitzpatrick, T. Griffith.

In Sarah Ann, from San Fran.—Mrs. Moore, Mathias, V. Onffrey.

Per Kalama, from S. F.—R. S. Hollister, Wm. Hughes, John Smith, Mrs. Jones and 2 children, J. B. Brown, J. Lewis, Wm. Morrison.

Per Rob't Bruce, from S. F.—G. D Gilman.

THE FRIEND.

Visit of the French Sloop-of-war Bonite, to the Sandwich Islands in 1836.

Translated for the Friend, from the French of Adolphe Barrot.

NO. VI.

Prospect from the hill overlooking Manoa valley—meet the Governor of Maui and his wife riding in a strange manner—review of the soldiers—King's house—library—character—boxing and fencing—does not trouble himself with the affairs of Government—Missionaries govern in the name of Kinau—King's feeling towards the Missionaries—tacit compact—manner of spending his evenings—incident in which his antipathy against the Missionaries appears—notice of the Island's capabilities.

During my stay at Honolulu, I made a number of excursions in the vicinity. The valley, in the midst of which Honolulu is situated, is truly magnificent, and it could be made to produce our colonial supplies in abundance. The hills around might be cultivated, and they would produce excellent coffee and cotton of superior quality. One day I took a delightful ride with Mr. Grimes, an American merchant. About a mile from the town, we left the road which extends along the shore, and directed our course towards the hills. We ascended by a very tolerable path. On reaching the summit of a hill, Mr. Grimes stopped his horse to enjoy my admiration. And surely it is difficult to imagine a prospect more picturesque and more enchanting. Behind us, the sun was disappearing in the ocean. Before us, shut in between two high mountains, the fantastic shapes of which were figured in profile on the azure of the sky, stretched a cool and verdant valley divided by a stream, which was hastening on through plantations of taro and sugar cane. In the middle of the valley were about fifty cabins, shaded by kukui and bread fruit trees; beasts were grazing in the meadows; the shade of the mountains extending over the whole valley; and the air was fresh and fragrant. The hill from which we enjoyed this prospect, rose on our left by an almost imperceptible slope, and a fine and gilded herbage covered it like a velvet carpet; around us, every thing was silent; nothing was heard except the chirping of some birds, as they flew over our heads. We remained there until night came to conceal from us this ravishing spectacle. Were my residence in Honolulu, I should often come to meditate in the valley of Manoa.

Although European luxury has begun to appear in Honolulu, yet very few carriages are to be seen. The King has a carriage which he never uses. A few of the European and American residents have chaises and coaches. The rich chiefs, and especially their wives, who, on account of their corpulence seem unable to walk, are seen riding about in hand-carts drawn by men. I recollect having met in the streets of Honolulu, the Governor of Maui and his wife making their visits. They were lying flat, side by side, supporting their chins with both hands, and their immense bodies tossed about by the motion of the vehicle, reminded me of certain carts which come to us from Sceaux or from Poissy. A throng of servants preceded and followed them; one carrying a parasol, another a fly-brush, and a third, the heir of this noble family. The men who drew this interesting couple, moved on at a brisk trot, the team being composed of at least eight or ten robust fellows, who from time to time were relieved by others.

The Governor of Maui stopped to talk with me, and, thanks to Mr. Charlton with whom I happened to be at the time, he made me understand that there would be on the morrow a grand review of the troops and of the militia in front of the King's house, and he invited me to be present.

Unwilling to lose so fine an opportunity of seeing the military forces of his Hawaiian Majesty, I was punctual to the appointment. Three hundred men, composing the entire army of the line, were drawn up in three lines. Each man was armed with a musket of English or American manufacture, without a bayonet. I shall not undertake to describe their costumes, for I should never get through. I could have wished that one of our inspectors general of infantry had been present. Of some, the only article of clothing was the maro about the loins; others wore upon their shoulders large pieces of cloth falling ostentatiously in folds, in the Roman fashion; and others had the head and body partly covered with leaves of the cocoa and banana formed into festoons.

Opposite the army of the line, and drawn up also in three ranks, was the militia of Honolulu. To distinguish the regular troops from these would have been difficult; for there was no difference in their clothing.—Few of the militia had muskets, and from the manner of using these, it was easy to perceive that they had not derived much advantage from the lessons of exercise which they had received. In front of the palace gate were stationed the royal guards, consisting of eleven men, dressed uniformly in pantaloons and white calico vests with scarlet facings. Each man was armed with a musket and bayonet. This was without dispute, the elite of the army of Oahu. They seemed to hold the soldiers of the line and the militia in the most profound contempt; while from their proudly erect attitude and from their military bearing, it could be easily perceived that they were wonderfully impressed with the idea of their superiority.

The beating of the drum announced that the exercise was about to commence. An officer read a long discourse, not one word of which could I understand. I was informed afterwards, that many men having been absent from the last parade, the adjutant was exercising his eloquence on this subject.—The exercise at length began, and surely, without excepting even the royal guards, the Hawaiian soldiers appeared to me somewhat deficient in expertness. But this however, is a science which they will learn soon enough. There are many things much more useful than military exercise which they could and should have been taught a long time ago, and of which they have not yet acquired the least idea. The orders were given in English.—The last orders were, "Kneel—ground arms—to prayers!" The adjutant then read a prayer of some length, and the command was given to break up the ranks.

After the review, the King invited me to walk into his house. It is a large cabin, having in the interior a certain appearance of neatness and even of luxury. It consisted of a large saloon and three chambers—calico curtains composing the partitions. The frame, made of a black hard wood, was held together by braided cords of different colors. Very fine mats covered the floor. At each end and in the side were large doors with glass windows inserted. The wall was ornamented by a number of paintings, among which I observed the portrait of King Leopold, then Duke of Saxe Coburg; the portrait of Canning, and those of Rihoriho and his wife, painted in England. A number of chandeliers were suspended from the beams. Chairs, tables, and two or three sofas, completed the furniture. Kauikeaouli invited me to enter the interior apartments—one of them contained a magnificent estrade, fifteen feet long and eight or ten wide. This estrade or bed, raised two feet from the floor, was composed of mats spread one upon another, in the manner already described. At the other end of the room was a bureau, upon which were some loose papers and a small book-case containing some religious books, which probably, are not often read by the King, and a history of France presented him some days before by an officer of the Bonite,

and which he will not read oftener than his other books, although he expressed to us a strong desire to learn the French language.

This house is situated at the extremity of an extensive court, surrounded, as are all the houses of this country, by a wall of bricks dried in the sun. In this enclosure are nearly fifty huts, which serve for kitchens, storehouses, lodgings for the King's servants, and barracks for the soldiers.

Kauikeaouli improves surprisingly upon acquaintance. He is naturally timid, but if he discovers kindness and indulgence in the person with whom he enters into conversation, he becomes confiding, and then can be perceived in him the germ of an understanding which needs only to be developed. He asks many questions, and sometimes the answers call forth from him very judicious reflections. He appears to have a vivid perception of his own ignorance, although his character is naturally fickle and inconstant. But these defects result, without doubt, from the education he has received, and his ideas, constantly directed to frivolous occupations, have little to do with serious subjects. The society also in which he mingles, tends not a little to confirm the habits of dissipation which he contracted in his childhood, and he delivers himself up, with deplorable readiness, to the influence of evil examples. He received one day, while on board a whaling ship, a decided taste for pugilistic combats, and for a long time the recreation of the King and of the young people of his court, consisted in boxing; and this pastime was in vogue on our arrival. Then we were called upon to furnish amusement. In his visits aboard the Bonite, he had occasion to see our men go through the exercise of fencing, and no persuasion was needed to turn his thoughts to this new distraction. During the whole time of our stay he was constantly fencing, either with the men, whom at his request the commandant sent to him, or with those of our sailors who passed near his house. He stopped them, brought then in, and then laying aside the royal dignity together with his coat, he feared no loss of reputation from crossing swords with them during entire hours.

Thus giving himself up entirely to his capricious passions, he relinquishes the care of government to his sister-in-law, Kinau.—She, as I have already remarked, is completely under the influence of the missionaries, and they govern in her name. The missionaries, however, are not certain of the duration of their domination, and the opposition which is excited against them among the foreigners fails not to trouble them. The King and his court are in open enmity with them. It is with reluctance that the King submits outwardly to their religious and police regulations, and often does he shake off this yoke; but his desires for independence reach not to the determination of seeing clearly into the affairs of state, and it is his personal conduct only that he strives to withdraw from the investigation and the censure of the missionaries. Thus there exists at present, a sort of tacit compact between the missionaries and himself; an agreement, so to speak, has been entered into between them, that he will not interfere with the government, on condition that no evangelical censure shall ever cross the threshold of his palace. In consequence, Kauikeaouli spends all his evenings in a public billiard room, playing and drinking with the first one that comes; and yet, only a good occasion is needed, I believe, to elicit from this diamond, unpolished though it be, some rays of light.

We were able to perceive something of the antipathy which the King has conceived against the missionaries, at the time of our feast at the Pali. A missionary and his wife, on their way from another part of the Island to Honolulu, reached the Pali at the moment when we were about to take our places at table. He barely saluted them, and then turned his back. At the same time it was remarked that the King appeared somewhat embarrassed; for a luau had always been, up to that time, a scene of debauch ry; and that which was given in honor of us, was perhaps the first at which a majority of the guests did not become completely intoxicated. When the missionary went on his way and disappeared behind the first angle of the mountain, the King seemed relieved of a great burden and his natural gaity returned.

—

The Sandwich Islands are eleven in number; five of which are large, namely: Hawaii, Maui, Molokai, Oahu, and Kauai—three are small, Kahoolawe, Lanai, and Niihau; and three are islets or rocks. They are situated between the 19th and 23d degrees of north latitude, and between the 157th and 159th degrees of west longitude.

A hasty glance at these Islands, shows that they have not figured long upon the surface of the earth. The volcanic eruptions which have produced them, are yet recent, and many promontories, upon which villages are now seen, have been formed within the memory of man. On going into the interior of the Islands, the truth of this assertion becomes evident. We can follow, step by step, the march of creation, and take her, so to speak, in the very act. It is easy to distinguish, as one ascends, the modifications through which the lava must have passed in order to be decomposed and become vegetable earth. Thus the lava which formed the lower points with which the shore is, as it were indented, is still almost every where such as the volcano threw it out; yet the natural and artificial irrigations and the heat of the climate, have already in some valleys near the shore, and especially on Oahu, decomposed the lava on the surface, and have rendered it capable of producing certain plants with short roots, without being able to nourish vigorous trees; and no sooner do the roots penetrate to the lava, than the plant dries up and dies. I remarked in our excursion to the Pali, that all the trees which had reached the height of ten or twelve feet, were dead, while the bushes beneath them formed a thicket so dense that a man could not penetrate it. At a certain elevation the conditions necessary to the decomposition of the lava are found united with greater power than in the lower lands; the work has advanced more rapidly and the trees are much more vigorous.

Oahu, justly called the garden of the Sandwich Islands, on account of the numerous streams which water it, is capable of recompensing the labors of agriculture with all the products of those of our colonies which are the most favored by nature. The plains of the interior and those near the shore, are exceedingly well adapted to the cultivation of sugar cane, which grows here to an astonishing size. The hills produce cotton and coffee in abundance, which can safely challenge a comparison with the most commended of similar articles. I have seen specimens of Oahu cotton which seemed to me to have very fine and very long silk. Indigo grows spontaneously, and the high mountains offer the precious sandal-wood for exportation. All the farinaceous plants, the potatoe, sweet potatoe and taro, are produced easily and in abundance. Almost all the Islands in the group present the same conditions of prosperity; all are watered more or less abundantly, and whenever nature does not perform this work, industry can find the means of irrigating. The heat at the Sandwich Islands varies from 60 to 84 degrees of Fahrenheit. The climate is very salubrious, and epidemic diseases are as yet unknown. Rains are abundant on the coast during the months of February, March, August and September; in the mountains it rains almost incessantly—the clouds with which their summits are continually crowned are dissolved in abundant rains, which form streams, and these flow on to enrich the plains, so that nature, after having in her convulsions produced this land, labors constantly to render it fertile.

A True Story.

A sea Captain's thirty years' absence—claiming his daughter, etc.

AARON BURR'S GREAT PLEA.

"Many years ago, I happened to be one of the referees in a case that excited unusual interest in our courts, from the singular nature of the claim, and the strange story which it disclosed. The plaintiff, who was the captain of a merchant vessel trading principally with the West Indies, had married quite early, with every prospect of happiness. His wife is said to have been extremely beautiful, and no less lovely in character.

After living with her in uninterrupted harmony for five years, during which time two daughters were added to the family, he suddenly resolved to resume his occupation, which he had relinquished on his marriage; and when his youngest child was but three weeks old, sailed for the West Indies. His wife, who was devotedly attached to him, sorrowed deeply at his absence, and found her only comfort in the society of her children and the hopes of his return. But month after month passed away, and he came not; nor did any letters, those insufficient but welcome substitutes, arrive to cheer her solitude.—Months lengthened into years, yet no tidings were received from the absent husband; and after hoping against hope, the unhappy wife was compelled to believe that he had found a grave beneath the weltering ocean.

Her sorrow was deep and heart-felt, but the evils of poverty were now added to her affliction, and the widow found herself obliged to resort to some employment in order to support her children. Her needle was the only resource, and for ten years she labored early and late for the miserable pittance which is ever grudgingly bestowed on an humble seamstress.

A merchant in New York, in moderate yet prosperous circumstances, accidentally became acquainted with her, and pleased with her gentle manners no less than her extreme beauty, endeavored to improve their acquaintance with friendship. After some months he offered his hand and was accepted. As the wife of a successful merchant she soon

found herself in the enjoyment of comforts and luxuries such as she had never possessed. Her children became his children, and received from him every advantage which wealth and affection could procure. Fifteen years passed away; the daughters married; and by their step-father were furnished with every comfort requisite to their new vocation of housekeepers. But they had hardly quitted his roof, when their mother was taken ill. She died, and from that time until the period of which I speak, the widower resided with the youngest daughter.

Now comes the strangest part of the story. After an absence of thirty years, during which time no tidings had been received from him, the first husband returned, as suddenly as he had departed. He had changed his ship, adopted another name, and spent the whole of that long period on the ocean, with only transient visits on shore, while taking in or discharging cargoes; having been careful never to come nearer home than New Orleans. Why he had acted in this unpardonable manner towards his family, no one could tell, and he obstinately refused all explanation.

There were strange rumors of slave-trading and piracy afloat, but they were only conjecture rather than the truth. Whatever might have been his motives for his conduct, he was certainly anything but indifferent to his family concerns when he returned. He raved like a madman when informed of his wife's second marriage and subsequent death, vowing vengeance upon his successor, and terrifying his daughters with the most awful threats, in case they refused to acknowledge his claims. He had returned wealthy; and one of the mean reptiles of the law, who are always to be found crawling about the halls of justice, advised him to bring a suit against the second husband; assuring him that he could recover heavy damages. The absurdity of instituting a claim for a wife whom death had already released from the jurisdiction of earthly laws, was so manifest, it was at length agreed by all parties, to leave the matter to referees.

It was on a bright and beautiful afternoon in spring, when we met to hear this singular case. The sun-light streamed through the dusty court room, and shed a halo around the grey locks of the defendant; while the plaintiff's harsh features were ever thrown in still bolder relief, by the same beam which softened the placid countenance of his adversary.

The plaintiff's lawyer made a most eloquent appeal for his client, and had we not been informed about the matter, our hearts would have been melted by his touching description of the return of the desolate husband, and the agony with which he now beheld his household gods removed to consecrate a stranger's hearth. The celebrated Aaron Burr was counsel for the defendant, and we anticipated from him a splendid display of oratory. He merely opened a book of statutes, and pointing with his thin finger to one of the pages, desired the referees to read it, while he retired for a moment to bring in the *principal witness*. We had scarcely finished the section, which fully decided the matter in our minds, when Burr returned with a tall and elegant female leaning on his arm. She was attired in a simple white dress, with a wreath of ivy leaves encircling her large straw bonnet, and a lace veil completely concealing her countenance. Burr whispered a few words, apparently encouraging her to advance, and then gracefully raising her veil disclosed to us a face of proud surpassing beauty. I recollect, as well as if it had happened yesterday, how simultaneously the murmur of admiration burst from the lips of all present. Turning to the plaintiff, Burr asked in a cold, quiet tone,

"Do you know this lady?"

"I do," he replied.

"Will you swear to that?" continued Burr.

"I will;" he answered, "to the best of my knowledge and belief, she is my daughter.'

"Can you swear to her identity?"

"I can."

"What is her age?"

"She was thirty years old on the 20th day of April."

"When did you last see her?"

"At her own house, about a fortnight since."

"When did you last see her previous to that meeting?"

The plaintiff hesitated—a long pause ensued—the question was repeated, and the answer at length was,

"On the 14th day of May, 17—."

"When she was just three weeks old!" added Burr. "Gentlemen," continued he, turning to us, "I have brought this lady here as an important witness, and such I think she is. The plaintiff's counsel has pleaded eloquently in behalf of the bereaved husband, who escaped the perils of the sea, and returned to find his home desolate. But who will picture to you the lovely wife, bending over her daily toil, devoting her best years to the drudgery of sordid poverty, supported only by the hope of her husband's return? Who will paint the slow progress of heart sickening, the wasting anguish of hope deferred, and finally the overwhelming agony which came as her last hope was extinguished, and she was compelled to believe herself a widow? Who can depict all this without awakening in your hearts the warmest sympathy for the deserted wife, and the utterest scorn for the mean, pitiful wretch, who could thus trample on the heart of her whom he had sworn to love and cherish?—Whether it was love of gain, or licentiousness, or self-indifference, it matters not; he is too vile a thing to be judged by such laws as govern men. Let us ask the witness, she who now stands before us with the frank, fearless brow of a true hearted woman—let us ask which of these two has been to her a father?"

Turning to the lady, in a tone whose sweetness was in strong contrast with the scornful accent which had just characterized his words, he besought her to relate briefly the recollections of her early life. A slight flush passed over her proud and beautiful face as she replied:

"My first recollections are of a small, ill-furnished apartment, which my sister and myself shared with my mother. She used to carry out every Saturday evening the work which had occupied her during the week, and bring back work for the following one. Saving that journey to her employers, and her regular attendance at church, she never left the house. She often spoke of my father and of his anticipated return, but at length she used to weep more frequently than ever. I then thought she wept because we were poor, for it sometimes happened that our only support was a bit of bread, and she was accustomed to sew by the light of chips which she kindled to warm her famishing children, because she could not purchase a candle without depriving us of our morning meal.—Such was our poverty when my mother contracted a second marriage, and the change to us was like a sudden entrance into Paradise. We found a home and a father."—She paused.

"Would you excite my child against me?" cried the plaintiff, as he impatiently waved his hand for her to be silent.

The eyes of the witness flashed fire as he spoke.

"You are not my father!" she exclaimed vehemently. "What! call you my father? You! who basely left your wife to toil, and your children to beggary? Never! never! Behold there my father!" pointing to the agitated defendant—"There is the man who watched over my infancy—who was the sharer of my sports, and the guardian of my inexperienced youth. There is he who claims my affection, and shares my home—there is my father! For yonder selfish wretch—I know him not! The best years of his life have been spent in lawless freedom from social ties; let him seek elsewhere the companion of his decrepitude, nor dare insult the ashes of my mother by claiming the duties of kindred from her deserted children!"

She drew her veil hastily around her as she spoke, and moved as if to withdraw.

"Gentlemen," said Burr, "I have no more to say. The words of the law are expressed in the book before you; the words of truth you have just heard from woman's pure lips; it is for you to decide according to the requisition of nature and the decree of justice.'

I need not say, that our decision was in favor of the defendant, and that the plaintiff went forth, followed by the contempt of every honorable man who was present at the trial.

Sir John Franklin.—The expedition in search of Sir John Franklin, says the New York Tribune of March, will sail from this port in May, and will consist of two schooners suitable for the navigation of the Arctic Seas, of seventy and ninety tons burden.—The command of the expedition has been tendered to Lieut. De Haven, who was attached to the Exploring Expedition, who has accepted the trust. Passed Midshipman Griffin will be second in command. A party has gone East to select the vessels for the expedition.

In Tuscany, the Romish priests have commenced persecutions against two printers of Florence, for having under the government of the Republic, printed a translation of the New Testament in Italian, on the express ground of "their having published the gospel in the vulgar tongue, so that every one may be enabled to read it."

A Russian ship of war lately arrived at Portsmouth, England, has excited a good deal of attention and admiration, from the beauty of its model. It is called a chef d'œvre of naval architecture. The vessel, instead of being of Russian build, as supposed by the English connoisseurs, is the Kamschatka, built in New York—by Americans and of American materials, for his Majesty the Czar.

THE FRIEND.

HONOLULU, JUNE 1, 1850.

LATE INTELLIGENCE.

By a recent arrival from California we have intelligence in less than fifty days from New York. The 'Alta Californian' of May 8th, has fallen under our inspection. From its columns we learn that Hon. JOHN C. CALHOUN died at the capitol in Washington, on the 31st of March. During the long period of forty-two years he has been actively engaged on the theatre of political life, occupiing stations of distinguished importance. He was born March 15, 1782, and had just entered upon his 69th year. Only twelve days before his death he spoke in the Senate upon the Slavery question.

We also learn that the trial of Professor Webster had taken place. It lasted eleven days. The jury returned a verdict of *guilty*. When it was announced, the convicted criminal fell back in his chair with his hands resting upon the railing, and remained for some moments in an insensible state. When he recovered, he remarked to the officer who had charge of him, 'Why are you keeping me here to be gazed at?' He would receive his sentence in a few days. In our next files of United States papers we may expect full reports of the trial.

A steam propeller, the 'Carolina,' had arrived at San Francisco from New York. She had made a remarkable quick passage from New York to Panama, in seventy-six days. The quickest on record, thus out running the steamer 'Sarah Sands,' (which had just arrived,) twenty-six days.

There has been a great fire in San Francisco. Several blocks were entirely consumed. The loss is estimated from one to two millions of dollars. The gambling establishments suffered severely.

Postcript.—By a later arrival, papers have been received to April 1st. We learn that Professor Webster had received his sentence—to be hanged!

O'BRIEN AND O'DONOHOE.—In late papers from Van Dieman's Land, we notice frequent allusions to these distinguished Irish Revolutionists who have been transported to that Penal Colony. O'Brien had the offer of indulgences, but he scornfully refused them, preferring to wear the *uniform* of a convict. In the Launcester Chronicle, we notice the following:

'Mr. Smith O'Brien is to be removed to Port Arthur, where he is to be accommodated in the stable attached to the former residence of Commissioner Lempriere, which is to be prepared for the purpose, and his intercourse is to be restricted to the visiting magistrate, the superintendent, the officer and serjeant of the guard.'

The following is from a Hobart-town paper:

'We regret exceedingly to learn from an authentic source, that Mr. O'Brien is suffering severely, both mentally and personally, from his banishment to Maria Island. Next week we will refer to his particular case more fully; it would be unmanly and unjust not to do so under all circumstances.

As for Mr. O'Donohoe, he availed himself of the Government indulgence, and is employing his time and talents in editing a paper entitled the "Irish Exile."

The following letter to the London Times contains information, which will be of great interest to captains of vessels and to others:

'Sir—The owners of the Caleb Grimshaw demand a means for extinguishing fire in the hold of a ship. The materials required are nothing more than a cask of common chalk in the bottom of the hold connected with the deck by a small pipe, and a two gallon bottle of sulphuric acid—which, on the alarm of fire, being poured down the pipe, will generate a sufficient quantity of dense smoke (gas in which flame cannot exist,) to extinguish any fire, however large. I enclose my card in accordance with your rule, but any chemist knows flame cannot exist in carbonic acid gas, which is generated by the action of sulphuric acid on the chalk. I beg to subscribe myself, your obedient servant.

MAP OF THE MINING DISTRICT OF CALIFORNIA—*by Wm. A. Jackson.*—We would acknowledge our indebtedness to Wm. Ladd, Esq. for a copy of this Map, which is neatly lithographed. It is by far the best and most accurate map of Alta California which has ever fallen under our inspection. It shows that in reality, more was learned respecting the geography of the country during the year 1849, than was ever communicated to the world before. To the curious in matters of this description, it is really amusing to compare this map with maps of the country published five, ten, or more years since. Until the discovery of the mines, the geography of California was as unknown to the world, as the geography of the center of Africa or New Holland.

☞ It is announced that twelve sisters of charity are about to embark at Brest, to found an establishment at Honolulu, the capital of the Sandwich Islands, by invitation from King Kamehameha III. ! ? ! !?

Nearly four thousand copies of Webster's quarto dictionary have been sold in Boston, in a little more than two years. Thirty millions copies have been sold of Webster's spelling book—about six millions since the death of the author, in 1843, or one million per annum.

We are glad to welcome the 'Eliza Warwick' from Boston, so soon after the arrival of the 'Charles.' In less than two months, we may expect the 'Chilo,' which sailed from Boston March 2d, for Honolulu.

☞ We are glad to have added to our list of exchange papers, the "National Era," the well conducted and talented anti-Slavery paper published in the city of Washington. Mr. Bailey, the responsible editor, wields a vigorous pen, and conducts the paper in a manner to command the respect of eminent members of Congress, as we have observed in reading the speeches lately delivered upon the Slavery question. The Quaker poet, Whittier, is the corresponding editor. The Era is a paper that a true American is glad to meet in a foreign land. Americans wandering in foreign lands, feel proud of their country, but they blush that her fair name should be associated with the foul blot of slavery; hence when they meet a paper like the Era, calmly, boldly, manfully, yet in a dignified manner, discussing the subject, it serves to show that mighty efforts are making for the abolition of the enormous evil; and that to, under the very shadow of the capitol. There may be differences of opinion among the non-slave-holding portions of the American community, respecting the best method of doing away with this colonial bequest of the mother country, but we rejoice to learn that there is a growing conviction among the northern people that it is an evil which should be confined to its present limits; hence the 'tug of war' in Congress respecting the admission of free California.

New Books Relating to the Sandwich Islands.

☞ If Solomon was justified in saying, "of making many books there is no end," with how much more emphasis may such a remark be now uttered. By late arrivals several new books have been brought, some of which relate to scenes in the Pacific, and at these Islands. Lieut. Wise, of the United States Navy, who visited the Sandwich Islands, while attached to the United States ship Independence, has published a narrative of his rambles, under the title of "Los Gringos." Dr. Wood, late Fleet Surgeon of the United States Squadron, in the Pacific, has published "Wandering Sketches, of People and Things, in South America, Polynesia, California, and other places." Another similar work, we observe, announced as published in London, written by an English Naval officer, by the name of Walpole, who visited the Islands, we believe, attached to H. B. M's ship Collingwood. In the "Biblical Repository for July, 1849," there is a lengthy, and carefully written article, upon the Sandwich or Hawaiian Islands; their history and relations to the rest of the world," by Rev. H. T. Cheever, who visited the Islands, several years since, and travelled over every part of the group.

☞ In Dr. Wood's work, so far as relates to the Sandwich Islands, we are gratified in

observing a spirit of candor and good sense. In judging of Missionary influence and success, he does not appear inclined to carp, or to observe—merely to express—indiscriminate commendation, but rather to have observed the "golden mean," endeavoring to keep his mind free from strong prejudices on either side. We shall here make a single extract from his work, relating to some scenes which chanced to fall under his observation during a visit to the volcano on Hawaii :

"In addition to the wonderful scenes of nature which this expedition had afforded us an opportunity of beholding, it made us acquainted with some traits of the native character, and presented a wonderful illustration of the good effects of even a low degree of civilization. Early in the morning on which we left Kilauea, hearing the monotonous tones of a human voice under the window of the hut, near which I had been sleeping, upon looking out I saw Kianuhi, our native captain, upon his knees, earnestly engaged in prayer, his countenance wearing the expression of fervent devotion. During the last night of our stay at the school-house, whilst we were lying about the floor, the only light of the apartment being a candle in a hatchet, sticking in one of the posts, the natives wanting some occupation, produced several books from the desk, printed in their own language. They were hymn-books, with the notes of the appropriate music ; and several of the Indians gathering about the candle favored us with the hymn in their native language, but with one of our familiar tunes.

On the following morning, having arisen earlier than my companions, I directed one of the Indians to make up the fire, and in the mean time I strolled off to walk among some of the neighboring huts. From one of them I heard the continued utterance of monotonous sounds ; and upon looking in at the door I saw a man, I presume the head of the family, kneeling on a mat in the corner, praying aloud, whilst the various members of the family, old and young, knelt in a row near him. The only words which I could understand were "Ehovah," and "Luna," the former word, of course, given them from our language, and the latter from their own, signifying above. What a scene! and what words from the hut of a native, on the wild volcanic mountains of Hawaii ! among a people the last born of civilized discovery, many of whom, Christians of no more than adult years, bear on their persons the marks of barbarian customs. As a careless member of a community to which Christianity was a birthright trust, I felt rebuked. Never, in the "dim religious light," and amid the solemn paraphernalia of Art's sacred temples, did I feel such an impulse to devotion, and involuntarily my own spirit of adoration was borne along with that of those humble worshipers."

We have made the above extract, not because there is anything very remarkable about the observance of family worship among the Hawaiians, but because we know that it is a very common practice among them, so far as they have come under Missionary influence. Would that this practice was more common among both natives and foreigners. All acts of religious worship, when properly performed are acceptable to God, but in that of family devotion, there is something we believe peculiarly acceptable. We envy not the feelings of those who denounce and decry Missionary influence, when it tends, as we know it does, to lead a once heathen people to worship their Maker, while kneeling around the Family Altar.

Mrs. Newman's School.—This lady has opened a school for instructing Hawaiian children and youth in the English language. She proposes, upon reasonable terms, to lodge, board and instruct a few pupils. Her residence is near the Rev. L. Smith's meeting-house.

References—Rev. L. Smith and Seamen's Chaplain.

The Agricultural Association.

Remarks respecting its formation in the Hawaiian Islands.

While the physical and moral improvement of the Hawaiians is becoming daily more conspicuous, arts and sciences begin to flourish.—Agriculture, in which the aborigines even at the time of the discovery, had attained some skill, has not kept pace with the advance civilization has made throughout the group. Though in different parts extensive plantations have been established, and a number of useful plants have been introduced, yet the former stand as isolated undertakings, while most of the latter owe their naturalization to accident, not design. Those who visit these Islands and become acquainted with their lovely climate, are particularly struck with the small variety of cultivated plants and vegetables. No attention has as yet been paid to a subject of so much importance. It is therefore, with great satisfaction that the friends of progress observe the present movement in favor of an Agricultural Association—for nothing shows more the advance of a community, than the formation of societies pursuing a useful and general object.

An Agricultural Society, such an one as these Islands need, ought to be more than a mere series of meetings at which theories are discussed and the results of practical experiments reported. In order to render it really useful, it ought to go a step further. It requires a few acres of ground, where new fruits, vegetables, esculent roots and herbs, useful as fodder for cattle and other domestic purposes, are cultivated. At the head of that establishment it wants a person, who possessing both practical experience and scientific knowledge, diffuses the newly acquired plants by distributing them among the members of the society and giving directions for their successful cultivation. He might also keep up communications with similar establishments, and thus exchange one production for the other.

A society thus organized, would have a fine field before it—the best stimulus to exertion, and undoubtedly obtain great results within a few years. Plants from nearly every part of the globe might be acclimated and successfully grown.—The Hawaiian Islands not having a strictly tropical climate, the society would principally have to turn its attention and to look for acquisitions to the cooler parts of the world, and to those districts of the equinoxial regions where the graceful forms of the tropics are harmoniously blended into the vegetation of the temperate zone. At an elevation of a few thousand feet the highlands of the East Indies, of Mexico, New Granada, Ecuador and Peru, produce a prodigious variety of useful plants, most of which are but nominally known to more civilized nations. The aracacha of Peru, (conicum maculatum,) for instance, probably the finest of all esculent vegetables, is confined to a very limited extent of country. The cultivation of this root, a native of the same region as the potato, has hitherto proved unsuccessful in Europe, more from ignorance of the requisite treatment, than from any other cause. The climate of these Islands seems to be well adapted to the aracacha, as also to a number of other useful plants, of which a long list might be cited.

BERTHOLD SEEMAN,
Naturalist of H. B. M. ship Herald.

To Rev. S. C. Damon.
Honolulu, May 14, 1850.

Mutiny in the Pacific.—We gave currency in our last, says the New Bedford Mercury, to the report from an Edgartown correspondent of the N. Y. Com. Advertiser, stating that Capt. Hussey of the ship Planter of Nantucket, had deliberately and without any just cause, shot one of his crew. The following facts in relation to the affair, have since come to our knowledge from a reliable source:

In June last, while cruising in the vicinity of the King's Mill group of islands, the crew of the Planter, led on by a few desperate fellows, refused duty, alleging as a cause, that the ship had cruised long enough, and should go into port. Capt. Hussey refused to comply with the demands of the crew, whereupon they armed themselves with knives, handspikes, boarding-knives, etc. and threatened the lives of the captain and officers unless their demand was immediately complied with. Capt. Hussey endeavered to reason with them, and upon going forward to do so, was met at the try-works and forced back. After several ineffectual attempts to induce the crew to return to their duty, and finding that they had determined to force the captain to return to port or take possession of the ship. Capt. Hussey ordered the ship's muskets to be brought on deck, and loaded with ball cartridges. He then addressed the crew, stating his determination to maintain his authority on board, if need be at cost of life, and gave them half an hour to consider the matter and make up their minds whether they would return to duty.

At the expiration of the time, he again addressed them, and finding they still persisted in their mutinous intentions, he very coolly and resolutely informed them, that he had determined upon the course for him to pursue—that he was a good shot, and that the first man, who on being commanded by him, should refuse to obey, would be shot dead on the spot. He then took up and tried a musket, and calling one of the ringleaders by name, ordered him to come aft, the only answer to which was a defiance. Capt. Hussey then leveled his gun and fired. The ball entered the temple of the mutineer and passed out the opposite side of the head; and he fell dead upon deck. The same course was pursued with another of the ringleaders, who with the remainder of the crew, preferred returning to their duty to being shot at—and the ship continued on her cruise.

The peril to which the vessel and crew were exposed by the conduct of the mutineers will doubtless furnish to the minds of all, a sufficient justification for the extreme measures to which the captain was compelled to resort, and afford to him ample vindication by the laws of his country.

☞ Thirty thousand landlords own England; three thousand own Scotland; six thousand own Ireland; leaving more than 25,000,000 inhabitants of those countries without a foot of God's creation.

Dr. Dick.

The appended letter, written by the venerable author, Thomas Dick, L. L. D., of Scotland, was received by a gentleman of this town, in acknowledgement of the receipt of a bill for £6, the contribution of a gentleman of this vicinity, as a slight testimonial to the high moral worth of Dr. Dick, and the value of his literary works.

The circumstances which called forth the contribution for this excellent and venerable man, who is now over eighty years of age, may be readily inferred from the letter. We trust that the simple statements of the letter may awaken, in other places, a disposition to make Dr. Dick some partial returns for the debt of gratitude due him for the healthful moral and religious influence of his literary works, and such as will assist him in the discharge of the manifold obligations which an all-wise Providence has seen fit to impose upon him in his declining life.—[Washington Union.

Broughty Ferry, near Dundee, Scotland, 30th Jan., 1850.

My Dear Sir:—I have much pleasure in acknowledging the receipt of your very kind letter of the 8th current, enclosing a Bill of Exchange on Messrs. Harnden & Co., for £6.

I return to you, dear sir, and your kind friends, my most grateful acknowledgements for your friendly remembrance and disinterested liberality; and I pray God you may all have such a portion of the good things of this life, as may promote your true enjoyment, and be conducive to your progress in the divine life, and above all, that you may be enriched with those spiritual and heavenly blessings which shall endure forever.

Perhaps it is due to your disinterested kindness and generosity, that I should state some circumstances in relation to my family and my temporal affairs. About seven years ago, my daughter and her husband, both in the prime of life, died within thirteen days of each other, leaving five children, two boys and three girls, the oldest about ten and the youngest about two years of age, almost without anything for their support. I had therefore to bear the greater part of the burden of their maintenance and education. As we had previously kept no regular servant, we were under the necessity of getting one into the family, and for several years we were under the necessity of submitting to this additional expense. About three years ago, two of the girls were admitted into John Watson's Institution, Edinburgh, where they are maintained and educated gratis, but at the age of thirteen or fourteen years, they must be again received at home. The boys have now gone to professions. Besides, I have an aged and infirm sister, once in a reputable and prosperous condition, now, through the uncertainty of mercantile affairs, left without almost any resources. Her husband, and latterly, all her family, grown up to men and women, have died, and for more than seven years she has been an inmate in our family, chiefly depending on us for support.

The profits which have arisen from the publication of my works in this country have been comparatively small. For the entire copy-right of the "Christian Philosopher," I received at first £120, and a few years ago, a few pounds more, when very large additions were made to it, so as to increase it to the size of two volumes. For the "Philosophy of a Future State, I received £80 and a few copies. For the copy-right of "Mental Illumination," £130. For the "Practical Astronomer," 50 guineas and 50 copies, &c. &c. These and the other sums have been spread over a period of more than twenty five years. I received from the booksellers in America on two or three different occasions, several sums for sending corrected sheets across the Atlantic before the works alluded to were published in Britain.

Notwithstanding our small income, and incumbrances, we endeavored, by dint of the most rigid economy, to move onward, though without some of the comforts we could have wished, and never had the least idea of laying open our circumstances to the public.—But about three years ago it was suggested by some respectable gentlemen in Dundee, that I should present a memorial to Lord John Russell for a small pension from the fund allotted to authors, &c. This memorial, accompanied with the warm recommendations of Lord Duncan, Lord Kennard, George Duncan, M. P. for Dundee, and about a dozen other official gentlemen, was presented to Lord John Russell through the medium of Mr. Macaulay, the historian; but no answer was ever returned to it, and by this time it has likely been quite forgotten. About three months ago, a benevolent gentleman from England, formerly unknown to me, happened to call, and in the course of conversation, allusion happened to be made to this memorial. He requested that a copy of it might be sent to him, which was done a week or two afterwards, and in a very short time a paragraph appeared in the Athenæum and the Literary Gazette, expressed in rather too strong terms. I had no hand whatever in the insertion of these or any other paragraphs which have lately been going the round of the newspapers. These statements are the inferences which my kind friends have been pleased to deduce from what was stated in the memorial. At the same time, should the public think that my writings have been in the least beneficial to society, and should they choose on this ground to present a testimonial, as you have so liberally done, I certainly will not refuse it. It would tend to procure us some comforts we have not hitherto enjoyed, and enable us to promote the education of my female orphan grand children. Last spring I was subjected to a dangerous disorder, which for some time baffled the efforts of all my medical attendants, but through the blessing of God I gradually recovered during the summer and autumn.—But about two or three months ago I was subjected to a severe surgical operation on my breast, from which a large tumor was extracted; but everything went favorably on, the wound is healed, and I enjoy at the present moment, a tolerable share of good health.

Mrs. Dick joins me in kind wishes and grateful acknowledgements to you and your friends. May you enjoy every desirable comfort through life, hope in death, and at length an abundant entrance into the everlasting kingdom of our Lord and Savior, is the earnest desire of,

My Dear Sir,
Your much obliged,
and most obedient Servant,
THOMAS DICK.

The "Long, Low, Black Schooner."

BY TIM TALFELLOW, ESQ.

It had been a "dirty night," blowing and raining terrifically in squalls, and dark as Tartarus; and the morning veiled in a canopy of heavy rolling clouds, was little better. The wind had fallen, but a huge sea tossed us mercilessly, and a thick mist circumscribed our vision to within a few yards around our ship. As the day advanced, the clouds were dissipated, until at last, as is often the case in the transitions of weather at sea, the misty curtain which surrounded us rose suddenly, as if at the fiat of elemental power.

The cry of "sail ho!" was almost immediately heard from the forecastle deck, and to the call of "where away?" from the officer of the deck, which always follows such an announcement, it was answered in the same hoarse voice, "four points on the lee bow, sir;" and turning our eyes in that direction, we discovered a vessel already "hull up," and seemingly not far off. The distance might have been a couple of miles; near enough, if in clear weather, to have easily distinguished in every particular by the aid of glasses; but seen as she was, through the half melting haze, not so readily reduced to shape, form and exactitude of character. At first she looked huge and clumsy, looming in the partial light like the wandering ghost of the 'Flying Dutchman;' then small and trim; and bye-and-bye, still more diminutive and quite plainly a schooner.

The sight of a sail is one of the most exciting objects of a sea life; a companion in darkness, a fellow traveller upon the desert, is not more welcome; not all the wonders of the deep have half its thrilling interest!—Conjectures are rife; her what and whatabout being a new subject, with all the advantage of a chance matter, which at all times enhances the gratification of a pleasure.

"Where can she be from?" "Where bound?" were the questions immediately asked.

"I can't imagine," said our captain. "I don't see how a craft like that could get here—what the mischief can she be about?"

"It may be a small vessel," observed another, "bound to Algoa Bay, or into the Mozambique Channel."

"Impossible—our latitude to day will be over forty-two—more than seven degrees to the southward ef La Ghullas!"

"Perhaps an express packet from England to India?"

"Even then," again rejoined the captain, "with a skiff like that, one might fancy the fellow would work round close in with the land in smooth water."

Every suggestion was maturely discussed, but none seemed entirely satisfactory. There was still a something wanting to confirm the argument. At one time, so small did she look, that we suddenly fancied she might be the launch of some large vessel that had foundered in this tempestuous part of the ocean, and might contain the remnant of her crew, who had thus saved themselves!—and immediately we pictured a scene of distress and suffering that might naturally have been the consequence of such an event—of weeping, and wailing, and nakedness, and fear; of exhaustion from exposure; madness from thirst; of starvation itself, and all the haggard horrors which the combinations of such a spectacle must have presented. There might be women aboard too! for in the mass

of migration from England to her colonies, particularly on this route "beyond the Cape," where lie India, the jewel of her crown, and the colonies of Australia—the giant progeny of an ever teeming mother—the number who embark upon the ocean for other dwelling places, would astonish our own home-keeping and home-loving country women who dream of the north and the south, the east and the west, as of a day's journey, and of the sea as a far-off and fearful road! Scarce a ship from England passes the Cape without them—daughters returning to parents after an education "at home," as England is fondly termed by them, though born upon the soil of its most distant dependency; wives to husbands, after a visit for the restoration of impaired health; friends rejoining friends, and relations to be united; and not unfrequently, the betrothed going forth in the palpitating expectancy of a consummation of her plighted faith with one whose fortunes have united him with a distant region. Such thoughts as these, carried the picture which our imaginations had drawn to the highest pitch. But on looking again and more narrowly, we discovered that our little schooner was well and sufficiently rigged; her sails were well fitted and well set; nothing in her appearance indicated haste or emergency, nor had she any of the usual signals of distress flying.

"It cannot be," cried the first to observe these distinctions; "there can be no jury-rig about that craft!—twig her gaff-topsail and flying jib."

"You are right," answered the captain, "she's a dandy from truck to heel!"

And with these unanswerable arguments we were fain to give pity to the winds for lack of substance.

Another conjecture was now started—altogether new.

"I'll tell you," cried the captain, with an arch curl upon his lip, the expression of a self complacency which always announced the conception of a thought that he fancied particularly cunning; "I'll tell you now what she is—a little fellow out of Capetown, bound round to the Mauritius, with wine, fruit, grain, and such like notions."

And there seemed to be something so extremely probable in this, from the known commercial relations of the two places, that the idea was immediately adopted as a matter of entire certainty.

"Fruit—butter—fresh eggs!" muttered one, as he walked slowly down the quarter deck.

"Butter and fresh eggs, did you say?" whispered another, "softly, my sweet fellow, softly." And by a microscopic vision there might have been seen in both, at the usual point of articulation between the mouth and the well turned-up whisker, what Charles Lamb, in his sweet essay on roast-pig, calls 'an involuntary moistening of the nether lip.'

Upon a long voyage, men grow imaginative in the gratification of their palates.—Amid the sorry realities of musty biscuit, salt beef and pork, and such halting, half-starved semblances of ducks and chickens as have lived through hard weather and confinement long enough for the sacrificial knife, the sense becomes a sort of spirituality, subsisting on the recollections of better fare.—The idea of freshness, even in a head of garlic, comes upon it like gurgling water upon the thirsty traveller; and with the delectable visions now before us, it was then all glee. The chattering petrels about us were not more gladsome. If we had before been delighted by the mere sight of a way-farer like ourselves upon the waste of waters, the pleasure was now ten-fold in the expectation of greeting him. The idea too, of intelligence from the living and breathing world, from which we had been so long excluded, had in it something very cheering—a feeling which none can appreciate who have never endured the heavy incarceration of the seas.

Our friend was still at some distance, and over a heavy head sea with the wind extremely light, we approached but slowly.—As we came nearer however, there seemed to be a change in our feelings, an indefinable though very perceptible something over the spirit of them, like the mutation of a gently proceeding dream. We were less gay, talked less, laughed less. It was evident something new occupied our thoughts. Each with his glass—some three or four—was earnestly watching the little vessel, while those who were without these aids to their physical vision, were passing from one to the other of the observers, inquiring what they saw. Our attention was first arrested by the enormous size of her sails; every thing too, was set, while our reefs were yet in, the weather still looking threatening.—The captain was the first to break in upon a silence that had now been some time prolonged.

"He out-carries us," he observed, speaking as if casually, and throwing his eyes with a seeming carelessness aloft—doubtful, perhaps, of exciting unpleasant feelings by a more serious air. "Mr. M—," he continued, addressing the officer, "call all hands—shake the reefs out of our topsails—set the main-top-gallant sail, and loose the mainsail and jib."

"Aye, aye, sir," was the quick reply; and the alacrity with which the order was obeyed, showed that there was some uncommon interest felt in the work.

From much chattering we now became strangely silent. Our eyes were kept steadily on the schooner; glasses were wiped and positions changed and re-changed, as if by every imaginable effort to see as much and as distinctly as possible. The number of her men had evidently increased. Four—five—six were aft; four were in the waist; as many forward; and a score were in her fore rigging. Each observer of these testimonials to her real character spoke hurriedly, without removing the glass from his eye, and was answered only by the short confirmatory ejaculation of another. New objects developed themselves.

"There is some thing amidships," cried one, "long, black, round, and covered with canvass."

"I see it," answered another, quickly, "over the main-hatch—long, round, black."

At this point, mere silent sensibility had attained its utmost. As if by a common volition, the glasses fell from our eyes as though it were little worth our while to look longer or for more; and gazing round, each seemed to await that from another which he dared not utter himself.

"I do not like her," said the captain.—"She has the look of a knave—what do you think of her?"

Our misgivings once broached, the weight of an Atlas seemed removed from our bosoms, and our position became immediately the subject of cool discussion. She was pronounced *suspicious;* and the conclusion was as soon fallen upon that whatsoever she might be, if hostile, it was now too late to attempt escape by running. It would be difficult to board us in so heavy a sea; perchance we might run her down—the risk to ourselves in such a case was but a choice of evils. It was determined that our only chance lay in an air of the most unflinching determination, and to this end we stood on. She was now about half-a-mile off, but heading directly for us, and her sails settling very low, it was impossible to see any thing upon her deck. Men were running up and down her rigging, as if for observation. We were evidently an object of solicitude with them; and reversing the matter, I must own, they were equally so with us. Anxiety had now become suspense. Our little armory was open within the poop; pistols lay disposed upon the table, and muskets and cutlasses were in ample readiness around. Our men stood scattered, or moved silently from place to place with a fidgety air, gazing intently on the little stranger, or anon glancing aft with a feeling natural to the ignorant, as if to read in the countenances of those to whom higher station had perhaps given quicker perceptions, that which they could not themselves discover; the blood coming and going in more faces than one.—I never saw a ship so still! We talked and were silent—laughed, and were more silent than before! We remembered our dreams of fresh butter and new laid eggs, and called it a capital joke; but it would not take the complexion of a jest.

We approached.

"He is near enough," cried one, "to give us a shot," and we started as though we had seen the flash!

At that moment he gave a 'yaw,' paying broad off; our glasses flew instantly to our eyes; we could see his deck—see all—six, seven men were on his quarter deck—two forward—a dozen or more *jackets and trowsers* in the fore rigging *were hung out to dry,* and the great gun amid-ships, huge as imagined thunder, resolved itself into a *long black whale boat, bottom up!*

A few minutes later found us with the captain of a little sealer out of London for a guest; a hardy weather-beaten son of the ocean, commanding a vessel of eighty tons and eleven men, formerly the yacht of my lord somebody, I forget who, bound to as near the south pole as ice and cold weather would allow him to go, and begging us to take letters for him, though by the way of India, as it would probably be his last opportunity before returning to the world again. It was odd how entirely every evidence of a belligerent propensity had succumned to the better feelings of our nature—the meal of the 'lean kine' was nothing to it! The muskets, cutlasses and pistols, had quietly taken themselves off, and though the last were indubitably loaded to the very muzzle, yet not one could be found to remember that he had any hand in the work!

"I thought," said our friend, "you were a man-of-war, when you bore up; for every thing had run away from me!"

"Yes," we replied, "we look a little rakish, and we reckon we might make a pretty good fight."

A fine breeze had sprung up before he left us, and both filling away on the same course,

the afternoon and evening saw the V— with a long, low, black schooner keeping close on her quarter.

NEW FLOATING BETHEL, WHAMPOA, CHINA —We rejoice from various sources to learn that this establishment finds such generous patronage and encouragement among seamen and merchants at Canton. In the October number of the Sailor's Magazine, we notice four subscriptions by mercantile houses of $400 dollars each, and several other subscriptions varying from 5 to $300.

☞ Some of our Island readers will recollect Mr. Hill, the English traveller, who visited our shores about a year or more since. In a late paper we notice his embarkation at Vera Cruz for Havana, en route for England. A correspondent of the New York Tribune, thus refers to him:

'Mr. Hill, an English traveller, bound homeward via Havana, Cadiz and the Pyrenees, after three years spent in Russia, Siberia the Polynesian Islands, and the interior of South America. His experiences have been of remarkable interest, and will, I hope, soon be made public.

The New Bedford Mercury states that Capt. Timothy Colby in that city, has a bed cord made of whales' sinews, which has been in the Colby family since 1640—two hundred and nine years—and has been used by Capt. Colby forty-one years, and is now as good as a dozen new hemp bed-cords. It has never been broken.

☞The Propeller 'Carolina,' just arrived in San Francisco from N. Y., is to run between San Francisco and Oregon, under the command of Capt. David Wood, who formerly commanded the Propeller 'Massachusetts.'

Mats	50c a fathom	Double width	1 dala a do
Iron poles	10 $1		

REGULATIONS.

I. The appointed SALES MAN is to arrange all trade with the Captain, and the Captain to pay him his fee; in cloth or cash as he may agree on.

II. Should the Captain wish to engage natives to take his supplies to the boat; $1 a day is the charge for each man.

III. No boat or canoe from shore shall be allowed to take off trade to ships, to be sold on board. Boats may be engaged to take off supplies bought on shore. Charge, $5 the first day and $3 each day after.

IV. No boat or canoe from shore shall be allowed to go off to ships when making the land, except the one appointed by the authorities.

V. It is requested that no Captain secretly engage, or take away on board his vessel, any natives from the shore. Any Captain wishing to engage natives for a cruise, are requested to make arrangements, before proper witnesses on shore, with any willing to go. A contrary procedure will be reported to the nearest Consul, of the nation to which the ship belongs.

VI. It is requested, that on the desertion of a man from a vessel, the Captain give immediate information to the Chiefs of the Station, and that the vessel do not leave the Island until the deserter be apprehended. That for every deserter delivered by the natives to the Captain two pieces of cloth to be paid, one to the Chief of the station, and another to the parties who secured his apprehension.

VII. That in case the deserter be not found until after the vessel has left the island, when apprehended, he shall become a prisoner and be employed in public work, until he leave the island.

VIII That, in any case considered necessary for a Captain to leave a man on shore, the sum of $30 be paid for each individual so left. tf

TO SEAMEN AND STRANGERS.—The Seamen's Chapel is open for Public Worship every Sabbath, at 11 a. m., and 7 1-2 p. m. Seats Free.

The Seamen's Concert for Prayer is held at the Room the 3d Monday evening in each month.

Seamen belonging to vessels (of all nations) visiting this port are invited to call at the Chaplain's Study, where they will be gratuitously supplied with copies of the Friend and other rending matter. It will be most convenient for the Chaplain to receive calls from Seamen between 2 and 4 p. m.

Public services at the Native Churches, on the Sabbath, commence at 9 1-2 a. m. and 2 1-2 p. m.

The Seamen's Reading Room is open at all hours of the day. Strangers arriving and having late foreign papers, are respectfully invited to aid in keeping said room supplied with useful reading matter.

Donations are respectfully solicited for the support of the Chaplaincy, and the publication of the Friend. An annual report of all donations is made to the Am. Seamen's Friend Society in New York. Any person contributing $50 is entitled to become a Life Director of the Society, and $20 to become an Honorary Life Member.

SAM'L C. DAMON, Seamen's Chaplain.

THE FRIEND:

A Monthly Journal devoted to Temperance, Seamen, Marine and General Intelligence.

PUBLISHED AND EDITED BY
SAMUEL C. DAMON, Seamen's Chaplain.

TERMS.

One copy per annum	$2,00
Two copies per annum,	3,00
Five copies per annum,	6,00
Ten copies per annum.	10,00

☞ Bound volumes of THE FRIEND, for 1, 2, 3, 4, 5, 6 and 7 years, at the *Chaplain's Study*. A reduction from the subscription price will be made to Seamen, and purchasers who desire more than a single volume

The Whale and his Captors:

Or, The Whaleman's Adventures, and Whale's Biography, as gathered on the homeward cruise of the "Commodore Preble"—by Rev. HENRY T. CHEEVER, *with engravings.* Harper & Brothers, *publishers, New York,* 1850.

We have frequently seen letters in American papers signed "H. T. C." dated at the Sandwich Islands, and on board the "Commodore Preble," on her homeward cruise, but we were not expecting to see a volume in addition written during the passage, of our old friend and visitor to the United States.—Ever since we saw the volume announced as having been published, we have felt a strong desire to glance over its pages. We frankly confess that we are *favorably disappointed.* Much has been written about the "rare old whale" and the "adventurous whaleman," and during the last few years we have heard many "a yarn" about chasing, harpooning, lancing, towing, cutting-in, trying-out, and stowing-down, sperm whales, right whales, and polar whales; still we have found this work to be not only readable, but quite instructive. The style is lively and well adapted to the nature of the book. From the plentiful sprinkling of poetical extracts scattered through the work, the reader would infer that whaling must be a very literary employment! Literary men are surely quite dependent upon the whaleman for the oil that supplies his "mid-night lamp," for it is not to be supposed that literary personages, even in America, would presume to read, study, or write by the light of a Cincinnati candle! Only imagine a poet, penning the effusions of his fancy by the light of a *lard* or *tallow* candle—the very idea is the most unpoetical imaginable.

That our readers may judge for themselves in regard to this work, we quote entire the second chapter, although no part of the book in reality, relates less to the "whale and his captors." The incidents herein narrated must have formed a pleasing episode in a long passage to the United States.

—

Tropic Island of Rimatara—Letter from the Natives—Landing through the Surf—Characteristics of the People—King Temaeva—Walk into the Interior—Island Metropolis—Foot-prints of Christianity—Native Hospitality—Regretful Good-by—Contrast between a people with the Bible and without—A Cut-off and a Recovery—A Ship-wreck and a Rescue—Reasoning of a South-Sea Islander—Tahitian Theology.

The first view we have of the Commodore Preble, is as she is lying off and on the lone Island of Rimatara, in quest of the fresh supplies which whalemen covet in order to keep at bay the scurvy. This is one of those fascinating South-Sea Islands, which, on their first discovery by Europeans in the latter part of the last century, quite turned the heads of many, and at once started so much speculative nonsense and sentimentality about primeval innocence and bliss embosomed in the Pacific.

A coral rock, by gentle nature made
Verdant and beautiful, through tropic sun,
And fertilizing rain, and grateful shade;
Placed far amid the melancholy main.

It is about seven miles long, one and a half or two wide, and lies in 152 west longitude and 22 45 south latitude; about south-west from Tahiti. It is properly perhaps, one of the Society Island group, being a mere pile of corallite and wave-washed coral sand.—We came in sight of it on Tuesday afternoon, a blue hummock on the bosom of the ocean, and ran on until we discovered, to our great delight, what could not be mistaken for a meeting-house, and a white flag flying on a post near by, to indicate the friendliness of the natives, and induce us to stop for trade.

The sea broke so high upon the north-east and south-west points of the Island, and indeed all along shore, that the captain did not deem it prudent to attempt landing that night. We therefore, stood off until twelve o'clock, mid-night, and then tacking, were up with it again by ten o'clock next morning, on the leeward side.

The Island presented a beautiful appearance, being thickly wooded to the water's edge, and elevated in some parts into gentle hills, crowned with all the various and luxuriant growth of the tropics. Canoes soon launched out through the boisterous surf, and came along-side of us, having two or three lads and men in each, much fairer skinned and better looking that the majority of Hawaiians.

The captain's boat anchored off the reef, while the natives brought their articles of trade in their pigmy canoes. By four in the afternoon he had procured a boat-load of pigs and cocoa-nuts, with which returning to the ship, we stood off again until the next morning, when the captain gave orders for two boats.

One of our sailors by the name of Johnson, that had lived on Tahiti, and could talk a little of their tongue, had told the natives the day before that there was on board a missionary, or a missionary's friend, from Hawaii, and there was accordingly sent off through him, on a slip of paper, very legibly written by a native teacher, a Rimatara letter, of which the following is a literal translation:

"Dear Friend and Father:

May you be saved by the true God. This is our communication to you. Come thou hither upon the shore, that we may see you in respect to all the words of God which are right with you. It is our desire that you come to-day.

From TEUTINO and his Brethren."

Eager to know some thing more of a people from whom came so cordial an *aloha*, and

My very heart athirst
To look on nature in her robe of green,

I made ready to go ashore; the breakers were not formidable enough, though beating with fearful violence, to make me forego the novelty of setting foot on a coral South Pacific Island, and the pleasure of a stroll among the trees after seven weeks at sea. Taking therefore, a life-preserver, I ventured into one of the little canoes that came along-side the boat, and was paddled and handed by a narrow cleft, through roaring breakers and ragged rocks that threatened instant destruction, among which a common boat could hardly live a moment. Those frail canoes however, only nine and eleven feet long, carried safely through, one by one, all that ventured ashore.

Immediately on our landing, the natives gathered around and formed a ring, naturally curious, like savages every where, to notice every thing, and I not less so to observe their own eager attitudes, expressive gestures and fine looks. The women have an uncommonly pleasing aspect of countenance, clear skin, but a shade or two darker than a dark brunette, black eyes, hair and eye-brows, and a captivating beauty of form, and bashful turning away when looked at, that is not a little attractive. Their nostrils are not so negro-like, nor their lips so thick as those of the Hawaiians, but still they bear to them a close resemblance. Many of the little girls and maidens were truly beautiful, and would be deemed paragons, even in the artificial state where beauty is not left so much to itself, but has to be busked, bustled, and corseted by omnipotent fashion.

I soon made my way to the island king, Temaeva, who sat apart from others upon a block of coral, and leaning on a staff, his only dress being a shirt and *kihei* (mantle.) He was a benevolent looking, well made man,

having the port and presence of a king, and if that were all,

> With Atlantean shoulders fit to bear
> The weight of mightiest monarchies.

He offered me his hand with much apparent cordiality, and immediately led the way to his house in the interior. The path was at first rugged as the volcanic clinkers of Hawaii, over heaps and swells of broken and sharp coral, over-grown with huge roots of the kamani and koa trees, in the borrowed terms of Wordsworth,

> A growth
> Of intertwisted fibres serpentine.
> Up-coiling, and inveterately convolved.

This barrier passed, there was a subsidence and inclining of the island inward, and the path went through a meadow of rushes, in time of rain flooded. The soil was a rich black loam. Next came beds of wet kalo (arum esculentum,) very luxuriant and large, beyond which were the houses of the king and native missionary teachers, the chapel, school house and principal settlement. These were prettily made buildings of kamanu posts, wattled between, lined on both sides with a good coat of white washed plaster, and thatched on the roof with grass. Being clustered tastefully together, they made a very pleasing appearance outside.

The chapel and house of the king were furnished with flooring and settees. In the former was a round pulpit, very much like those seen in popish cathedrals, wherever is seen at all what popery is by no means fond of—the pulpit. They had been built eleven years, it being more than twenty, we were told, since the island was first christianized by native missionaries from Tahiti. They were all surrounded by a low paling of posts driven slightly into the ground, merely to keep out hogs; while cocoa-nut trees and giant bananas were dropping their fruits all around. The whole scene, in every feature, was most pleasingly corroborative of the representations quoted by Harris in "The Great Commission," to show the temporal utility of the missionary exertions in the South-Seas.

"Instead of their little, contemptible huts along the sea-beach, there will be seen a neat settlement, with a large chapel in the center, capable of containing one or two thousand people; a school house on the one side, and a chief's or the missionary's house on the other; and a range of white cottages a mile or two long, peeping at you from under the splendid banana trees, or the bread fruit groves. So that their comfort is increased and their character elevated."

Soon after reaching this little metropolis of the island, the king had baked pig and delicious kalo, placed upon a massive rude table, and plates of English crockery, with knives and forks. A blessing was asked by the native teacher, and I was invited to eat. It was, in their view, an important piece of courtesy, which a recent breakfast rather unfitted me for; yet I ate, with compliments, of the mealy kalo, and tasted of the pig, while the king was taking huge morsels that would almost sink a common man.

The wine of this feast was the delicious milk of young cocoa-nuts just from the tree; and I will venture to say that Hebe never poured such nectar into the goblets of the gods. It was more like that which Eve made ready once in Eden, as the poet tells, where with to entertain their angel guest:

> With inoffensive must and meathes,
> From many a berry and from sweet kernels pressed,
> She tempers dulcet creams; nor them to hold
> Wants her fit vessels pure; then strews the ground
> With rose and odors from the shrub unfumed.

This entertainment over, we repaired to the teacher's, where again was served up the same, with the addition of banana made into a *poi*, of which the king ate freely. I was here presented with a couple of rolls of white kapa by the good woman of the house. After surveying the premises, getting a specimen of the king and teacher's hand-writing, and giving them a card to certify any other chance ship of their hospitality, I returned to the shore by another path, through a dense wood, coming out of it on the windward side of the island, by the old church and grave yard, where Tameava pointed out the tomb of a former wife, having the date of her death rudely cut in a coral slab.

The cocoa-nuts passed were numberless, shedding their fruit by thousands; also lofty and straight pandanuses, kukuis and milo trees. Following round the shore to the point at which we had struck off into the woods, we found the captain there busy trading. I pleased myself a while with looking at those mixed and motley groups, and trying to communicate with the harmless Arimatarians, and then went off to the boat through the outrageous surf, inly wishing I could leave with them some substantial and enduring testimony of good will.

The king and his wife, together with the captain, came one by one, soon after, and we all pulled off to the ship, where the king seemed highly gratified with his entertainment and presents. He is manifestly king but in name, having to promise a recompense even to the men that brought him off to the boat in their canoe. The gospel has abolished all tyranny, and as the sailor interpreted it, all there are for themselves, and without distinctions. There are four hundred all told, and live according to their own telling, in much peace, being visited two or three times a year by whaling ships for recruits, whose trade just keeps them (the adults,) with a single cloth garment or kihei, a piece.

A roughly made schooner, of kamanu wood, much like our mahogany, was on the stocks, for which they were very anxious to get tar, oakum, and a compass. No white missionary, we were told, has ever resided upon the island, but all their imperfect christianization and acquaintance with the arts have been effected by native teachers from Tahiti. White men have stopped on the island occasionally, but they say they do not want them, unless they know the language, and have some trade.

I could not leave this secluded and lovely island, though but the stopping-place of a day, and ere long I hope, to mingle with humanity in a wider and more populous field, without a feeling of sadness, I hardly know why. But so it is in the voyage of life, especially in that of a traveler, sailing down the stream of time, we hail a friendly bark, or touch here and there at a pleasant landing-place upon its banks, pluck a few fruits and flowers, exchange good wishes and kind words with the friends of a day, truly love and are loved by some congenial hearts, both drop and take some seeds of good and evil, to spring up when we are in our graves, and then we are away; the places that now know us know us no more for ever, and the faces that now smile upon us we never see again. Who can help sighing as he thinks of it, and wishing to leave, wherever he goes, some durable evidence that an immortal spirit has passed that way!

> Oh, at what time soever thou
> (Unknown to me,) the heavens wilt bow,
> And, with thy angels in the van,
> Descend to judge poor careless man,
> Grant that I may not like puddle lie,
> In a corrupt security,
> Where, if a traveler water crave,
> He finds it dead, and in a grave;
> But as the clear running spring
> All day and night doth flow and sing;
> And though here born, yet is acquainted
> Elsewhere, and, flowing, keeps untainted—
> So let me all my busy age
> In thy free service engage.
> And though (while here) of force I must
> Have commerce sometimes with poor dust,
> Yet let my course, my aim, my love,
> And chief acquaintance be above;
> So when that day and hour shall come
> In which thyself will be the sun,
> Thou'lt find me dressed and on my way,
> Watching the break of thy great day.

How different now our reception here by Islanders that had been blessed with the bible, from that which a whaling ship had while sailing along in this same Pacific in the year 1835, from barbarians that had never received the gospel. A large number of natives came off, as to us, for the purposes of trade. No treachery was suspected, and all for a while went on amicably. But, upon a signal from a chief, the natives sprang for the harpoons, whale-spades, and other deadly weapons at hand, and a desperate contest immediately ensued. The capt in was killed by a single stroke of a whale-spade; the first mate also, soon after. The second mate jumped over-board and was killed in the water, and four of the seamen lost their lives. A part of the crew ran up the rigging for security, and the rest into the forecastle.

Among these last was a young man, the third mate, by the name of Jones, the only surviving officer. By his cool intrepidity and judgment, after a dreadful encounter, the ship was cleared of the savages, the chief killed, and many of his companions, both of those on board and those who came alongside to aid in securing the ship.

Jones now became the captain, buried the dead, dressed the wounded, put the ship in order, and made sail for the christianized Sandwich Islands with the surviving crew. With a skill and self-possession worthy of the man that could accomplish such a rescue, and with a favoring Providence, he navigated the bereaved whaler to Oahu, where the survivors were hospitably entertained. The ship however, had to be sent home, the voyage being completely broken up, and thousands of dollars lost to owners and underwriters.

I remember once to have listened to the narrative of a captain who was wrecked in the Pacific on a sunken rock, and for fourteen days and nights, himself and crew, twenty-two in number, were exposed in their boats, and had quite given up hope of ever again reaching the land. But on the morning of the fifteenth day after the loss of their ship, they found their boats nearing an unknown island. They were almost spent, and saw the shore, which was guarded by a reef, lined with natives, whether cannibals or christianized they could not tell.

While their lives were in doubt, and they

were questioning whether a worse death by savage violence did not await them than if they had perished at sea; one of the natives came out toward them through the surf, holding in his hand a book, and cried, with a loud voice, "Missionary! missionary!" An answering shout of recognition and beckoning from the poor mariners immediately brought the natives, through the waves, to their aid, by whom they were carried on shore in their arms, supplied with food, and generously entertained with more than human, with christian kindness.

It so happened, according to the captain's statement, that this was an island whose inhabitants had been first brought to a knowledge of christianity by the brother of this captain, who had been some years before cast away on this very island, and with one other of the ship's company, was saved.—They were taken by the natives to be offered up as a sacrifice to their gods. But while on their way to the place where human victims used to be sacrificed, they remembered the tradition that a god should come to them from the sea.

Over-ruled doubtless, by a divine impulse, they now entertained the white man as a god, and he instructed them concerning the only true God and Saviour. They invited the missionary from another island, and in heaven's blessing upon his instructions, was read the secret of all their after-kindness to the white men who visited or were cast upon their shores. All whalemen may see in this contrast, as we have to our joy in the Commodore Preble, what a difference there is between islands that have, and that have not, the "*book*."

It is the *book* which has brought it to pass that the adventurous, weary whaleman can now traverse the entire Pacific, and land with impunity at most of its lovely islands, and be supplied on terms of equity with all he needs. Let then, those that owe to it the most, be loudest in their praises, and warmest in their love, and most careful in their obedience to the *book of books*.

It was the reasoning of one of this great family of the South-Sea Islanders (with whom our ship has just had such pleasant intercourse,) soon after he came into possession of the bible:

"When I look at myself, I find that I have hinges all over my body. I have got hinges to my legs, my jaws, my feet, my hands. If I want to lay hold of any thing, there are hinges to my hands, and even to my fingers, to do it with. If my heart thinks, and I want to make others think with me, I use the hinges to my jaws, and they help me to talk. I could neither walk nor sit down if I had not hinges to my legs and feet. All this is wonderful. None of the strange things that white men have brought in their big ships, are at all to be compared to my body. He who made my body, has made all those clever people, who made the strange things which they bring in the ships; and he is God, whom I worship.

"But I should not know much more about him than as a great hinge-maker, if men in their ships had not brought the book which they call the bible. That tells me of God, who makes the skill and the heart of man likewise. And when I hear how the bible tells of the old heart with its corruption, and the new heart and a right spirit, which God alone can create and give; I feel that his work in my body and his work in my heart fit each other exactly. I am sure then, that the bible which tells me of these things, was made by him who made the hinges to my body. I believe the bible to be the word of God.

"The men on the other side of the great sea used their skill and their bodies to make ships and to print bibles. They came in ships and brought iron hoops, knives, nails, hatchets, cloth and needles, which are very good. They also brought rum and whiskey, which are very evil. They moved the hinges of the jaws, and told lies and curses, which are abominable. At last some came and brought the bible. They used the hinges of their bodies to turn over its leaves and to explain God's blessed word. That was better than iron ware and stuff for clothing. They were the servants of the living God, and my heart opened to their words as if it had hinges too, like as my mouth opens to take food when I am hungry. And my heart feels satisfied now. It was hungry, God nourished it; it was thirsty, God has refreshed it. Blessed be God, who gave his word, and sent it across the sea to bring me light and salvation!"

Now we say that this unsophisticated native thinker, working thus all by himself at the great theological argument from evidences of design, could hardly have done better had he been going to school to Calvin or Chalmers all his days. He might have written in his Polynesian bible the lines which are said to have been found on a blank leaf of a copy of the scriptures belonging to a great English poet. And, ah! how much better had it been for the world, if Byron had loved *his* bible as there is reason to believe the unknown Tahitian did his.

Within this awful volume lies
The mystery of mysteries;
And bless'd, forever bless'd are they
Who read to hope, and read to pray.
But better had he ne'er been born,
Who reads to doubt, or reads to scorn.

An Honored Negress.—On Sunday, the 3d of March, says the New York Observer, there was buried at Brunswick, Maine, a black woman of a remarkable character; and she was highly honored at her death.—Her pall-bearers were Governor Robert Dunlap, Dr. Lincoln, Professor Packard, and Joseph McKeen Esq., Treasurer of Bowdoin College, &c.; and the principal mourners were Rev. President Allen, with two of his daughters, of Northampton, Mass., who had come two hundred and fifty miles to attend the funeral. She was buried by the side of her friends, Mrs. Allen and her daughter. The funeral proceeded from the church near the College, after an affecting discourse by the Rev. Dr. Adams, which was listened to with deep interest by an assembly which completely filled that spacious edifice. And why were these honors paid this humble woman? The following letter to the Boston Traveller, from which paper we derive these facts, answers the question.

It was because of her rare attainments as a Christian. It was because she had been for thirty years a worthy member of the Church of Brunswick, and was regarded by her fellow christians as superior to themselves in the strength of her faith, and in a spirit of devotion.

She was born a slave on the famous Beverwyck estate, in Hanover, Morris County, near Newark, N. J. In early life she entered as a servant the family of President Wheelock, of Dartmouth College, and lived in his family and that of his daughter, Maria Malleville Allen, the wife of President Allen, of Bowdoin College, forty years. For the last eighteen years, she has lived alone in her house, and she died alone and suddenly. In the same night, and probably at the same hour, died her friend, the wife of Rev. Dr. Adams.

This circumstance added peculiar interest and pathos to his discourse. He said that if his beloved companion (then lying dead, to be buried the next day) could have been permitted to choose an attendant spirit, as she passed through the dark valley, and in her upward flight to the paradise of God, doubtless she would have chosen Phebe. "Black Phebe!" he exclaimed, "she has sometimes been called; but her soul is whiter and purer than the light, and her heavenly garments are more resplendent than the sun shining in his brightness."

It is to be hoped that the eloquent preacher, who was her minister for twenty years, will feel it his duty to prepare, for the benefit of the world, a memoir of Phebe Anna Jacobs.

Societe des Missions Evangeliques.

Paris, Feb. 27, 1850.

To the native Churches, Missionaries, and other individuals, at the Sandwich Islands, who have contributed to the raising of funds in behalf of the Paris Evangelical Missionary Society:

Dearly Beloved Brethren—Our hearts have been filled with joy in the Lord and with gratitude toward you, by the affecting proof of love and sympathy we have received from you. At the amazing distance which separates you from us, at some eighteen thousand miles from the metropolis of France, you have heard the cry of distress, which we uttered in our distress, and you have answered it. An unexpected revolution, and the financial crisis brought on by it, had placed us in the greatest embarrassment. We were obliged to shut the Seminary where Missionaries used to be prepared for the service of the Lord, and we even doubted whether we should be able to support the prosperous mission which we have founded in South Africa among the Bechuanee tribes. But the Lord has had mercy and been better than all our fears. He has stretched out his merciful arm in our behalf, by prompting his children to lend us their assistance. Our appeal has been heard in Germany, in England, in America, in Bengal. And you, beloved brethren, who not very long ago, did not even know the name of our native country, you have also assisted us. Twice have we received through the hands of Mr. H. Hill, the treasurer of the Boston Missionary Society, the gifts of your love; the first, amounting to $200 or fr. 1,045, and the second to $319 83 or fr. 1,679 10.

Be blessed for it! May the Lord reward you according to the richness of his mercy, for the good we have received. You have rejoiced our hearts, strengthened our weak hands, and prevented the ruin of the work we have undertaken for the glory of our Redeemer and the salvation of souls.

You will be gratified to hear that, thanks to your timely assistance and that of other brethren, our fears have disappeared, our embarrassments have ceased, and the Socie-

ty will cheerfully resume its labors with the assistance of God. Rejoice, dear brethren, at that happy change which you have in the measure of your means, contributed to bring about.

We have never seen, nor is it probable that we ever shall see your faces in this world, but we trust we shall meet in the day of Christ and join our voices to praise our beloved Saviour and Master.

It is in him that we thank you again, and wish you every blessing that can flow from the inexhaustible treasure of his mercy and love.

For the Committee,
GRAND PIERRE, D. D. Director.

THE FRIEND.

HONOLULU, JULY 1, 1850.

Dr. Webster's Trial.

The last mail from the United States brought papers containing a full report of this important trial, which lasted eleven days. The result of this trial was announced in our last. The interest excited by the trial extended far beyond the city of Boston. Some of the New York papers, in reporting the proceedings, take occasion to make rather severe comments upon the justice of the decision and the manner in which the trial was conducted. It is not for us to comment upon so grave matters, but we could wish that criminals in New York and elsewhere might never be subjected to a more *unjust* trial than that which has resulted in pronouncing Dr. Webster GUILTY. We shall wait with some anxiety to learn whether the Governor of Massachusetts extends towards the condemned, an executive pardon. The following narrative of proceedings in the jury room, we have read with much interest. We copy the letter from the American Traveller:

TO THE EDITORS OF THE TRAVELLER—GENTLEMEN:—Having read in several papers what purported to be a relation of the scenes and events which transpired in the jury room on the trial of Dr. John W. Webster, I have felt desirous (now that the subject has been brought before the public mind) that a plain statement of the most important matters connected with the jury room should be made, as it might prove interesting, if not instructive to the community. The jury was composed of twelve men, from as many different branches of the mechanical and mercantile professions; they were from four different religious denominations, and their ages varied from 28 to 66 years. They were men whom I should designate as possessing good sound common sense—men capable of judging—of discerning—of appreciating evidence and estimating its importance. The jurors, after they had become acquainted with each other, and as the evidence began to bear with crushing weight upon the prisoner, and the "net work of complicated circumstances" seemed to encircle him, felt strongly the need of "that wisdom which cometh from above," to guide and direct their minds aright in their most momentous and responsible situation.

It was then that our worthy foreman, (whom we all most highly respect, and whom we shall ever remember with pleasure) proposed that they should have religious services every evening. The proposition was most cheerfully responded to, and ever after that time, the voice of praise and prayer ascended, as we trust from sincere hearts, to the throne of infinite wisdom and mercy. I need not say that the burden of every prayer was for wisdom to guide and direct into a right d cision, and for blessings most rich and precious to descend upon the prisoner and his afflicted family.

I now come to the closing part of this momentous trial. When the witnesses for the defence had given in their testimony, and the counsel for the prisoner announced the evidence on their part closed, a feeling of pain and anguish must have come over the mind of every juror—"What! can no more be said—no more be done in behalf of the unhappy prisoner! Is that the evidence—the only evidence on which we are to base our verdict of "not guilty."

At that very time, with the light which the able charge of the Chief Justice afterwards gave us on several points of "the law and the evidence," I think I speak the sentiments of nearly if not quite all the jury, when I say that they were as ful'y prepared for their verdict as they were when they retired to the jury room, after listening to the most able and eloquent pleas of the prisoner's senior counsel and the Attorney General: so strongly, so fully had the evidence pointed to the prisoner as the guilty man—AND TO NO ONE ELSE. After the jury had gone to their room—with the various evidences of guilt spread on the table before them, and the door locked upon them; shut out as it were entirely from the world, with nothing but the eye of the Omniscient God upon them—so painful was the sense of responsibility, so unwilling were they to come to the result which all felt they must come to, that thirty or forty minutes were spent ere any thing was done—when at last the voice of the foreman was heard calling them to order and reminding them of duty, however painful; and when they had all taken their seats around the table—then it was that one of the jurors rose and said: "Mr. Foreman, before entering upon the further consideration and decision of this most important matter, I would purpose that we seek for divine wisdom and guidance." The proposition met with a cordial response, and the foreman called upon a juror to offer prayer. This was done most feelingly and sincerely. We then proceeded to the most trying and painful part of our arduous duty. The various articles which were put into the case were examined by the jury, and particularly those things which seemed to bear most strongly against the prisoner. The final decision of the question was resolved into three parts.

First. Are the remains of a human body found in the Medical College on the 30th of Nov., 1849, those of the late Dr. George Parkman?

Second. Did Dr. George Parkman come to his death by the hands of Dr. John W. Webster, in the Medical College, on the 23d, of Nov., 1849?

Third. Is Dr. John W. Webster guilty, as set forth in the indictment, of the wilful murder of Dr. George Parkman?

When the vote on the first question was put, twelve hands arose immediately. Some little discussion then took place, when the second question was tested—and twelve hands at once arose. Third—the most important question of all—was next to be tried. Quite a pause ensued. One juror in his sympathies of kindness for the prisoner, (who was his personal acquaintance or friend) and his afflicted family—shrunk from the fiery ordeal. "Can't we stop here?—can't the law be vindicated and justice satisfied, if we pause here? Must we take the LIFE of the unhappy prisoner?" Some discussion ensued—the mind of the juror seemed more calm—and he expressed his readiness to vote on the final question, which was put, and twelve hands arose. The die was cast!—and John W. Webster was pronounced Guilty of Murder.

Thus ended the closing scene in the jury room. What afterwards transpired in the court room is already known to the public. When our foreman then pronounced the awful word—Guilty! the jury, as well as the prisoner, trembled and grew faint. And what a relief it was when we were again allowed to go free, and join our families and friends after so long and painful a separation; and there was not a juror's heart but would have leaped for joy could the prisoner have been justly allowed the same unspeakable blessing. ONE OF THE JURY.

Boston, April 3, 1850.

☞ H. B. M. ship "Enterprise," Capt. Richard Collinson, C. B. arrived at this port on the morning on the 25th. The Enterprise left England on the 20th January last, and passed Cape Pillar on the 20th April. She is on her passage to Bhering Straits, in search of the missing expedition under the command of Sir John Franklin.

The following is a list of her officers:

Captain—Richard Collinson, C. B.
Lieutenant—G. A. Phaqre,
" J. T. Jago,
" J. J. Barnard.
Mate—R. T. Legg,
" M. T. Parks.
Surgeon—R. Anderson.
Assistant Surgeon—E. Adams.
Second Master—F. Skead.
Clerk in charge—E. Whitehead.

The "Enterprize" parted company with the "Investigator" off Cape Pillar, on the 20th April—all well.—*Polynesian.*

☞ The following is a list of officers of H. B. M. sloop "Swift," now in our harbor, and late from Mazatlan. The Swift carries six guns, and has a complement of sixty-en persons.

Com.—William Cornwallis Aldham.
Lieut.—James E. Bickford.
Purser—Arthur A. Speed.
Master—Edwin Rowe.
Mate—Richard Onslow.
Midshipman—Charles E. Brest,
" William Moriarty,
" Philip Patrickson.
Master Assistant—Eff'm. Kellow.
Clerk—Edward I. Giles.

British and Foreign Bible Society.

In connection with the report of the Hawaiian Bible Society, published in another part of our columns, it affords us pleasure to acknowledge a grant of one hundred Bibles and one hundred Testaments, from the British and Foreign Bible Society. The grant was made to Rear Admiral Thomas for the Sandwich Islands, as we learn from a communication addressed to R. C. Wyllie, Esq., by Mr. Henry Knolleke, Assistant Foreign Secretary of the British and Foreign Bible Society. Mr. Wyllie has placed these volumes at our disposal, and we are most happy to place them on the same shelves with the publications of the American Bible Society. The grand design of both these noble institutions is precisely the same, while with giant strength they are publishing the word of God, wi hout note or comment, in more than one hundred different languages, and scattering them broadcast over the sea and land. In 1848 the receipts of the British and Foreign Bible Society were £117,440, and the Society issued 1,419,283 copies of the word of God, while the total issue since its commencement, amounts to 19,741,770 copies. During the same year, 4848, the receipts of the American Bible Society were $254,337, and the Society issued 655,066 copies of the Bible, while the total issue since its commencement amounts to 5,780,095 copies.

☞ The box of Bibles and Testaments referred to, was brought hither on board H. B. M. ship, the Enterprise, Captain Collinson.

Spontaneous Combustion.

We recommend the following account of 'spontaneous combustion,' to the serious consideration of all our spirit drinking readers. Let them be careful how they approach too near a lighted candle or a burning lamp! We have read similar well attested accounts.

"The following extraordinary occurrence is related by the Gazette des Tribunaux—A few days ago, in a tavern, near the Barriere de l'Etoile, a journeyman paiater, named Xavier C—, well known for his intemperate habits, while drinking with some comrades, laid a wager that he would eat a lighted candle. His bet was taken, and scarcely had he introduced the flaming candle into his mouth, when he uttered a slight cry, and fell powerless to the ground. A bluish flame was seen to flicker about his lips, and on an attempt being made to offer him assistance, the bystanders were horror-struck to find that he was burning internally. At the end of half an hour, his head and the upper part of his chest, were reduced to charcoal. Two medical men were called in, and recognized that Xavier had fallen a victim to spontaneous combustion. This conflagration of the human frame is frightfully rapid in its progress—bones, skin and muscle, are all devoured, consumed, and reduced to ashes. A handful of dust on the spot where the victim fell, is all that remains.

Selected for the Friend.

Lines supposed to have been written by a Sailor on his separation from home:

THE SEA BOY'S FAREWELL.

Wait, wait ye winds, till I repeat
A parting signal to the fleet
Whose station is at home;
Then waft the sea boy's simple prayer,
And let it oft be whispered there,
While in fair climes I roam.

Farewell to Father! reverend hulk!
In spite of metal, spite of bulk,
Soon may his cable slip;
Yet while the parting tear is moist,
The flag of gratitude I'll hoist,
In duty to the ship.

Farewell to Mother! "first class" she!
Who launched me on life's stormy sea,
And rigged me fore and aft!
May Providence her timbers spare,
And keep her hull in good repair,
To tow the smaller craft.

Farewell to sister! lovely yacht!
But whether she'll be "manned" or not,
I cannot now foresee,
May some good ship a tender prove,
Well found in stores of truth and love,
And take her under lee.

Farewell to George! the jolly boat!
And all the little craft afloat
In home's delightful bay.
When they arrive at sailing age,
May wisdom give the weather-gage,
And guide them on their way.

Farewell to all on life's rude main!
Perhaps we ne'er shall meet again,
Through stress of stormy weather;
But summoned by the Board above,
We'll harbor in the port of love,
And all be moored together

SickStrangers' Aid Fund.

We are glad to receive intimation that there are some who hold themselves ready to contribute for the aid of the sick and destitute stranger. Judging from applications which have been made in months past, we infer that in time to come the benevolent will not want for suitable opportunities whereby they can dispose of their charities. Should any persons be disposed to place funds in our hands to aid the sick and destitute, we shall be ready to take charge, and report in regard to the manner of disposing of the same.

Eclipse in August.

It has been announced that the French authorities at Tahiti nad sent gentlemen hither to make observatioas on the eclipse to take place the coming August. In the Illustrated Almanac we find the following remarks respecting the phenomenon:

Sun Eclipsed August 7 at the time of New Moon in the afternoon; visible in the United States only in the south western part, and the western territories. It will be visible at the following cities, and on the southern limb: Natchez, New Orleans, Austin, Texas, City of Mexico, lat. 19° north, long. 100° west.

This Eclipse will make its principal display in the Pacific Ocean. It will be central and total on the meridian in longitude 141° 50, west from Greenwich, and latitude 17° 50' north. At this point total darkness will continue full six minutes, with the sun in the meantime within two degrees of the zenith.

☞ We would direct the reader's attention to the communication, in another portion of our columns, dated "Paris, Feb. 27, 1850." At the very period that French vessels of war were threatening to fire upon Honolulu, efforts were making among the native Protestant Churches throughout the islands, to aid a Missionary Society in Paris, which was embarrassed through want of funds.

Tyfoons Loosing their Terror.

For ages Tyfoons have been the terror of all navigators in the India and China seas. Recent discoveries have well nigh established the point, that if navigators will observe certain rules in regard to the management of their vessels in Tyfoons, the damage is not only very much diminished, but in most cases entirely avoided. A most interesting and important work upon this subject, has been published by *Henry Piddington*, President of the Marine Court of Inquiry, at Calcutta. He does not profess to have made any new discoveries, but to have compiled a work which embodies the discoveries of others. In this work, he proposes "to explain to the seaman, in such language that the man who can work a day's work can understand it—the Theory and the Practical use of the Law of Storms for all parts of the world." A copy of this work has been exhibited us by Capt. Lovett, of the brig "Eagle," who has been long sailing in those parts of the world visited by Tyfoons. He considers the book of inestimable value to the navigator in those regions, and which ship-masters should make their study.

For years we have been accustomed to see allusious to the discoveries and theories of Redfield and others in regard to "circular" storms, but until this work of Piddington fell under our observation, we were not aware that the "law of storms" was so far understood that the skillful ship-master might *avoid* storms, or safely *manage* in them, or *profit* by them!

Vague hints have for more than a century been thrown out by scientific men respecting the *circular* motions of storms. One Capt. Landford, in 1698, called West India hurricanes "whirl-winds." Don Juan de Ulloa, in 1743, describes "rotary" storms in the Pacific coast of South America. In 1801, one Col. Caffer, in describing the storms in the southern Indian ocean, remarks, "Thus it appears that these tempests or hurricanes are tornadoes or local whirl-winds." Notwithstanding these hints which were from time to time advanced, no general law was discovered and made known, until William Redfield of New York, published in 1831, an article in the 'American Journal of Science,' in which he demonstrates "not only that the storms of the American coast were whirlwinds, but moreover that they were *progressive* whirlwinds, moving forward on curved tracts at a considerable rate." These prin-

ciples have been applied to the Tyfoons of the China seas, and found to explain in a most remarkable manner, these hitherto mysterious winds or storms. That Mr. Redfield is acknowledged to have made important discoveries in regard to the law of storms, is clear from the following language of Sir David Brewster, 'The theory of rotary storms was first suggested by Col. Caffer, but we must claim for Mr. Redfield the greater honor of having fully investigated the subject, and apparently established the theory upon an impregnable basis.'

Very important service has been rendered to this subject by Lieut. Col. Reid, of the Royal Engineers, in a work published in 1838, entitled the 'Law of Storms.' In this work he most successfully applies the views of Mr. Redfield to the West India hurricanes and those of the southern Indian ocean; and he also proves what Redfield had theoretically announced, viz. that in the southern hemisphere the storms revolve in a contrary direction to those in the northern.

For the foregoing brief historical notices in regard to this subject, we acknowledge our indebtedness to the 'Sailor's Horn Book for the Law of Storms,' by Piddington.

Effects of Change in the Navigation Laws.

The important change which has taken place in the navigation laws of the United States and Great Britain, is destined to exert a most important influence upon the commerce of the two countries. Thus far the change has operated most beneficially for England. Had not the change taken place, it must have imposed a heavy check upon British shipping interests in the northern Pacific. This is a point which has attracted the attention of merchants in England, as we observe in a late London paper. The other point wherein the change has operated beneficially for England, relates to the trade between England and the United States, as will appear from the following statistics taken from a late American paper:

"The shipping returns for the month ending the 5th of February, show a very great falling off in American tonnage, under the operation of the repeal of the navigation laws, and the effect of the reciprocity system.

These returns show the tonnage which entered inwards during that period, as compared with the same period of the two preceding years, to have been as follows:

	1848	1849	1850
British vessels,	148,290	269,969	234,122
United States,	25,828	75,180	51,456
Other countries,	24,783	51,037	42,468
	298,901	396,186	328,046
The clearances outward, were:			
British vessels,	191,449	471,402	203,975
United States,	26,498	62,219	44,376
Other countries,	62,190	67,433	57,537
	280,137	501,054	305,888

It thus appears, that the effect of the new regulation has thus far, been injurious to the navigation of all countries other than Great Britain. The English papers attempt to account for this, in some degree, by the diversion of American vessels into the California trade.

H. B. S. Treasurer's Report.

HAWAIIAN BIBLE SOCIETY,

in account with Amos S. Cook, Treasurer.

Dr.

1849.			
Oct. 20.	For S. N Castle's draft on H. Hill, Treasurer A. B. C. F. M. Boston, in favor of William Whitlock, jr. Treas. Am. Bible Society New York, for cash paid Capt. Fales,	$364 00	
"	20 per cent advance on the above,	72 80	—436 80
1850.			
June 24.	Balance to new account,		375 25
			$812 05

Cr.

1849.			
April 26.	Balance due the Society as per account this day,		$364 00
Oct. 20.	20 per cent advance on the above, paid by Capt Fales,		72 80
May 1.	Mr. and Mrs. A Bishop, subscript.		2 00
"	Female Seminary, Wailuku, avails of girls' sewing,		1 12
" 30.	Rev. A. Thurston, to constitute his son Thomas a life member,		10 00
Nov. 1.	A Friend, do. Rev. T E. Taylor, do.		10 00
"	" do. Mrs. P. T. Taylor, do.		10 00
"	" do. Miss L. T. Taylor, do.		10 00
1850.			
Jan. 7.	" do. Miss E. D Rice, do.		10 00
"	" do. Miss M. M. Smith, do.		10 00
April 7.	Mrs. E. Johnson, subscription,		1 50
June 24.	Contributions from Lahaina, thro' Rev. S. C. Damon,		26 00
"	Collection at Seamen's Chapel,*		62 75
"	J. B. F. Marshall, Esq. to constitute Mrs. M. T. Marshall a life member,		10 00
"	A. B. Bates, do. Mrs. Bates, do.		10 00
"	G. P. Judd's fm. do. G P. Judd, do.		10 00
"	L. Andrews, do. Mrs. Andrews,		10 00
"	H. Dimond, do. Mrs. Dimond,		10 00
"	R C. Wood, do. Miss E. A. Abell,		10 00
"	J. Fuller, do himself,		10 00
"	Mrs. M. P. Chamberlain, do. herself,		10 00
"	W Goodale, do. Miss I. Chamberlain,		10 00
"	S. C. Damon's family, do. E. C. Damon,		10 00
"	Mrs. Armstrong, do. Miss C P. Arm'ng,		10 00
"	A. S Cook, do. Mr. J. P. Cook,		10 00
"	Bibles and Testaments sold by Rev. S. C. Damon, as per his account,		101 88
			$812 05
"	Balance from old account,		$375 25

Note.—The total amount of the collection was $162 75, including ten life memberships.

Audited and found correct—the balance of $375 25 remaining in the Treasurer's hands, for remittance to the parent Society.

SAMUEL. H. CASTLE,
Auditor Hawaiian Bible Society.

Sale and Gratuitous Distribution of Bibles and Testaments.

In connection with the publication of the Treasurer's report of the Hawaiian Bible Society, we would make a few remarks relative to the sphere of the Society's operations, and number of Bibles disposed of during the last two years. No report of this kind was made last year, in consequence of our absence from Honolulu. It is the design of the Society to act as auxiliary to the American Bible Society. This latter Society for many years made most generous grants of Bibles and Testaments in various languages, to be kept on deposit in Honolulu.

Biennial Report.

		On hand June 1, '48.	Received during '49–50.	On hand June 1, '50.	Sold and distributed.
Bibles,					
English	"	322	452	442	332
Danish,	"	12	0	9	3
German,	"	48	50	61	36
French,	"	1	50	36	15
Spanish,	"	32	20	32	29
Welsh,	"	1	0	0	1
Swedish	"	21	0	8	12
Dutch,	"	9	0	7	2
Portuguese,	"	0	388	41	347
Total		445	960	627	778
Testaments.					
English,	"	8	459	281	186
Danish,	"	2	0	1	1
German,	"	27	25	35	17
French,	"	0	25	17	8
Spanish,	"	71	120	28	163
Swedish,	"	15	0	15	0
Portuguese,	"	243	150	310	83
Total		376	779	687	458

Total cost of Bibles and Testaments received from the American Bible Society, during the period specified, $1,120 38

To meet this out-lay, the Hawaiian Bible Society forwarded last year, 436 80

Cash now on hand, 375 25—812 05

Hence there is at present, a deficit of $308 33

By examining the foregoing table, it will appear, that no less than 347 bibles and 83 testaments in the Portuguese language, have been sold and gratuitously distributed; also 29 bibles and 163 testaments in the Spanish language.

The Law of Storms.

The following is a brief summary of the law of Storms, as we find it laid down by Piddington:

I. "The words, Law of Storms, then, signify, first, that it has now been proved by the examination and careful analysis of perhaps more than one thousand logs and of some hundreds of storms, that the wind in hurricanes, and frequently in severe storms in the higher latitudes on both sides of the Equator, has two motions. It turns or blows round a focus or centre in a more or less circular form, and at the same time has a straight or curved motion forward, so that, like a great whirlwind, it is both turning round, and as it were, rolling forward at the same time."

II. Next, it is proved that it turns, on the N. side of the Equator from the E. by the N. towards the W., or contrary to the hands of a watch, and on the other side of the Equatoa, that its motion is with the hands of a watch.

These two laws constitute the rule or *Law of Storms*, so far as the investigations have now been made. We regret that our limits will not allow us to go more fully into this subject, or publish lengthy extracts from the work of Piddington. It is a subject which, we are confident, merits from all classes of navigators, the most careful investigation.—Although a quaint old writer, Thomas Fuller, might say that "the winds are not only wild in a storm, but even stark mad in a hurricane," yet the discoveries of modern science reveal the laws by which the navigator may escape the "fury of the mad winds." It may still be true that "the wind bloweth where it listeth," yet the wind is not quite so *lawless* as was formerly imagined.

Punahou School Examination.

We neglected in our last number to notice the examination of this school, which holds on the even tenor of its course. We congratulate the teachers on bringing the school so successfully to the close of another academical year. The subjoined lines were sung with much animation by the pupils as the closing exercise:

Away over mountain, away over sea,
Vacation has come, from our studies we're free,
Where sisters are calling and brothers are gay,
To the pleasures we sigh for, away, boys, away!

Away o'er the ocean erelong we shall ride,
And our vessel's dull motion impatient we'll chide,
For affection is urging us away o'er the foam,
With the swiftness of tho't to our own "sweet home."

Away from the tasks and the trials of school,
The rising and working and playing by rule—
Away o'er the waves and their white crested foam,
To the endearments of love and the pleasures of home.

And life is a school, but vacation will come
To crown all our hopes in a holier home,
Where parents and brothers and sisters will meet,
To enjoy heavenly union surpassingly sweet.

We have not altogether forgotten the bounding joy with which the inmates of a boarding school hail the "long vacation," and turn their backs upon the abode where

"The rising and working and playing by rule,"

was the fixed and immutable law.

The Currents of the Ocean.

Not long since, I observed in some periodical published in New York, the remarks of some gentleman on the cause of the Florida stream, suggesting, that probably it was occasioned by the waters of the Pacific, passing under the Isthmus of Darien, and debouching themselves near the Tortugas Islands, and the Bay of Mexico; and naming as his reasons for such an opinion, that the waters of the Pacific were some ten feet higher than those of the Atlantic, and that the Gulf Stream, like the Pacific, was blue, while the Atlantic was green. One scarcely knows whether to be most surprised or amused, at the ideas of gentlemen who go so far to seek out causes and principles, which lie within the most common observation. For instance: let one pour water upon a grindstone, and turn it round, he will soon discover that the liquid on the surface will not assume the full motion of the solid; and if the stone is revolving from west to east, the water will have an apparent motion from east to west. One has only to apply this principle to the subtle elements upon the earth's surface, and he has at once the cause of trade winds and equatorial currents. Let him extend his view then a little beyond the Bay of Mexico, and he will find the volume of water he forced against the shores of this western continent from this cause, so great, that he will be at a loss to know how it finds its way out of a channel so narrow and so crooked, as the channel of Florida. Instead of finding it necessary to go into the Pacific for a supply, he will be seeking for a vent from the Atlantic, for the surplus waters which are constantly flowing into it around Cape Horn and Cape of Good Hope, and which, according to every navigator's experience, flow northward towards the equator, and very naturally too, as will be demonstrated by the moving of any liquid upon the surface of a revolving body; the liquid always seeking the highest place, or the place of the greatest speed. It is necessary always to settle whether our premises be true, before we place much confidence in our deductions. For instance, we should be slow to admit that the Pacific is higher than the Bay of Mexico, when we have some good reasons to believe that the Bay of Mexico from natural causes must be the highest; or, that the waters of the Atlantic are not of the same color as those of the Pacific, until we have some good evidence of so important a fact. I have seen a great deal of blue water, but I have never been in the Pacific, and I should almost suspect the person who should assert that the Atlantic or even the Mediterranean, did not contain it in any abundance, of being a fresh water sailor.

Great things are learned from little ones; Newton from the falling of an apple evolved the principle of gravitation. Let any one make a miniature globe and miniature continents upon it, and put his globe in proper motion; and if he makes no Bay of Mexico, I am much mistaken if the friction of his liquid will not form one for him. The question will naturally suggest itself, what becomes of all this water, flowing in around the two southern Capes, and passing off through the Gulf Stream, into the north Atlantic?—This is readily answered by asking another question, viz: From whence comes all the snow deposited upon the northern portions of the two continents, and supplying all the great lakes and rivers? It used to be reasoned, that there must be some subterranean passage, to discharge the waters so constantly flowing from the Atlantic, and the great rivers into the Mediterranean; more recently it is learned, that the supply does not more than equal the demand of atmospheric absorption, for the watering supply of Africa, and other countries bordering on the sea; and it is even said that the bay of Carthage, in which large ships used to moor, will now scarcely float a ship's long-boat.

The course of currents and counter-currents, in general, is clear and natural. Little boys may demonstrate them, as I have often done in my youth, by making puddle holes in the sand, and admitting the flowing tide by a narrow strait; and applying to them the only qualifying circumstances which I know of, viz: another current let in through another channel, or a strong wind.—*Sailor's Magazine.*

The Ship is Sinking.

Several years ago I was called to visit a young man who was on his dying bed, under circumstances peculiarly calculated to touch one's feelings. He was the only son of his mother, and she a widow. The father, a captain of a whale ship, had died, leaving his widow, a son, and a daughter in very feeble health, utterly destitute. All the hopes of the mother and the daughter were centered in this young man.

He was about eighteen years of age, and embarked as a sailor on a whaling voyage round Cape Horn. The mother and daughter, sustained by hope, endeavored, by means of the needle, during his absence, to obtain an humble subsistence. When about a year out, he was taken sick; but stimulated by the vast responsibilities resting upon him, he persevered in remaining on duty till he was hardly able to lift his hand. He then, with a saddened heart, gave up, still hoping that health would be restored to him. But days and nights came and went, as he lay in his cheerless berth counting the dreary hours, and often weeping in the remembrance of his lost home. All on board the ship were too busy to give the sick man any but the most casual attentions.

Thus several months of weariness and woe passed away. Each week he was growing more wan and wasted, and as the ship rolled upon the billows of the Pacific, he had no strength to shield himself from being violently tossed to and fro in his hard berth. All hopes of recovery seemed now at an end, and the captain meeting a ship which was about to return to the United States, decided to transfer the sick man from his own ship, which was to continue for two years longer, perhaps, its adventurous voyage. It was possible that the young man might survive until he reached home. It was possible that a mother's care might yet restore him. Mute and exhausted under the dreadful discipline of months of despair, he was passively borne to a berth in the home-ward bound ship. A voyage of five months was yet before him.—He was to be tossed upon the tempest, lashed waves of the Cape. The coarse fare of the sailor was all the nutriment which could be furnished for his enfeebled frame, and no nursing could be afforded him, but such as could be offered by the busy hands of a crew collected from all nations.

The months dragged slowly along and life still lingered, to the surprise of all. At last the hills of his native land wore in sight, and the ship dropped anchor in the harbor from which, nearly two years before, buoyant with youth and hope, the young man had departed. He could not raise himself in his berth. Even his sunken and faded eye could not beam with animation, as he heard that his mother and sister stood by his side. He had come home penniless to die. Even the language of affection could find no utterance from his lips, as in mute despair, he turned his eyes to the still more despairing looks of those he loved.

It was two days, I think, after he had been removed to his mother's room, when I was standing by his bedside. It was as bright and beautiful an afternoon as ever smiled upon this lost world. He was lying on his bed as silent and motionless as if he were dead. His mother with her head leaning on her hand, in equal silence, sat by his side. His sister, like a statue, congealed by grief, sat by the window looking out into those clear, blue depths of infinity, into which her agonized spirit doubtless wished to soar and find rest. Not a word was uttered as I entered the room. A gentle pressure of the hand was the only recognition of my expressions of sympathy. As I stood in silence, looking upon the deep lines which grief had traced upon that youthful brow, the young man languidly raised his eyes, and without the movement of a limb, feebly and slowly articulated "The—ship—is—sinking!" and his eye was fixed—and he was dead.

My pen can trace this scene of domestic anguish no farther. "Why," perhaps some one may ask, "do you trace it so far? Why relate so sad a story?" When I have murmured at some little trial; when I have become dejected, and have repined in view of some trifling disappointment, I have often thought of this grief, and felt rebuked. It is well for us to learn a lesson of contentment

and gratitude, by contemplating those sorrows which are desolating our globe, and from which we have been mercifully protected.—Am. Messenger.

MARRIED.

In this town, on the 4th instant, by Rev. R. Armstrong, CHARLES R. BISHOP, Esquire, Collector General of Customs, to Miss BERNICE PAUAHI, all of this place.

DIED.

In this town on Sabbath the 2nd instant, Mr. CHARLES TOBEY, aged (about) 33 years, of North Fair Haven, Connecticut Mr. T. was formerly a resident of these Islands, but for the past three or four years has been residing in China and California.

In this town, on the 18th inst., Mr. SAMUEL H. EVERETT, of New York, aged 35 years.

Mr. Everett landed on our shores a few days since, from the bark Wm. H. Shaler, in the last stages of California dysentery, of which disease he died. Mr. E. was a brother of A. P. Everett, of the firm of Everett & Co. of this place and California.

Drowned at sea on the 3d inst., Mr. G. HOME JOHNSTONE, passenger per Eudora from San Francisco to this port, a native of Scotland.

Friends at a distance will please accept of this intimation.

PASSENGERS.

Ship Eliza Warwick, fm Boston, T A Marshall, Samuel Hubbard, W F Allen.

Brig Swan, fm Van Dieman's Land, Henry Hills, Abraham Bolster.

Schooner Roe, fm San Francisco, O Mowrey, J W Maxwell, J W Mercer, G M Robertson.

THE WHALE AND HIS CAPTORS,
By Rev. H. T. Cheever—Price $1 25.

AGRICULTURAL MEETING.

☞ NOTICE—MONDAY, the twelfth of August next, is the day appointed by the Committee chosen at a preliminary meeting of those interested in the subject, for a general meeting of delegates and others from all parts of the Islands, for the organizing of an Agricultural Association. It is earnestly desired that all the Islands may be represented, and that as many individuals as are in circumstances to do so, bring with them such of the productions of the Islands as they may be able.

S. REYNOLDS,
W. NEWCOMB,
J. F. B. MARSHALL,
R. W. WOOD,
W. L. LEE, Committee.

Honolulu, June 8, 1850. tf 4

The Market House Regulations and Prices, Rarotonga.

No charge for water, except the FEE to the natives the Captain may engage, to fill the casks.

MARKET HOUSE PRICES.

Potatoes	$1 per brl,	Taro	$1 per brl,
Oranges	1 "	Yams	1 1-2 "
Chesnuts	75c "	Pine apples	1 "
Lemons	1 "	Papoa "	75c "
Old cocoa nuts	10 $1	Green cocoa nuts	20 do
Bananas	3 bunches $1	Dried banana	10 bundles $1
Pumpkins	$3 1-2 100	Fowls	4 $1
Turkeys	1 each	Small	75c
Ducks	1 "	Small	75c
Hogs	6c per lb	Fishing net	25c per fathom
Iron wood	$4 per boat	Other wood	$3 per boat
Native cloth	$1 3 fathoms	Yellow do	$1 a piece
Bonnets	$1 each	Hats	25c to $1 each
Mats	50c a fathom	Double width	1 dala a do
Iron poles	10 $1		

REGULATIONS.

I. The appointed SALES MAN is to arrange all trade with the Captain, and the Captain to pay him his fee; in cloth or cash as he may agree on.

II. Should the Captain wish to engage natives to take his supplies to the boat; $1 a day is the charge for each man.

III. No boat or canoe from shore shall be allowed to take off trade to ships, to be sold on board. Boats may be engaged to take off supplies bought on shore. Charge, $5 the first day and $3 each day after.

IV. No boat or canoe from shore shall be allowed to go off to ships when making the land, except the one appointed by the authorities.

V. It is requested that no Captain secretly engage, or take away on board his vessel, any natives from the shore. Any Captain wishing to engage natives for a cruise, are requested to make arrangements, before proper witnesses on shore, with any willing to go. A contrary procedure will be reported to the nearest Consul, of the nation to which the ship belongs.

VI. It is requested, that on the desertion of a man from a vessel, the Captain give immediate information to the Chiefs of the Station, and that the vessel do not leave the Island until the deserter be apprehended. That for every deserter delivered by the natives to the Captain two pieces of cloth to be paid, one to the Chief of the station, and another to the parties who secured his apprehension.

VII. That in case the deserter be not found until after the vessel has left the island, when apprehended, he shall become a prisoner and be employed in public work, until he leave the island.

VIII. That, in any case considered necessary for a Captain to leave a man on shore, the sum of $30 be paid for each individual so left. tf

TO SEAMEN AND STRANGERS.—The Seamen's Chapel is open for Public Worship every Sabbath, at 11 a. m., and 7 1-2 p. m. Seats Free.

The Seamen's Concert for Prayer is held at the Room the 3d Monday evening in each month.

Seamen belonging to vessels (of all nations) visiting this port are invited to call at the Chaplain's Study, where they will be gratuitously supplied with copies of the Friend and other rending matter. It will be most convenient for the Chaplain to receive calls from Seamen between 2 and 4 p. m.

Public services at the Native Churches, on the Sabbath, commence at 9 1-2 a. m. and 2 1-2 p. m.

The Seamen's Reading Room is open at all hours of the day. Strangers arriving and having late foreign papers, are respectfully invited to aid in keeping said room supplied with useful reading matter.

Donations are respectfully solicited for the support of the Chaplaincy, and the publication of the Friend. An annual report of all donations is made to the Am. Seamen's Friend Society in New York. Any person contributing $50 is entitled to become a Life Director of the Society, and $20 to become an Honorary Life Member.

SAM'L C. DAMON, Seamen's Chaplain.

Visit of the French Sloop-of-war Bonite, to the Sandwich Islands in 1836.

Translated for the Friend, from the French of Adolphe Barrot.

NO. VII.

Irrigation—abundant harvests—absence of rats etc—introduction of musketoes, centipeds and scorpions—Hawaiians supposed to be of Malay origin—Japan junks—Malay words in the Hawaiian language—appearance of the Hawaiians—disposition—change in character—amusements—religion—Pele, (god of Oahu) delivers the sun from imprisonment—priests—Kamehameha—arrival of missionaries—not favored by Kamehameha.

The natives of the Sandwich Islands have understood for a long time the art of irrigation. The early navigators admired their ingenious system, and there has been no change in it since. Taro, which constitutes the principal food of the inhabitants, requires at certain intervals and for certain times, to have its roots covered with water, and this operation must be repeated a great number of times before the plant reaches maturity.—Taking advantage of the slope of the land, each landholder forms his own portion into terraces, separated by embankments of earth about two feet high and covered with grass. The water, led from the stream by a canal, is introduced into the upper terrace, and having flowed into that as long as necessary, it passes on to the next, and so of all. Each patch in turn, is designed to sustain a family for a longer or shorter time. Thus the same water irrigates different patches, which are so planned that the taro in one patch is in full maturity when the products of the one immediately above it are exhausted.

Water at the Sandwich Islands however, as in all other countries which produce by irrigation, is the occasion of many quarrels and sometimes of fatal accidents. It is not necessary to state that the lands of the King and of the Chiefs share the streams the most abundantly; but as there is generally a full supply of water, there is enough for each one. The harvest never fails—the cultivator is always sure of receiving the reward of his labor. It is true that a drought of a few months continuance would be sufficient, in many localities, to cause a famine; but there is no account of such a calamity, and the Sandwich Islands are so situated as to banish all fear in this respect. In like manner, the harvests are not exposed to the ravages made by rats, birds, and noxious animals, which are so troublesome in our colonies.—These are presents which civilization has not yet made to this country; although in has already introduced musketoes, centipedes, scorpions, etc. Previous to 1822, musketoes were unknown at the Sandwich Islands—it would seem that they were brought from California. The same is true of centipedes and scorpions, the first of which appeared in 1829. At present these vexatious creatures, especially the musketoes, are exceedingly multiplied, and the Sandwich Islands yield not in this respect, to the countries where they originated.

Different kinds of domestic animals have not yet had time to multiply at these Islands. Perhaps it is but a few centuries since plants began to thrust their roots across the crevices of lava rocks. For a long time the Sandwich Islands may have been only an assemblage of craters vomiting torrents of lava, which cooled in the sea and thus enlarged the base of the volcano. Then, when this land was formed, when it had become habitable and fertile, Nature took care to cause nutritious plants to spring up, to people it with birds, and to send inhabitants. But she was doubtless interrupted before she had completed her task; for Cook found only a few quadrupeds, very few insects, and some birds, (at the present time there are only ten or twelve species.) The population were long under the necessity of subsisting on fruit and fish, as the dog, the only quadruped on the islands, was reserved exclusively for the chiefs, being eaten by them only on great occasions.

Many theories have been advanced as to the manner in which the Sandwich and other islands of the Pacific were peopled, and each theory has been supported by arguments more or less weighty. I make no pretensions to have solved a problem which has baffled perhaps the researches of many who were in a far better situation than myself to discover the truth, yet I have been induced to embrace the opinion of European residents, a class by no means well instructed it is true, but serious observers. They believe that all the islands of the ocean between the tropics, were first people by Malays, who were driven upon these shores by the winds, and they support their opinion by the following facts:

In 1822 or 3, a Japanese junk was cast upon the shores of Maui. There were seventeen men on board, and they had been eleven months at sea and had lost many of their companions.

In 1832, another Japanese junk arrived on the southern side of Oahu. It was navigated by four men, who were dying with hunger, and who had been obliged to take every precaution to sustain life. They stated that it was about ten moons since they left Japan, at which time their ship's company consisted of thirty-six men; that shortly after sailing they experienced a violent gale from the west, which drove them from their course, they knew not where; that at length the cold became very severe, and that they came in sight of land which was covered with snow, at which time many of their companions died with cold; that for a long time the wind drove them along the coast of this inhospitable land; that at length the wind changed and they lost sight of land; and after many moons, the weather having gradually become warmer, they came in sight, though at great distance, of land, towards which the wind was urging them; and that in this way they reached the Sandwich Islands. They stated that for a long time they had nothing to drink but rain water which they caught in their sails, and that when this failed them they drank sea water.

These facts cannot be doubted, as they have been confirmed to me by the testimony of twenty different individuals. But what causes these persons to believe that the Hawaiian people owe their origin to the Malays rather than to the Japanese, is a certain analogy in the physiognomy of the two nations, and especially the great number of Malay words found in the Hawaiian language. Mr. Reynolds, United States consul at Honolulu, assures me that the Hawaiian language contained more than two hundred Malay words. There is then a probability that one or more Malay vessels driven from their course by a strong southwest wind, would have been borne on towards the northwest coast of America; there, meeting with westerly winds, they would have been conducted to a certain longitude, and thence to one of the Pacific islands. What has happened twice in fifteen years, must, or at least may have happened in former years.

The Hawaiians are of a copper complexion; the men are generally large and well formed, with long black hair, which seldom curls. The women are smaller, and far from being so well formed as the men; yet they possess a good degree of gracefulness. As a general thing, the men wear no beard.—Some are seen with naked hair, either colored with lime, as is often the case, or perhaps natural, resulting from a union of races. The chiefs seem to form a distinct class, on account of their size and stature. But this difference can only be attributed, I believe, to the life which they lead. I observed the beauty of their teeth and the smallness of their feet. Almost all the chiefs and old men appeared to me to have conformed to the an-

cient custom which required men and women to knock out one or two of the front teeth on the death of a father, a mother, a friend, or a chief. I saw but very few cases of deformity; this however, has been remarked of all savage nations. Free in their conduct and in their dress, they are not exposed to those accidents which sometimes in civilized nations are followed with such fearful consequences for infants.

In disposition the natives are mild, timid, cheerful, acute, and observing. They are generally much given to laughter. When we were lying at anchor at Kealakeakua, the noise which they made around the ship reminded me of the tumults which I have often heard in the South American forests when all the trees were covered with a host of macaws and parrots; yet they seemed more grave and less loquacious when I visited them on shore.

I remarked that a happy change has been wrought in the character of this people.—Cook represents them as very adroit thieves, and he speaks of the many precautions, almost always useless, which he was obliged to take in order to protect from their covetousness the articles which might be stolen. We were informed, and our own experience confirmed the truth of the information, that no traces of this thievish disposition remain.—Not an article of ours was stolen, and yet the natives had a thousand opportunities of stealing. At the time of our excursion at Kealakeakua, we got wet in landing, and spread our soaked garments upon the sand. When we gathered them up, not an article was missing; yet a hundred natives, men and women, were around us, and there were many things calculated to tempt them. I happened to drop a silver buckle in the sand, without perceiving it, and an Indian who had found it came on a run to bring it to me.

Each family lives in its own house and cultivates its own field of taro; the women share the cares of agriculture with the men, prepare the food of the family, and make cloth for its garments. The men spend the most of their time in fishing and in procuring shells which they dispose of to ships. The people are called out on certain days, to cultivate the lands of the king and chiefs; on those days the canoes are *tabu*, and on the previous evening they are drawn ashore, and the bay is deserted. These employments however, are far from occupying all their time, especially in those islands where civilization has not created new wants. Whenever we went ashore, a crowd of men and women followed us in our excursions, during entire days. The women, as we observed, spend three or four hours a day in playing in the waves. This is almost the only amusement in which I have seen them engage. Formerly the song and the dance caused the hours of leisure to pass pleasantly; but now that these pleasures are forbidden, I know not how this people employ themselves when they have nothing to do I imagine that in a civilized country, one may rigorously abstain from the dance and the song, for visits, conversations, shows, and a thousand subjects of distraction, cause time to pass rapidly; but what would one have these poor savages do, for savages they still are, if those pleasures to which they are habituated are to be prohibited them, before they are put in a condition to invent for themselves others more rational and perhaps less innocent? Besides, the facility with which the missionaries have brought this people to support their influence, although at times a little tyrannical, proves how easy it is to govern them, and how few efforts would be necessary to lead them to the end which they have doubtless proposed.

All the navigators who have visited the Sandwich Islands, have given some account of the religion of the islanders; it would be useless to repeat what they have said. Besides, my object being simply to make known this people such as they are at the present time, and the changes brought about by the contact of civilized nations, I shall content myself by sketching the principal features of their ancient religion. Every thing which inspired them with fear, the islanders imagined to be a god; these were monstrous divinities, to whom they sacrificed human victims on certain occasions, either to render them propitious when commencing a campaign, or when chiefs were sick, to exorcise the god of death. It was often the case also, that numerous victims accompanied the chiefs to the tomb, and these were selected from their most intimate servants.

On Hawaii, Pele, the godess of volcanos, while she constantly threatened the life and property of the natives, received many sacrifices from them. When there was an earthquake, when large pillars of smoke rose above the clouds, when at night columns of flame darting from the sides of the mountain, painted the sky with a blood red color, they then sent victims to Pele, to mitigate her anger; but, alas! the goddess was inexorable. She accomplished by means of her ravages, the work of creation, which a god more powerful than herself had imposed on her. She added a new stratum of lava to those of which this land is formed.

The god of Oahu had also the reputation of being very powerful; he was moreover, a very great eater. The richest offerings of taro and sweet potatos scarcely satisfied him, and always, by means of his priests, his appetite demanded numerous contributions from the harvests of the faithful. This god was also of colossal stature, and much benefit did he derive from it. It once happened that the sun did not appear at Oahu. The men were sad; many of them became fools, and terrible diseases decimated the population. Numerous victims were sacrificed to the god, and during two moons, the whole island lay prostrate before his altars. The king of a great country towards the south, (Tahiti without doubt,) had taken the sun prisoner, thrust him into a very deep cavern, and closed up the entrance with immense blocks of lava. Nor did his precautions end here; he had placed at the entrance as sentinel a bird which uttered a piercing cry whenever he heard the least noise; and at the head of his intrepid warriors he was always ready to rush upon those who should dare attempt the release of the prisoner. But all this did not intimidate the powerful god of Oahu, who had been moved by the groans of his worshipers. He was a very great god. When he went from one island to another, the water reached only to his ankles; and it came up only to his knees, when he went to the country of the south. It was night when he arrived at Tahiti. He advanced so softly that the bird did not hear him, and he strangled him before he could utter a cry; then removing with his powerful hands the blocks which closed up the entrance of the cavern, he seized the sun and hurled him into the air with incredible force. When he was at a certain distance from the shore, he raised a shout, which awoke the king of Tahiti and his warriors; they ran to the cavern, but their astonishment was great when they perceived that the sun had been rescued.—The god of Oahu had hurled him to so great a height that they were never able to take him again. Since that time, the sun has always shone at Oahu.

Each of the gods had his priests, whose wants were abundantly supplied from the altar; their influence was very great, and they often held, it is said, the destinies of chiefs and kings in their hands. Kamehameha took upon himself the whole spiritual authority, being at the same time both conqueror and sovereign pontiff. He well knew the influence which this union of power gave him, and never could the efforts of missionaries, who arrived from the United States a short time before his death, obtain permission from him to aim a single blow at the religious belief of the country. "Your religion," said he, when the subject was introduced, "is perhaps very good for your nation; but the gods of Hawaii are indispensable to the Hawaiian nation. They gave me strength to conquer; they gave me power to reign. I know not your god; why should I forsake mine?" For a savage, Kamehameha was a shrewd politician. He well understood how much influence religion must have over the people which he governed. This power was in his own hands, and he knew that it would pass into the hands of the men who should give to the nation a new god, whose priests they themselves would be; yet he mitigated some of the rigors of the tabu.

American Seamen's Friend Society.

This Institution held its Twenty-second Annual Meeting on Monday evening, May 6, in the Broadway Tabernacle, New York, P. Perit, Esq, the President, in the Chair.

An abstract of the Annual Report was read by J. Spaulding, one of the Secretaries, from which it appears that the receipts of the Society for the year ending the 1st inst, were $23,497; and the expenditures $23,200; exceeding the receipts of the preceding year $4,915, and not including a considerable amount raised by the Secretaries, and expended in the places where raised and for local objects.

The operations of the Society are both foreign and domestic; extending through its Chaplains and Sailor Missionaries, the ministrations of the Gospel to seamen, kind offices to the sick, and the last rites to the dead, in the Islands of the Pacific, China, Brazil, Chile, France, Sweden, and the West Indies; besides acting in concert with numerous auxiliary and local Societies in sustaining Sailors' Homes, Bethels, etc. in this country.

The Society's Home in New York has had within the last year 2,421, and in eight years 27,975 sailor boarders. Some of the results of these labors are seen in the following particulars, viz: that thousands of seamen have signed and kept the temperance pledge; that entire crews go to sea and return home sober men; that intoxicating liquors are not furnished among the stores of the merchant, whaling and fishing vessels as formerly; that comparative order and quiet now prevail in the Sailors' Homes, in the streets, and on the

wharves; that their chests are well replenished; that hundreds of thousands of dollars have been deposited by them in small sums in Savings Banks; that they are manifestly thriving, rising in their profession, and becoming in many instances owners in the craft they navigate, as the mechanic owns his tools; that the discipline of the sea is greatly improved, the men being governed less by brute force and more by moral influence; that numbers of masters, officers, and sailors have been made wise and happy in a hearty reception, and a faithful profession of a spiritual religion; and that having tasted the good word themselves, they are creating and supplying a demand for it on foreign shores.

The meeting was addressed by Mr. Trumbull of Valparaiso, Chile, Rev. Walter Colton, and Rev. Messrs. Rogers and Widets.

American Temperance Union.

The Fourteenth Anniversary of the American Temperance Union, was held on Thursday evening, May 8, at the Broadway Tabernacle, New York, Chancellor Walworth, the President, in the Chair.

The Annual Report, read by Rev. John March, Corresponding Secretary, represented the cause as in a sound and prosperous condition, notwithstanding the apparent defection the last year, in the delusive cholera preventative. The Churches and Ministry have given to it more of their time and influence. The risings and upheavings of society to throw off the burdens and oppressions of a legalized traffic, have been more and more successful.

Maine holds firm to her prohibitory statute and is blessed in it. Vermont has rejected the license system by a popular vote of 20,000 to 12,000. Massachusetts gives no license in any of her counties. Rhode Island none but in four towns. In New York, no legislative action has been had, but a report of a committee of the legislature has been submitted which must ultimately create some definite action. The Sunday traffic is greatly suppressed in New Jersey and Maryland. The Wisconsin law stands firm, and is found to operate to the terror and check of all venders of intoxicating drinks. It is considsidered a model law for all the States.

Father Mathew's visit has been well received, and has awakened some interest in the cause at the South. Temperance organizations are numerous, and in many places effective. The order of the Sons of Temperance are about 300,000. Temperance lecturers are diminishing, but the labors of Messrs. Gough, Kellogg, Jewett, White, and others, have been well appreciated, and very successful. The issues of Journals, Youths' Advocate, Almanacs, Tracts, Books, etc. from the office of the Union, have been somewhat increased. They have been sent to Home and Foreign Missionaries, to California, to the North of Europe, and to many destitute portions of our own country.

The spirit ration is continued in the Navy, but the seamen of merchant ships, whalers, and coasters, are now, as a class, very temperate.

Good progress is making in England. Influential men are more and more impressed with the importance of the cause, as a relief for the poverty and sufferings of the working classes. In Scotland, the three principal religious denominations are earnestly engaged in it. Fifty ministers of the Free church have headed the temperance movement. The King and Queen of Sweden are still patrons of temperance in their kingdom. The Sandwich Islands have suffered from French aggressions and the California excitement, but temperance is there still predominant. Liberia is a perfect temperance Republic. In Canada and Nova Scotia, in several of the West India Islands, at Madras and Bombay, much progress is reported. More united action, more contributions of money, a vastly increased circulation of temperance tracts, is needed to ensure success.

The meeting was ably addressed by Rev. Dr. Dowling, W. H. Burleigh, Esq, W. E. Dodge, Esq, T. B. Segur, Esq, and Kahgegagahbowh, or George Copway, of the Ojibway nation. The Indian Family likewise sang several of their songs.

White Jacket: or *The World in a Man-of-War.* By Herman Melville. New York, Harper & Brothers.

In this volume we have *reality* not *romance.* In ninety-three brief chapters, the author paints as many distinct scenes of life on board a man-of-war. There is plenty of incident, but it is made subservient to the very laudable purpose of exhibiting the condition of our navy, its discipline, the treatment of the sailors, etc.

Facts concerning the use of rum and the cat-o'-nine-tails are detailed, which must arrest the attention of the nation. The book should be placed in the hands of every member of Congress. It gives a clearer insight into the abuses prevalent in our navy, and a better conception of the necessary remedies, than any other work within our knowledge. It entitles its author to the warmest thanks of every American interested in the improvement of the condition and elevation of the character of our sailors.—*National Era.*

It appears that Melville, author of Typee and Omoo, has published another work.—That he was not altogether unqualified to speak of "the world in a man-of-war," may may be inferred from the fact that after having taken 'french leave' of several whalers, in the Pacific, he finally shipped as a sailor on board the United States frigate 'United States,' at Honolulu, in 1843, and proceeded to the United States.

Whaling Business.—The town of Provincetown, in Barnstable county, Mass. has now *twenty-five* vessels employed in the whale fisheries, and we have been informed by some of the most enterprising men in that place, that whaling is now considered the most important branch of business there, having outgrown the cod-fishing interests in a great degree. If the business results as successfully hereafter as it has for a few years past, it will add greatly to the wealth of the "City in the Sand."—*Barnstable Patriot.*

Temperance.—The city of Quincy, Illinois, has determined by election, that no license to keep a liquor or beer shop shall be granted in that city. About one-half of the votes were polled—six hundred—of which only forty-five were in favor of the license.

The Seamen's Bethel at Whampoa was dedicated to the public worship of God on the 19th, March, the dedicatory services being attended by about eighty persons, among whom we noticed H. E. Mr. Davis, the American Commissioner, Mr. Forbes the American Vice Consul, and many of the merchants of Canton. The number of ships at Whampoa at the time was very few, and only a portion of them had European crews, which accounts in a measure for the absence of sailors from the audience. The services were opened by reading the scriptures, and singing the following hymn composed by Dr. Bowring for the occasion.

Hear, O Thou benignant Father!
Praise for mercies—prayers for grace!
While with grateful hearts we gather,
Sanctify the gathering place.
Many a thousand leagues divide us
From the lands and homes we love;
But Thy gospel is beside us,
Heaven around, and Thou above.

Humbly here an altar building
To Thy glory—may Thy rays
Beam upon it, gladdening, guilding,
As in Israel's honor'd days.
When their desert path benighted,
Saw the flaming pillar reared:
So may our dark way be lighted,
By Thy Spirit bless'd and cheered!

In the deep we see Thy wonders,
And before these wonders bow;
From the clouds we hear Thy thunders:
Speak, O Lord! in mercy now!
When the darkest storm is low'ring,
When the fiercest whirlwinds rage;
O'er them let the Cross be tow'ring,
Brighter still from age to age.

Father! if Thou deign to bless us,
All our labors will be blest,
Naught shall daunt us—naught distress us;
Thou our righteousness—our rest!
All must yield where Thou presidest;
Thou who rulest sea and land;
All must follow when Thou guidest;
Lord! stretch out Thine helping hand.

The dedicatory prayer was offered by Rev. P. Parker, M. D., and the sermon preached by the Rev. Dr. Legge of Hong Kong. His discourse was based on Mark vi. 34: "And Jesus, when he came out, saw much people, and was moved with compassion toward them, because they were as sheep not having a shepherd; and he began to teach them many things." From this text, he deduced the Christian obligation of compassionating the ignorant of our race, and as a consequence the need and propriety of providing means and facilities of instructing them. The services were concluded by Rev. Mr. Cleland giving the benediction.

The floating Bethel which has now been opened for public worship at Whampoa is a commodious structure, one hundred and twenty feet in length, and thirty four feet beam, with a walk four feet wide extending around it. The interior is divided by a cross passage-way six feet wide, into two parts, the chapel and the chaplain's apartments. The former is fifty feet long, and thirteen feet high, lighted by six gothic windows on each side, and has accommodations for seating three hundred auditors. It is a spacious and elegant room. The other and smaller end of the Bethel is divided by a passage lengthwise, and contains six rooms, one of which is a reading-room, soon to be provided with a library and periodicals, a subscription having already been opened for this purpose. The entire expense of the Bethel, including anchors and cable, will not vary far from six thousand dollars, all of which has been collected from foreigners in China, about half of it from the residents, and the residue from the shipping.

The chaplain of the American Seamen's Friend Society, Rev. George Loomis, having drawn up a plan in relation to the Bethel, began to collect subscriptions in December, 1848, and a meeting of subscribers was called in Canton, in May 8th, 1849, at which it was resolved to vest the management of the funds collected for the erection of a Bethel in the hands of trustees.—P. S. Forbes, Esq., was chosen chairman, and John Dent, H. G. Lamson, Joseph Jardine, R. P. Dana, and T. W. L. Macdean, Esqs., with the Seamen's Chaplain, members of the Board of Trustees. W. O. Bokee, Esq. was appointed Secretary to the Board, and N. de St. Croix

Esq. requested to co-operate with Mr. Loomis in carrying out the details. The keel was laid in August 1849, and the vessel floated out of dock February 7th, 1850. We congratulate the foreign community in Canton on the completion of this praise-worthy undertaking, and in noticing it, we cannot close without mentioning the untiring exertions of Mr. Loomis and Captain St. Croix in daily overseeing the thorough execution of the work, and collecting funds from the community and shipping for its completion. —Chinese Repository.

THE FRIEND.

HONOLULU, AUGUST 1, 1850.

The Moravians.

Our interest has recently been renewed in regard to this interesting denomination of Christians, from the circumstance of having met one of their clergymen, the Rev. John Augustus Miertsching, of Hernhut, Germany. This gentleman was attached to H. B. M. S. Investigator, bound to the Arctic Ocean, in search after Sir John Franklin.—His appointment was that of "Interpreter." He has for several years been attached to the Moravian Mission, among the Esquimaux Indians on the coast of Labrador. From his knowledge of the Esquimaux language and character, it was reasonably inferred that possibly he might communicate intelligibly with the Indians around Bhering's Straits.—During his brief sojourn among us it was exceedingly pleasant to learn from him, respecting the efforts now making by the Moravians to carry forward their missionary operations in Greenland, South Africa, West Indies, and other parts of the world. The Moravians are the pioneers of modern Protestant missionaries. Their number as a denomination are quite small, but the success of their missionaries has been very great.—The "Church" of the United Brethren numbers only sixty eight congregations, and seventeen thousand communicants, but they are supporting sixty mission stations, where are gathered eighteen thousand six hundred and twenty two communicants, according to the last statistical reports at our disposal.—On a following page will be found an interesting historical sketch of the Moravians.

New Mission in Contemplation.

Late advices from the office of the American Board of Commissioners for Foreign Missions, in Boston, intimate that the Board contemplate establishing a new mission, at some advantageous position on the Kingsmill, or Caroline group of Islands. Strong's Island is thought by some to be a convenient central position. We have in former volumes of the "Friend" published several communications from visitors at Strong's Island. The last communication was from Captain Jackson. See the February number of our paper for 1849.

The following carefully written paragraphs from a work which has not yet reached this part of the world, may not be uninteresting to our readers. The six previous volumes of the exploring expedition have long been before the public. We are indebted to the politeness of Rev. Mr. Clark for these extracts:

Brief extracts from Mr. Horatio Hale's account of the Micronesians, in volume 7th of the United States Exploring Expedition, on Ethnography and Philology.

"The Micronesians, as a people, do not differ greatly in complexion from their neighbors of Polynesia. Their color varies from a light yellow, in some of the groups, particularly the western, to a reddish brown, which we find more common in the east and south-east. The features are usually high and bold,—the nose straight or aquiline, the cheek-bones projecting, the chin rounded and prominent. The nose is commonly widened at the lower part, as in the Polynesian race, but this is not a universal trait. The hair, which is black, is in some straight, in others curly. The beard is usually scanty, though among the darker tribes it is more abundant, and these have often whiskers and mustachoes. In stature, the natives more often fall below, than exceed the middle height, and they are naturally slender. That which especially characterizes this people is the great elevation of the forehead, and indeed of the whole head, as compared with its breadth. This was general in those whom we saw, and is apparent in nearly all the portraits of natives which have been given by different voyagers."

* * * *

"In character, the Micronesians, at least those of them who belong to the lighter colored tribes, will compare advantageously with any other people, whether savage or civilized. Their most pleasing, and at the same time their most striking trait, is a certain natural kindliness and goodness of heart, to which all their visiters, of every country and character, bear the same testimony.—Wilson at the Pelew Islands, Kotzebue at Rodack, Duperrey and D'Uville, at Ualau, Lutke and Martens at all the western islands, O'Connell and every other visiter at Banabe, Paulding at the Mulgrave group, and our expedition at Makin, have had occasion to remark the sweetness of temper and the absence of any harsh and violent feelings, which characterize the inhabitants. This is especially deserving of note, inasmuch as there is no quality more rare, or about the existence of which skepticism is more justifiable, than that of real benevolence among savages. In this case, however, the strong and decided testimony of so many witnesses can leave no doubt that the natives of the Caroline Islands are, for the most part, a kind, amiable, and gentle race."

* * * *

"There are, however, as before remarked, some exceptions to be made in any general description of this people. The kindness of heart is less apparent in the natives of those small isolated coral islands, where the supply of food is scanty, and where the frequent pressure of actual want sometimes produces in the people a hard and unfeeling disposition. Those tribes, too, among whom a partial intermixture of the Melanesian race shows itself in the features and complexion, will also be found to partake, more or less of the ferocity natural to that race."

* * * *

"They are also, like the Polynesians, a social and enterprising people. A constant communication is kept up among the various groups and islands. They are excellent navigators, governing their courses by the stars with great accuracy."

* * * *

"It will be seen that the character here given is little more than a catalogue of good qualities. Such as it is, however, it is an exact statement of the impressions derived from personal observation, as well as from the accounts of others. There can be no doubt that these natives are a finely endowed race, in whom the moral feelings and the intellect generally predominate over the more violent passions. That there are occasional exceptions, has been before remarked, and some of them will be hereafter noticed."

* * * *

"In treating of the Polynesians, we have had occasion to remark that they had probably attained, before their discovery, to as high a grade of civilization as the circumstances in which they were placed would permit. The same remark may be made concerning the natives of Micronesia, but with this difference, that while the former appear to have arisen from a lower condition to their present state, the latter seem, on the contrary, to have descended from a higher grade, which had been attained in some more favorable situation."

* * * *

"The religion of the Micronesians carries us at once to eastern Asia. It is the worship of the spirits of their ancestors. They are called at the Ladrones, *aniti*, at the Kingsmills, *anti*, at the Mulgraves, *anit* and *annis*, at Banabe, *hani* or *ani*, at Falalou, *hans*, &c. Probably the *yaris*, of Lord North's Island, signifying divinity, is the same word, as the change of *n* to *r* is universal in these dialects. The have neither temples, images, nor sacrifices. Their worship consists only in praying and performing certain ceremonies—among others the offering of a portion of their food to the spirits. It does not appear that a real *tabu* system exists on any of the groups. Voyagers have found words signifying sacred, or forbidden, which they have assimilated with the Polynesian tabu, but they give us no hint of a code of laws and social regulations deriving their validity from a religious sanction. There is certainly nothing of the kind in the Kingsmill group."

Sir John Franklin.—A new brig, named the Lady Franklin, built at Aberdeen, has been purchased by the British government to go in search of Franklin. Mr. Green the aeronaut, has sent nine balloons, with an apparatus for generating gas, and a place for the distribution of slips of printed paper and silk from the balloons while in the air. A trial was made lately, and the balloon drifted first to Chichester, and then turned across the channel, and one of the slips of paper has been sent back from St. Dennis, France. The clairvoyants are still very busy with the case of Franklin, and all report favorably.

Death of the Rev. E. Mudge.

In our list of deaths will be found that of one who was extensively known among American whalemen, sailing out of the port of New Bedford. As a Chaplain he was most indefatigable in his labors for the welfare of seamen, who always referred to him in the most respectful manner as "Father Mudge." For many years he kept for reference, the name of every sailor leaving New Bedford, and carried on an extensive correspondence with their friends, in different parts of the country. It was through age and infirmity that he retired from the chaplaincy, and during the last few years has been residing upon a small farm in Lynn, Mass.

The Sandwich Islands.

Rev. Dr. Cheever, on Sunday evening, May 5th, at the Broadway Tabernacle, New York, read an "interesting letter from Rev. E. Bond, a Missionary stationed at Kohala, Island of Hawaii, whose church and all the buildings connected with his mission were blown down by a hurricane not long since." He advocated the collection of a sum sufficient to restore the church.

On Sunday evening, 12th, Dr. Cheever delivered a discourse on the position and importance of the Sandwich Islands as a Missionary station.

☞ Although it may spoil a good story, yet we must correct an error at the close of the article translated from the French, in our present number. It is there asserted that the missionaries from the United States arrived a short time *before* the death of Kamehameha I. The truth is, they arrived a few months *after*, his death. Kamehameha I. died May 8th, 1819. The American missionaries arrived March 30th, 1820.

☞ We would acknowledge our indebtedness to the New York Tribune for the report of the American Seamen's Friend Society, and the American Temperance Union. This paper is among the very best for general and political intelligence, published in the United States. Its foreign correspondence is valuable and extensive.

☞ The Prince Kamehameha, elder brother, and Prince Liholiho, the heir presumptive, Sandwich Islands, attended by Mr. Judd, Plenipotentiary, were presented to Prince Albert at an audience at Buckingham Palace, by Viscount Palmerston, Her Majesty's principal Secretary of State for Foreign Affairs. The Princes were afterwards conducted through the Palace, and through the royal stables, by Lieutenant Colonel F. H. Seymour, the Equerry in waiting on Prince Albert.—Late paper.

According to later intelligence, Mr. Judd and the young princes had arrived safely in the U. S. and were visiting in Boston. They may be expected in about two months.

July Thirty-First.—The seventh anniversary of the Restoration of the Hawaiian Flag by Rear Admiral Thomas, took place on the 31st ulto. The day was observed as a National Holiday. The Public offices and stores were closed in Honolulu. In addition to the usual salutes, and other pyrotechnical manifestations of public joy, we understand that M. Paki, a High Chief, gave a sumptuous dinner at his new and beautiful residence, and also that a Levee, in the evening, was given at the Palace; which was quite numerously attended. We regret to learn that His Majesty, was unable to attend through every serious indisposition. The most interesting incident connected with the day we have yet to record, viz: the turning of the King's Spring in Nuuanu, into the new Reservoir.

☞ Dr. Bowring, referred to in the article, "The Seamen's Bethel at Whampoa", as the author of the "Dedication Hymn." is the author also of the oft sung hymn commencing,

"Watchman tell us of the night, &c."

Dr. B. is now H. B. M.'s Consul, at Canton.

Subscription for Professor Webster's Family.—It is stated that the recent calamity that has occurred to this interesting family, has incited their old friends in Boston to raise for them a handsome donation, as a testimonial of continued friendship. The widow of the late Dr. Parkman heads the list with $500, which has already reached above $20,000.

Look out for the Eclipse.—M. Adams, agent of the French authorities at Tahiti, sent hither to make observations upon the eclipse of August 7th, has addressed a communication to H. H. M.'s Minister of Foreign Relations, from which we make the following quotations:—

"On the 7th of August next, a total Eclipse of the Sun, will be visible, at Honolulu, and the Hawaiian Islands, in general, of which the principal phases, at Honolulu will be:

	H. M. S.	A. M.
Commencing at	8 54 19	"
Total Eclipse,	10 13 8½	"
End of Total Eclipse at	10 19 15½	"
End of the Eclipse,	11 45 52	"

From the commencement, till the total eclipse, the light of the Sun will diminish gradually. At 10 hours, 13 minutes, 8 1-2 seconds, when the last portion of the Solar Disk, will have disappeared, the darkness will become very deep, and will continue for 6 minutes and 7 seconds, after which the Sun's Disk will reappear, and the light will return by degrees, until the end of the Eclipse.

It is difficult to predict what will be the degree of darkness, but every thing conduces to the belief that the darkness will be greater than in a night of full moon. Most probably all the bright stars, will be seen. The planets Venus, Mars, and Jupiter, happening to be very close together, during the Eclipse, will be seen to the East of the Sun, towards the horizon.

The total eclipse, spoken of, is one of the strongest of the present age. Generally, in the same place, one is not seen oftener than in a century; and sometimes, even several centuries pass over, before a total eclipse is reproduced.

American Arctic Expedition.—This expedition in search of Sir John Franklin, is reported in the New York Tribune, to have sailed on the 22d day of May. It is composed of the "Advance," 144 tons, and the "Rescue," of 90. Both vessels were put in complete order, principally, by H. Grinnell, Esq., of New York, at an expense of $30,000.

"The staunch vessels and their noble crews leave with the hearty good wishes of all. Lieut. De Haven bears letters to various British officers in the Arctic Seas, among them one from Lady Franklin to her husband. The number of men on the two vessels is 36. The officers are:

Lt. Edwin S. De Haven Commanding.
Passed Midshipman S. P. Griffin, Acting Master.
" " Wm. H. Murdaugh,
" " T. W. Broadhead,
" " R. R. Carter,
Passed Assistant Surgeon E. K. Kane.
Assistant Surgeon, Benj. Vreeland.
Midshipman, W. S. Lovell.
Boatswain, H. Brooks.

Lieut. De Haven commands on board the Advance, and Passed Midshipman Griffin on the Rescue. Dr. Kane will pay particular attention to matters of Science, Natural History, Temperature, &c., but these investigations are not to interfere in any way with the legitimate purpose of the expedition. Unless they are spoken off the Grand Banks, it is probable that nothing will be heard from them for several months, the only means of communication (by sea) being throush English or Danish whaling ships. Should opportunity offer, letters will be sent overland by traders of the Hudson Bay Co.

Royal Swindling.—King Ferdinand of Naples, with the royal view of replenishing his exhausted Exchequer, issued a proclamation declaring Messina a free port. Those who were simple enough to believe the word of a king, entered the port and stored their commodities; but when they attempted to sell or export them, they were politely informed that his august majesty had changed his royal mind, and would tax every cent's worth of foreign produce in the port. The merchants remonstrated, but in vain; they even asked permission to withdraw ther goods and depart as they had entered, but this was also denied. His majesty would not allow any thing that has entered Messina agreeably to his proclamation to be either withdrawn or sold, without first paying an enormous duty of over one hundred per cent on its value. Among those who have been thus entrapped and swindled, are several merchants of this city, some of whom have paid the duties under protest. We understand that they have represented their case to our Government, and claim its protection against the outrageous proceedings of this royal robber.—*Boston Atlas.*

☞ There is at present residing at Southampton, England, an old man named Wade, the last survivor of Captain Cook's companions in his voyages round the world. He is ninety nine years of age, and is in the possession of all his faculties. He was present at Captain Cook's death, and himself received a spear wound from one of the islanders.

HISTORICAL SKETCH.

A short chronological statement of some remarkable occurrences and facts, connected ith the History of the Church of the United Brethren, may not be uninteresting to those who are but partially acquainted with the antiquity of its constitution ; the severity of its successful struggles to maintain, amidst the most cruel persecutions, the purity of its faith and worship ; the friendly communication it has maintained for centuries, with the Church of England ; and the countenance given to it by the government of this country, as an ancient Protestant Episcopal Church.

The Church of the United Brethren originally descended from the Sclavonian branch of the Greek or Eastern Church, which probably received the gospel through the immediate agency of the Apostles and their cotemporaries. St. Paul mentions his having preached in Illyricum (Romans xv. 19), and that Titus had proceeded for the same purpose into Dalmatia (2 Timothy iv. 10), and both of these were Sclavonian provinces.

The light of truth thus kindled, was not permitted, as in Asiatic Churches, to be quenched in darkness. In the fourth century, Jerome, a native of Strido, an Illyrian city, in order to promote the spread of the christian faith in his native land, translated the Bible into his mother tongue. By the seventh century, the Sclavonian church had increased considerably, and rendered herself remarkable, in the year 680, by refusing to appear at the sixth synod of Constantinople, because her members abjured image worship.

Soon after this period, God was pleased to open the door for the gospel in nearly the whole of the Sclavonian provinces. The Bulgarians were the next who embraced the faith, which, through the Divine blessing on the laborious efforts of Cyrillus and Methodius, two Greek bishops, spread likewise among the neighboring nations. In 861, they entered Moravia, where Suatopluk, the reigning monarch was converted ; and a short time afterwards, Borziwog, Duke of Bohemia, being on a visit to King Suatopluk, heard and received the truth, and was baptized ; and on his return home (accompanied by the pious Bishop Methodius), his Queen, Ludomilla, was won over to the true faith, his people cast away their idol, Korsma, and the gospel spread nearly through the whole of Bohemia. Shortly after his death, a dreadful persecution from the pagan authorities—again brought into power—desolated the infant Bohemian Church. This season of trial, was, however, short, and the gospel light again shone brightly in Bohemia and Moravia. From those countries the beams of sacred truth shone upon Poland, and even upon Muscovy.

But now new trials, much more pregnant with danger, appeared, and lasted for many centuries. The bishops of Rome, jealous of the spreading influence of the Eastern Church, used every means to alienate these nations from the Greek Church, and bring them under their yoke. In 943, the Emperor Otho subdued the Bohemians, and soon after commanded their princes to introduce the Roman liturgy in the Latin tongue.—The Bohemian Church nobly resisted this innovation, and though the princes (from the year 968) adhered to the Roman communion, the clergy resolutely retained the Bible, and performed their church service in the vulgar tongue.

The unwearied efforts of the popish emissaries began, at length, to relax the zeal of the Bohemians for purity of doctrine and worship ; but, in the year 1146, at a most seasonable period, the Waldenses came into Bohemia, and by their fearless testimony, the faithful worshippers were encouraged to reject the tradition of men, and to adhere firmly to the truth which they had received from their godly forefathers. It was not till the year 1361, that the Emperor Charles IV., at the instigation of the Roman Pontiff, commanded the cup of the euchorist to be denied to the laity, and introduced all the corruptions and abuses of the Western Church.—To these innovations however, a large body of the Bohemian christians opposed a resolute resistance, and many upright ministers dispensed the ordinances, according to the will of God, in private dwellings. For these heresies, as they were deemed, they were persecuted without mercy, and almost without intermission ; many were punished with death, more with the spoiling of their goods, and multitudes with imprisonment and exile.

At the end of the fourteenth century, John Huss, professor, and afterwards rector of the university of Prague, began to inveigh boldly against the errors of the Church of Rome. His views of divine truth were enlarged, and his spirit was revived, by the writings of Wickliff, the English Reformer, parts of which he translated into the Bohemian tongue. In 1412, Pope John XXIII. proclaimed pardon of sins to all who would assist him in his wars against the two antipopes and the King of Naples. John Huss strenuously opposed this scandalous measure, and the Bohemians publicly burnt the bulls of the Pontiff and the letters of his prelates.

In consequence of this, Huss was cited, in 1414, to appear before the Council of Constance, by which he was condemned to the flames, as an incorrigible arch heretic. On the road to the stake, he sung psalms and hymns with such cheerfulness, that his enemies confessed that he went to death as if he were going to a wedding feast. Thus this faithful confessor of the gospel finished his course in the flames, July 6th, 1416, and sealed his testimony by martyrdom, in the forty second year of his age. The death of Huss was immediately followed by unparalleled sufferings of his followers ; they were excommunicated, robbed, imprisoned ; many were thrown into the deep shafts of the mines of Kuttenberg ; and many, like their leader, were burnt alive. At length, the oppressed Hussites, in direct opposition to the spirit of the gospel, resolved to defend their faith sword in hand. A bloody war ensued, marked by great cruelties on both sides, but effecting nothing for the cause of truth, as the warlike Hussites at length succombed to the force and cunning of their popish adversaries. The genuine followers of John Huss were confident that God would support His own cause without carnal weapons and about the year 1450, the Church of the Unitas Fratrum, or United Brethren, under its present name, was formed by those who chose rather to suffer as witnesses of the truth, than take up worldly weapons for its defense. By permission of Podiebrad, reigning monarch of Bohemia, they obtained a retreat in the Barony of Lititz, and were joined by many persons of similar religious views from different parts of Bohemia and Moravia.—Here, though pursued by the bitter storm of persecution, often hunted, driven from their dwellings, and cast out into the wilderness, they were anxious to maintain not only the pure doctrines of the gospel but likewise apostolic practice and discipline.

In the year 1660, John Amos Comenius, one of the greatest scholars of the age, considering himself their last bishop, transmitted to Charles II. of England, a History of the Church, with an affecting account of its sufferings, and a dedication (which he called his last will and testament), bequeathing these memorials of his people to the Church of England. This dedication contained the following affectionate appeal :

"We then commend to you, friends, our well-beloved mother, our Church ; take you now the care of her in our room, whatever it shall please God to do unto her, whether to restore her amongst us, or whether she is deceased at home, to raise her to life elsewhere."

The history of this hidden church during the following half century is soon told. The godly remnant left in Bohemia and Moravia carefully sought in secret, to maintain the pure and evangelical doctrine of their Church, and to persevere to read the Bible and many edifying books. These, however, they were obliged to conceal, sometimes even from their nearest relatives. Many are the affecting accounts still extant, of those who were brought out of the house of bondage to the enjoyment of Christian liberty.—They held their assemblies by night, in cellars and hidden places, surrounded by dangers and snares, and thus strengthened each other in the faith of the gospel. Many were the persecutions and tortures they endured, and marvelous were the deliverances they often experienced. Thus it is evident that the Lord always preserved in Bohemia and Moravia a seed of the genuine confessors of the truth. These were a grain of wheat which lay long hidden in the ground apparently dead, but by the restoration of the Brethren's Church, at last sprung up and bore much fruit.

It was in the year 1722, that, fleeing from a renewed persecution in Moravia, a godly remnant of this ancient Church found refuge in the estates of Count Zinzendorf, in Lusatia, where they built an humble village, Herrnhut, which is now the principle settlement of the Brethren's Church. Hither, leaving all earthly possessions behind, they brought the hymns, the ritual, the statutes, the spirit, the blessing, and the promises of their ancient church ; and thus formed, not only in the men who emigrated, but in the sacred deposits they had preserved, the link between the Ancient and the Renewed Brethren's Church. By the continual accession of numbers from their own country and from various parts of the continent, they gradually increased, though not to a large extent, and congregations and societies were afterwards formed in England, Denmark, Sweden, Russia, Holland and North America.

Count Zinzendorf, for a time, used all his efforts to induce the Moravian emigrants to unite themselves to the Lutheran Church ; but finding that the Moravian Brethren would rather leave their new asylum than forsake their ancient rule and discipline, he devoted

himself wholly to their service, procured for them the continuation of their episcopal constitution from the only surviving bishops of the Polish branch of the Brethren's Unity, Jablonsky and Sitkovius; and resigning all his worldly honors, was himself consecrated a Bishop of the Unitas Fratrum in 1737.—On this occasion the Archbishop of Canterbury (Dr. Potter) addressed him a letter of congratulation, of which the following is an extract:

"I should be entirely unworthy of that high station in which Divine Providence has placed me, insufficient as I am, were I not to show myself ever ready to use every exertion in my power for the assistance of the universal Church of God, but especially to love and embrace your Church, which is united to us in the closest bonds: inasmuch as, neither intimidated by dangers, nor seduced by the manifold temptations of Satan, you have hitherto, as we have been informed, invariably maintained, together with the pure and primitive faith, the discipline also of the primitive church. I request, in return, the support of your prayers, and that you will salute in my name your brother bishops, as well as the whole christian flock over which God has made you overseer. Farewell."

The genuine possession of the "love of Christ," which had enabled the Brethren to leave all for His sake, was soon manifested in their desire to promote the salvation of the most benighted nations of the heathen world, for which they were ready to undergo the severest privations and hardships, and to sacrifice life itself. When the Moravian refugees at Herrnhut scarcely amounted to six hundred persons—when they had but just found rest from suffering themselves, and were beginning to build a church and habitations, so powerful was this desire to communicate the blessings of the gospel to the heathen, that in eight or nine years they had sent missionaries to Greenland, to the Indians in North and South America, to many of the West India Islands, to Lapland, to Algiers, to Guinea, to the Cape of Good Hope, and to Ceylon; and not long after, they commenced missions in Tartary, in the Nicobar Islands in the Bay of Bengal, in Persia, and in Egypt. Such was their devotedness to the work, that in the first mission they undertook, among the negroes of St. Thomas, one of the West India Islands, upon hearing that no opportunity would be afforded them of intercourse with the slaves, unless their messengers became such themselves, the first missionary determined even to sell himself as a slave, that he might be able to teach the poor Africans the way of deliverance from the captivity of sin and satan. This sacrifice, however, was not eventually required. The success of their labors has been remarkable; the history of their missionary operations is, however, too extensive, if not too well known, to admit of a detailed notice in this sketch.

In 1735, some Brethren visited England on their way to North America, and in the early part of 1738, Peter Bohler formed an intimate acquaintance with several clergymen and students in London and Oxford, to whom his testimony of the free grace of God, in Christ Jesus, was greatly blessed. On the 12th of May, 1738, the first society in connection with the Brethren's Church was established in Fetter Lane, by the advice and under the direction of Bohler, and four years after, those members of the society who felt themselves called to enter into closer fellowship with the Moravian Church, were formed into a regular congregation, by Bishop A. G. Spartenberg. This event took place on the 10th of November 1742, and it was followed by the establishment of similar congregations in various parts of Great Britain and Ireland. The settlement of many families of the Brethren in the British Colonies of North America, soon after their emigration from Moravia, led to several applications to Parliament for protection, and for relief from laws and services contrary to their religious scruples. In 1740, an Act was passed, with the unanimous consent of the Episcopal Bench (22 George II. cap. 30) conceding to the Brethren in England, as well as America, the privileges they sought, and fully acknowledging them as an Ancient Protestant Episcopal Church, which had been countenanced and relieved by the kings of England, his Majesty's predecessors."—The bishop of Worcester, in the debate upon the bill, described them as an "Ancient Episcopal Church which preserved itself from the errors of popery in the most hazardous times, and had on that account undergone great sufferings for the last four centuries." He further observed, "that of all Protestants, they came nearest to the Established Church of this kingdom in their doctrine and constitution; and though the enemy had persecuted them from several quarters, the soundness of their faith, and the purity of their morals, had defended them from any imputation of popery and immorality, neither of which had ever been laid to their charge by their most inveterate persecutors."

Already, in the year 1741, the Brethren's Society for the Furtherance of the Gospel, was founded in London—a distinct feature of the Moravian Church being, that it exists but to serve the Lord, and proclaim his blood bought righteousness and atoning death, wherever He opens a door. And as long as she is faithful to her calling, she will not cease to exist; she may be poor—may be despised—may, like her mother church, be persecuted; but she will not be forsaken or destroyed, but remain a witness church, till the gospel shall have been preached for a witness to all nations, and the Lord shall come again to His church on earth.

In the year 1814, the Christian Guardian gave a concise history of the Moravian Church, in order to excite the sympathies of English Christians towards their missions, then in difficulties through the severe losses sustained in their settlements on the continent of Europe, during the war. In their preface, the editors observe, "We are happy in recording the liberality of a British public, towards those patient servants of Christ, whose work of faith and labor of love, will not be forgotten by their Master."

In the year 1817, an Association was formed by Christians, not in connection with the Moravian Church, for raising funds for helping them to carry on their missionary work, now greatly extended; and ever since that time, its labor of love, showed towards the Lord's name by ministering to his cause, has been increasing; so that for several years, the London Association, in aid of the Brethren's missions, has collected for them from £4000 to £5000 per annum.

To this day the Brethren's Church, widely scattered over the face of the earth, yet closely bound together in unity of spirit, ritual and discipline, is numerically small and inconsiderable. On the continent of Europe she has eighteen congregations; in Great Britain and Ireland, twenty eight; and in North America, twenty two. The number of members, in these sixty eight congregations, is about 17,000.

To this small church is committed a large and (to the Lord be the praise) flourishing missionary work among the Greenlanders, Indians, Esquimaux, Hottentots, and Negroes, occupying, amongst these varied tribes in these different climes, sixty stations, which are served in the gospel by two hundred and sixty missionaries of both sexes, who have sixty one thousand converts under their constant spiritual charge, of whom eighteen thousand six hundred and twenty two are communicants. Thus the number of communicants from among the heathen exceeds the number of the church at home (including even the children of the members.) "This is the Lord's doing, and marvelous in our eyes."

Rats.—Rev. Walter Colton, in his agreeable diary of a voyage to California in a man-of-war, entitled "Deck and Port," relates the following capital rat story:

"I have always felt some regard for a rat since my cruise in the Constellation. We were fitting for sea at Norfolk, and taking in water and provisions; a plank was resting on the sill of one of the ports which communicated with the wharf. On a bright moonlight evening, we discovered two rats on the plank coming into the ship. The foremost was leading the other by a straw, one end of which each held in his mouth. We managed to capture them both, and found to our surprise, the one led by the other was blind. His faithful friend was trying to get him on board, where he would have comfortable quarters during a three year's cruise. We felt no disposition to kill either, and landed them on the wharf. How many there are in this world to whom the fidelity of that rat readeth a lesson!"

Tunneling the Alps.—The project of digging a railroad tunnel through the Alps, between Chamberry in France and Susa in Sardinia, has been talked of for several years. Now, it would seem, the great undertaking is in a way to be realized. A commissioner of the Piedmontese government has unanimously decided in favor of the project, and an application is about to be made by Parliament for the means of carrying it into execution. The tunnel will be about seven miles in length, nineteen feet high, and twenty-five feet in width—admitting of a double track. The estimated cost is about three millions of dollars. Mount Genevre, which it is thus proposed to penetrate, rises to an elevation of about 10,000 feet. Chevalier Henry Maus, the author or this gigantic scheme, has spent five years of constant study upon the subject.

Seamen's Home in New Orleans.—This truly beneficent undertaking has met with great success. The grounds have been purchased for $8,000; and additional subscriptions of about $12,000 have been made for the erection of the building. The whole amount required is $40,000.

☞ Edward Everett is reported to be engaged on a history of France, for which he has been many years collecting materials.

DONATIONS.

	For Chaplaincy.	For Friend.
Commander of H. B. M. ship Swift,	$6 00	$6 00

MARRIED.

In this town, June 26th, by Rev. Lowell Smith, Mr. Henry Guyon, to Miss Angeline T., daughter of Mr. John G. Munn.

In Honolulu, July 1, by the Rev. S C. Damon, Captain Peter L. Lain, of the British brig Warlock, to Miss Maria Kenedy.

In Honolulu, July 31, by Rev. L. Smith, Captain John Meek, to Kaluapapohana.

On board brig Colorado, Feb. 26, off Cape Horn, by Capt. P. J. Baker, Mr. J Henry Gust, of Roxbury, Mass., to Miss Jane Stinsfield, of the same city. The ceremony was performed during a gale of wind; but notwithstanding the unpropitiousness of the elements, it is said to have been a very happy occasion, in which all on board participated.

DIED.

In Honolulu, July 31, Captain Joseph Carter, keeper of the Mansion House, and for many years a resident of the Sandwich Islands.

At sea, on the 13th of February last, on board the ship Memnon, near the Cape of Good Hope, Edward Spring, M. D., aged 42 years, son of Rev. Gardiner Spring, D. D., of New York. He was on his return passage from California via Canton, whither he had gone for the benefit of his health. His body was interred at the island of St. Helena

At Lynn, Mass., on the 9th of May, suddenly, Rev. Enoch Mudge, of the Methodist E. Church, the first native Methodist clergyman in New England, and for several years pastor of the Seamen's Church in New Bedford.

In Honolulu, on the 18th of July, Keaka, wife of Mr. John Norton.

On board the ship Cachalot, June 23d, on her voyage from Panama to Honolulu, Mr. Henry Crooks, of Columbus, Ga., aged 45 years. His disease was the Panama fever.

In this town, on the 23d inst., Fanny Maria, infant daughter of Mr. Henry L. Sheldon.

New Book.

For sale at the POLYNESIAN OFFICE.
and at the CHAPLAIN'S STUDY.
THE WHALE AND HIS CAPTORS,
By Rev. H. T. Cheever—Price $1 25.

To Seamen and Strangers.—The Seamen's Chapel is open for Public Worship every Sabbath, at 11 a. m., and 7 1-2 p. m. Seats Free.

The Seamen's Concert for Prayer is held at the Room the 3d Monday evening in each month.

Seamen belonging to vessels (of all nations) visiting this port are invited to call at the Chaplain's Study, where they will be gratuitously supplied with copies of the Friend and other rending matter. It will be most convenient for the Chaplain to receive calls from Seamen between 2 and 4 p. m.

Public services at the Native Churches, on the Sabbath, commence at 9 1-2 a. m. and 2 1-2 p. m.

The Seamen's Reading Room is open at all hours of the day. Strangers arriving and having late foreign papers, are respectfully invited to aid in keeping said room supplied with useful reading matter.

Donations are respectfully solicited for the support of the Chaplaincy, and the publication of the Friend. An annual report of all donations is made to the Am. Seamen's Friend Society in New York. Any person contributing $50 is entitled to become a Life Director of the Society, and $20 to become an Honorary Life Member.

SAM'L C. DAMON, Seamen's Chaplain.

JUST RECEIVED—BINGHAM'S Sandwich Islands—being "a residence of twenty one years in the Sandwich Islands, or the civil, religious, and political history of those Islands."—Third Edition, revised and corrected. Embellished with engravings. Price $2.50 and $3.00. It is a sufficient recommendation of this work that it has passed through three editions of 2000 copies each, since its first publication in 1847.

For sale at the counting room of this paper, and also at the Chaplain's study. jy26-11-3m

The Market House Regulations and Prices, Rarotonga.

No charge for water, except the fee to the natives the Captain may engage, to fill the casks.

Market House Prices.

Regulations.

I. The appointed Sales Man is to arrange all trade with the Captain, and the Captain to pay him his fee in cloth or cash as he may agree on.

II. Should the Captain wish to engage natives to take his supplies to the boat; $1 a day is the charge for each man.

III. No boat or canoe from shore shall be allowed to take off trade to ships, to be sold on board. Boats may be engaged to take off supplies bought on shore. Charge, $5 the first day and $3 each day after.

IV. No boat or canoe from shore shall be allowed to go off to ships when making the land, except the one appointed by the authorities.

V. It is requested that no Captain secretly engage, or take away on board his vessel, any natives from the shore. Any Captain wishing to engage natives for a cruise, are requested to make arrangements, before proper witnesses on shore, with any willing to go. A contrary procedure will be reported to the nearest Consul, of the nation to which the ship belongs.

VI. It is requested, that on the desertion of a man from a vessel, the Captain give immediate information to the Chiefs of the Station, and that the vessel do not leave the Island until the deserter be apprehended. That for every deserter delivered by the natives to the Captain two pieces of cloth to be paid, one to the Chief of the station, and another to the parties who secured his apprehension.

VII. That in case the deserter be not found until after the vessel has left the island, when apprehended, he shall become a prisoner and be employed in public work, until he leave the island.

VIII. That, in any case considered necessary for a Captain to leave a man on shore, the sum of $30 be paid for each individual so left. tf

The Friend, sent Abroad.

Any person, paying the annual subscription price of the Friend ($2,00) in advance, can have the paper sent to China, Sydney, Tahiti, San Francisco, or over land, via Panama, to the United States or England According to the U. S. Post Office laws, newspapers sent from the office of publication, the postage may be paid by the person to whom the paper is addressed, but otherwise the postage must be pre-paid.

☞ If we have been correctly informed, there is not that irregularity about letters and papers going to the United States, that there is about their conveyance hence. tf

Visit of the French Sloop-of-war Bonite, to the Sandwich Islands in 1836.

Translated for the Friend, from the French of Adolphe Barrot.

NO. VIII.

The tabu—tabu either permanent, or temporary—object of the tabu—declared by the priests—its operation on the people—on the women—penalty of breaking the tabu lessened by Kamehameha—the system abolished in the reign of Rihoriho—arrival of Catholic Missionaries—their success in making proselytes—sent to California—measures taken by the French government to protect Catholic missionaries—Mr. Walch arrives—ordered to depart—refuses to obey—persecution of the Hawaiian Catholics—reply of the King, when spoken to on the subject—spread of the Presbyterian religion over the islands—conversion of the natives declared to be almost entirely nominal—general meeting of the mission—Lahaina—printing offices—newspapers,—Hawaiian books chiefly on religious subjects—reason for not publishing books of history—mistake of the missionaries—the course which should have been pursued.

The *tabu*, which I have often mentioned, was a prohibition, sometimes religious, sometimes civil, of the use of certain things.—They were even forbidden to touch, or look at them. Tabu was either temporary, or permanent. The permanent or sacred tabu was inherent in the thing declared tabu.—Thus, the person of the king and of the priests, the house of the king, the place where he bathed, the temples, the offerings made to the gods, and the royal sepulchres were always tabu. By degrees the priests and chiefs extended the tabu and made a speculation of it. Certain kinds of feathers and of fishes became tabu to the people: only the king and principal chiefs could wear those feathers and eat those fishes. The infraction of the permanent tabu was almost always punished with death: very severe corporal punishment was inflicted upon those who violated the temporal tabu.

The priests sometimes pronounced a general tabu upon the whole country, sometimes on a village, and sometimes, upon a single house. Now one thing was interdicted by the tabu; and then, another. In certain cases, the tabu forbade the lighting of kukui-nut torches, the eating of fish and of cocoa-nuts, fishing, going out of the houses, &c. In other cases, it was a means of appropriating to the exclusive use of the priests and chiefs an article which had become rare. And often, the sole object of it was to exhibit the power of the priests to the minds of the people, by making them experience it, even in their own houses. The tabu then may be considered as a means, employed by the most powerful, to impose their will upon the most feeble. From the chiefs it descended to the other classes; the men had made a thousand things tabu to the women, among which things were cocoa-nuts, certain kinds of fish, and bananas: neither were they permitted to stop in the apartment where the men took their food.

Kamehameha, as I have stated, diminished the severity of the penalty for breaking the tabu; but it was not till the reign of Rihoriho, that the tabu was entirely abolished.—The women especially, and the people experienced the benefits of this religious reform, which must be ascribed to the influence exerted by the American missionaries upon the minds of the chiefs. Yet a cry of horror arose in all the islands, when the high priest proclaimed the tabu abolished: but this people, so mild and so easily governed, very soon forgot their wooden gods; they destroyed the idols to which they had so long sacrificed human victims, and, following the example of the chiefs, they prostrated themselves in crowds before the altars of the new religion. The regent, Kaahumanu, was one of the first to embrace Christianity, and she gave all her influence to the efforts put forth by the missionaries to establish and spread the Christian religion.

A little later, in 1827 I believe, two Catholic missionaries, Messrs. Bachelot and Short, arrived at Honolulu; they established themselves there at first without opposition, and, as all the inhabitants testify, their public and private conduct was always exemplary. Mild, affable, humble, devoting themselves without ambition and without selfishness to their work of regeneration, they soon made a great number of proselytes. Then the Protestant missionaries began to believe that the competition of the Catholic missionaries would become dangerous, and they took measures to arrest it. One day in 1832, the two missionaries were dragged from their residence by order of Kaahumanu, put on board a Hawaiian vessel, and, after a month's voyage during which they suffered the greatest privations, they were landed on the coast of California, forty miles from any habitation, without food, without water, and without arms to defend themselves against the wild beasts.

The French government were never, I think, made acquainted with this affair, which demanded, perhaps, its intervention. These meek and peaceful men were doubtless unwilling to draw the severity of our government upon this country. They might also, without sufficient reason, have believed that after the revolution of July, two poor, persecuted missionaries would not be believed. If such was their belief, they were in an error, and the protection of France would certainly not have been withheld from them, if the matter had come to the knowledge of the government; they will find evidence of this in the measures which will doubtless be taken to prevent a recurrence of similar acts.* The present is not a period of religious persecutions. I have been assured that the order for the embarkation [of the two Catholic priests] and the arrangements which accompanied it were written entirely by the hand of a missionary known at Honolulu. I can hardly believe, notwithstanding, that in the nineteenth century, men belonging to a free and enlightened nation could resolve to give such an example of persecution and intolerance. Messrs. Bachelot and Short are still in California, as I have been informed.

The alarm felt in Honolulu on the arrival of the Bonite was from the fear that she had come to demand satisfaction for this injustice. Mr. Walch, an Irish Catholic missionary had arrived, a few days before and received a verbal order to depart immediately; but, in accordance with the advice of the English consul, he had refused to obey unless he should receive a written order. This order was to be sent him the day that we arrived; but the presence of the Bonite, doubtless, produced a change in the intentions of Kinau. The order was not sent, and sixteen days after, at the time of our departure, Mr. Walch had not only not received it, but there had been nothing more said to him about leaving. As an English sloop-of-war, the Acteon, arrived at Honolulu the day that we sailed, it is not probable that Mr. Walch will experience any further molestation. But the proselytes made by the two Catholic missionaries were cruelly persecuted. All who would not abjure the Catholic faith were cast into prison and sentenced to the basest labors.—Some of them are still groaning in dungeons.

When mention was made to the king of the violence enacted against the Catholic missionaries, he replied that this act had taken place under the regency of Kaahumanu, that he had nothing at all to do with it, and that, consequently, he could not be held responsible. He furthermore added that he was aware of the fact that almost all the wars which had disquieted the states of Europe,

* Since this account was written, the French government have sent a frigate to the Sandwich Islands; the commandant of this ship has taken evidence, upon the spot, of this scandalous abuse of power, and there is every reason to believe that for the future, the character of French and of Catholic will not be a cause of oppression in these islands.

were occasioned by the co-existence of two rival religions. The Presbyterian religion having first been taught on the Sandwich Islands, another religion, he said, could not be admitted; and it was only in this way that he could preserve tranquility among his people: one religion was abundantly sufficient for 100, or 150,000 inhabitants. Kauikeaouli, in speaking thus, gave evidence of great wisdom; and moreover, of a knowledge of history which I should not have suspected. I cordially approve of the principle advocated by the king; but those who taught him so fine a sentiment should have added that in the United States there is a greater variety of religious opinions perhaps than in any other country; that the Catholics are not persecuted there; and that the nation is not, on account of religion, desolated with civil war; that intolerence is the primary cause of disorders; and that in violating the individual liberty of the Catholic missionaries, and in banishing them by an arbitary act, Kaahumanu perpetrated a deed of hateful intolerence.

At the present time, the Presbyterian religion is spread over all the Sandwich Islands, that is, the natives, on the sabbath, attend religious worship in the churches of the Presbyterian missionaries; but unfortunately, with very few exceptions, this conversion is almost always entirely nominal. Indeed, the natives are not yet in a condition to understand their new religion; moreover, it is presented to them under an aspect too severe and mystical. In all places at a distance from the residence of the missionaries, the islanders have preserved, if not the barbarous customs of their old religion, at least their absurd superstitions. The work is then only commenced; but the force of circumstances, in spite of the system pursued by the missionaries, will work out for this people those moral and physical improvements, which a better management would have secured much sooner.

The missionaries of the different Islands assemble every year at Honolulu; a schooner which belongs to the mission goes for them to their different places of residence. This is a sort of annual council where each one reports the results of his labors during the year, and where they concert measures for the future. All the Missionaries of the Sandwich Islands are Americans, as all those of the Society Islands are English. It is by a kind of tacit agreement that the clergy of these two nations have divided the spiritual domination, and I am almost ready to add, the temporal also, of the Islands of the Pacific.

Lahaina on the Island of Maui may be considered as the capital of the mission. It is there that the missionaries have their principal establishment and their high school, a sort of nursery where are trained the monitors who are to assist the missionaries in their labors.

There is a printing office at Lahaina and two at Honolulu, one of which belongs to the mission and the other, to the editor of a newspaper published in English and called *The Sandwich Island Gazette*. The Gazette is a weekly paper, edited by an American, and opposed to the missionaries. The *Ke Kumu* (flambeau, professor) a newspaper published in Hawaiian by the missionaries, contains nothing but the notices of the arrival and sailing of vessels, and extracts from religious works. I observed that among the very great number of books printed in Hawaiian, very few had reference to the progress of industry, or of science: all, with the exception of a few elementary works of arithmetic and geography, were on religious subjects, such as commentaries on the Bible, catechisms for the use of the natives, or hymn books. I do not, by any means, deny the utility of these works, nor their indispensable necessity even; but I can give no reason why the missionaries, always so zealous and persevering in their religious duties, have altogether neglected to impart to the Islanders any notions of industry, of the mechanic arts, of manufactures, and of agriculture; notions, without which, the natives can derive no advantage from civilization. I testified my surprise that I had not found any knowledge of history among the chiefs, and the answer was made that in reading the history of other nations, the natives would only learn too soon to be corrupt and perverse; that it would be better, for civilization to enter the country by a purer medium, and that those who had charge of the mission would know when it would be a suitable time to make known to the inhabitants of the Sandwich Islands the history of the nations of the old world, taking care to prune off every thing having a tendency to awaken polluting ideas in the readers. In the mean time, this people coming in daily contact with runaway sailors and with vagrants, and who see, with but very few exceptions, only the refuse of society, are becoming contaminated by this ruinous intercourse without being able to oppose to the evil the natural defence which is found in the occupations of industry and in a more enlarged and liberal education.

The best means of rendering the new religion dear to this people would have been to demonstrate to them that their present condition could only be improved by the change: but they have experienced, even to this day only the privations and the sternness of the religion which has been imposed upon them. It has subjected them to a life to which they were not accustomed; it demands a large part of the time which they are able to devote to labor; it forbids their engaging in the sports and amusements to which they were attached; and as an offset, it offers them nothing but purely metaphysical advantages which they can neither appreciate nor conceive of.

Moreover, this people, which early navigators represented as so happy in their nakedness, seemed to us to be miserable under the rags with which civilization has covered them. What then has been gained by the change? When Cook discovered the Sandwich Islands he found the inhabitants cheerful and happy. Their enjoyment was material, it is true; with mental pleasures they were unacquainted. Living with scarcely the least reference to the future, they were not even conscious of their dignity as men.

They have been deprived of their sensual enjoyments, and mental pleasures have not been furnished for them. I know that civilization always commences in this way, and that it must destroy barbarism in order to create upon its ruins. But has all been done that ought to be done? Has the path, pointed out by reason, humanity, and even by the interests of religion, been pursued?—Surely not; and where it has not, the natives will be found to regret their ancient customs and to undervalue the benefits of civilization. It was not requisite that they should hear the mystic language of the Bible; their minds were not sufficiently mature to comprehend these sublime truths. It was enough for them to learn the fundamental doctrines of the Christian religion, those simple and pure doctrines which they could easily understand. It was necessary to put forth efforts for the physical well-being of the people, to enjoy speedily the fruits of that civilization which has been brought to them. The missionaries would have been able to use their unlimited influence in order to do away those despotic institutions which give up the fortunes of the natives to the caprice of a chief, and to replace them by wise and liberal laws. How could the citizens of a free people suffer such abuses to exist? Were they afraid of going too far and of compromising their influence? They have, forsooth, managed this people as they pleased. They have taken from them their costume, their habits and religion.—They have seen the high priest himself proclaiming the weakness of the gods and, at their word, applying the torch to those temples and idols by which he governed the people; and they have been afraid to meddle with the absurd laws which were enacted in times of despotism and barbarism; in times, however, when the caprice and cupidity of the chiefs being necessarily limited, those laws were far less oppressive than at present! Verily the system pursued in the Sandwich Islands cannot be too severely condemned, when the consequences are considered.

In fine, although the property of the citizen should be made inviolable; although just bounds should be placed to the despotism of the chiefs, yet, at the same time, the development of commerce, of industry, and of agriculture ought to be patronized in every possible way; and to accomplish this foreigners ought to be invited in and encouraged. To throw obstacle upon obstacle in the way of their establishment in the country, as has been done, was not sound policy.

But, the objection will be made, *it is foreigners that have corrupted the native population.* I admit it, and that was the first effect that the contact of civilization ought to produce. It was an inevitable evil; but the only possible remedy should have been applied, and in the very cause of the evil the remedy was to be found. You should either have left this savage people as you found them and withdrawn from them; or else you should have drawn them away from the pernicious influence of the only European society known to them; and the settlement in the country of industrious foreigners, merchants, agriculturists, &c., could only bring about this result. Is it to be believed that savages can take examples in morals from the sailors of whale ships?

Note by the Editor.—We have heard the remark that "notes and corrections" should have accompanied these translations. It has not escaped our observation that M. Adolph Barrot evinces but a limited knowledge of facts, in many of his statements, but so much having already been written upon the Sandwich Islands, we have preferred to leave our readers to consult the numerous books and publications relating to the points treated upon in these successive articles.

M. Barrot takes occasion to censure the American Missionaries upon one point in this number that we think might as well have been passed over, by one who omits no occasion wherein he may extol the Catholic Missionaries, "mild, affable, humble, devoting "themselves without ambition and without "selfishness to their work of regeneration."

The point we refer to is that of not printing more books in the Hawaiian language, upon "the progress of industry or science," and a less number upon "religious subjects "such as commentaries on the Bible, cate-"chisms for the use of the natives, and "hymn books." Whether the American Missionaries have been particularly censurable in this respect, we leave our readers to infer by perusing the following catalogue of publications issued from the American Mission Press previous to 1845 :

Elementary Lessons.	First Teacher for children.
Decalogue and Lord's Prayer.	Tract on Astronomy.
Scripture Doctrines.	Maps of Sacred Geography.
Thoughts of the Chiefs.	Sixteen Sermons.
Sermon on the Mount.	Tract of Lying.
Hawaiian Hymns.	Attributes of God.
First book for Children.	First book for teaching Eng.
Universal Geography.	Moral Science
New Testament.	Key to Colburn.
Fowle's Child's Arithmetic.	Heavenly Manna.
Animals of the earth.	Hymns for children.
Catechism on Genesis	Hawaiian History.
Geometry for children.	Colburn's Algebra.
Tract on Marriage.	Anatomy.
Sacred Geography.	Scripture lessons.
Geographical questions.	Mathematics. Geometry, Trigonometry. Mensuration, Surveying, and Navigation.
Bible class book.	
Colburn's arithmetic.	
History of beasts.	Tract on Intemperance.
Lama Hawaii, newspaper.	Bible class book, vol ii.
Hawaiian almanac.	" " vol iii.
Vocabulary.	Keith's study of the globes.
Compend of Ancient History.	Volume of Sermons.
Union questions.	Sandwich Islands Laws.
Colburn's Sequel.	English and Hawaiian lessons
History of Beasts for children	Keith on the prophecies.
Hawaiian Teacher.	Dying testimony of christians and infidels.
Child's Teacher.	
Daily food	Bailey's Algebra.
Jawaiian Grammar.	Reading book for schools.
First reading book for children.	Messenger, semi-monthly
Tract on the Sabbath.	History of the S I in Eng.
Maps of U. Geography.	Hawaiian Bible.
Scripture chronology & hist.	Child's book on the soul.
Hymns revised and enlarged.	Natural Theology.
Hymns with tunes.	Nonanona, newspaper.
Linear Drawing.	Articles of faith and covenant.
Little Philosopher.	Church History.
Eng and Hawaiian Grammar.	Moral Philosophy.
Tract on Popery	Pilgrim's Progress.

We regret our inability to place beside this catalogue the list of publications issued from the Catholic Press. We have never met with but two or three small publications, printed at that Press, and they were *most strictly confined to the peculiar tenets of the Romish Church.*

We think if the Hawaiians had been left to derive their knowledge of "industry and "science," "history and the world," from the publications of the Catholic Press, it would have been far less than it is at present.

FRIEND OF TEMPERANCE.

Cheap vs. Dear Spirits.

We occasionally meet with persons, who claim for themselves the most cordial good wishes for public morals and temperance, yet assert that it makes no difference whether spirits are cheap or dear, in regard to the amount of drunkenness. Their argument is, make spirits cheap, and those who drink will not care so much about them, besides when spirits are held at a high price, in consequence of high duties, it holds out a great temptation to smugglers. Our readers are aware of the forcible attempts which were made by the French, one year since, to compel the Hawaiian Government to diminish the duty on French Brandy. Had that attempt been successful, it is our honest belief it would have done immense injury to the numerous seamen visiting this port.

The following extract is taken from a private letter which we have recently received from the Rev. E. E. Adams, American Seamen's Chaplain, at Havre, in France :

"I am safe in saying that a third of the sailors now in port have been intoxicated this week. Wherever I go, I meet men lying on floors, in the streets, in the forecastles, perfectly helpless and senseless ; but brandy is so CHEAP and the temptations are so abundant, that although many make the most solemn resolutions and take pledges, yet they go with the pledge in their pocket to the dram shop. The last month we had four hundred sailors, and they were generally very steady, and my visits among them produced an effect so visible that the captains and consul gave me united testimony of their gratitude and interest. But it is often up-hill work. They swear at me—play cards in the midst of my evening meetings, walk up and down the room with their thumbs at their noses, and saying, 'go preach to the captains.' This does not last long, for I am sure to preach them down, and then they are ashamed and beg my pardon."

If the state of things is any better in Honolulu, I am confident we owe it, in part, at least, to the high price of intoxicating drinks and the heavy penalties imposed upon the publicans unless they keep within the strict letter of the law, which is very explicit, in regard to the sale of intoxicating liquors to natives, and the closing of their shops at night. The simple truth is, unless King Alcohol is fettered and handcuffed by stringent police regulations and wholesome laws, there is no peace in the community where His Rebel Majesty exerts an influence. Only contemplate the hubbub that was recently produced in the town of Adelaide, South Australia, because an humble editor presumed to inform his readers that a wealthy person had "unhappily fell into habits of intemperance" and in consequence died.

An Editor in Trouble.

In glancing over a file of the daily "South Australian Register," published at Adelaide, a flourishing town in one of the British colonies of New Holland, our attention has been arrested by notices of a powerful combination of rum sellers, rum drinkers, and other friends of Old Alcohol, to crush the "Register," or make the Editor *mum* as regards the effects of intoxicating drinks. Mr. Stevens, the publisher of the Register, (daily) and Observer, (weekly) appears to have acquired great influence throughout the colony, and his papers to have a very extensive circulation. "The front of his offending" appears to be this—in the month of February last died in Adelaide, a person who had acquired considerable influence, and a large fortune, by his mercantile and mining enterprizes. His funeral was attended by an immense crowd of the people of Adelaide. In preparing an obituary notice, the editor refers in most laudatory language to the superior "mercantile qualifications," "the sound education," and other desirable traits of character possessed by the deceased, rendering him a favorite among the colonists. He was comparatively a young man in the prime of life, but had unquestionably fallen a victim to intemperance. To which failing the editor thus alludes :

"The large and sudden accumulation of property, however, proved a snare, and the deceased unhappily fell into habits of intemperance, which beclouded the latter portion of his life, and undermining a fine natural constitution, "brought down his strength in his journey and shortened his days." It is consolatory, however, to know, that in his last moments he was able to express contrition, and his sorrowing friends have hope in his death."

For writing this paragraph, a portion of the colonists have vowed vengeance. The subject is exciting much interest in parts of the colony away from Adelaide. Public meetings have been called, and "the people" declare that the editor of the Register shall not be crushed, although the venders of strong drink declare that they will no longer advertise in the columns of the Register or Observer. In our humble opinion, the character of Mr. Stephens' papers would be decidedly improved by this withdrawal of "rum notices."

While all due respect should be paid to the feelings of surviving friends, in noticing the deaths of those who have unquestionably shortened their lives in consequence of their intemperate habits, yet we can well conceive that there may be instances where an editor ought not to keep silence, but for the good of the living, for the welfare of the young, the truth should be told. It seems strange, that editors, ministers, physicians, moralists, and every body else, may talk, and write about the causes of death, with this exception, if a person dies through intemperance, *not a word must be said or written !* Kill a man with a knife, shoot him with a gun, strangle him with a hair, hang him with a rope, let him die of hunger, poison, thirst, or cold, let him kill himself, be killed by another, or die a natural death, or fall by any of the nine hundred and ninety nine ills that afflict mankind, it is proper to publish long

and detailed accounts, but if the rum sellers' poisons despatch a fellow mortal, it is highly improper to say a word, or write a sentence. Oh, no, let brandy slay its thousands, and even its tens of thousands, not a word must be uttered, no note of warning be sounded. At such times, the rum-seller and his abettors, are remarkably tender of the feelings of the friends of the deceased drunkard! Pity they were not equally sensitive while pursuing a traffic that has filled the world with lamentation, wrung the widow's heart with grief, and left the orphan a beggar!

THE FRIEND.

HONOLULU, SEPTEMBER 1, 1850.

POLYNESIA.

Strong's Island.—Capt. Calott, commanding "Hobeoricok," 67 days from Strong's Island informs us that he came nearly direct, and that 60 days would be about an average passage form thence to Honolulu. He estimates the population at 1,500 natives, and reports 4 foreigners living there, and thinks a Missionary would be well received and protected by the King. He thinks that the passage hence, to Strong's Island would not exceed 15 days. The Island is fertile and mountanous, and about 60 miles in circumference. The population is now decreasing, through the prevalence of colds, consumption and other diseases.

Ascension Island.—Capt. Hull of the Romulus, visited this Island, last Spring, and reports, that from information that might be relied upon, a Missionary would be well received and protected by the Chiefs. There are about 150 foreigners residing upon the Island. Ships can be well supplied with yams, hogs, and fowls, at low prices. Ascension Island is about 5° to the Eastward of Strong's.

Catherine's Island.—The Pacific News reports "The ship William Melville arrived late, from Lancaster, Van Dieman's Land. On the voyage she touched at Catherine's Island, (one of Patterson's group) the 13th May, for the purpose of obtaining a supply of fresh water, and the natives decoyed the crew to the bush, and murdered two men, passengers, Mr. Francis Lecoy and Daniel McQueeny, of Lancaster. The other four men who were ashore escaped by swimming off to the vessel, as the natives had captured the boat and hauled it ashore. We should not wonder if John Bull will yet give these savages a severe chastisement for this outrage."

Marquesas Islands.—It was lately reported that the French Authorities had abandoned the group, and removed their moveable property to Tahiti. Only an old Padre remaining. According to more recent intelligence, we learn that "the Republic of France has established a Botany Bay for the safe keeping of her criminals. The law fixes the Marquesas Islands as the place of punishment,—providing that the punishment for political offences hitherto punished by death, shall be the detention in a fortified enclosure sufficiently large for agricultural labor, though such as to subject the prisoners still to police regulation."

The Evening Picayune.—This is the sixth daily paper now issued in San Francisco. Like the other dailies published there, it presents a remarkably neat typographical page. It is a most striking fact that in the short space of less than one year six daily papers should be started and sustained in a city, where the streets are, as yet, unpaved, and the side-walks unlaid. The Picayune is published by Guihon & Co., and edited by P. A. Brinsmade, Esq. May success crown the most sanguine expectations of both publishers and editor. We can, at this remote distance, perceive but one drawback upon the enterprise, which is that the publishers propose issuing "The Sunday Morning Review." To edit, publish, sell and distribute a Sunday paper appears to be so flagrant a violation of the command, "Remember the Sabbath day to keep it holy," that we are by no means inclined to wish the publishers and editor success in this part of their enterprise. Before embarking funds in the publication of a Sunday paper, even in a pecuniary point of view, we think it would be well 'to count the cost.' 'Thus saith the Lord, *take heed to yourselves, that ye bear no burden on the Sabbath day.*' If editing and publishing a newspaper on the Sabbath is not *burdensome*, it is vastly different from the same description of labor on a week day.

Agricultural Convention.

We most sincerely regret that the narrow space which our small sheet affords for topics of this nature will not allow us to make a full report of the proceedings of the Convention. The Sessions were held on four successive days, at Maunakilika. On the evening of the first day, a large audience assembled at the Chapel, to listen to the opening address of Judge Lee, which was eloquently delivered, and prepared with care. A copy was requested for the press, and appeared in the Polynesian of August 17th.—No sooner had his tones ceased, amid manifestations of decided applause, than H. H. M. Minister of Foreign Relations, Mr. Wyllie, commenced speaking upon the same general topic, to the manifest delight and instruction of the audience. The speaker exhibited most interesting results of his Antiquarian researches into the annals of the Hawaiian Nation. His address was also requested for the press and has appeared in the Polynesian.

We availed onrselves of the privilege of attending most of the meetings of the Convention. Many of the discussions were able and instructive. It was interesting to hear men speak upon agricultural prospects of the Islands, who were not strangers to daily manual labor. The planters and farmers of the Islands are laboring and practical men. Committees were appointed to report on various branches of Agriculture, Horticulture, and kindred topics, at the next annual meeting, in August 1851;—when we believe there will be an exhibition that will do honor to the Islands.

The following officers were chosen for the ensuing year:—

President, Wm. L. Lee.

Vice President, Benjamin Pitman, G. S Kenway, *Hawaii;* L. L. Torbert, *Maui;* S. G. Dwight, *Molokai;* Stephen Reynolds, *Oahu;* Godfrey Rhodes, *Kauai.*

Treasurer; S. N. Castle.

Corresponding Secretary, E. P. Bond.

Recording Secretary, R. H. Bowlin, Esq.

Executive Committee, R. W. Wood, Chairman; J. F. B. Marshall, Wesley Newcomb, E. O. Hall, G. A. Lathrop.

In a few weeks will be published the 1st Report of the Proceedings of the "Royal Hawaiian Agricultural Society."

The first beneficial results of the Convention, we would mention, is an effort about to be made by the planters to introduce laborers from China.

France.—Our Correspondent at Havre, under date of April 29, writes as follows:—

"France is quiet, although, there are forbodings of some serious change. I do not apprehend any thing. The country is committed to Republicanism, and in spite of a strong monarchical feeling on the part of merchants and such like, there is an extreme democratic tendency on the part of most literary men. The worst thing in France is the spirit of persecution. It is difficult to distribute tracts and Bibles, *legally*, without being encountered by some ignorant major or bigotted priest. Yet the cause of true piety advances and there is a large demand for Evangelical preaching, and France is blest with some of the most eloquent protestant preachers of the day. We will hope that she may become as enlightened and free as her position requires and her privileges demand."

Shipwreck and Loss of Life.—The brig Frolic, of Boston, E. H. Faucon, master, from China, the 16th of June, was totally lost on a reef, about sixty miles above Fort Ross, on the night of the 26th ult. Six of the crew were lost in the vessel. The remainder landed about 5 or 6 miles from the reef, saving nothing but what they stood in. The captain and officers with three men

rqached Fort Ross in one of the boats, on the 31st. The rest of the crew are travelling down by land, as one of the boats proved to be very leaky, and the men perferred the land route. The reef on which the Frolic struck appeared to extend WNW and ESE, some two miles in extent and the eastern end of it a mile or two from the shore, which had the appearance of a light point with rocky islets fronting it. Below the point the land tended to the eastward. The Frolic struck the reef stern on, in eight fathoms water, and filled immediately. At the time the reef was first seen, the Frolic was steering ESE and the reef bore N. The wind very light from N to NNE. The Frolic was immediately hauled to SWW; but although she had steerage way, with the wind on her quarter, which was very light, and the swell setting to the SE, she was swept up by a strong tide, or current. Capt. F. reached this place yesterday. The Frolic was judged to be 50 or 60 miles from the nearest land at the time the reef was discovered. The Frolic was bound to this port with a valuable cargo of Chinese goods. The loss is estimated to be about $150,000.—[Alta California, Aug. 4.

The Case of Professor Webster.—In the Supreme Judicial Court, Chief Justice Shaw delivered the opinion of the Court in the case of the Commonwealth *vs.* John W. Webster, overruling each and every point raised by defendant's counsel, in support of their motion for a writ of error in said case, and deciding that all matters connected with the trial of the prisoner, had been conducted according to the prescribed forms of law, in relation to capital trials.—[Eve. Picayune.

New Caledonia Islands, S. Pacific.—A March No. of the Adelaide Observer, reports as follows:—

"More atrocities have been lately committed by the natives of New Caledonia and the neighbouring islands. At Effoo, a place about two miles distant from Bunkett, the following men belonging to boats employed in collecting sandal-wood were killed, in December last:—Mr. William Jordan, first mate, of Berwick-on-Tweed; John Allen, of Liverpool; Frederick Gardener, of London; John Burrows, of Glasgow; and Edward Ward, of Bristol, seamen.

"All the crew of the *Mary* cutter were killed in and near Balade harbor. On arrival there from Sydney, Captain Robey, of the *Mary*, sent a boat with Robert Hall, an American, and a native of Rotumah, to procure water. On getting up the river they were attacked by natives and killed. After this, two natives came on board the *Mary*, under pretence of selling fish, the cook went down in the hold to bring up some yams to exchange for the fish, and the captain's attention having been drawn to the fish in the canoe belonging to the natives, they split his head with a tomahawk; they then killed the cook as he was coming out of the hold. The only man now left alive on board the *Mary* was a Rotumah man, whom the natives would not eat, because of a disease in his eyes which rendered him almost blind.

"They cooked the bodies of the captain and crew ashore, and ate them; after which they burned the vessel to the water's edge. This is the statement of the Rotumah man, who managed to make his escape from the cannibals to Yengin, and who related the facts to Mr. Miller, who now takes up the narrative in person, and who writes from Mr. Fitzgerald's beche-le-mer establishment at the north end of New Caledonia, the members of which had since been driven away or massacred. The French Mission establishment at Yengin or Balade had shared the same fate.

A new Era in India.—We would acknowledge a file of the Friend of India, and from it are gratified to make the following extract:—

"The Act for the Establishment of Liberty of Conscience, became the law of the land on the 11th of April 1850, a day which will be memorable in the annals of British India as the 5th of December, 1829, when the rite of Suttee was abolished, and, for the first time in twenty centuries "the Ganges flowed unblooded to the sea."—Henceforward every man throughout India will be at liberty to profess whatever creed his conscience may incline him to without being reduced to beggary through the instrumentality of the Courts of justice. The inestimable value of this boon will be at once seen by a reference to the law of the land as it previously stood, and which is thus expounded by Sir William Macnaughten:—"Whatever property the individual, previously to his conversion, was possessed and seised of, will devolve on his nearest of kin who profess the Hindoo religion." It was impossible that so monstrous a violation of the first principles of religious liberty, could continue to be tolerated under the enlightened government of Britain, in the middle of the Nineteenth century; and the wonder is, not that it has been abolished now, but that it was not abolished before. One of the effects of this new law will be to remove all penalties from the profession of Christanity, and it is possible that when the profession of that creed becomes *safe*, it may also become more common."

Whaling Intelligence.—The Evening Picayune reports, whale ship Lafayette, Smith, of New Bedford, was lost on the Island of Albamare, Gallipagos Islands, 35 months out, 600 bbls sperm oil; she went ashore in the night; the captain was running in to come to an anchor when she struck a rock and became a total loss. The whale ship Golconda of New Bedford took the captain and mate with part of the crew; two boats crew had left the ship and nothing was known of them; bark Dryade, Fish, of N. Bedford, from Talcahuana on a cruise, clean; ship Lafayette of Warren, R. I. 400 bbls sperm oil on a cruise; ship Sharon of Fair Haven, 1000 bbls oil, on a cruise; Callao, Susson, of N. Bedford, 200 bbls sperm oil 8 months out; bark John A. Robb, Wimpeny, of Fair Haven, 4 months out, 100 bbls sperm oil, at anchor at Charles Island; Oregon, Wimpeny, of Fair Haven, 12 months out 400 bbls sperm oil. The steamer West Point sailed from San Carlos May 24, for this port via Panama.

POET'S CORNER.

For the Friend.

LINES TO DU PETIT THOUAR.

BY AN ENGLISHMAN.

All hail, Du Petit Thouar! Thy name
Stands foremost in the host
Of chivalry's bright roll of fame,
Thy country's pride and boast!

True to thy knighthood's stainless vow,
Thou the protector art,—
Oh proud and happy destiny!
Of gentle woman's heart.

Who but the brave Du Petit Thouar—
What land but thine own France,
For Ta'iti's hapless queen would care,
Or break for her a lance?

The meteor flag of colors three,
Waves gaily o'er thy head;
O'er Bruat too, and D'Aubigny,
Who it to glory led.

Mauritius first beheld thy fame,*
Thou pink of chivalry,—
But jealous Britain's merchant ships
Bade thee retreat full speedily.

Tahiti's isle next saw thy might,
And conscious of their doom,
Religion, peace, and truth, and right,
All wept to see thee come.

But what to thee are truth and right,
Or woman's falling tear?
Thy high career, thy glory bright,
From these no check need fear.

The Queen Pomare wept in vain,
Alas! she could no more;
And a new glory gilds the name
Of famed Du Petit Thouar.

The dames of France for this high deed
Their smiles upon thee shower'd,
And, surely in sarcastic mood,
Presented thee a sword!

But rest not here adventurous chief,
Marquesan hills are fair,
And helpless are their feeble tribes;
Haste with thy squadron there.

"I came and conquered"—thus mays't thou†
Thy brief despatches write:
Like his of old thy victories are,
Like his thy glories bright.

But not alone thy glorious name,
Though high above compare;
For Bruat bold, and D'Aubigny
Thy well earned fame must share.

Both dear alike to France and fame
These honor'd names we see,
One laurel twines them with thine own
In bright triumvire.

Haapape, and Harna too‡
Witness'd their fame in war;
And lighting on their dazzling swords,
New glories came from Faaa.

What though victory scorned to crown
Their banners with success;
Heroes before have beaten been,
Nor is their glory less.

Hail! honored three; in earth's wide bounds,
Wher'er fair woman lives,
A halo your bright names surrounds
That deathless glory gives.

---

* At the Mauritius the gallant Admiral, in his high zeal for the honor of France, was riding the high horse till his arrogant pretensions met with a sudden and effectual check in the spirited conduct of some British East Indiamen, and he thought it advisable to quit the harbor to save himself the disgrace being driven out.

† "Veni, vidi, vici," wrote the illustrious Roman.

‡ Haapape, better known as Point Venus Harna or Mahaena, and Faaa; three places where the invincible warriors of France met with a severe repulse from the poor, undisciplined Tahitians. These reverses, however, were more than counterbalanced by the glories of Mogadore. Vide Gov. Bruat's proclamation.

TREATY.

KAMEHAMEHA III., King of the Hawaiian Islands, to all to whom these presents shall come, GREETING:

KNOW YE, that whereas a treaty of Friendship, Commerce, and Navigation, between our Kingdom and the United States of North America, was concluded and signed by our and their Plenipotentiaries, in the city of Washington, on the 20th day of December, 1849, which treaty is word for word as follows:

The UNITED STATES OF AMERICA and His MAJESTY the KING of the HAWAIIAN ISLANDS, equally animated with the desire of maintaining the relations of good understanding which have hitherto so happily subsisted between their respective states, and consolidating the commercial intercourse between them, have agreed to enter into negotiations for the conclusion of a treaty of Friendship, Commerce and Navigation, for which purpose they have appointed Plenipotentiaries, that is to say:

The President of the United States of America, John M. Clayton, Secretary of State of the United States; and His Majesty the King of the Hawaiian Islands, James Jackson Jarves, accredited as His special commissioner to the Government of the United States; who, after having exchanged their full powers, found in good and due form, have concluded and signed the following articles:

ARTICLE 1. There shall be perpetual peace and amity between the United States and the King of the Hawaiian Islands, His heirs and His successors.

ARTICLE 2. There shall be reciprocal liberty of commerce and navigation between the United States of America and the Hawaiian Islands.

No duty of customs, or other impost, shall be charged upon any goods, the produce or manufacture of one country, upon importation from such country into the other, other or higher than the duty or impost charged upon goods of the same kind, the produce or manufacture of, or imported from, any other country; and the United States of America and His Majesty the King of the Hawaiian Islands do hereby engage, that the subjects or citizens of any other state shall not enjoy any favor, privilege, or immunity whatever, in matters of commerce and navigation, which shall not also, at the same time, be extended to the subjects or citizens of the other contracting parties gratuitously, if the concession in favor of that other state shall have been gratuitous, and in return for a compensation, as nearly as possible, of proportionate value and effect, to be adjusted by mutual agreement, if the concession shall have been conditional.

ARTICLE 3. All articles the produce and manufacture of either country which can legally be imported into either country from the other, in ships of that other country, and thence coming, shall, when so imported, be subject to the same duties, and enjoy the same privileges, whether imported in ships of the one country, or in ships of the other; and in like manner, all goods which can legally be exported or re-exported from either country to the other, in ships of that other country, shall, when so exported or re-exported, be subject to the same duties, and be entitled to the same privileges, drawbacks, bounties, and allowances, whether exported in ships of the one country or in ships of the other; and all goods and articles, of whatever description, not being of the produce or manufacture of the United States, which can be legally imported into the Sandwich Islands, shall, when so imported in vessels of the United States, pay no other or higher duties, imposts or charges, than shall be payable upon the like goods, and articles, when imported in the vessels of the most favored foreign nation other than the nation of which the said goods and articles are the produce or manufacture.

ARTICLE 4. No duties of tonnage, harbor, light houses, pilotage, quarantine, or other similar duties, of whatever nature, or under whatever denomination, shall be imposed in either country upon the vessels of the other, in respect of voyages between the United States of America and the Hawaiian Islands, if laden, or in respect of any voyage, if in ballast, which shall not be equally imposed in the like cases on national vessels.

ARTICLE 5. It is hereby declared, that the stipulations of the present treaty are not to be understood as applying to the navigation and carrying trade between one port and another situated in the states of either contracting party, such navigation and trade being reserved exclusively to national vessels.

ARTICLE 6. Steam vessels of the United States which may be employed by the Government of the said states, in the carrying of their public mails across the Pacific Ocean, or from one port in that ocean to another, shall have free access to the ports of the Sandwich Islands, with the privilege of stopping therein to refit, to refresh, to land passengers and their baggage, and for the transaction of any business pertaining to the public mail service of the United States, and shall be subject in such ports to no duties of tonnage, harbor, light houses, quarantine, or other similar duties of whatever nature or under whatever denomination.

ARTICLE 7. The whaleships of the United States shall have access to the ports of Hilo, Kealakekua and Hanalei, in the Sandwich Islands, for the purposes of refitment and refreshment, as well as to the ports of Honolulu and Lahaina, which only are ports of entry for all merchant vessels, and in all the above named ports, they shall be permitted to trade or barter their supplies or goods, excepting spirituous liquors, to the amount of two hundred dollars *ad valorem* for each vessel, without paying any charge for tonnage or harbor dues of any description, or any duties or imposts whatever upon the goods or articles so traded or bartered. They shall also be permitted, with the like exemption from all charges for tonnage and harbor dues, further to trade or barter, with the same exemption as to spirituous liquors, to the additional amount of one thousand dollars, *ad valorem*, for each vessel, paying upon the additional goods, and articles so traded and bartered, no other or higher duties, than are payable on like goods and articles, when imported in the vessels and by the citizens or subjects of the most favored foreign nation. They shall also be permitted to pass from port to port of the Sandwich Islands for the purpose of procuring refreshments but they shall not discharge their seamen or land their passengers in the said Islands, except at Lahaina and Honolulu, and, in all the ports named in this article, the whaleships of the United States shall enjoy in all respects whatsoever, all the rights, privileges and immunities, which are enjoyed by, or shall be granted to, the whaleships of the most favored foreign nation. The like privilege of frequenting the three ports of the Sandwich Islands, above named in this article, not being ports of entry for merchant vessels, is also guaranteed to all the public armed vessels of the United States. But nothing in this article shall be construed as authorizing any vessel of the United States, having on board any disease usually regarded as requiring quarantine, to enter, during the continuance of such disease on board, any port of the Sandwich Islands, other than Lahaina or Honolulu.

ARTICLE 8. The contracting parties engage, in regard to the personal privileges that the citizens of the United States of America shall enjoy in the dominions of His Majesty the King of the Hawaiian Islands, and the subjects of His said Majesty in the United States of America, that they shall have free and undoubted right to travel and to reside in the states of the two high contracting parties, subject to the same precautions of police which are practiced towards the subjects or citizens of the most favored nations. They shall be entitled to occupy dwellings and warehouses, and to dispose of their personal property of every kind and description, by sale, gift, exchange, will, or in any other way whatever, without the smallest hindrance or obstacle; and their heirs or representatives, being subjects or citizens of the other contracting party, shall succeed to their personal goods, whether by testament or ab intestato; and may take possession thereof, either by themselves, or by others acting for them, and dispose of the same at will, paying to the profit of the respective governments such dues only as the inhabitants of the country wherein the said goods are, shall be subject to pay in like cases. And in case of the absence of the heirs and representative, such care shall be taken of the said goods as would be taken of the goods of a native of the same country in like case, until the lawful owner may take measures for receiving them. And if a question should arise among several claimants as to which of them said goods belong, the same shall be decided finally by the laws and judges of the land wherein the said goods are. Where, on the decease of any person holding real estate within the territories of one party, such real estate would, by the laws of the land, descend on a citizen or subject of the other, were he not disqualified by alienage, such citizen or subject shall be allowed a reasonable time to sell the same, and to withdraw the proceeds without molestation, and exempt from all duties of detraction on the part of the government of the respective states. The citizens or subjects of the contracting parties shall not be obliged to pay, under any pretence whatever, any taxes or impositions, other or greater than those which, are paid, or may hereafter be paid, by the subjects or citizens of the most favored nations in the respective states of the high contracting parties. They shall be exempt from all military service, whether by land or by sea; from forced loans, and from every extraordinary contribution not general and by law established. Their dwellings, warehouses, and all premises appertaining thereto, destined for the purposes of commerce or residence, shall

be respected. No arbitrary search of, or visit to their houses, and no arbitrary examination or inspection whatever of the books, papers or accounts of their trade, shall be made; but such measures shall be executed only in conformity with the legal sentence of a competent tribunal; and each of the two contracting parties engages that the citizens or subjects of the other residing in their respective states, shall enjoy their property and personal security, in as full and ample manner as their own citizens or subjects, or the subjects or citizens of the most favored nation, but subject always to the laws and statutes of the two countries respectively.

Article 9. The citizens and subjects of each of the two contracting parties shall be free in the states of the other to manage their own affairs themselves, or to commit those affairs to the management of any persons whom they may appoint as their broker, factor or agent, nor shall the citizens and subjects of the two contracting parties be restrained in their choice of persons to act in such capacities, nor shall they be called upon to pay any salary or remuneration to any person whom they shall not choose to employ. Absolute freedom shall be given in all cases to the buyer and seller to bargain together and to fix the price of any goods or merchandize imported into, or to be exported from the states and dominions of the two contracting parties; save and except generally such cases wherein the laws and usages of the country may require the intervention of any special agents in the states and dominions of the contracting parties. But nothing contained in this or any other article of the present treaty shall be construed to authorize the sale of spirituous liquors to the natives of the Sandwich Islands farther than such sale may be allowed by the Hawaiian laws.

Article 10. Each of the two contracting parties may have, in the ports of the other, consuls, vice consuls, and commercial agents, of their own appointment, who shall enjoy the same privileges and powers with those of the most favored nation; but if any such consuls shall exercise commerce, they shall be subject to the same laws and usages to which the private individuals of their nation are subject in the same place. The said consuls, vice consuls, and commercial agents are authorized to require the assistance of the local authorities for the search, arrest, detention, and imprisonment of the deserters from the ships of war and merchant vessels of their country. For this purpose, they shall apply to the competent tribunals, judges and officers, and shall in writing demand the said deserters, proving, by the exhibition of registers of the vessels, the rolls of the crews, or by other official documents, that such individuals formed part of the crews; and this reclamation being thus substantiated, the surrender shall not be refused. Such deserters, when arrested shall be placed at the disposal of the said consuls, vice consuls or commercial agents, and may be confined in the public prisons at the request and cost of those who shall claim them, in order to be detained until the time when they shall be restored to the vessel to which they belonged, or sent back to their own country by a vessel of the same nation or any other vessel whatsoever. The agents, owners or masters of vessels on account of whom the deserters have been apprehended, upon requisition of the local authorities shall be required to take or send away such deserters from the states and dominions of the contracting parties, or give such security for their good conduct as the law may require. But if not sent back nor reclaimed within six months from the day of their arrest, or if all the expenses of such imprisonment are not defrayed by the party causing such arrest and imprisonment, they shall be set at liberty and shall not be again arrested for the same cause. However, if the deserters should be found to have committed any crime or offence, their surrender may be delayed until the tribunal before which their case shall be depending, shall have pronounced its sentence, and such sentence shall have been carried into effect.

Article 11. It is agreed that perfect and entire liberty of conscience shall be enjoyed by the citizens and subjects of both the contracting parties, in the countries of the one and the other, without their being liable to be disturbed or molested on account of their religious belief. But nothing contained in this article shall be construed to interfere with the exclusive right of the Hawaiian Government to regulate for itself the schools which it may establish or support within its jurisdiction.

Article 12. If any ships of war or other vessels be wrecked on the coasts of the states or territories of either of the contracting parties, such ships or vessels, or any parts thereof, and all furniture and appurtenances belonging thereunto, and all goods and merchandise which shall be saved therefrom, or the produce thereof if sold, shall be faithfully restored with the least possible delay to the proprietors, upon being claimed by them, or by their duly authorized factors; and if there are no such proprietors or factors on the spot, then the said goods and merchandise, or the proceeds thereof, as well as all the papers found on board such wrecked ships or vessels, shall be delivered to the American or Hawaiian consul, or vice consul, in whose district the wreck may have taken place; and such consul, vice consul, proprietors or factors, shall pay only the expenses incurred in the preservation of the property, together with the rate of salvage and expenses of quarantine which would have been payable in the like case of a wreck of a national vessel; and the goods and merchandise saved from the wreck shall not be subject to duties unless entered for consumption; it being understood that in case of any legal claim upon such wreck, goods or merchandise, the same shall be referred for decision to the competent tribunals of the country.

Article 13. The vessels of either of the two contracting parties which may be forced by stress of weather or other cause into one of the ports of the other, shall be exempt from all duties of port or navigation paid for the benefit of the state, if the motives which led to their seeking refuge be real and evident, and if no cargo be discharged or taken on board, save such as may relate to the subsistence of the crew, or be necessary for the repair of the vessels, and if they do not stay in port beyond the time necessary, keeping in view the cause which led to their seeking refuge.

Article 14. The contracting parties mutually agree to surrender, upon official requisition, to the authorities of each, all persons who, being charged with the crimes of murder, piracy, arson, robbery, forgery or the utterance of forged paper, committed within the jurisdiction of either, shall be found within the territories of the other; provided, that this shall only be done upon such evidence of criminality as, according to the laws of the place where the person so charged shall be found, would justify his apprehension and commitment for trial if the crime had there been committed; and the respective judges and other magistrates of the two governments, shall have authority, upon complaint made under oath, to issue a warrant for the apprehension of the person so charged, that he may be brought before such judges or other magistrates respectively, to the end that the evidence of criminality may be heard and considered; and if, on such hearing, the evidence be deemed sufficient to sustain the charge, it shall be the duty of the examining judge or magistrate to certify the same to the proper executive authority, that a warrant may issue for the surrender of such fugitive. The expense of such apprehension and delivery shall be borne and defrayed by the party who makes the requisition and receives the fugitive.

Article 15. So soon as steam or other mail packets under the flag of either of the contracting parties, shall have commenced running between their respective ports of entry, the contracting parties agree to receive at the post offices of those ports all mailable matter, and to forward it as directed, the destination being to some regular post office of either country; charging thereupon the regular postal rates as established by law in the territories of either party receiving said mailable matter, in addition to the original postage of the office whence the mail was sent. Mails for the United States, shall be made up at regular intervals at the Hawaiian post office, and despatched to ports of the United States, the postmasters at which ports shall open the same, and forward the enclosed matter as directed, crediting the Hawaiian Government with their postages as established by law and stamped upon each manuscript or printed sheet.

All mailable matter destined for the Hawaiian Islands shall be received at the several post offices in the United States and forwarded to San Francisco or other ports on the Pacific coast of the United States, whence the postmasters shall despatch it by the regular mail packets to Honolulu, the Hawaiian Government agreeing on their part to receive and collect for and credit the post office department of the United States with the United States rates charged thereupon. It shall be optional to prepay postage on letters in either country, but postage on printed sheets and newspapers shall in all cases be prepaid. The respective post office departments of the contracting parties shall, in their accounts, which are to be adjusted annually, be credited with all dead letters returned.

Article 16. The present treaty shall be in force from the date of the exchange of the ratifications for the term of ten years, and further, until the end of twelve months after either of the contracting parties shall have given notice to the other of its intention to terminate the same, each of the said contracting parties reserving to itself the right of giving such notice at the end of the said term of ten years, or at any subsequent term.

Any citizen or subject of either party infringing the articles of this treaty shall be

held responsible for the same and the harmony and good correspondence between the two governments shall not be interrupted thereby, each party engaging in no way to protect the offender or sanction such violation.

Article 17. The present treaty shall be ratified by the President of the United States of America, by and with the advice and consent of the Senate of the said States, and by His Majesty, the King of the Hawaiian Islands, by and with the advice of His Privy Council of State, and the ratifications shall be exchanged at Honolulu within eighteen months from the date of its signature, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same in triplicate, and have thereto affixed their seals. Done at Washington, in the English language, the twentieth day of December, in the year one thousand eight hundred and forty nine.

[Seal.] JOHN M. CLAYTON.
[Seal.] JAMES JACKSON JARVES.

And whereas We have carefully examined all the points and articles thereof, by and with the advice of Our Privy Council of State, We have confirmed and ratified the foregoing treaty, and We do confirm and ratify the same, in the most effectual manner, promising on Our faith and word as King, for us and Our successors, to fulfil and observe it, faithfully and scrupulously in all its clauses.

In faith of which We have signed this ratification with Our own hand, and have affixed thereto the geat seal of Our Kingdom.

Given at Our palace of Honolulu, this nineteenth day of August, in the year of our Lord one thousand eight hundred and fifty, and in the twenty-fifth of Our reign.

[Seal.] KAMEHAMEHA.

Keoni Ana.

By the King and the Premier.

R. C. WYLLIE,
Minister of Foreign Relations.

Exchange of Ratifications.

We, the undersigned, Robert Crichton Wyllie, Minister of Foreign Relations of His Majesty the King of the Hawaiian Islands, and Charles Bunker, Consul of the United States, for Lahaina, having been authorized by our respective Governments to exchange the Ratifications of the Treaty of Friendship, Commerce and Navigation between His Hawaiian Majesty and the United States, concluded and signed at Washington, on the twentieth day of December, one thousand, eight hundred and forty-nine, certify:

That we have, this day, met for that purpose, and after comparing the said Ratifications each with the other, and both with the original of said Treaty, have effected the exchange accordingly.

In witness whereof, we have signed this certificate, at Honolulu, this twenty-fourth day of August, one thousand, eight hundred and fifty, and have thereunto affixed our respective Seals.

[L. S.] R. C. WYLLIE.
[L. S.] CHARLES BUNKER.

A Fire occurred in Montreal on the 22d June, by which two hundred and seven buildings were destroyed, some of which had been recently erected and were of a superior description. The loss of property is estimated at $1,200,000, of which $95,000 worth was insured. One woman lost her life, and several children were burned.

Memoranda.

☞ The Br sch Mary has been sold and registered und the Hawaiian Flag, and name changed to the "Snake."

By the ship Tobacco Plant.—On the 6th of April, 1850, the ship Hercules, of Newbedford, 33 mos out, with 250 bbls sp; and the Br bk favorite, of London, 14 mos, 50 bbls; went on shore in a typhoon at Apolo, Pearl harbor, total wrecks. Also a missionary schooner lay high and dry on the reef. June 17th, spoke the ship Phœnix. of Nantucket, 22 mos out, 350 bbls, in lat 1 50 S, long. 169 43 W.

June 29, lat 16 04 S, long 176 E, spoke the schooner Ebenezer, of Sydney, from California, bound to Sydney.

The following intelligence was furnished by the 2d mate of the lady Howden,: On the morning of the 22d of June, the British brig Lady Howden, of London, Capt. Chalk, from California for Sydney, went on a reef about 12 miles to the southward of Ongea, one of the Fejee Islands, at a quarter past 3 a. m. With great risk the boats were got out and dragged over a coral reef for upwards of a mile, in passing the outer part of which the cutter was capsized and every thing in her lost. The long boat had a narrow escape. The natives plundered the vessel of every thing they could lay their hands on.

PASSENGERS.

Bark Connecticut, from San Francisco. Mrs. Penhallow and 2 Children, W. Robinson, J. R Mitchell, P. Michel and servant, C. Jackson. P. Jackson, Mr. Macey, W. Campbell.
Ship Sartelle from San Francisco. Chas Bunker, Esq. U. S Consul for Lahania, C. Bunker, Jr, A. Estabrook.

MARRIED.

At Smithfield, N. C, June 5, by the Rev. J. T. Wycher, Rev. David Trumbull, Seamen's Chaplain, Valparaiso, S. A, and Miss Jane W. Fitch of New Haven, Ct.

In New Haven, Ct., June 20, by Rev. Dr. Bacon, Rev. Chester S. Lyman and Delia Williams Wood, daughter of Hon. Joseph Wood, all of New Haven.

DIED.

At Makawao on the 6th inst., Mrs. Cooper, wife of Thomas Cooper, an old resident at the Islands. She was a Hawaiian, formerly from Lahaina aged 33 years.

In Honolulu, Aug. 5, M. Simon Cronin, a native of County Kerry, Ireland, but a citizen of the United States, where he had resided 18 years. He arrived in California in June, 1849, and labored as a blacksmith for the U. S. Government, at Benecia, until obliged to leave for the Islands, on account of ill health. [Papers in Mass. and N. Y. please copy.]

In Honolulu, Aug. 10, on board H. B. M. schooner Cockatrice, Thomas Norris, able seaman, 22 years of age.

On board whaleship Hobomok, on her passage from Strong's Island, about the 28th of July, James Berry, aged 23, seaman, belonging to Boston. He had formerly been attached to the U. S. brig Boxer, on the coast of Africa.

On board Hobomock, Captain Jones, master of the vessel, in the early part of June, while the ship was cruising. He belonged to Falmouth, Mass.

Visit of the French Sloop-of-war Bonite, to the Sandwich Islands in 1836.

Translated for the Friend, from the French of Adolphe Barrot.

NO. IX.

What the Missionaries have done for the Hawaiians—depopulation of the Islands—causes of depopulation—proper means to arrest its progress—Government—Kamehameha makes himself absolute sovereign af the group—attaches foreigners to his service—dies—Rihorihio ascends the throne—puts down an insurrection on Kauai—abolishes the ancient worship and the tabu—dies in England—Kaahumanu regent—her zeal for the new religion—dies, and is succeeded in the regency by Kinau—the King dependant upon Kinau, even after he became of age—plan of removing him to Maui—project for the conquest of New Hebrides—terminating disastrously—Missionaries rule in Kinau's name—absolute power of the King modified in only a very slight degree by missionary influence—governors—taxes—laws—penalty—criminals escape punishment by paying a sum of money—judges—taxation—commerce—commercial houses at Honolulu—amount of consumption at the Islands—articles imported—articles furnished in exchange—commercial prospects—whale ships—sandal wood—resources of the Islands yet to be developed—advantageous situation—effect on their prosperity if a canal or railroad across the Isthmus of Panama.

The missionaries found this people without a character, with vices, which were only superficial, with simple and artless manners, and with astonishing readiness to receive new impressions. And what have they done for them? They believe they have corrected their morals; but demoralization is at its height, demoralization by calculation, much more hateful than that over which they claim the merit to have triumphed. They believe they have made Christians, but they have made hypocrites only. They believe they have ameliorated the physical condition of the people; but they have made them acquainted with misery which they did not know.

Still it is an incontrovertable truth, that the missionaries have done much for the tribes of the ocean; but they have imposed far too narrow limits upon their mission, they are far from having done all the good which they might have done. To what ought this to be ascribed? Perhaps to an excess of zeal; perhaps also to the education not sufficiently liberal which they have received. Imbued with a religious sternness so remarkable in certain sects, they have lost sight of the temporal good of this people in their effort to make them participate in those spiritual treasures which they esteem above all things. They have abolished barbarous and revolting practises for the sake of humanity, and they have given the natives some ideas of civilized society; but having reached the point when reform would produce useful results, they stopped short. It might be said that they have been constantly under the influence of interested considerations. Thus they have established schools, but they have proscribed the study of the English language. What could have been their object in this? They evidently feared, as I have already stated, that the influence of the European residents would counterbalance their own. But this was not the greatest obstacle to the progress of civilization: and is there not evidently an anomaly between the end proposed and the means employed? Have the missionaries wished, by rendering the intercourse between the natives and foreigners more difficult to arrest the contagion of vice? But all the world knows, and at the Sandwich Islands the fact is more evident than elsewhere, that vice needs no language in order to have intercourse; example alone, has been sufficient to corrupt this people, so artless and susceptable.

Since the discovery of these islands their population have decreased in a fearful manner. It is already reduced to one fourth, at least, of what it was at the time of Cook's first voyage. This diminution is ascribed to different causes. Strong drink has been here, as among all savage nations, a poison brought by Europeans. Diseases unknown in former times have infected the nation. Licentiousness has been followed with consequences so much the more terrible in this country, as the contagion spread everywhere without the least resistance, for it was an unknown evil. One cause of depopulation as potent, at least, as licentiousness, still exists in a disease mentioned by many European physicians, who have been established for a long time at Honolulu. This disease, which was introduced about ten years ago, attacks women in childbed, and proves fatal in three cases out of five. At first white pimples appear on the lips, and these extend by degrees to the throat, the stomach, the bowels. It generally commences eight or ten days before confinement, and ends almost always in the death of both mother and child. But whatever may be the causes which are decimating the population of the Sandwich Islands, is it not lamentable and surprising that wherever civilization has come in contact with the savage state, this contact has been fatal to the people it ought to regenerate? The effects are everywhere the same, though the causes may be different. Fanatical and sanguinary in Mexico and Peru, encroaching in the United States, religious and mystical in the Sandwich Islands; into whatever country civilization has penetrated, there have the aborigines disappeared before it. What have become of the people that once covered the valleys of Spanish America? Civilization has destroyed them. At the present time you will scarcely find any vestiges of them in the lowest classes of society. What remains in the valleys of the Ohio, the Missouri and the Mississippi, of the numerous tribes that once roamed through the forests? The vicinity of the whites has caused them to disappear, and soon the inquiry will be made if these nations even existed. The population will melt away before civilized man, either by this terrible mortality which is consuming it, or because it will mingle and lose itself in the migrations from Europe and America. And this intermingling should be encouraged by all possible means; and to this end wise laws should be enacted, industry should be called in, agriculture encouraged, and commerce patronized. These are the means by which these wretched people can be saved from a state of decay which is paralyzing its vital principles. Unless haste is made, there will be none left at the Sandwich Islands to civilize, unless it be the civilizers themselves.

The government of the Sandwich Islands is monarchical and absolute; but it has undergone important modifications since the discovery of the Islands. Formerly each island of the group was governed by a chief who was independent of his neighbours. These sovereigns were engaged in war the most part of the time. At length Kamehameha, heir to the sovereignty of the island of Hawaii, began that series of conquests that rendered him absolute king of all the islands.

Kamehameha possessed superior talents for observation, and his perseverance was remarkable. He quickly perceived what powerful assistance he might derive from Europeans, who at that time began to visit these islands, and his first care was to attach a large number of them to his service. At his death, which took place in 1819, his son Rihoriho ascended the throne. Some manifestations of insurrection appeared on Kauai, but they were immediately suppressed by Rihoriho who with a single devoted companion crossed the sea to find his rival. He, filled with admiration for such a noble manifestation of confidence acknowledged him as

his sovereign. It was Rihoriho who abolished the ancient worship which Kamehameha, either from conviction or political considerations, wished to remain unimpaired. Rihoriho likewise abolished the Tabu. At this period the influence of the missionaries began to be in the ascendant. This ascendancy became unbounded on the death of Rihoriho, who in 1824 went to die in England. Kaahumanu, widow of Kamehameha, and regent during the minority of Kauikeaouli, displayed a zeal which approached even to fanaticism in the practise of her new religion, and she gave herself up entirely to the guidance of the missionaries.

On the death of Kaahumanu, Kinau, her daughter succeeded her in the regency, ruled by the same ascendancy, blindly adopted all the measures which were dictated to her by the mission, and the authority of the missionaries gave law to the country. To this system no change was made, as I have already stated, when Kauikeaouli became of age. Accustomed to yield to the will of his sister he has not to this day performed an act of authority. Yet his well known aversion to innovation, and some supposed tendency in him to independence, gave rise to a plan among the chiefs of the regent's party, of removing him to Maui, which was the most devoted of all the islands of the group, to the new system. Kauikeaouli was made acquainted with this project by the almost simultaneous departure of all his seryants. In this crisis he applied to the foreign residents of Honolulu, who promised to stand by him; and their firmness, well known to the opposite party, caused the the failure of the project. Kauikeaouli can find out whenever he pleases, and shall know how to employ it, how great are the elements of power in the support which foreigners will lend him. This occurred in 1832. At this time there appeared two documents or proclamations, one from Kinau, and the other from Kauikeaouli, who then attained to his majority. These two documents, published in Hawaiian, professed to set forth their respective rights, but on the part of the king it was a vain form, and he soon fell again under the yoke of his sister.

Soon after the idea was suggested to the king, by whom, is not known, of undertaking the conquest of the New Hebrides. It was his design, if successful, to abandon the Sandwich Islands with all his court, and to found a new kingdom in the conquered country. Two brigs were employed in this expedition, and the command devolved upon Boki,* one of the generals of Kamehameha, and Governor of Oahu; but never did enterprize terminate more unfortunately. The brig, on board of which Boki embarked, was driven off by a southerly gale, and was never heard of after. The crew of the other brig, Harrietta, to the number of more than a hundred men, all perished of an epidemic before reaching their destination. It was necessary to send a new crew from Honolulu, to take back the brig from Viti, or Feejee, where it had been abandoned.

At the present time affairs are almost in the same condition as in 1832, Kauikeaouli evidently seeks to shut his eyes to the state of dependence in which his sister holds him; and while he delivers himself up to the dissipation of a life entirely sensual, Kinau governs or rather the missionaries in her name.

But the machinery of the government is very simple. The king issues his orders and the subjects obey. There is no necessity that the laws of the sovereign be accompanied by commentaries. At present this absolute power is modified in only a very slight degree by the influence of the missionaries, who are more interested in the propagation of their religion than in the temporal welfare of the people. The regulations introduced by them are exclusively religious; yet they have constantly opposed every measure, which by giving security to foreigners, could induce them to form any considerable commercial and agricultural establishments in this country.

Under the king, governors administer the affairs of the different islands. They are high and powerful lords, subject in name only to the authority of the sovereign, on whose account they collect the poll-tax; but only a small proportion of the value received ever finds its way to Honolulu. It would be difficult perhaps to obtain correct returns. Kuakini for example, is as potent throughout the island of Hawaii as Kauikeaouli himself; yet the royal authority is everywhere recognized. Forty years ago the powerful Kamehameha put down all ideas of independence that could threaten the security of his crown; and now, the union of the missionaries, and their co-operation in all the measures necessary to perpetuate this unity of power, tend to the same result. There is little probability then, that any revolution will soon take place to change the form of government, It is however easy to foresee the result of the struggle now in progress between the missionaries and the European residents. Whatever efforts the former may make to put off the time, the day will come, I doubt not, when the number of foreigners increasing as the resources of the country increase, will paralyse all the measures of the missionaries and open these islands to a more enlarged and productive system of administration.

I will add a few words concerning the laws of the Sandwich Islands, and the administration of justice. The Hawaiian code contains ten articles, It is a sort of commentary on the decalogue; or rather the law of nature, amplified and disfigured by civilization. Every crime is punished by imprisonment for a shorter or longer time, or by involuntary labour; but there is no one who cannot be bought off by a sum of money. Premeditated murder is the only crime that does not admit of an equivalent in money, and is punished with death; yet the premeditation can be so easily set aside that the law becomes a nullity. It demands two hundred dollars for the life of a man, and every man who can command fifty dollars may commit a rape. Hence it appears that morality is not fixed at a very high rate. In fine, the part of the code with which civilization had to do, is not the most moral.

There are three judges in Honolulu, and one judge in each district. They live on the perquisites of their office, and this is not a meager sum; for the fourth, and sometimes the third of all the fines paid go to the judge. For example, if a married man commit adultery with a married woman, each must pay a fine of fifteen dollars. The man pays fifteen dollars, five to the judge, and ten to the husband of the woman. The woman pays fifteen dollars more, five to the judge, and ten to the wife of her accomplice. It is the same in civil actions. The judge receives one fourth of the value concerning which he decides.

When a foreigner commits a crime he is tried by a jury composed of an equal number of foreigners and natives. The judges have then only to enforce the law; but when a civil action comes before them, they decide according to their own judgment, and from their decision there is no appeal. It is understood that foreigners never appeal to this tribunal. All difficulties that arise among them are settled by arbitrators.

At the Sandwich Islands the people have no charter; nothing which limits the authority of the king or of the chiefs. The king is absolute master of the soil, and of every thing that it produces. It is only by his permission that the inhabitants live upon the land, and use the fruits of the land. Hence he has the right to dispose of everything that pertains to them. Yet, for want of written stipulations, there are certain established customs, and it is seldom that there is any departure from these. Thus, although upon the death of an occupant of a land, that land by right reverts to the king, yet he almost always permits the son of the deceased to inherit the hut and field of his father; but, I repeat it, this is only a concession, and not a right.

There is not at the Sandwich Islands a well established system of taxation; but it is expected that among the natives, each man pays to the king a tax of one dollar, and that each woman and each child that has attained to the heighth of four feet, pay half a dollar. Children whose heigth is less than four feet are not subject to taxation. Besides this the king receives one-half of proceeds of sales made by the natives: for example if a fowl be sold for fifty cents, one half of it, or twenty-five cents must be paid to the king. Then two days in each week are devoted to the cultivation of the lands belonging to the king, or to the chiefs. Thus can the king call everything among this people into requisition that suits his convenience.

See what civilization has done for this people. The first care of the civilizers should have been to modify such barbarous laws.

The commerce of the Sandwich Islands is not yet of much importance. The productions of the country being of but trifling value, as a matter of course the demand for foreign goods must be unimportant. Commerce is carried on almost exclusively by American or English ships, which come directly to Honolulu, or which touch at this port either on their passage from the republics of the South Sea to China, or in going to the north-west coast of America and California. Some of these vessels dispose of their entire cargoes at Honolulu to furnish supplies for the wants for the country; or they only store them, and wait for high prices in the markets of California in order to transport them there.

A number of American Houses have been established some years in Honolulu. There are four or five of them, and their business is not extensive. There is only one English house, the business transactions of which are

*Boki's expedition consisting of the brigs Kamehameha and Becket, sailed December 2nd, 1829, and not in 1832, as stated above. It was *Boki's* expedition, *not* the king's; the object was to procure sandal wood, not to found a new kingdom. The king objected to Boki's going in person, even after he had gone on board to sail. See Bingham's Sandwich Islands p.361, and Jarves' History, p. 288 of the first edition, p. 144 of the third.—Ed.

of little importance. French commerce has appeared at the Sandwich Islands, but at long intervals. Chance only gave it this direction, and no direct operation has been undertaken in France with this country since that which was entered upon in 1825, by a house at Bordeaux, at the instigation of Rives, Kamehameha's physician, who accompanied Rihoriho to England.

Consumption at the Sandwich Islands does not amount to more than $100,000, the sum total of importations, whether for consumption or storage, scarcely amounts to $200,000.

The consumption consists of bleached and unbleached calicoes, prints, hardware, lumber, sugar, coffee, spirituous liquors, &c. The importation of articles of luxury is limited to the consumption of five or six hundred Europeans or Americans living on the different Islands, and who are generally poor. The Americans bring to the islands white and unbleached cottons, soap, ready-made clothing, flour, rum, wines, and other French articles, &c. The English imports are composed principally of calicoes, white cottons, cordage, canvass, hardware, supplies for ships, &c. Lumber is brought from New Zealand, and sugar from the Society Islands, or from Peru.

The Sandwich Islands furnish in exchange for these articles, provisions, sandal wood, a small quantity of tuui-nut oil, which is of an excellent quality for burning, perfectly clear and without smell, and money which they receive of the ships that touch at the islands for refreshment. But as soon as agricultural industry shall have developed the resources of the islands, they will produce all colonial commodities; and their commerce at present so limited, will increase in proportion to the increased productions of the islands. The most important commercial resource of the islands at this time is the whale ships, which touch at Honolulu twice a year to repair damage and procure supplies, which are cheap and very good. Fifty or sixty American whale ships enter the port of Honolulu annually, and twenty or twenty-five English whale ships. It is calculated that the expense of each whale ship for supplies, is not less than $500 dollars each time; thus making a sum total of 35 or $40,000.

Sandal wood has become exceedingly scarce, so that in order to find any it is necessary to go where the country is almost impassable. During the first years of cutting sandal wood, the forests were cut down without any precaution. It was a treasure the value of which was unknown to the chiefs and abused by them when discovered. It is now almost impossible to procure a full cargo of this precious wood. If some order should be observed in cutting the trees, it might in a few years become a valuable article of export; but this cannot be hoped for. The poverty of the chiefs, joined to the passions which have been awakened in them, will prevent this, moreover they are aware that the resource is about to fail them, and they make haste to exhaust it in every possible manner.

But the greatest riches of these islands, as I have already stated, is concealed in the earth, and only the industry of Europeans and Americans can draw it forth for commerce; for the population is far from possessing the perseverance and energy which are necessary to carry on large agricultural establishments with success. If the lands remain exclusively in the hands of the natives, ages will pass before they acquire the talent or the courage to turn them to account. A people habituated to live from hand to mouth, and almost without labour, cannot be rendered industrious at once. Up to the present time agriculture has not advanced a step, and these fertile lands are awaiting the industry which must make them productive. Each native lives in his hut, cultivates the quantity of taro which he needs, and contents himself with raising some fowls and hogs, which he sell to the ships which visit the islands; with the proceeds of these sales he pays his tax to the king, and procures for himself cloth and ardent spirits. But this resource belongs only to the aristocracy, which has already become somewhat industrious. Beneath this class is the great majority of the people, who still live as they lived before the discovery of the islands, yet with much more wretchedness, and with much higher rent to pay the chiefs.

It pertains then to the future to develope the territorial and commercial resources of the Sandwich Islands. Situated in the centre of the great north Pacific ocean, they are a sort of resting place in the midst of this vast sea, which separates India and China from America. They will acquire importance in proportion as the relation between the two continents shall be developed. Should the isthmus of Panama be opened the Sandwich Islands would of necessity become one of the most interesting places on the globe, since besides the resources which I have pointed out, they would possess the advantage of being situated on the great route between Europe and India; they would become the natural entrepot, the station-point that commerce will make for itself on this new route; to this point will centre all the commerce of China, the Philippines, Chinese India, the north-west coast of America and California. Add to this advantageous situation, a fertile soil and salubrious climate, and there will be no occasion to doubt that the Sandwich Islands are destined to become a most important commercial station.

This future cannot be so far distant, as one might at first be disposed to believe. The idea of opening a canal across the isthmus of Panama is not new, and the possibility of accomplishing the project has been demonstrated more than once, whatever knowing geologists may have said about it; the supposed elevation of the Pacific above the Atlantic, which would endanger the coasts of the other continent, is a chimera; and if this fear were well founded, the difficulty of restraining the water by means of dykes, could not be compared with the obstacles to be overcome in opening the canal. Two years ago, the project of a canal proposed to the government of New Granada, a project well conceived, but unfortunately impracticable for many reasons connected with one of the contracting parties, was accepted by that government. Immense advantages accrued to the contractor. I doubt not that it would very cheerfully accede to a proposition of the same kind, if it could only be assured of the execution of the project, by the morality and ability of the company that should undertake the magnificent enterprise. It is not long since an American company proposed to construct a railroad from Chagres to Panama; but the project of the canal came athwart this enterprise, and I know not what has become of it. But although the opening of a canal seems to me far more advantageous than the construction of a railroad, yet this latter means of conveyance would not be without an immense influence upon the condition of the Sandwich Islands; for lines of packets would doubtless be established forthwith, to ply between Panama and the various ports of the Pacific.

Death of President Taylor.

Late papers from the United States furnish full particulars of the last sickness and death of the President of the United States. This melancholy event, causing a nation to mourn, occurred July 9, at half-past 10 o'clock, p. m., after a severe sickness of only five days. On July 4th he was present at the National monument, and listened to an oration by senator Foote, but that evening was attacked with disease, which assumed the form of cholera morbus, which the united wisdom of eminent physicians was not able to remove. During his illness he was surrounded by his family whose sorrow was great.

The Vice President, Millard Fillmore, officially announced the President's death to the Senate on Wednesday morning, July 10th.

"Fellow citizens of the Senate, and of the House of Representatives:—I have to perform the melancholy duty of announcing to you, that it has pleased Almighty God to remove from this life Zachary Taylor, late President of the United States who deceased last evening at the hour of half-past ten o'clock, in the midst of his family, and surrounded by affectionate friends, calmly, and in full possession of all his faculties. Among his last words were these, which he uttered with emphatic distinctness: "I have always done my duty. I am ready to die. My only regret is for the friends I leave behind me."

Having announced to you, Fellow citizens, this most affecting bereavement, and assuring you that it has penetrated no heart with deeper grief than mine, it remains for me to say, that I propose this day at 12 o'clock, in the hall of the House of Representatives, in the presence of both houses of Congress, to take the oaths prescribed by the Constitution, to enable me to enter on the execution of the office which this event has devolved upon me. Millard Fillmore.

MR. WEBSTER'S EULOGY.

On the morning of the 11th, the Hon. Daniel Webster pronounced the following eulogy upon the late President.

Mr. Secretary; At the time when the great mass of our fellow citizens enjoy remarkable health and happiness throughout the whole country, it has pleased Divine Providence to visit the two houses of Congress, and especially this House, with repeated occasions for mourning and lamentation. Since the commencement of the session we have followed two of our members to their last home, and we are now called upon, in conjunction with the other branch of the Legislature, and in full sympathy with the deep tone of affliction which I am sure is felt throughout all the

(*Continued on page 78.*)

THE FRIEND.

HONOLULU, OCTOBER 1, 1850.

Two Living Facts.

The world rings with praises upon the recent achievement of English and American Diplomatists, in negotiating the treaty securing the existing free navigation laws, between the two great commercial nations. Great good will no doubt, thereby result to commerce, and numerous merchants become princely rich; but it is a sad pity, that common justice cannot be meted out to the foreign seamen sailing under the respective flags of the two countries. Cannot British ministers, and American statesmen frame some law, or negotiate some treaty, for the protection of those seamen of other countries, who are induced to ship on board English and American vessels. Not, however, to deal in generalities, for, according to the old Saxon proverb, one fact is worth a thousand arguments, and, of course, two will be worth twice that number.

The First. This day, September 6th, two crippled sailors have visited our *sanctum*, on errands similar to that, which near eighteen hundred years ago, brought a certain cripple to the gate of Solomon's temple, "which is called Beautiful, to ask alms of them that entered into the temple." Now for a brief history of these two crippled sons of Neptune. One is a Portuguese, native of the Western Islands. He was taken from his home in the Atlantic, and brought into the Pacific, on condition of receiving about the "200th lay," on board an American whale ship. Ere long sick and lame, the captain puts him ashore in Honolulu, hiring an irresponsible man for $30 to take care of him until he recovered! But why does he not go to the U. S. Hospital, with Yankee seamen? Oh, he is a foreigner without an American protection! Months pass away, he does not recover, but he does suffer from hunger, and want of medical care. Erelong a few friends subscribe and pay his board, while recovering from the amputation of his leg, which the surgeon *cuts off gratis*. He has no trade, and must live upon charity, but would rejoice to return to his native shores.

No United States officer, commodore or consul has power to send him home, or to a port in the United States, or *even* to pay a penny for his support. This is wrong! It is unjust! It is inhuman! American vessels ought not to be allowed to induce foreign seamen to ship under the United States flag, unless the law protect and provide for them when sick and disabled.

The *other living fact* is in the shape of a Lascar *minus* his two legs. These were lost while in the employ of an English shipowner. Being no longer useful on board, and unable to go "aloft" he must go ashore: but where? To "Little Greenwich," no, he is not an Englishman, but a foreigner. He may work for the Englishman, but if sick and crippled, he must hobble and beg, like his Portuguese brother. This too, is wrong! It is unjust! it is inhuman! English vessels should not be allowed to ship foreign seamen under the British flag, unless the law protect and provide for those seamen when sick and crippled. Reader, if you chance to meet in the streets of Honolulu the poor Portuguese, hobbling on *three* legs, or the poor Lascar hobbling on *four*, give him a shilling, or a sovereign, which is more than the American or British Consular Representatives are *allowed to do in their official capacity*. We hope to witness still greater improvements in the Navigation Laws of the two countries.

Cases similar to these now referred to are constantly occurring in this, and every port visited by English and American shipping. It is a subject demanding speedy, humane, and just legislative action, at the hands of English and American law-makers.

☞We have received a long communication of twenty foolscap pages, from Captain Smalley, master of the Minerva, giving his thoughts most freely upon a series of articles published in the columns of the "Friend" in 1847, and entitled "Wants of Seamen." These articles, but especially No. 2, "Seamen need better Government," and No. 3, "Seamen need better Fare," have given great offence to many masters of whale-ships in the Pacific. Having conversed with scores of masters in regard to the articles, having published a Review of them by a master of a whale-ship, (see Friend, December 1848), and now having this long communication before us, it is our desire to see justice done to all parties. If the remarks of the author of those articles, in regard to the government of seamen, their treatment and fare be taken as referring to all masters, and all ships, indiscriminately, a decidedly wrong impression would be given. The sins of a few should not be visited upon the many. There are several hundred American shipmasters in the Pacific, and not a few of them would be justly indignant at being classed with the *supposed tyrant* described in No 2, Captain Smalley is one of them, and hence has taken up his pen in good earnest to repel the insinuation or imputation; and well he may, being able to record respecting himself, "having during fourteen successive years of experience, passed through the necessary grades, necessary to qualify me to take command of a ship, namely, boat-steerer, third, second, and first officer's berth, and during that period having sailed in many different ships, and many with different men, *I never was ill-treated, cursed or ill used; never saw the time there was not enough to eat on board, and that which was good and nutritious (so long as the ship could obtain it), nor have I ever been punished, nor have I ever seen any one punished without just cause.*"

We have met with many more, who, although unable to write in so full and confident language what Captain S. has written, yet have felt injured that their characters should be brought under suspicion, and their motives misrepresented in consequence of the base and ill-tempered conduct of some drunken master who took delight in abusing his men, and through meanness put them upon short allowance of poor provisions. The general remark of shipmasters upon this subject is, "If there are such masters, *mean, cruel*, and *tyrannical*, publish their names, let us know who they are, and not reproach the whole profession." They argue, let us be treated as landsmen are treated. This we have, and shall still aim to do.

We should publish the communication just received *entire*, had we not already published a long "Review" of the same articles and were not our columns so crowded, as they are, at present. It is gratifying to see the dexterity with which our seafaring correspondents wield a pen as well as handle a harpoon.

A Sailor's Thought.

We have received a communication from a seaman on board the "Minerva," entitled "Thoughts concerning treatment of Sailors." The article contains some excellent thoughts. He seems to be of the opinion that sailors are not quite so much abused at sea as they are represented to be. This is quite remarkable for one before the mast. "It is very easy," he remarks, "for man to see wrong where he is not concerned; and in positions where he is concerned he is apt to consider himself very near right. Most men are very willing to represent the sufferings of sailors as very great, but little do they think of making him happy on shore. I think the *crosses* I experience at sea would be overlooked very easily by me were I to meet a kind reception while on shore." Take a hint reader, and not give the sailor a "cold shoulder," and then be heard to bewail poor Jack's misfortunes and hardships when he is off soundings.

DONATIONS.

Whale Ships returning.—Although comparatively few of the large whaling fleet about Bherings' Straits, have arrived, yet the most favorable reports are brought respecting the success of nearly all the vessels wh ch have been cruising in that region.—Those vessels which have arrived took most of their oil this season in the Anadir Sea, among "the tumbling mountains of ice."—Whalemen report that they never saw whales more tame and easily taken. This might be inferred from the fact that as yet we have not heard of a single death, or accident, occasioned by the upsetting of boats, and other mishaps which so frequently occur, when the whales are timid and wild. One ship reports, that at one time more than twenty ships were seen "boiling out;" another, that for many days they had ice around them and actually in contact with the vessel, yet experienced no essential inconvenience; another that, one day thirty ships were seen entering Bherings' Straits. We are not aware, that up to this date (Sep. 30) there is the arrival of a vessel, which has cruised *within* the Straits. They may be expected this month.

No reports, as yet, respecting exploring vessels, in search of Franklin.

For the Friend.

An Hawiian Ordination.

Mr. Editor:—On the 25th inst, the Rev. Stephen Waimalu was ordained pastor over the church and people of Waianae. He has been preaching to them as a licentiate for two or three years past; and they recently gave him a call to settle among them as their pastor, and have pledged themselves to raise annually for his support, the sum of 150 dollars. Mr. Waimalu is the third native, who has been ordained to preach the gospel at these Islands within the last ten months.

The following Clergymen, each accompanied by a delegate, were present, and took part in the exercises on that interesting occasion. Rev. A. Bishop, from the church at Ewa; Rev. E. W. Clark, from the 1st church in Honolulu; Rev. L. Smith, from the 2d church in Honolulu; Rev. P. J. Gulick, from Waialua; and Rev. James Kekela, from the church at Kahuku.

Sermon by Mr. Clark, from I Cor. 4, 5.
Consecrating prayer, by Mr. Gulick.
Charge to the Pastor, by Mr. Smith.
Right hand of fellowship by Mr. Kekela.
Charge to the church by Mr. Bishop.
Concluding prayer, by Mr. Waimalu.

Yours respectfully,

Honolulu, Sept. 30, 1850. L. SMITH.

Japanese Junk.—The Am. whale ship Splendid, in April last, fell in with a Japanese Junk drifting at sea, rudderless and without any person on board. On visiting the wreck they found rice and beans. Of the latter, they took away between 20 and 30 bushels. They also obtained various written documents, books, clothing and a quantity of excellent cordage; the hawsers were well made and are now in use on board the Splendid.

Capt. Pearson has kindly given us a small quantity of the Japanese beans, and should any gardner or planter upon the islands desire to obtain any of them for seed, let him apply at the Chaplain's study.

Who among Seamen will aid in support of the Friend?

In former years during the Fall shipping season, seamen have been invited to contribute a small amount to support the Friend. We are under necessity of again calling for aid; but in asking seamen to lend a helping hand, we have adopted a plan that in several instances has been well received. *We propose paying back in bound volumes of the Friend the full amount of a sailor's subscription.* We have back volumes on hand for 1, 2, 3, 4, and 5 years. Any person subscribing $1 50 receives a volume for one year; and $3 two volumes, and so on. Last week we supplied the "Splendid" with bound volumes amounting to $35,00, and the "Logan" to $19,00 worth. In this way we hope during the season to raise an amount sufficient to pay our current expenses, printer's bill, binder's bill, &c., &c. At present, however, there is a debt of at least $300 upon the Friend. As we have never made an appeal to our sea-faring readers, when we did not meet with a generous response, we hope not to be disappointed in the present instance, in in as much as every contributor, is entitled to the value of his subscription in bound volumes. We would respectfully invite masters (with full ships), to co-operate with us in carrying out this plan. We had of late some warm assurances from our sea-faring readers that the Friend was ever a welcome visitor on ship board.

☞Donations and Subscriptions received for the support of the Friend by the Rev. Mr. Taylor, at Lahaina, and Rev. Mr. Coan, at Hilo.

Surveying cruise of the "Massachusetts" The U.S. Steam Propeller "Massachusetts," sailed from this port on the 6th of April last, having on board a joint commission of army and navy officers, sent out by the Government to examine the coast of the United States lying upon the Pacific Ocean. During her absence she has visited the coast lying between San Francisco and the straits of Juan de Fuca and Puget's sound. From thence she proceeded to Beaver harbor, on the north coast of Vancouver's Island, where she supplied herself with coals from the mines in the vicinity, and on her return touched at Cape Flattery, or Neat harbor, and Columbia River. She sailed from thence on the 1st of August, examining in her course downward the coast and rivers. On the 5th of August, at noon, she hove to off the Umqua River, Saw a schooner at anchor inside, and shortly was boarded by a whale-boat from the river, in which was Dr. Fisk, Messrs. Brinesmaid, Farrell, Eugenbroop and others, who reported that the schooner inside was the Samuel Roberts, from San Francisco, with a party under the auspices of Messrs. Winchester and Payne. A Mr. Scott from Columbia River was also one of the party in the boat. The above gentlemen informed Captain Knox that they had found 12 feet on the bar at low water, and 20 at high water. They were surveying the river, intending to proceed up the river as far as they could get in the schooner. The S. R. had been into Rogue's River some time previous, and had lost two seamen by the overturning of a boat on the bar. The latitude of the mouth of the river is 43, 41, 15N., longitude 124, 04 W. Captain Knox subsequently made a river just north, and close to Cape Gregory. It appeared to have a wide entrance, and well sheltered from south and south-west winds—open to the N and W. From appearances Captain K would think there was good water on the bar. About eight miles NW by W, by compass, from the rock off Cape Mendocino, there is a sunken ledge on which the water breaks occasionally. Vessels passing the Cape should give it a berth of about nine miles, although a vessel may pass inside of it, and near the Cape, but the ground is very broken.—*Alta California.*

The Medal of Col. Fremont. — The National Intelligencer publishes the correspondence between Hon. Abbot Lawrence, U.S. Minister at London, and Col. Fremont, in which the former officially announces the honour conferred upon the latter in the bestowment of a medal by the Royal Geographical Society of Great Britain, in testimony of their sense of his eminent services in promoting the cause of geographical science. Mr. Lawrence says in his letter:

"I can assure you that I felt a proud satisfaction in having the opportunity of being present at the annual meeting of the society, and receiving this complimentary testimonial of merit to a citizen of the United States, who has done so much not only in the cause of science, but in every department of duty to which he has been called to promote the honour of his country. It is my fervent hope that your life may be long spared to enjoy your well earned fame in science, and that your success in your new and high position may be commensurate with the name and fame acquired by arduous labour, in your brief but brilliant career."

"There is sorrow on the sea"—Jeremiah lxix. 23.

A funeral sermon, with the above words for a text, we learn was preached September 15th at Lahaina, at the Bethel, by the Rev Mr. Taylor. The occasion was the death of two young men, who were drowned August 30th, about one week before their ship "Good Return," reached Lahaina; their names were John Briggs, aged 23, Dartmouth, Mass., and John Brason, aged 20, belonging to Monroe, Monroe co., Michigan. There was a full attendance of seamen in port.

country, to take part in the solemnities of the funeral of the late President of the United States. Truly, sir, was it said in the communication read to us, that a great man has fallen amongst us. The late President of the United States, originally a soldier by profession, having gone through a long and splendid career of military service, had at the close of the late war with Mexico become so much endeared to the people of the United States, and had inspired them with so much, and with so high a degree of regard and confidence, that without solicitation or application, without pursuing any devious paths of policy, or turning a hair's breadth to the right or left from the path of duty, a great and powerful and generous people saw fit, by popular vote and voice to confer upon him the highest civil authority in the nation. We cannot forget that as in other instances, so in this, the public feeling was carried away in a degree, by the eclat of military renown. So it has been always and so it will always be, because high respect for noble feats in arms has been, and always will be outpoured from the hearts of the members of a popular government; but it will be a great mistake to suppose that the late President of the United States owed his advancement to the civil trust, or his great acceptability with the people, to military talent or ability alone.

I believe, sir, that associated with the highest admiration for those qualities possessed by him, there was spread throughout the country a high degree of confidence and faith in his integrity and uprightness as a man. I believe he was especially regarded both as a firm and mild man, in the exercise of authority and I have observed more than once in this and other popular governments, that the prevalent motive with the masses of mankind for conferring high power upon individuals, is a confidence in their mildness, in their parental protection, which are regarded as of a sure and a safe character. The people naturally feel safe when under the control and protection of sober counsel—men of impartial minds and a general parental superintendence. I suppose, sir, no case ever happened in the very first days of the Roman Republic, where any man found himself clothed with the highest authority in the state, under circumstances more repelling all suspicion of personal application, all suspicion of pursuing any crooked paths in politics, or of all suspicion of having been actuated by sinister views and purposes, than in the case of the worthy, and eminent, and distinguished and good man whose death we now deplore. He has now left to the people of his country a legacy in this; he has left them a bright example which addresses itself with peculiar force to the young and rising generation; for it tells them that there is a path to the highest renown, straight, onward, without change or deviation.

Mr. Secretary—My friend from Louisiana, Mr. Downs, has detailed shortly the events in the military career of Gen. Taylor. His services through his life were mostly on the frontier, and always a hard service, often in company with the tribes of Indians, all along the frontiers for so many thousands of miles.

It has been justly remarked by one of the most eloquent men whose voice was ever heard in these houses, that it is not in Indian wars that heroes are celebrated; but it is there that they are formed. The hard service, the stern discipline, devolving upon those who have a great extent of frontier to defend with irregular troop; being called suddenly into contact with savages, and to study the habits of savage life and savage war, in order to forsee and overcome their strategems. All these things tend to make hardly military character for a very short period.

Sir, I had a connection with the Executive Government of this country, and all that time very perilous and embarassing circumstances existed between the United States and the Indians on our borders, and the war was actually raging between the United States and the Florida Tribes; and I very well remember that those who took counsel together on that occasion officially, and who were desirous of placing the military command in the safest hands, came to the conclusion that there was no man in the service more fully uniting the qualities of military ability and great personal prudence than Zachary Taylor; and he was of course appointed to the command.

Unfortunately his career at the head of this government was short. For my part, in all I have seen of him, I have found much to respect and nothing to condemn. The circumstances under which he conducted the government for the few months he was at the head of it, have been such as not to give him a very favourable, certainly not a long opportunity of developing his principles and his policy, and to carry them out. I believe he has left on the mind of the country a strong impression, first of his absolute honesty and integrity of character, and of his good sense; and lastly, of the mildness, kindness, and friendliness of his temper towards all his countrymen. But he is gone, he is ours no more, except in the force of his example.

Sir, I heard with infinite delight the sentiments expressed by my honorable friend from Louisiana, (Mr. Downs) who has just resumed his seat, when he prayed that this event might be used to soften the animosities, to allay party criminations, and restore fellowship and good feeling among the various sections of the Union. Mr. Secretary, great as is our loss to day, if these inestimable and inappreciable blessings shall have been secured to us even by the death of Zachary Taylor, they have not been purchased at too high a price, and if his spirit from the region to which it has ascended could see these results—could see that he has entwined a soldier's laurel around a martyr's crown, he would say exultingly—"Happy am I that by my death I have done more for that country which I have loved and served, than I did or could do by all the devotion and all the efforts that I could make in her behalf during the short space of my earthly existence."

Mr. Secretary, great as this calamity is, we mourn, but not as those without hope. We have seen one eminent man and another eminent man, and at last a man in the most eminent station, fall away from the midst of us, but I doubt not there is a power above us, exercising over us that parental care that has marked our progress for so many years. I have confidence still that the place of the departed will be supplied, that the kind beneficial favor of Almighty God will still be with us, and that we shall be borne along, upward and onward, on the wings of sustaining providence.

May God grant that in the time there is before us, there may not be wanting to us wise men, as good men for counsellers as he whose funeral obsequies we now propose to celebrate.

New Book.

DECK AND PORT: *or incidents of a Cruise in the U. S. Frigate Congress, to California. With sketches of Rio Janerio, Valparaiso, Lima, Honolulu, and San Francisco. By Rev. Walter Colton, U. S. N., Author of "Ship and Shore," &c. New York*, 1850.

The title of this book resembles an honest man's face, being a true index of the contents within. The reader must not expect to be surprized by startling assertions or wonderful discoveries, but he will not be disappointed if his wishes are bounded by the circle of agreeable and entertaining reading.—He will find himself sailing along at about seven knot per hour. Although a long voyage may be tedious and monotonous, yet our author has succeeded most remarkably in not transferring the dull monotony of the voyage to the pages of his book. He does not task the mental powers of his readers, neither allow them an excuse for dozing, although swinging in a Mexican hammock, after dinner, with the thermometer at 100°. Some may imagine it an easy matter to write a *diary* at sea, yet, the writer must possess some rare qualities to compose a diary worthy of being printed, and read. Mr. Colton however has succeeded in this difficult, but imagined easy style of writing. Many a reader of Addison's Spectator has imagined that he could write in Addisonian style, because the sentences were so perfect, the periods so smoothly rounded and the writer's style so transparent, yet the imitator has soon shown that it is one thing to admire the great English essayist, but another to write as Addison wrote. Hundreds of scribblers may fancy it an easy matter to write the diary of a Cape Horn voyage, but not one in a thousand will do what the Chaplain of the "Congress" has done, write a diary that will delight a landsman.

In glancing over the pages of "Deck and Port" we have been delighted to observe how numerous were the topics that may be gracefully touched upon by the pen of a "ready writer" during a long voyage without descending to the scandal and gossip of shipboard. If disposed we might point out some few paragraphs which, in our poor judgment, might as well have remained in manuscript, closely shut in the Chaplain's portfolio; of this he seems aware and prepares the reader's mind by the following remark in the preface, "It undoubtedly contains passages which may seem light and irrelevant; but a diary has privileges in this respect, which are not extended to compositions of a graver character."

It will be recollected by some of our readers, that on board the "Congress," the U.

S. Commissioner, Mr. Ten Eyck, and U. S. Consul, Mr. Turrill with their families came as passengers to the Sandwich Islands.

To afford our readers an opportunity to judge of the character of the work, we shall, (opening the book almost at random,) copy the author's diary for one week, during the passage from Norfolk to Rio:

Thursday, Dec. 11. A delicate question of discipline occurred to-day. The master's mate of the gun-deck, finding the captain of the main-top behind the rest in lashing and stowing his hammock, ordered him to clean the bell,—a menial service, and intended as a punishment. The captain of the main-top, knowing the order to be illegal and derogatory to his position, declined compliance.—He was reported to the officer of the deck and confined. All this had taken place without the knowledge of the first lieutenant or the commander. When known to them, the facts were promptly inquired into. I felt some interest in seeing how Captain Du Pont would dispose of the question.

The illegality of an order, though it may mitigate the offence, cannot for a moment justify disobedience. Such a doctrine would make every man a judge in his own case, and overthrow discipline. He must obey the order, and seek redress at its proper source.—The offender saw his error, as exhibited to him by Captain Du Pont, and said he should submit to any punishment which the government of the ship required. That was enough; he was one of our best men, this his first offence, and Captain Du Pont very properly at once restored him to duty. Now what would have been the moral effect of inflicting chastisement on that man, as some, in a spirit of haste, might have done. It might have broken his ambition. It would certainly have reduced him to a lash-level with the hardened culprit. It would have relieved punishment of some portion of the shame which attaches to it. The bad always exult when they see any portion of their disgrace transferred to the good; therefore never punish a good faithful sailor for the first offence into which he may be betrayed, if there is any way of getting round it. Let his virtues

"Plead for him like angels, trumpet-tongued."

Friday, Dec. 12. We have had, for three days, the regular trade-wind from the south-east, and have been running under royals and studding-sails, from seven to ten knots the hour. The thermometer has ranged at 75, the air has been balmy, and the sky free of clouds. What a contrast to the weather of the line,—where a cloud gathered before you could turn your eye, and where showers fell like water from some vast reservoir, with the bottom suddenly knocked out!

A flying-fish, hard pressed by a dolphin, took refuge on the deck of our ship. He might as well have remained in the sea, for he was instantly secured by one of our sailors, and presented by him to a lady passenger, who, with too little feeling, fried and ate him. It is true he had the satisfaction of being eaten by a lady, which was perhaps preferable to being swallowed by a dolphin.—How many frantic lovers there are who would like to be eaten up by their mistress! Besides, it is in much better taste to dispose of one's self in this way, than making a plunge into the sea to feed a hungry shark. Still, for one, I should not like to see a woman coming at me with a frying-pan.

Our batteries, in their black paint, look solid and uncompromising. Their threatening strength reminds one of the terrific lines of Campbell, in the Battle of the Baltic:—

"When each gun,
From its adamantine lips,
Spread a death-shade round the ships
Like the hurricane's eclipse
Of the sun."

Saturday, Dec. 13. A booby was seen last evening, at sunset, circling around our masts. He was looking where he should light when it should become sufficiently dark. He lives on what he can find in the sea, but prefers a spar to a wave on which to roost. He has sense enough to know that when asleep, the fish may avenge upon him some of the wrongs which he inflicts. But he is, after all, a very stupid fellow. He secures his prey often at the expense of his life, and that, too, when there is no necessity for it. If a little billow casts a dead fish on a rock, he poises over it for a moment to be sure of his mark, and plunging down, head first, dashes his own brains out; very much like a politician who rushes so hard upon an office that he destroys himself in its attainment.—The senate is, in this case, the rock on which his little craft [illegible].

We are now approaching the region of dolphins, porpoises, sharks, and small whales. Our sailors are rigging their hooks and harpoons. It will be difficult for any thing that comes near us to escape their glittering steel. Their hostility falls mostly on the shark.—They regard him as a grave robber. He can expect no mercy. The loudest note of exultation I ever heard on board a man-of-war, was when one of these fellows was brought on board. "There," said a rough salt, "you have been prowling about here to get a nab at us, and have got nabbed yourself—you old blood-sucker!" There are three beings that can expect no mercy in misfortune,—a rat, a tyrant, and a shark.—Of the three I would soonest spare the rat; I always associated something respectable with his long tail. But let that pass.

Sunday, Dec. 14. We have had the awning spread, and have held divine service.—All joined in, and sung Old Hundred to the hymn commencing with the lines—

"God of the seas, thine awful voice
Bids all the roaring waves rejoice."

The impressiveness of a service at sea is owing, in part, to the isolation of those on board. There is nothing around to distract the attention, or win a diverted thought.—Around rolls or rests the melancholy main—above stretches the blue heaven, and over all reigns that Supreme Intelligence, at whose fiat resplendent worlds rolled from chaotic night. All is vast and awful, like that state of being into which we are ushered at death. It is this that makes the sailor religious, and inspires him with respect for all the great truths which throw their light through the night of the grave.

The errors and vices of the sailor seldom result from skepticism. I never met with one who denied or doubted the existence of a God, the wickedness of the human heart, or the realities of a future state. They seem to think a man's impulses may be wrong, while in the main he is good. The spirit is willing, but the flesh is weak. They have a law in their members warring against the law of their mind, and bringing them into captivity to Satan; and yet they are free to denounce that captivity, and brand it as the source of all their degradation and misery. Their loathing spirits, touched with a diviner life, often exclaim, "Who shall deliver us from this body of sin and death.

Monday, Dec. 15. We were to-day, at 12 o'clock, in lat. 15° 45' long. 36° 48' w. We have run within the last five days a thousand miles, and are now within six hundred and sixty miles of Rio. Three or four days more, and we shall probably be at rest in one of the most magnificent bays in the world. Our ship is in prime condition for displaying her symmetry and strength. She is indebted for this to the experience and activity of our captain and first lieutenant.—They are thorough in the details of ship duty, and are sustained by efficient officers. To keep a man-of-war trig, taxes the profoundest patience and energy. It requires an eye that sees every thing, and a fidelity that neglects nothing.

I saw this morning, at daybreak, an old tar standing alone on the forecastle. His stalwart form rose in bold relief on the brightening sky. His dark locks flowed out from under his tarpaulin upon the wind. His large deep eye was fastened on the sun as it came whirling up in splendor out of the sea. His large sinewy arms were extended, as if to welcome some being that inspired reverence and love; when Milton's sublime apostrophe to light rolled in solemn emphasis from his lips:—

"Hail, holy Light! offspring of Heaven, first born
Or of the eternal co-eternal beam!
May I express thee unblamed? since God is light,
And never but in unapproached light,
Dwelt from eternity, dwelt then in thee,
Bright affluence of bright essence increate."

Tuesday, Dec. 16. This is beautiful sailing; a soft, balmy atmosphere, a smooth sea, and a breeze that carries us seven and eight knots the hour. We have not taken in our studding-sails for several days; while our royals seemed to have entered into an agreement with our broad pennant to stand or come down together. The day is not darkened by clouds, and the night is filled with the soft light of the moon. The stars come out from the blue vault of heaven, and blaze with a distinctness and force that makes each one seem some central source of exhaustless and unquenchable splendor. Of this high host Jupiter leads the way; to him the eye of the sailor turns as that of the Moslem to the crescent that glows on the minaret of his prophet.

An officer to-day, after reprimanding a sailor for some alleged neglect of duty, told him to go forward; that he was such a perfect nondescript that he did not know what to do with him. So forward Jack went, muttering to himself *nondescript*—what does that mean? "Here, Wilkins," said he, "can you tell me what nondescript means? the officer of the deck called me a nondescript, and I want to know what it means—something bad, I suppose, for he was mighty angry." "No," said Wilkins, "I don't know what it means; call Tim Shades, he can tell you." Now this latter person was a sort of ship's dictionary, and though perhaps as ignorant as any on board, had a meaning for every thing, and a reason for it besides. So Tim Shades came. "What does nondescript mean?" inquired the aggrieved sailor. Our

lexicographer seemed at first a little puzzeled; but soon settling his features into oracular solemnity, replied:—"Nondescript means one who gets into heaven without being regularly entered on the books." "Is that all it means?" ejaculated the offended sailor; "well, well, I shall be glad to get there any way, poor sinner as I am." Were there more of the spirit of this sailor among sectarians, there would be less altercation about the right road, and quite as much speed.

Wednesday, Dec. 17. Another hundred miles of the distance that separated us from Rio has been left behind. Four hundred miles more remain to be traversed. The breeze is extremely light, directly aft, and our studding-sails on both sides, below and aloft, are out. We are under a cloud of canvas, which hangs over our frigate like the brooding wings of the cherubim over the sanctuary of the ark. But here I fear the parallel must stop. We have the sacred tables, it is true, and the commandments inscribed on them, but where is the soul-absorbing reverence they should inspire?

All hands are at work getting our ship ready for port. She is being scoured from stem to stern, outside and in. Every soil on her paint is obliged to yield to soap and clean water; and every weatherstain on her rigging is removed. She will look neat as a bride approaching the nuptial altar. What is there more beautiful on earth than a young and guileless being thus timidly intrusting her destiny to the hands of another,—leaving her home, her father, mother, brothers and sisters, for a hearth which another love has lighted, and where other hopes are to bud and bloom? He who can betray the confidence thus reposed in him, and break the heart that has treasured its last trust in his, is callous alike to crime and shame. But this is digression.

Oil.—The import of oil into the United States for the week ending July 1st, was, of Sperm, 2,160 bbls; of whale, 3,000; and of bone, 12,000 lbs. Total, from January 1st to July 1st, of Sperm, 59,925; of whale, 172,730; and of bone, 2,782,500 lbs.

New Bedford Oil Market.—July 1, 1850. Sperm continues in active demand for export and speculation, and sales to the extent of 5950 bbls have been made since our last. The transactions here embrace two cargoes of about 1700 bbls each at 119 cts per gallon; 200 bbls at the same price, and a cargo of 250 bbls on private terms. In Nantucket sales have been made of 2100 bbls at 118 cts cts. In manufactured we notice sales of 4000 gals unbleached Winter at 117cts; 4000 gals do Spring at 112 cts; 1000 gals do do at 113; and 5000 gals bleached do, at 117 cts per gallon.

Whale—We have no change to notice in the market which remains very dull.—The only transaction which has come to our knowledge is a parcel of 1000 bbls handsome N W Coast reported at 52 3-4 cts per gallon.

Whalebone.—Sales of 10,000 lbs Polar at 36 cts; and 24,000 lbs do, understood to be at the same price.

MARINE JOURNAL.

PORT OF HONOLULU.

Arrived,

Sept 2—Am bk Auckland, Jennings, 294 ts, 34 ds fm Petropaulovski.

MARRIED.

In Honolulu, Sept. 26, by Rev. S. C. Damon, Mr. T. Blake, to Miss Hana Kalaau.

DIED.

At Cincinnati, O, on the 1st July, 1850, at an advanced age, Jesse B. Bowlin, father of R H. Bowlin, Esq. of this place.

At St. Louis, Mo. of cholera, Mrs. Smith, wife of Mr. C. Smith, formerly a resident at these Islands.

On board ship J. Q. Adams, on her passage from San Francisco, Mr. Anthon, from China, late supercargo of the brig Frolic, which was lost on her passage from China to California, as formerly reported.

In the city of New York, Thomas O. Larkin, Esq., of San Francisco, formerly American Consul in California. Mr. Larkin was well known here, and was an enterprising man, and President of the San Francisco and Panama Steamship Co.

In England, in June, the world-renowned Siamese twins. Upon a post mortem examination it was found that a vital connection existed between them through the connecting integument, as the result of the unique death proved.

On board ship Splendid, on her passage from Guam to the north, April 20, John, and 24, Joe, Sandwich Islanders. They shipped at Honolulu, one year ago.

On board ship Splendid, Joseph Castro, a native of Guam.

At sea, March 15, of dysentery, on board ship Mazeppa, on her passage from Honolulu, to Valparaiso, George E. Webster, a native of Salem, Mass, aged 22 years.

At Charles' Island, one of the Gallipagos group, on the 3d of August, Capt. Thos. Wilson, master of the English whale ship Ranger.

At Pittston, Me, April 19, 1850, Mr Gershon Cox, aged 84 years. He was the father of five sons, who are well known as ship masters in the Pacific. One of the sons, Wm. H. Cox, died December 14, 1849, at San Francisco. Mr. Cox was for about half a century a leading member of the Methodist denomination in the vicinity where he resided, and was highly esteemed in the community.

BOOKS FOR SALE AT HILO.

The following books may be obtained at the Rev. Mr. Coan's: Jarves' History of the Sandwich Islands, price $1 00. The Whale and his Captors, price $1 00. Numerous volumes published by the Am. Tract Soc. The Friend, bound and unbound.

BIBLES in various languages.

☞ Seamen will be supplied with numerous volumes gratis, or at reduced prices. tf

New Book.

For sale at the POLYNESIAN OFFICE.
and at the CHAPLAIN'S STUDY.
THE WHALE AND HIS CAPTORS,
By Rev. H. T. Cheever—Price $1 00.

To Seamen and Strangers.—The Seamen's Chapel is open for Public Worship every Sabbath, at 11 a. m., and 7 1-2 p. m. Seats Free.

The Seamen's Concert for Prayer is held at the Room the 3d Monday evening in each month.

Seamen belonging to vessels (of all nations) visiting this port are invited to call at the Chaplain's Study, where they will be gratuitously supplied with copies of the Friend and other rending matter. It will be most convenient for the Chaplain to receive calls from Seamen between 2 and 4 p. m.

Public services at the Native Churches, on the Sabbath, commence at [illegible]1-2 a. m. and 2 1-2 p. m.

The Seamen's Reading Room is open at all hours of the day. Strangers arriving and having late foreign papers, are respectfully invited to aid in keeping said room supplied with useful reading matter.

Donations are respectfully solicited for the support of the Chaplaincy, and the publication of the Friend. An annual report of all donations is made to the Am. Seamen's Friend Society in New York. Any person contributing $50 is entitled to become a Life Director of the Society, and $20 to become an Honorary Life Member.

SAM'L C. DAMON, Seamen's Chaplain.

For the Friend.

A Ship-Master's Opinion respecting Sabbath Whaling.

Mr. Editor:—When last at the Sandwich Islands I purchased two bound volumes, containing the Friend for the years of 1847, '48 and '49 up to the date of my leaving. In looking over the volumes I found a great deal of interesting matter. Amongst other things, I noticed several articles written by different persons (but one in particular by Rev. T. D. Hunt) upon the great sin committed by whalemen in taking oil on the Sabbath. After giving it a serious consideration I wish to make a few remarks upon the subject. I went my first voyage at sea, a boy, in 1832 and have been at sea most of the time ever since, and have always made a practice of taking all the oil we could, on the Sabbath as well as other days, and have never thought that we were committing any great sin in so doing.

There are some few pious captains ("and to their credit be it said," so says the Friend) who will not take a whale upon the Sabbath. But as far as I can learn, whenever they are fortunate enough to have blubber on board, will try it out on the Sabbath, and call it "a case of necessity," as the blubber is wasting. And thus it is that their consciences are quieted. For my part I cannot say that it is to any man's credit to profess any thing that he does not act out to the very letter.

I have heard of one of those pious Captains who, when on the coast of Kamtchatka three or four years since, on a Sabbath morning, with fine weather and plenty of whales about the ship, when asked by the mate if they might lower the boat in pursuit of them, as himself the other officers and crew were very anxious to go, told them they might go if they wished, but *he* should have nothing to do with it. They lowered the boats and succeeded in killing two noble whales, and took them to the ship and commenced cutting, the same as if it was any other day in the week. No doubt it was very consoling to that master to think that he had nothing to do with it.—All I shall say is, if there is any one so *verdant* at the Sandwich Islands as to believe that that master objected to receiving his share of those two whales upon his arrival at home, I am not.

Rev. T. D. Hunt in his "Wants of Seamen," No. 6, published in the Friend for August 1847, says "the ill gotten gains of Sabbath whaling should be as much abandoned as the price of blood as they are the price of Souls." Again he says, "he may sail his ship, or prepare for the approaching tempest, but whale on the Sabbath—never. Compel him to any thing beyond the sailing or the safety of his ship and you break his sabbath."

Now I would ask the Rev. Mr. Hunt the difference in sin committed, between sailing a ship and whaling upon the Sabbath, for in my poor estimation it amounts to one and the same thing, i. e., to make as speedy termination of a voyage as possible. In all ships that I have been in when sailing the ship, the crew were liable to be called upon at any moment, to trim the yards, make, and take in sail, &c., with one man constantly at the helm, and in the course of the 24 hours, 12 different men would be there, and I should think that these men would peril their souls just as much as the same number of men would in taking a whale, for all the necessity that I can see for sailing upon the Sabbath, is to shorten the voyage as much as possible and thereby make it profitable.

In "taking in sail" and "lying by" on the Sabbath would not make any great difference in quite a long passage. Whereas in a whaling voyage it might make a year or more difference in the voyage and then in all probability be obliged to return home with not much more than half a cargo. For it will sometimes happen in a six months' cruise that almost every opportunity that we have of taking oil, is upon the Sabbath. Therefore I think it right to improve all opportunities. I take it it is for this reason only that Mr. Hunt makes a difference between Sabbath *whaling* and *sailing*; i. e. as he is not interested in the profits of any whale voyage, but has made a passage in vessels at several different times, that he is as anxious to reach port as other people, without regard to the poor sailors, who are obliged to peril their souls in consequence. As he remarks in his correspondence with the editor of the Friend, in the Jan. No. of 1849, "the confusion attendant upon getting under weigh and approaching our port obliged us to dispense with our usual Sabbath services."

I should have thought that one who thinks it so great a sin to take a whale on the Sabbath, would have endeavoured to persuade the master of the vessel, on board which he sailed to California to have remained where they were until next day, and have held their "usual services" on board, for I do not doubt but the port that they were so anxious to reach would have remained in the same place! Whereas a sperm whale which all hands on ship-board had been anxiously looking for a month or more, seen on a Sunday if not taken, would be very apt to change his quarters before Monday!

After thinking well upon the subject, I have come to the conclusion, that, when I think it a sin to whale on the Sabbath, I shall not sail a ship on that day, but on Saturday night take in all sail, lash the helm, and not make sail again until Monday morning, whether making a passage or cruising for whale.

And when I hear of a vessel after a long and unpleasant passage arriving in sight of their destined port late of a Saturday night, with the Rev. T. D. Hunt as passenger, and hear of his endeavors to persuade the master to remain where they are until Monday, then I shall think, and not before, that it is not for self interest that he makes a difference between Sabbath *sailing* and *whaling*.

Yours respectfully,

Alexander R. Barker,

Master ship "Abraham Barker."

Bay of Islands, N. Zealand, Feb. 1850.

From Pernambuco—Loss of a Sag Harbor Whaler.—Captain Knox, of brig Romp, arrived at this port this forenoon, from Pernambuco, which place he left 16th ult., gives information of the loss of the whaling ship Franklin, Captain Cooper, of Sag Harbor. She went ashore during the night of June 7th, about seventy miles North of Pernambuco, and it was expected she would prove a total loss. Capt. Cooper arrived at Pernambuco in his boat, and on the 10th returned to the wreck with assistance, in order to save the cargo, which consisted of 3300 barrels of whale oil. Hopes were entertained that he would succeed. The Franklin was bound home from the Pacific Ocean

THE FRIEND.

HONOLULU, OCTOBER 15, 1850.

EDITORIAL REMARKS.—During the last two years having had many warm discussions with ship-masters, upon the merits of the articles "Wants of Seamen," we have not unfrequently said to them, "If you are not pleased with the views expressed by the Rev. Mr. Hunt, let us have yours. Review those articles and you shall be heard!" We now place before our readers a communication by a ship-master, in which he gives his views upon one point discussed by the Rev. Mr. Hunt, namely, "Sabbath Whaling." Let his subject be discussed freely, calmly, and courteously. Let the arguments pro and con be adduced, and placed in their strongest light. Good and not evil will be the result. Let no one fear for the truth in the field of fair and honorable discusssion.

In regard to the publication of the Rev. Mr. Hunt's articles, some have taken occasion freely to censure the Editor of the Friend, while others have approved. Some have also censured us for publishing what they styled "Fore-castle literature," while others have said that the Editor of the Friend was too much of a "Captain's Man," and would not allow Jack to publish his wrongs. The idea of pleasing all classes of our readers is out of the question, but there is an idea that we have ever aimed to keep *these eight years* before us, to publish a paper that should afford useful, instructive and entertaining reading, to the many thousands of seamen in the broad Pacific, including masters, officers, and seamen on board the various classes of Naval, whaling, and merchant, vessels. In carrying out this idea, the Friend has been sustained from year to year. Assurances have of late been freely pouring in upon us, that the paper as it has been conducted, was essentially useful among seamen, and must be sustained. This is encouraging, and if our readers continue their pecuniary support, we shall endeavour on our part to support the character of the Friend, and do all in our power to render it a welcome visitor in the Cabin and the Forecastle, or wherever else its circulation may be extended.

In passing judgment upon the character, and opinions advanced in our columns, let our readers exercise their good sense, and observe whether articles are *communicated by correspondents*, or *appear editorially*.

Bible 250 Years old.

Dr. King recently presented us with an interesting relic of olden times in the form of an English Bible, printed in 1599, several years previous to the celebrated translation under the authority of King James, and twenty years previous to the landing of the Pilgrims.

The following is a *verbatim et literatim* reprint of the New Testament title page, that of the Old Testament having been lost.

THE
NEW TESTA-
ment of our Lord IESVS
CHRIST, Tranflated out of
Greeke by *Theod: Beza:*
With brief Summaries and expofitions vpon the
hard places by the faid Authour *Ioac: Camer*
and *P. Lofeler Villerius,*
Englished by L. TOMSON.
Together with the Annotations of Fr: Iunius vpon
the Reuelation of S. IOHN.

¶ IMPRINTED AT LONDON
by the Deputies of Chriftopher Barker.
Printers to the Queenes most
Excellent Maieftie.
1599.

This would appear to be a translation from the Latin translation, made by Beza, who died 1605, aged eighty-six, hence the copy before us was printed seven years before his death. In comparing it with our English version, we are surprized to observe the great similarity.

The following is a reprint of the xv. psalm.

¶ *A Pfalme of Dauid.*

LOrd, who shall dwell in thy Tabernacle? who shall reft in thy holy Mountaine?

2 He that walketh vprightly and worketh righteoufneffe, and fpeaketh the trueth in his heart.

3 He that flandereth not with his tongue, nor doeth euill to his neighbour, nor receiueth a falfe report againft his neighbour.

4 In whofe eyes a vile perfon is contemned, but he *honoureth* them that feare the Lord: hee that fweareth to his *ovvn* hinderance and changeth not.

5 He that glueth not his money vnto vfury, nor taketh reward against the innocent: he that doeth thefe things, fhall neuer be mooued.

TWO WHALE SHIPS SUPPOSED TO BE LOST. Capt. Roys reports, that on the 1st of Sept. while his ship was lying in a Bay upon the W. Coast of Bhering's Straits, an Indian chief came on board, and by signs made known that two whale ships went ashore, and all hands were lost. As near as he could understand the fatal spot must have been, N. W. from Cape East, on the Asiatic Coast. For four or five days previous there had been a heavy gale from the N. E. It was impossible to learn the names of the vessels lost.

A COPY OF THE FRIEND WORTH $100!—We recently heard the master of a whaleship remark, that one time during the late cruise if he could have obtained a certain No. of the Friend he would have given $100. Now we would suggest that shipmasters do not fail to supply themselves with bound volumes; and we also hope that many may be inclined to subscribe for the paper to be sent overland to the United States.

☞All attempts to discover the means by which this communication reached our office will doubtless be vain. Should it become known, it might lead to serious consequences! We are somewhat surprised that a member of the whale-family should condescend to make his appeal through our columns, inasmuch as we have ever aimed to direct whalemen to the best cruising grounds. We feel honored by the compliment and shall feel bound, on no consideration to betray the confidence thus reposed in us:—

A Polar Whale's Appeal.

Anadir Sea, North Pacific,
The second Year of Trouble.

MR. EDITOR,—In behalf of my species, allow an inhabitant of this sea, to make an appeal through your columns to the friends of the whale in general. A few of the knowing old inhabitants of this sea have recently held a meeting to consult respecting our safety, and in some way or other, if possible, to avert the doom that seems to await all of the whale *Genus* throughout the world, including the Sperm, Right, and Polar whales. Although our situation, and that of our neighbors in the Arctic, is remote from our enemy's country, yet we have been knowing to the progress of affairs in the Japan and Ochotsk seas, the Atlantic and Indian oceans, and all the other "whaling grounds." We have imagined that we were safe in these cold regions; but no; within these last two years a furious attack has been made upon us, an attack more deadly and bloody, than any of our race ever experienced in any part of the world. I scorn to speak of the cruelty that has been practised by our blood-thirsty enemies, armed with harpoon and lance; no age or sex has been spared. Multitudes of our species (the Polar), have been murdered in "cold" blood. Our enemies have wondered at our mild and inoffensive conduct; we have heard them cry, "there she blows," and our hearts have quailed as we saw their glittering steel reflecting the sum beams, and realized that in a few moments our life-blood oozing out, would discolor the briny deep in which we have gambolled for scores of years. We have never been trained to contend with a race of warriors, who sail in large three-masted vessels, on the sterns of which we have read "New Bedford," "Sag Harbor," "New London." Our battles have hitherto been with simple Indians in their skin canoes. We have heard of the desperate encounters between these whale-killing monsters and our brethren the Right whales on the North-west coast. Some from that quarter have taken shelter in the quiet bays of our sea, others of the spermaciti species from Japan, have also visited us and reported their battles and disasters; they have told us it is no use to contend with the Nortons, the Tabers, the Cof-

fins, the Coxs, the Smiths, the Halseys, and the other families of whale-killers. We Polar whales are a quiet inoffensive race, desirous of life and peace, but, alas, we fear our doom is sealed; we have heard the threat that in one season more we shall all be "cut up," and "tried out." Is there no redress? I write in behalf of my butchered and dying species. I appeal to the friends of the whole race of whales. Must we all be murdered in cold blood? Must our race become extinct? Will no friends and allies arise and revenge our wrongs? Will our foes be allowed to prey upon us another year? We have heard of the power of the "Press;" pray give these few lines a place in your columns, and let them go forth to the world. I am known among our enemies as the "Bow-head," but I belong to the Old Greenland family.

Yours till death,

POLAR WHALE.

P, S. I send this by the——— of———. Do'nt publish the name of the vessel. P. W.

Another Junk.—On the 22nd of April, in lat. 45 N, lon. 155 E, the "Henry Kneeland," Clark, master, fell in with a Japanese junk, having thirteen persons on board. The vessel left Yeddo for Kuno, three or four days sail, but was driven to sea, and had been sixty-six days drifting at the mercy of winds and waves, dismasted and rudderless. For forty days their water had been out, and they had subsisted on snow-water. Their food consisted most of the time of refuse fish. The junk had no cargo on board. Captain Clark took the crew on board the Henry Kneeland. The commander and two of the crew of the junk came passengers to Honolulu on board the H. K. Two of the crew are on board the Maringo; six were taken to Petropaulaski, and were taken charge of by the Russian authorities, and two came passengers by the Nimrod.

A Whaler supposed to have foundered. A French whaleship, lately arrived, reports that during the gale about the middle of September, a ship was seen to go down; name of ship unknown.

The Friend Semi-Monthly.—During the remainder of the year, thd Friend will be issued Semi-monthly, for the convenience of our numerous readers in the Whaling Fleet.

☞Masters of whaleships should report their vessels as early as possible after arriving in port.

DONATIONS.

	For Chapel.	For Friend.
Capt. Hubertson,		$25 00
Capt. Loven, of the Levant,	$5 00	5 00
Capt. Case, of the Neva,		5 00

Notice to Seamen.

☞ The Chaplain, will be found by Seamen, at his Study between 12 and 3 o'clock every day, during the present shipping season.

New York Correspondence.

The following communication, intended for our columns, was accidently mislaid, or it would have appeared in our last number. The fresh and condensed summary of news, occasionally furnished by our correspondent, "J. S." is always acceptable. We should rejoice to receive a monthly dispatch from the same pen, for the perusal of the readers of the Friend.

New York, May 22nd, 1850.

Dear Friend.—The tide of population from the Old World continues to flow into the United States with no signs of ebbing, at the rate of 1000 per day, or 365,000 in a year; and we say *let them come.* We have bread enough to feed them, and christianity enough, rightly improved, to save them. *Let them come* and breathe our free air, and above all stand erect in the enjoyment of that liberty wherewith Christ makes his people free. What if most of them are papists! I never saw a bank of fog which a good breeze would not roll off; nor a bank of snow which a warm sun would not melt.

The Pope has at length returned to Rome, but Rome has not returned to the Pope, and never will. The day is passed when any fallible mortal can comfortably assume the office of God's Vicegerent, and lord it over minds in matters where God has made them *free.* He is in Rome, as we have known an ambitious whale steer into an inlet at high tide, and found himself uncomfortably anchored at the ebb, and annoyingly saluted with the harpoon. Well, let him flounce, and learn lessons of humility, to respect the principles and practice of truth wherever found, and to love whom God loves.

Within a few days there has been no small stir here about a rumoured invasion of Cuba from our coast. The force is said to be considerable, has been fitted out ostensibly for California, and is headed by a Spaniard. The design is said to be to land on some unprotected part of the island, and sweep from it every vestige of Spanish domination. President Taylor has ordered several of our armed vessels to Cuba to protect our national neutrality and honor. Cuba, some think, will make two or three good, democratic, states; and Canada, on the north, as many more! California will come into the Union shortly, and doubtless, as she desires; free from the blot and curse of slavery.

The benevolent Societies, the *glory* of our land, have just celebrated their anniversaries. A good time we have had. Most of them, both in their receipts and apparent usefulness, are in advance of the preceding year.

The various industrial pursuits are in a prosperous condition; money is plenty; confidence inspires trade with life; the General Government is so administered, as to satisfy the reasonable, and all but the totally depraved; thank God for this goodly heritage.

As ever, Yours, J. S.

Dr. Webster's Case Decided.

All efforts to obtain the Governor's Pardon have failed, and the 30th of August is the day appointed for his execution. As many of our sea-faring readers have heard nothing of this melancholy affair, we publish the following admirably condensed account, extracted from Governor Briggs' address before the Honorable Council.

"It is undisputed, that on the 23d day of November, 1849, John White Webster, a professor in Harvard University, and in the Medical College in Boston, did, at mid-day, in that college, within a few feet of the place where he daily stood and delivered scientific lectures to a large class of young men, with unlawful violence, take the life of Dr. George Parkman, a respectable citizen of Boston, who had come to that room at the repeated requests of the prisoner.

That after taking his life, he eviscerated, and in a manner most shocking to humanity, mutilated the body of his victim, burning parts of it in a furnace, and depositing other parts of it in different places in the building, where they were found by persons who were seeking after Dr. Parkman.

That after killing him, he robbed his lifeless creditor, by taking from him two notes of hand, signed by himself, to which he had no right, and committed still another crime by making false marks upon those notes, and that a jury of his country, empanelled according to law, under the direction of four of the five eminent Judges constituting the Supreme Court of Massachusetts, after a long, patient, and impartial trial, and after hearing in his defence the arguments of learned and eloquent counsel, upon their oaths, found him guilty of murder.

Upon that verdict, the Court pronounced the awful sentence of death. In such a case there should be obvious and conclusive reasons to authorize the pardoning power to interpose and arrest the sword of justice. I do not see these reasons.

The combined circumstances of the case force me to the conclusion, that the safety of the community, the inviolability of the law, and the principles of impartial justice, demand the execution of the sentence.

I hope it is not necessary for me to say that it would have given me unspeakable pleasure to have come to a different result, and that I would do anything on earth in my power, short of violating duty, to alleviate the sufferings of a crushed and broken-hearted family. GEO. N. BRIGGS.

Council Chamber, 10th July, 1850.

The Late President.

We give, from such materials as we have before us, the following leading facts in the life of the deceased President.

Zachary Taylor was born in Orange County, Virginia, Nov. 2d, 1784. Till the age of twenty-one he resided with his father, and is said to have worked on his farm. In early youth he gave evidence of uncommon energy and force of character, and of a taste for military life. In 1808, at the age of 24, he was appointed a lieutenant in the army. In 1810, he married Miss Margaret Smith, of Maryland, who survives him. He was promoted, in 1812, to the rank of Captain; and after the declaration of war with Great Britain, he was promoted Major by President Madison, after his memorable and gallant battle of Fort Harrison, with a handful of men against a large body of savages. At the end of that war he resigned his commission, and returned to his farm. In 1816 he was re-appointed Major, and commanded two years at Green Bay; after which he served

at the South, and again in the Northwest, being seldom absent from active duty. In 1832 he was made Colonel, and served in the Black Hawk war. From 1836 to 1840 he was in Florida, being specially selected for the irksome and difficult service of subduing the Seminoles. In that service he fought the battle of Okechobee, memorable in the annals of Indian warfare. In 1845 he took the command of the Army of Observation in anticipation of hostilities with Mexico; since which his history is too well known to require that we should write it here.—[N.Y. Observer.

Important Trial.

We copy from the last Polynesian the following report of an important trial, relating to the British Schooner "Enigma."

Wahine, *et al*, vs. Apear.—This was an action by the plantiffs, natives of these islands, against the owner of the British schooner Enigma for damages for privations endured by them on board said schooner in consequence of an insufficiency of food and water and a want of shelter. It appeared upon evidence that the schooner sailed from Hong-Kong in China, about the middle of July—that after the vessel was loaded and ready for sea, the agent at Hong-Kong sent on board seventeen Hawaiians, at the same time sending rice and water for their use sufficient, as he said, for forty-five days consumption, which he considered a sufficient time to make the passage. The Captain, whose bearing and appearance on the stand were exceedingly creditable, immediately protested against taking them, alleging that he had no room for them; but the agent for the vessel required him to put them into and under the long-boat; whilst, as the vessel was chartered to be laded FULL, four casks of their water were put on deck, by which means they lost two casks by having them stove, the second day out, so that they were then put on five pints allowance. The Captain, finding that his water would be insufficient, deviated from his course, in order to get this necessary of life from several islands laid down on his chart; but as he went from one to another, he found them barren rocks. Soon after they found their rice to be bad, and upon broaching two of the casks of water, it was discovered that being put into beer barrels, the water had become putrid, and then their allowance was reduced to four pints. During this time, some who had come on board ill becoming yet more sick and others falling sick, the Captain, although sick himself and sharing the same short allowance of water, divided with his passengers his private stores, put on board at his own expense. The sick were likewise put below, but the stores of one man made but sorry rations for himself and seventeen others, whilst instead of forty-five days, their passage was prolonged to sixty-three; and it was proved by two of our most experienced ship masters that the ordinary passage was not less than sixty days. It was further in evidence that the death of some of the four passengers, who died during the voyage, was accelerated at least, by the want of proper food and water, for towards the end of the passage, they were compelled by their necessities to mix the bad water with the good, in order to make up the quantity necessary for subsistence, and indeed had it not been for the rains, which fell during the latter part of the passage, it was the opinion of the witnesses that many more must have died.—The advocates for the plaintiffs contended that this was in contravention of the implied contract to supply them with all reasonable comforts and provision, as well as directly contrary to the British passenger act, which requires that room beneath deck, and the usual allowance of provisions for British seamen shall be given to each passenger, irrespective of any supply of provisions of their own. This act was passed to prevent the ignorant emigrants of the British Islands from being imposed upon by the avarice of passenger brokers, and it was contended that the act applied with much greater force to the subjects of a friendly power, who to ignorance in general, added ignorance of the English language. The same act provides that sufficient water shall be stowed *under deck* to give to each passenger three quarts per day, and it was contended that the contract to carry these passengers was made under and subject to this law.—Upon these facts the Jury brought in a verdict for plaintiffs of $2000.

Asher B. Bates, Chas. C. Harris, for plaintiffs.
John Montgomery, for def't.

DIED.

On board ship Albion, May 30th, of consumption, Thomas B. Tripp, of Dartmouth, Mass., aged 18 years.

On board bark Philip, September 15th, Francisco Penavia, an Italian, had a wife living in Monte Vedio.

In Honolulu, Oct. 3d, Mr. George W. Cleaveland, late from California. There was found in his possession papers showing that he was regularly discharged from the U. S. Regiment of Mounted Riflemen, at Fort Vancouver, Oregon, July 8th, 1850. He was born in Broome Co., State of N. Y., and was a cooper by trade. Among his papers was found a letter from a sister residing in Morristown, St. Lawrence Co., N. Y. [papers in N. Y please copy]

At U. S. Hospital, in Honolulu, Oct. 9, John A. Clinton, belonging to Newport, R. I. He came passenger on board the "Sarah Abigail" from California, and died the same day he was landed.

On board "Pioneer," in July, Samuel Stick, a native of King's Mills Group. And in Sept. Jackson, a native of the Hervey Islands.

On board ship "Dartmouth," Feb. 27, 1849, Jose P. Machado, aged 24 years, native of Pico, Western Islands.

Drowned, 22d of April, 1849, Richard Waden, belonging to ship Darthmouth. He is supposed to be a native of Ireland, but a resident in the American British Provinces.

New York Correspondence,

Or an epistle general to the American Sailor in the Pacific, from one of the Secretaries of the American Seamen's Friend Society.

NEW YORK, June 29, 1850.

It would afford me much pleasure to tell each reader of this page what of all things on earth he might most desire to know—about his country, his friends, how to make a fortune, or how to be happy.

As to country, let me say to that seaman then, that your country is not where you left it when you sailed for the Pacific. It has removed several degrees; one half of it by railroad, and the other half of it by steamboat. The railroad part has continued to pay its entire expenses by enhancing the value of the land passed through, while the other has realized more in the rise of city stocks and real estate. So the move in a pecuniary view is a good one; your country is growing rich. Still better, education, the education not of a few of the most wealthy, but of the entire people, and a practical education too, is becoming a favorite and settled principle of action. Better still, things bearing on the social and moral condition of the people are receiving a growing attention. England is debating the matter of stopping all the mails, and shutting all the Post offices on the Lord's day, while the Board of Admiralty are meditating the removal of the curse of grog from the British Navy. Sweeden and the nations farther north are much engrossed on the subject of religious toleration. Germany is profoundly considering the savage custom of war. France is just where Paul's ship ran aground—where two seas meet—and is making ready the planks to get safe to land. In Italy, the Pope is back at the wheel, but with all his cardinals to help, he can't steer the ship; his good sense may yet determine him, and if not that a dire necessity, to let civil matters alone, and attend to those which appropriately belong to the church. The United States, as represented in Congress, is now on the matter of extending the territory of freedom, diminishing that of slavery, adopting postal regulations so as to tax very lightly, yet sufficiently for a healthy existence, the knowledge passing through the mail.

As to friends—the old homestead, with some exceptions which you will in due time learn, is cheered by the same familiar faces you left. The old gate, settled an inch or two, still swings before the door. That shell on the mantlepiece lies just as you left it, and the favorite cat purs in the same corner. Your father is really growing older, and you will mark the change should you live to see him again; while your mother—God bless the sailor's mother! age, and anxiety about you have knit another seam on her brow. Your brothers, your sisters, not essentially changed. Your wife! She does not forget you, and long before she has any good reason to expect you, she will trim her lamp till a late hour and watch for your return. Your little ones! they are now on tip-toe to run and meet you.

A fortune! Yes, I will tell you how to make that. The ship has just returned to New Bedford with the richest harvest of oil ever gathered by one ship from the Pacific grounds. It made the reapers glad. But you can do even better: Pursue a merchandise better than oil, and declared in the scriptures to be better than silver, and your fortune is made! Prosecute that—gain that, and you are richer than you could be in possession of all the the gold of the California mines. And such a treasure would make you happy. Gold can't do it. Silver can't do it. Friends can't do it. A cheerful fireside to welcome your return can't do it. All these are desirable, but they are not the one thing needful. The mind the immortal mind pants for something higher, purer, more permanent, more satisfying than these. And that one thing is Christ formed in the soul, the hope of glory. It is the better part chosen by Mary of Bethany. It is the pearl of great price bought by the merchant. Seek then that, and your country is better than the one you left for the sea—it is a heavenly one. Your friends better, for their friendship and society will be forever. Your treasures boundless as your bliss, and lasting as eternal life.

His blessing which maketh rich and addeth no sorrow therewith be with you.

J. S.

☞ We copy the following from a San Francisco paper. The remarks of the Editor were made in referring to a late Act of the Hawaiian Government, respecting foreigners holding land in fee-simple :—

POLICY OF THE LEGISLATURE OF THE SANDWICH ISLANDS TOWARDS FOREIGNERS.—It is somewhat singular, that at the very time our municipal authorities are discussing ordinances preventing foreigners from engaging in certain industrial occupations in this city, intelligence should have reached us that a policy quite the reverse had received the sanction of the Legislature and King of the Sandwich Islands. We blush to record the fact, which we commend to the special attention of our city Solons.

WHAT CAN BE DONE ON ONE ACRE OF GROUND.—The editor of the Maine Cultivator published, a few days ago, his management of one acre of ground, from which we gather the following results:—One third of an acre in corn usually produces thirty bushels of sound corn for grinding, beside some refuge. This quantity was sufficient for family use, and for fattening one large or two small hogs. From the same ground he obtained sixty bushels of onions; these he had sold at one dollar per bushel, and the amount purchased his flour. Thus from one third of an acre and an onion bed he obtained his bread stuffs. The rest of the ground was appropriated to all sorts of vegetables, for summer and winter use; potatoes, beets, parsnips, cabbage, green corn, peas, beans, cucumbers, melons, squashes, &c, ; with fifty or sixty bushels of beets and carrots for the cow. Then he has also a flower garden, raspberries, currents and goosberries, in great variety, and a few choice apple, pear, plum, cherry, peach, and quince trees. If a family can be supported from one acre of ground in Maine, why not at the Sandwich Islands?

The friends of Temperance, says the Albany Evening Journal, have reason, without any reference to politics, to morn the death of General and President Zachary Taylor. He was a strict tetotaller for more than 20 years; and for several years previous to his brilliant career in Mexico, he not only caused Temperance societies to be formed among the soldiers, at the garison under his command west of the Mississippi, but also caused scores of temperance papers to be distributed among them.

WHALE SHOOTING.—Capt. Robert Brown, of the ship North Star, of New London, is about sailing on a whaling voyage, and intends to use his whaling guns in the business. Harpoons, with lines attached, are fired from these guns, and so far as they have been tested they have proved entirely successful. In a voyage of the ship Electra, Capt. Brown took eleven right whales, nine of which were taken with the guns. In taking polar whales the guns were not required, as they were very tame and easily captured. The guns, harpoons and lances that Capt Brown is going to use on the North Star, are patented and are an improvement upon those used in the Electra.

DEATH OF BRIGADIER GENERAL MASON.—We learn with regret, that a telegraph despatch was received yesterday by Genl. Jesup, announcing the death of that distinguished officer and excellent man, Brigadier General (by brevet) Richard B. Mason of the United States army, who had returned from California. He breathed his last in St. Louis on the night of the 25th, a victim to the Cholera.

THE FRIEND.

HONOLULU, NOVEMBER 1, 1850.

AN HOUR WITH THE JAPANESE.—Several ship-wrecked Japanese being in Honolulu, we requested one of them who has acquired an excellent knowledge of our language to make us a visit, accompanied by one of his countrymen, lately brought hither. We shall first introduce our readers, to the interpreter, John Mung. This person, with four others, was taken ten years ago from a desolate and uninhabited island, where they had been cast and where they had lived for 180 days, on sea fowls. They were brought to Honolulu by Capt. W. H. Whitfield, of Fair Haven, who then commanded a whale ship in the Pacific. Four of the number remained here, one having died. John Mung was taken by Capt. W. to the United States, where he learned the cooper's trade, and enjoyed a good opportunity for going to school. His education is highly respectable. He has been one whaling voyage and then with the multitude went to California. There not succeeding to his expectations, he came to the islands, indulging the long cherished hope that he might obtain a passage to his native shores. It is his ambition to command a Junk, and navigate her, with compass and quadrant, and shew his Japanese countrymen, that the "out-side barbarians," understand navigation; which science he has acquired sufficient for all practicable purposes. Would that his fond wish might be gratified!

On Mr. Mung's arrival in Honolulu, he learned that that there was a fresh arrival of his shipwrecked countrymen, and for whom he is prepared to act as interpreter. By his aid we learned the following facts respecting the Japanese taken from a junk, by Capt. Clark, of the Henry Kneeland, on the 22d of April, in 45° N. L., and 155° E. L.

Teenzumolly, was the name of the junk, commanded by Capt. Kusky, with Mr Kekuzero, for mate. There were thirteen, all told on board the junk. We may as well state that, KeKuzero, the mate has furnished us as minutes from his "Log," and we have no doubt he has noted down the facts in true Japanese nautical style! But to proceed, Mr Mung, acting as interpreter, and M KeKuzero dictating to him. The Teenzumolly was owned by a soldier or nobleman, in a town situated in the S. E. side, of a small island, S. W. from Niphon. The name of the island, our ear was too dull to catch the sound, although a part of the name we aver, was Nipung—. The town is twice the size of Honolulu—the people are farmers and fishermen—only two junks were owned there, but a plenty of fishing boats—rice is the principal product besides all kinds of vegetable products. Both junks were owned by the Honorable Mr Soumung. The Teenzumolly, had taken a cargo of rice to Yeddo, discharged the same, received payment, partly in silver and partly in paper money, (we have seen specimens of both, as for the paper money it appears as well as any we ever saw,) and started on her homeward passage, ordinarily of only three days, but was overtaken by adverse winds. Their supply of water was exhausted at the end of sixteen days, and their rice at the end of twenty-six. They were then reduced to some refuse fish scales and occasional showers, but by the merciful care of Divine Providence all were preserved until at the end of sixty-six days, their junk rudder-less and dismasted, fell in with the H. Kneeland, Capt. Clark, who took them all on board his vessel and supplied their wants. They cherish the most grateful feelings towards Capt. Clark and his ship's company. Subsequently Capt. Clark delivered six of them to the Russian authorities at Petropaulaski, under the promise that they should be returned to Japan. Two were taken by Capt. Sherman, of the Nimrod, and two by Capt Divoll of the Maringo.

There is an impression abroad, that Japanese, if taken back to their country will be put to death. We are positively assured by Mr Kekuzro, through the interpreter Mr. Mung, that this is not the fact. He asserts that should any vessel take them back to their native village, the inhabitants would rejoice to hail the vessel and would put on board a supply of fresh recruits, without charge. We hope soon to learn that some man-of-war, merchant vessel, or whale ship is bound thither, on the benevolent errand of restoring these unfortunate persons to their country and home. Referring to their home, leads to the remark, that seven of these are married and their families reside in the village where their junk was owned.

Our Yankee propensity of asking questions was wonderfully excited in our interview with Mr. Kekuzero, for we found that he could furnish much valuable information respecting the Japanese islands, and the customs of the people. The following facts we record, respecting his native village, containing sixty idol temples, which according to his account are full of gods. Every temple is presided over by a priest, who acts ex-officio as school teacher. The children o all both rich and poor, attend school together, and nearly all the inhabitants can read and write. The people are all taxed for the support of the temples. Every farmer paying about five bushels of rice, per acre. We asked, "how do the laws punish the thief?" Our informant replies, "For the first and second offence the thief is imprisoned, but for the third, his head is cut straight off."

"How do they punish the murderer?" "His head is cut off direct," (were the words of the interpreter.)

As for marriage, a man is allowed but one wife, but if she does not please her husband, he can send her back to her father's house, with the consent of the old people, otherwise the husband must support her.

Touching their ideas of a future state, we learned that the bad people are believed to go to a bad place after death, and the good to a good place. When a person dies a record is made of his name and it is hung up in the house of his friends, and the household have stated periods for praying to the spirit of the departed. In Japan there are six principal sacred days, including New-year, which occurs in January.

Our limits will not allow us to enter more fully into details, in recording a sketch of our interview with Mr Kekuzro, and Mr Mung his interpreter. At some future time we may make some additional remarks relating to the Japanese and the policy of that government.

WRECK OF THE CHARLES DREW.—This vessel 11 months out, having 1400 barrels of oil on board, was wrecked in the evening of the 23d ult, a few rods west of the entrance of Pearl River, on the South side of Oahu. She has bilged in both sides and will prove a total wreck. Near 500 barrels of oil have been obtained from the wreck, and rafted on board the Connecticut, Capt. Penhallow, which vessel proceeded to anchor at the nearest safe position. The bone, 19,000 lbs. was shipped to the United States from Maui. The Master, Capt. Cary, was on shore at the time of the disaster. The wind blowing quite fresh, the officer in command, through an error in judgment, supposed the vessel was standing on shore to the weather of Honolulu, whereas she had been blown to leeward, and hence run in so far as to strike the reef. We learn the vessel was partially insured, although there was no insurance upon the cargo. In recording this disaster, we cannot refain from referring to the general sympathy manifested by all who are acquainted with the master of the unfortunate vessel. Capt. Cary has been a ship master for thirty years, and even visited these islands in that capacity twenty-seven years ago. He was a large owner in the vessel, and must sustain a heavy loss. He is by no means disposed to blame his officers, but speaks in the highest terms of their good conduct and watchfulness.

LONGEST VOYAGE ON RECORD.—The Barckly, of New Bedford, on her last voyage was absent 65 months! and took 1500 barre

John 43—17. "If ye know these things, happy are ye if ye do them."

There are several ways for learning a becoming acquaintance with God's character. The character of God may be discovered in the works of creation, in the study of the heavenly bodies and the structure of the earth: it may be discovered in the Bible, the word of revelation which he has made to mankind, finally it may be learned from Christ who came to our world for the purpose of making a more full and complete revalation of character, than had hitherto been communicated. In the works of creation, the wisdom and power of God are revealed: in the Old Testament Scriptures, his providence and knowledge of human affairs; but in sending his Son to our world his mercy and love stands forth with marked preeminence. Christ declares, that God *so* loved the world, that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life. "If now there was one lesson, more than another that Christ would teach mankind and impress upon the mind, it was that of humanity, hence, it is manifest that God had this point in view, when he sent his Son into the world. So long as the human soul is destitute of true humanity or is filled with pride so long is it wanting the main essential of happiness. My text asserts, *if ye know these things, happy are ye if ye do them.* The things referred to in this passage, relate to humanity.

Melancholly.—A few day since a young man discharged from the whale ship William Tell, shipped on board the merchant ship Iowa. When going on board the latter vessel lying in the outer harbor, he lost his hat overboard, and immediately plunged after it, but was seized by a shark which took off, first his head and next his left arm. Subsequently nothing was seen of the body. We learn that his name was James Kinney, of Irish descent, and furthermore, that he shipped on board the Wm. Tell at the Bay of Islands, New Zealand. We have a distinct recollection of the unfortunate young man, only a few hours before his untimely end, he left our study with a bundle of books and papers which he had procured for his reading during the passage.

☞A Polar whale yields upon an average about one hundred and twenty barrels of oil. We have collected facts showing that eight ships, that visited the Anadir Sea, and Arctic Ocean, took one hundred and fifty-two whales, yielding nineteen thousand, one hundred barrels of oil, or one whale, one hundred and nineteen barrels.

☞By a late arrival from Valparaiso, papers were brought to September 12th, not containing any news of importance.

The proper time for whaling in the Anadir Sea and Artic Ocean.

	First whale.	Last whale.

☞The wreck of the Charles Drew as she lies upon the reef, was sold on the 30th ultimo, to Messrs. Coady & Co. for $1,350.

Items of Foreign News.

Death of Sir Robert Peel, in England and the election of his son to Parliament.—Bloody battle between the Danes and Germans.—American Minister has demanded his "papers" and left tbe court of Portugal, in consequence of that court not complying with certain demands. The Bill for the admission of California as a State, has passed the "Senate," but not the "House," at last accounts. The new President of the United States, Mr. Filmore, with his new cabinet, Daniel Webster at his head, have entered successfully upon their duties.

Items of Domestic News.

During the past month more whalers have visited Honolulu, (having a greater amount of oil on board,) than ever before during one season. Remarkable health among seamen generally,—only one death in port during the month of October.

From the money-vault of the H. B. Co.'s premises $37,000 have disappeared.

The merchants in Honolulu have established a Chamber of Commerce. Business was never more brisk, and all kinds of mechanical labor in great demand.

☞ The following is a list of the officers of the U. S. Brig "Dolphin." The Dolphin sailed from Hong Kong on the 23d of July for Manila, thence to the Bonin Islands, sailing from thence on the 17th of Sept.; bound home by way of California:

Lieut. Commanding, Tho's S. Page; Acting Lieut's, G. V. Fox, (Ex officer); G. P. Welch, C. H. Wells; Asst'g Surgeon, Owen Jones Wistar, Mid'n, J Cornwall, Cha's L. O. Hammond; M. Mate, R. J. Robinson.

Jas. S. Hudson, Capt's Clerk, died of dysentery on board the Dolphin, the 26th of August, universally regretted by all who knew him.

The U. S. Flag-ship "Portsmouth," and sloop of war "Marion" were at Hong Kong on the 22d of July. The former vessel to sail for home. The whale ship Aeronant was at Peel's Island with 900 bbls of whale oil.

GOD IN GREAT AND SMALL.

"The hand that made the floweret gay,
To glitter in the dawn;
The hand that fixed the lamp of day
The blazing comet launched away—
Painted the velvet lawn"

THE PLEASURES OF EARTH.

"Yes, fair as the syren, but false as her song,
Are the world's painted shadows, that lure us along,
Like the mist on the mountain, the foam on the deep,
Or the voices of friends that we greet in our sleep,
Are *the pleasures of earth.*"

LOOKING OUT UPON THE WORLD.

"'Tis pleasant through the loopholes of retreat
To peep at such a world; to see the stir
Of the great Babel, and not feel the crowd;
To hear the roar she sends thro' all her gates,
At a safe distance, when the dying sound
Falls a soft murmur on the uninjur'd ear."

WORDS.

"But words are things; and a small drop of ink,
Falling like dew upon a thought, produces
That which makes thousands, perhaps millions think."

Territory of the United Stares.—Some curious person at the North has been calculating the area of the United States not yet organized into States, and finds that we have domain enough for forty-six and a half States as large as Pensylvania. Of these, thirty-five will lie north of 36° 30', and be free States, if that line of compromise was adopted.

The Bee.—That within so small a body should be contained apparatus for converting the "virtuous sweets" which it collects into one kind of nourishment for itself, another for the common brood, a third for the royal glue for its carpentry, wax for its cells, poison for its enemies, honey for its master, with a proboscis almost as long as the body itself, microscopic in its several parts, telescopic in its mode of action, and with a sting so sharp that, were it magnified by the same glass which makes a needle's point seem quarter of an inch, it would yet itself be invisible, and this, too, a hollow tube—that all these varied operations and contrivances should be enclosed within half an inch in length, and two grains of matter, while in the same "small room" the large heart of at least thirty distinct insects is contained—is surely enough to crush all thoughts of atheism and materialism.

Short Allowance.—It is said that the celebrated Whitfield, when advanced in life, finding his physical powers failing him, undertook to put himself upon what he called "short allowance." He preached once only on every day of the week, and three times on the Sabbath.

Hic, Hæc, Hoc.—When the Rev. Dr. Patton was in England, he dined with several gentlemen who used a great variety of arguments to make him give up his cold water principles. "Now here," said one, "here, doctor, is some good old hock; surely you can't decline this?" "Can't," replied the doctor; "why, sir, I learned to decline it when a boy. Hic, hæc, hoc." the table was in a roar, and the doctor came off triumphant. Let all boys when they are young decline hoc; if they do, they will never know the drunkard's hic.

Good Remedies.—For drunkenness, drink cold water; for health, rise early; to be happy be honest; to please all, mind your business.

☞ We have received the "Whalemen's Shipping List," to August 6th, from which we make the following extracts.

Oil and bone imported into the United States, from Jan. 1st, to Aug. 5th: Sperm, 67,223 bbls; whale, 180,324; bone, 2,723,400 lbs.

NEW BEDFORD OIL MARKET, August 5, 1850. —SPERM—The demand is very moderate, but the market continues firm and full prices are realized. We notice sales since our last of 300 bbls at 120 cts per gallon.

WHALE—Continues dull and depressed, and we have no transactions to report. The last sales were at 49a53 cts, as to quality.

WHALEBONE—We have heard of no transactions in this market. In New York sales were made at 35 cts for South Sea, and N W Coast, and 37 cts for Polar.

☞ A letter from Capt. Lakeman, of bark Alto, of this port, dated at Mauritius, May 18, reports the abandonment of the bark Geo. Porter, Ellis, of this port, on the 1st April, 1850, but gives no particulars, except that Capt. Ellis, his officers, and a part of the crew, with the cargo of the bark, consisting of 750 bbls sp oil, were on board ship Phenix, of New London, which vessel would cruise one or two months, and return home. The cooper of the Geo Porter was on board the Alto. The letter also reports, March 25, no lat &c., bark Bart. Gosnold, Taber, New Bedford, with 1150 sp, 450 humpback oil. The Alto had 1100 bbls sp oil, or upward.

☞ The U. S. sloop of war Falmouth arrived at Hilo Oct. 26—from San Francisco.

MARRIED.

In Lahaina, Oct. 19, By Rev T E Tayler, Mr Albion Burnham, of Boston, to Mrs Mary E Fenner, of Mystic, Ct. U S A.

DIED.

Mr James Y. Hudson, Capt.'s Clerk, departed this life at sea, Aug. 21, 1850, aged 23 years, of dysentery, son of Commander Hudson, U. S. N.—[Com.

Fell overboard, June 4th, Edmund Elliot, seaman, on board the Isaac Hicks. He was a native of South Shields, Eng., aged 23 years.

On board the ship Henry Astor, August 12, 1850, lat 07 03 north, long 97 4 west, Capt Tustean P Swain, of Nantucket, Mass., aged 49 years.

On board Helespont, 30th of Sept. Stephen Clifton, aged 20, col'd, seaman, Newark, N J. He came out in the vessel.

Lost overboad from H. B. M. ship Herald, Sept. 25, Charles Kennedy, belonging to Chatham, Eng. while the vessel was on her passage from Bhering Straits to Honolulu.

Lost overboard Oct 17, 1849, off Trustine Islands, lat. 37 28 S, long 10 17 W, A. Hegie, carpenter of Am whale ship Euphrates. He shipped under the name of Jonathan D. Frarie, and is supposed to belong to New York city. Also on the 26th of March, in Japan Seas, James Trennor, seaman: of the cholera, two days after leaving New Bedford, George Baker, steward.

On board the ship Pioneer, Sept. 24, Geo. Vincent, a boatsteerer. The vessel was on her passage from Arctic Ocean to Honolulu.

On board the Am whale ship Washington, Oct. 2d, John Reed, a seaman, belonging to New York city.

The following persons are reported having died on board the Am wh ship Rajah, Sept 4, Mr ———, coopet, belonging to Fall River, Mass, Oct 19, Manuel Francis, boatsteerer, native of the Western Islands: Oct 20, Antone a native of Cape de Verd Islands: May 26, Bill, July 15, John, Sept. 17, Joe, natives of the Sandwich Islands: Sept 17, Sam, a navive of Rotaina.

On board the wh ship Benj. Morgan, Oct. 2d, Manuel Gasper, a Portuguese.

On board the General Scott, about the middle of Sept. Capt Smith. Also John Lewis, colored —[Com.

I the harbor of Lahaina, Oct. 10, Joseph W Edmunds, of dysentery, a passenger from California, he belonged to Charlestown Mass—[Com.

Sept. 22, in Lahaina, of Consumption, Thos W Hopping. Mr Hopping was from Syracuse, N Y; he had been upon the island about one year; he came here with the seed of disease planted deep in his system; he came a stranger, but his kind and gentlemanly deportment on all occasions, secured for him the love and esteem of all who knew him; when near his end he remarked it was not so hard to die in a foreign land, because he was surrounded by so many friends—[Com.

CARD—Capt. Cary, lately master of the Charles Drew, desires to return his greatful acknowledgments to the 1st Lieut Mr. M'Quire and seamen of H. B. M's ship Herald; to Mr. Fox and seamen of the U. S brig Dolphin; and to numerous masters and men belonging to the various whale ships in port, for their cheerful, efficient and prompt aid, rendered in attempting to save the vessel and cargo.

Information Wanted,

Respecting Jacob Prior Marseilles, who shipped Oct. 5, 1847, on board the Am. whaling bk. Dromo, Capt. Steel, of New London. He shipped under the name of Jacob Mead; the Dromo has returned to the U. S., but if the person here mentioned, is now in the Pacific, he is requested to report himself either to his friends or the Seamen's Chaplain, Honolulu.

Honolulu, 28th Oct, 1850.

Visit of the French Sloop-of-war to the Sandwich Islands in 1836.

Translated for the Friend, from the French of Adolphe Barrot.

NO. X., AND LAST.

Commerce of France—Sandwich Islands have engaged the attention of the Prussians—Importance of the Islands to England and Prussia in case of a war—American influence, and American commerce at the Islands—Political relations of the Islands—with England—with the United States—Establishments of foreigners—Foreigners not permitted to own Real Estate—Consequences—The Peacock at Honolulu — Why she came—Efforts of Com. K. to have certain Articles inserted in the Treaty, defeated—the only way to secure the welfare and preservation of the Hawaiians—the Missionaries have done good and evil; but in relation to their motives, the writer does not undertake to decide.

Other circumstances may attach a high degree of importance to the Sandwich islands and render them of great consequence, as a place of refreshment to our commerce. Our commerce is banished, so to speak, from the markets of India, and Indo-China, by the difficulty of procuring return cargoes for our own ships. The consumption of tea and indigo is limited in France, and a certain number of cargoes of these articles supplies our market for a long time. Besides, the profits arising from the shipping of goods to India and China cannot be sufficient to compensate our ship owners for the loss occasioned by the ships returning from so long a voyage without a cargo. Moreover, the competition of manufacturing has become so great, that the nations who are sure of return cargoes to their ships, oppose to us a rivalry which we cannot withstand. We are under the necessity, then, of proportioning the number of ships fitted out for the East Indies to the consumption in France of tea, indigo, and other articles brought from that part of the world. It is true that Bourbon, and what we call *our possessions in India*, afford a limited amount of sugar for return cargoes, but this resource is very inadequate, and besides, we have a direct commerce with Bourbon which answers for the exportation of the products of the country, and in all cases, the freight of those of our vessels which are bound for China, might find there, is liable to so many risks that no dependence can be placed upon it.

It is evident then, that could we be assured of return freight from India and China, we could send out a much larger number of ships; and could increase to a considerable extent, in those countries, the consumption of those articles which are in general requisition there. Here a question is presented which has been often agitated, and to which I shall return, as it is of vital importance to our commerce in the East; and because, in my opinion, the interests of our manufactures have not been appreciated to this day. I will first speak of the admission of sugar from Manilla, and Cochin China, with duties proportioned to those which our colonial sugar pays. When in 1817 the duties upon sugar from the East Indies were diminished, our commerce seeing markets opened which it had ardently desired for a long time, it engaged with ardor in the India trade, and as many as fifteen or twenty French ships were seen in the bay of Manilla. But this season of commercial prosperity did not continue long. The interests of our commerce, of our navigation, and of our manufactures, were sacrificed, in my opinion, to interests far less important.

Often have I asked myself why France, with all her territorial resources, with the good wages of her operators, compared with the wages of operators in England, and with a thousand other causes of success, should be behind other commercial nations. Why, in time we are always the last on the ground; the gleaners, when others have gathered the harvest. When I examine with my own eyes, I am always convinced, that in order to compete successfully with England, and the United States, France only needs a firm determination to succeede, and a rational deviation from the system which has hitherto been followed. We do not sufficiently comprehend the importance, perhaps, of a great commercial prosperity, nothwithstanding our eyes have been opened for some years, and we have manifested a solicitude, which has too much respected, perhaps, those old prejudices, the pernicious influence of which seems apparent at the present time.

The English consul had the kindness to give me a list of the arrival of merchant vessels at Honolulu, the only port of the Sandwich Islands that is habitually frequented by foreign ships. This list embraces the years 1830, to 1835, and gives a very good idea of the relations of the country; but I repeat it, it would not be right to judge concerning the commercial importance which the Sandwich Islands may acquire from what they are at present. The circumstances which I have enumerated, and others besides will rapidly develope their resources, and make them, if not a considerable market, at least, an important entrepot for European merchandise.

Attention is called to the Sandwich Islands from another point of view; on account of their geographical position; opposite to the Russian possessions of Kamstchatka, although at a great distance, they have for a long time attracted the attention of the Russian government. Of the eighteen vessels of war which have arrived in Honolulu since 1825, four were Russian. In case of a war between England and Russia, both these powers would, without doubt, seek to take possession of the Sandwich Islands for a military station, and as a place of refuge for their ships of war, and privateers.

It is true that the American influence is now dominant at the Sandwich Islands, this influence being exerted by the Missionaries, all of whom came from the United States; the commerce, in like manner, is American. Yet I never could believe that England, so quick to appreciate the different military positions of the globe, and to take possession of them when they can be useful to her, has not perceived the importance of the Sandwich Islands in the event of a war between her and Russia. I never could believe that she would sleep a moment; even should this danger become imminent; nor would she consent to abandon her rights to other nations, when by making sure of them in time she could preserve an appearance of acting according to the law of nations. For a long time she has been in favorable circumstances to form an estimate of the port of Honolulu, the narrow and difficult entrance to which can be so easily defended, and which, in the hands of a hostile nation, would be the occasion of alarm to the English, for their commerce in the East. I can easily imagine that England, who regards the Sandwich Islands as having been committed to her guardianship in consequence of the cession made to Vancouver by Kamehameha, an act without validity, if you please, but which will not the less serve for a pretext, whenever England shall deem it expedient to take possession; I can easily imagine, I say, that England has not, to this day, judged it necessary to establish a garrison at Honolulu, as it would cost much money, and would be entirely useless in present circumstances; but I am fully persuaded that she has her eyes constantly on the Sandwich Islands, and that she perfectly appreciates the importance of their position in case of war.

The political relations of the Sandwich Islands, with the governments of civilized nations, are limited to two acts; the first is that, by which, on the 25th of February, 1794, Kamehameha acknowledged himself and his people as subjects of His Britannic Majesty.

The second political act is the Treaty of Commerce, signed on the 23rd of December, 1826, between Kauikeaouli and the government of the United States. This Treaty grants no exclusive advantages to Americans:

it only secures to the citizens, and to the property of the citizens of the United States, the protection of the Hawaiian government, *against all enemies* in case of war; *it sanctions the admission of American vessels into the ports of the Sandwich Islands, and gives them permission to trade with the inhabitants of the islands.* The following Articles establish certain rules for the saving of American ships that may suffer shipwreck on the coast of the Hawaiian Islands, and for the arrest of deserters. The Treaty ends with the usual clause that "American commerce shall enjoy all the advantages that may be allowed to the most favored nation;" stipulating on this point, full reciprocity for the commerce of the Sandwich Islands with the United States.

The English have not wanted to make a Treaty with a country, of which they regard themselves as the lords paramount; for by a Treaty they would relinquish their rights in lawsuits. They have therefore abstained from every political act with the Hawaiian government. The Americans on the contrary foreseeing that the English will one day be able to make good that acquired right to the Sandwich Islands, desire to secure by a Treaty the advantages which they now enjoy, and of which they might be deprived by another government taking possession. This Treaty, therefore, should be their security. In this the Americans have been guided by a wise foresight; they have perceived all the commercial importance which the Hawaiian Islands will acquire, and they have taken measures to secure their commerce in case of a revolution in the government.

Should we not profit by their example, and by a Treaty, secure to ourselves the advantages which the geographical position of the islands may offer to our commerce? It is true that at present, a Treaty of Commerce with the governments of the islands in the Pacific, would but slightly benefit our commercial navigation; but it would by a document, laid away in our archives until there should be occasion to use it.

The Treaty between the United States and the Sandwich Islands is incomplete, and the American Agent wholly occupied with the commercial relations of his countrymen, has not fully appreciated the circumstances of the country with which he treats. He has not given attention to the establishments already formed at the Sandwich Islands by Americans, nor to those which an increase of commerce will cause to spring up. The existing establishments have been founded without precaution, each occupying a lot of land ceded by the government, say the proprietors, but without any ostensible act. Now the government trusting to the ancient laws of the country, claims to be the exclusive proprietary of all the lands, and this claim includes those where foreigners have formed their establishments, permitting them to occupy the lots during life, but on the condition that the lots and the buildings shall revert to the crown whenever the resident shall die, or leave the country. The government has declared, moreover, that no foreigner can own lands at the Sandwich Islands, a measure which has been dictated to it, and the pernicious influence of which has not been calculated.

This declaration of the government has arrested every effort which agricultural industry might put forth at the Islands, and produced a want of confidence in commerce, which only tends to paralyze their progress. Foreigners who would be glad to engage in agricultural labors, requiring a great outlay of capital, are prevented by the certainty that if any malady, or any motive whatever, should induce them to leave the country, they would lose at once the fruit of their labors; that their death, moreover, would take it away from their children. Those who establish themselves in these Islands, having always to take into consideration a forced abandonment at length, proportion their investments to the chances of success which an inconsiderable establishment can offer. Consequently, agriculture has made no progress, and instead of immense establishments which a more enlarged policy would have caused to spring up, no other cultivation is seen on the fertile plains of the Sandwich Islands than that of the taro. The system pursued by the government occasions distrust; it shows that jealousy of foreigners already exists, and it bodes ill for the future.

Yet it is undoubtedly true that this country can no longer be satisfied with its ancient standing; the people have entered upon a new life; their wants are increased, and industry alone can furnish means to satisfy them. To paralyze the resources of the country, would be to expose it to complete demoralization, the consequences of which are already begining to show themselves in a fearful manner.

On the other hand, it would be unjust to demand liberty for each one to build and plant upon government lands without having previously purchased them. But what is the tendency of the system now in vogue, a system which keeps at a distance, and discourages foreign industry? Is it not to render the land almost entirely unproductive? Oahu contains a population of 20,000, (I mention this island because its population is the most dense), and taking into consideration plains, hills and mountains, it contains an area of 600 square leagues, (530 square miles). A thousandth part of this, perhaps, is cultivated. Can this still savage people draw forth from this land the treasures which it contains? Will these men become the enterprising proprietors, who will be able to obtain skilful planters from India and America, or from Europe, and direct them? Besides, will not this people, which has for forty years been diminishing in a fearful progression, continue to diminish from the same causes? Must it not expect the fate of all those savage tribes which the contact of civilization has smitten with death, and which have disappeared from the face of the earth before the work of regeneration was accomplished?

When we arrived at Honolulu we found there the American sloop of war, Peacock, Commodore Kennedy. Mr. Edwards had been sent by the government of the United States to arrange divers commercial matters with certain powers of India, and to place the commercial establishments at the Sandwich Islands on a firm basis. But Mr. Edwards died in India, before the arrival of the Peacock at Honolulu, and Commodore Kennedy carried out the instructions received by Mr. Edwards. The principal object of the mission was the construction to be given to the Treaty between the United States and the Sandwich Islands. The Hawaiians and the Americans put different constructions upon this Treaty; the Americans pretended that the land upon which they had erected houses had become their own property; the government of the Sandwich Islands declared, as I have just said, that the Americans, and other foreigners, having built upon lands which did not belong to them, had no right to the property; that it was an act of great condescension to permit them to occupy it during their residence in the country, and that when they should leave, the State ought to resume the possession of a property, all the rights to which it had preserved. Commodore K. put forth all his efforts in order to secure, by adding other Articles to the Treaty, the principle contended for, by his countrymen; but obstacles were thrown in his way. At the first conference there was agreement upon every particular, and the additional Articles were to be signed the next day. The next day, the government not only refused to accede to the demands of Commodore K. but it formally declared that it was decided not to permit foreigners to become landholders at the Sandwich Islands by any title whatever. Commodore K. having no specific instructions to guide him in the matter, set sail much dissatisfied, and threatening the government, it is said, with the efficacious intervention of the United States.

This refusal of the government is ascribed to the missionaries, who in my opinion have sustained, or have persuaded the government to sustain a principle, the justice of which cannot be denied. The claim to be an owner of a land, simply because an individual has built a house upon it, was not defensible even by the law of nature; but to shut the door to all accommodation in this question, was altogether impolitic. It was prejudicial to the interests of the country and the people, whose welfare, and preservation even, depended on the intermingling of the nation with foreigners; for it is only in this way that these unnumbered abuses, and this terrible arbitrariness, under which the islanders groan, can be done away; an arbitrariness and oppression become a thousand times more insupportable at present than formerly.

The Hawaiian government did wrong in my opinion, in taking such arbitrary measures. It is certain that the erection of a house cannot give a legal claim to the land upon which the house has been built; but regard should be had to the circumstances in which the establishment was formed, to the condition of the country at the time, and then preference should be given to the actual holders. In certain cases also prescription should give to the holders the right of property, or it should have an influence upon the duration of the leases which the government might grant. As to the uncultivated lands,—and this I believe was one of the principal objects with Commodore K.—was there no legal means by which it might be brought about, that foreigners might cultivate these lands with security, and without the fear of being dispossessed, when on the point of reaping the fruits of their labors? Could not the government be induced to yield, in consideration of a certain price, and for a number of years the ownership of lands which for want of laborers must remain unproductive? Could it not, while offering to purchasers every needed security, reserve to

itself a pledge of sovereignty, and absolute ownership, if ever it should wish to refuse to foreigners, the right to become proprietors; if in short, it should wish to persevere in a system which I regard as unsustainable at the Sandwich Islands.

In conclusion: the missionaries have doubtless done good at the Sandwich Islands, but they have also done much evil in not doing all the good which it was given them to accomplish. Ought their intentions to be accused? Should credit be given to the charge of interested motives, which is made against them? or should the fault be set aside on the principles in which they have been educated, the coudition attached to humanity, that no work coming from the hand of man is perfect? This question I shall not undertake to decide. My stay at the islands was not long enough to satisfy my own mind on this point, and whatever my judgment might be I should be afraid of being unjust towards the missionaries, or towards their accusers.

THE FRIEND.

HONOLULU, NOVEMBER 15, 1850.

☞ A correspondent asks, "When will the Translations end?" We reply, with this number. Some of our readers may not have been particularly interested in these translations from a French author, but with others it has been far otherwise.

We would not wish to be understood as coinciding with all the views and opinions expressed in these articles of M. Adolphus Barrot, still, taking into consideration the fact that the writer was a Frenchman, a Catholic, a transient visitor, (remaining only a few days on our shores), and furthermore, unacquainted with the native language, we are much surprized at the general correctness of his statements. He must certainly have been a good observer; and capable of winnowing wheat from chaff. Much chaff may remain, but if he had enjoyed a longer opportunity for observation, he might have cleared it away. We would merely add, that he was bound to Manilla, there to act as French Consul, but has since returned to France. This article originally appeared in a publication entitled "A Review of the two Worlds," and a copy was brought to the islands by the Rev. Mr. Richards, on his return from Europe, in 1845. We would express our obligation to the Rev. Mr. Dole for his perseverance, in thus gratuitously translating so many pages for our columns.

Melancholy.—While firing a salute on board the J. E. Donnel, in the harbor of Honolulu, on the 13th instant, the fourth officer, and two others were severely wounded by the accidental discharge of the gun. It is hoped that all may recover, although their escape was most providential. There are serious fears that the eye-sight of one or two may be injured.

Seamen's Chaplaincy at San Francisco.

A correspondent at San Francisco, under date of October 16th thus writes us;—

"Sixteen months ago, the first Church edifice was dedicated. Five others have since been built and dedicated. Two others will soon be. And recently a Bethel has been fitted up, and a Baptist brother, the Rev. Preveaux, is to be the Chaplain, under the auspices, I believe, of the San Francisco Port Society.

Brother Preveaux is a fine man, a graduate recently of Newton Seminary. He came out under the Baptist Board of Home Missions. You may gladly welcome him into the fraternity of Chaplains. Extend to him the hand of fellowship. The room fitted up for him, is the upper story of a store in Sansome Street, near Clark's Point, a good location. It will seat about 300 persons."

T. D. H.

California Admitted.

The vote has passed both houses of Congress admitting California as a State. Many other important bills have also been passed. Late California papers announce great preparations making to celebrate the admission of California, as the first Pacific State of the great North American confederacy, or the glorious Union.

We regret that our small sheet does not allow us more space, wherein to publish the current news of this busy, bustling, stirring, driving, hurrying, sailing, steaming, flying, experimenting, thinking, reading, speaking, printing, and revolutionizing age.

Items of Foreign News.

Of late, every mail from the United States and Europe brings intelligence of the death of some distinguished person. We have now to announce that of Louis Philippe, ex-king of the French. He died in England, in the latter part of August.

We have also to announce the death of the venerable, and oldest American Foreign Missionary, the Rev. Dr. Judson, of Burmah. He sailed for the East Indies, we believe in 1812, and there has labored until the present time, with the exception of a short visit to the United States. The Old and New Testaments were translated by him into the Burmese language. He died at sea on 12th of April.

☞ We would acknowledge the receipt of a neatly printed pamphlet, with the following title page :—

Death of President Taylor. A Sermon Preached in the First Congregational Church, in San Francisco, on Sabbath Evening, September 8th, 1850. By the Pastor, Rev. T. Dwight Hunt. San Francisco: Published by Still, Conner & Co. 1850.

Important to Navigators in the Pacific.

A very interesting discovery of a large island, entirely unknown, we believe, to navigators, was made in November last by Capt. M'Michael, of the ship Montauk, on his voyage from Sydney, New South Wales, to Shanghai, China. It lies between the Loo Choo Islands snd Japan, and occupies the positions embraced by what are represented in the ordinary Admiralty charts as three distinct, and small islets, termed respectively Harbor, Bungalow, and Crown islands; of which the two first named have very nearly the same meridian—about 130 deg. 6 min. E. from Greenwich; while Bungalow is in 28 deg. 20 min.; and Harbor island in 28 deg. 20 min. N. lat.: Crown island being placed more at the South and West. It was of course the eastern end of the island that was seen by Capt. M'Michael; and so far as he was able to observe, it extended from 27. 35. to nearly 28. 40. N. lat.; and from 129. 05. to 130 18 E. lon.; throughout which limits he coasted it, approaching some times within ten or fifteen miles of the shore. It is high in the middle and at the north end; where the appearance is of a coast of cliffs, with a number of small islands close along shore; the south end being low with a reef all round it. In this southern portion there is the appearance of an opening—as of the fancied channel between the parts mistaken for Crown and Bungalow islands, but no such channel exists. Smoke was seen in several places; and at night many lights, as from fishing boats. A ship bound to the north and west of Loo Choo, according to Capt. M'M. should not run to the north of 27 deg. 37 min. N. lat.; which parallel will take her clear of all; or, otherwise he should get to the north of the island, which does not extend, probably, beyond 28 deg. 45 min.

Naval.—The following is a list of the officers of the U. S. sloop of war Falmouth.

Commander, Thomas Petigru.
Lieutenants, Henry Moor, George M. White, George W. Harrison, Charles S. Mc Donough.
Surgeon, David Harlan.
Purser, John W. Mason.
Lt. of Marines, John S. Delvin.
Master, Henry S. Newcomb.
Ass't Surgeon, Francis M. Gunnell.
Pass'd Mid'n, P. Wager, Wm. K. Bridge.
Midshipmen, Ed. T. Spedden, Wm. Mc N. Armstrong, David B. Harmony, Jno. N. Quackenbush.
Capt's Clerk, Charles J. Porcher.
Boatswain, Charles Johnston.
Gunner, A. F. Thompson.
Carpenter, Lewis Holmes.
Sailmaker, Lewis Rogers.

Icebergs at Sea.—A correspondent of the N. Y. Commercial, writing from on board the steamer Pacific in St. George's Channel, speaks of meeting large icebergs off the coast of Nova Scotia and Newfoundland:—

"One of these was supposed to be from 600 to 800 feet high, with a surface of 150 to 200 acres. Supposing the altitude above the level of the water to be 700 feet, it would be forty-nine hundred feet thick under water according to the usual estimate, or 5600 feet thick in all. In the neighborhood of this I counted 24 others of various dimensions. The mercury in the thermometer here fell to 40°, but gradually rose as we approached the middle of the Atlantic."

THE MEETING OF SHIPS.

When o'er the silent seas alone,
For days and nights we've cheerless gone,
Oh! they who've felt it, know how sweet,
Some sunny morn a sail to meet.
"Ship ahoy!" our joyful cry,
Sparkling, at once, is every eye,
While, answering back, the sounds we hear,
"Ship ahoy! what cheer, what cheer?"

Then sails are back'd, we nearer come;
Kind words are said of friends and home;
And soon, too soon, we part with pain,
To sail o'er silent seas again.

THE PARTING BRUTHERS.

Come cheer my fading spirit, brother, I feel that I must die;
Ah, why that downcast eye, brother, from whence that heavy sigh?
I go the way of all the earth; say, would'st thou stay my flight?
For I shall live above, dear brother, though hidden from thy sight.

By our childhood's happy hours brother, I pray thee think of me;
And live as thou wouldst die, brother, to meet eternity.
Live as a pilgrim on the earth, look upwards to the skies,
And think that at the judgment-day, we all must thither rise.

Ah, why dost thou despond, dear brother, and hang thine aching head?
Let not thy heart in sorrow mourn when I am cold and dead
I know that my Redeemer lives, and at the latter day,
He'll clothe, in heavenly raiment, my senseless clod of clay.

Adieu to all the world! Brother, farewell to friends and thee!
My dying gaze doth faintly view a glimpse of eternity.
Hark, now the angels joyful shout doth meet my ravished ear!
In thee, O God, I put my trust, now I have nought to fear.

Dr. Webster was executed in Boston on the 30th of August. Late papers contain full particulars of the melancholy affair. The day of his execution was kept from the knowledge of his family.

☞ We learn that the Rev. T. Dwight Hunt, of San Francisco, has gone to the Atlantic States, but to return in March, 1851.

AUCTION SALE of whale ship Marcus, of Sag Harbor, condemned, sold, with spars standing, yesterday, for $200. A. B. Howe, Auctioneer.

From New Bedford we learn the following state of the oil market.

Total receipts from January 1st to September 9th, 73,873 bbls. sperm, 191,874 bbls. whale; 2,740,400 lbs. bone.

[For the week ending September 9, 1850.]

SPERM.—There is a good demand, but the transactions continue rather light, large holders being indisposed to operate at present prices. We notice sales of 550 bbls, in parcels, at 120 cts. per gallon, cash, and 400 bbls on private terms. In Manufactured, sales have been made of 500 galls. unbleached Winter Sperm at 120, and 500 do bleached Spring, at 117 cts.

WHALE.—The transactions the past week have been larger than for some time past, and include 320 bbls. NW Coast at 52 cts; 50 bbls. do at 54 cts., cash, and 3000 bbls. do the terms of which we did not learn—the market is closing with a good demand.

WHALEBONE —A sale of 7000 lbs. South Sea was made at 35 cts. per lb.

CANDLES.—Sale of 200 boxes sperm at 40 cts. per lb., 4 mos.

KYANIZED HEMP—JUST WHAT IS WANTED.—Yesterday, our old friend, Mr. Carpenter, formerly of Rochester, N. Y., came into our office with three large coils of hemp rope—a new article.

It is well known that in shipping, a Manilla cord is well used up in one trip. The kind Mr. C. is agent for, is composed of *unrotted* hemp, and through the agency of chemistry, is completely impervious to the weather. It is a desirable article for all uses. The boats on the Mississippi and the shipping on the sea coast are all adopting it. It is superior to any imported. The weight of the 2 1-2 inch Manilla rope and that of the 1 1-7 inch Kyanized rope is exactly the same—each piece weighing 1 lb. 7 oz. Although weighing the same, the Manilla line measuring *three-eights* of an inch larger than the Kyanized, yet the latter sustained 600 lbs. greater weight. In the same proportion, a Kyanized flat boat line, of the same weight with Manilla, would bear about one ton greater strain.—[Det. Tribune.

MR. WHITFIELD. — When Mr. George Whitfield was in the zenith of his popularity, Lord Clare, who knew that his influence was considerable, applied to him by letter, requesting his influence at Bristol, at the ensuing general election. To this request Mr. Whitfield replied, that in *general elections* he never interfered; but he would earnestly exhort his lordship to use diligence to make his *particular calling and election sure.*

SOMETHING LEARNED BY EXPERIENCE.—Wesley says, "When I was young I was sure of everything; in a few years, having been mistaken a thousand times, I was not half so sure of most things as I was before: at present, I am hardly sure of anything but what God has revealed to man."

THE STRAIT GATE.—The strait gate of the gospel is wide enough to admit any sinner, but too narrow for the admission of any sins.

MARRIED,

At Pepeita, Tahiti, on the 17th of October, EMILY, the beautiful daughter of Capt David Dring, to Monsieur Bovis, of the French navy

DIED.

In this City, on the morning of the 13th instant, Abraham H. Fayerweather, formerly of New York, but long a resident at these islands, aged 38 years.

Of consumption, on board the Samuel Robertson, Mr. Giles Allen, on the 18th of March, belonging to New Bedford.

On board the Samuel Robertson, on the 4th of February, Manuel Francis

Drowned, November, 1849, Eli J. Robinson, off the River La Platte, belonging to the whaleship Buyard. He belonged in Maidson Co., N. Y

Fell overboard and drowned, June, 1850, John Garty, native of Canada, and seaman on board the Tybee, the vessel at the time off Chili.

Died on board Memkar, September 23rd, Richard Lester, a boat-steerer. He was 32 years of age, and left a wife and child to mourn his death, which occurred just as the vessel was leaving the Arctic Ocean. He came from the U. S. in the Awasnack, of Falmouth.

PORT OF HILO.

Arrived.

Nov 1—Am wh shp Falcon, Smith, 1600 wh, half the crew are ill with scurvy.

MEMORANDUM.—The whale ship Menkar, on the night of the 23d of Sept, in the Arctic Ocean, caught fire Both try pots were on fire, the wind blowing a gale. The ship was put before the wind. After the most strenuous efforts the fire was mastered. About 20 barrels of blubber, cutting tubs, and various other articles were thrown overboard. No lives lost, although several of the men were severely burnt. The vessel passed the straits on the 25th, supposed to be the last vessel.

PASSENGERS.

TO SEAMEN AND STRANGERS.—The Seamen's Chapel is open for Public Worship every Sabbath, at 11 a. m., and 7 1-2 p. m. Seats Free.

The Seamen's Concert for Prayer is held at the Room the 3d Monday evening in each month.

Seamen belonging to vessels (of all nations) visiting this port are invited to call at the Chaplain's Study, where they will be gratuitously supplied with copies of the Friend and other rending matter. It will be most convenient for the Chaplain to receive calls from Seamen between 2 and 4 p. m.

Public services at the Native Churches, on the Sabbath, commence at 9 1-2 a. m. and 2 1-2 p. m.

The Seamen's Reading Room is open at all hours of the day. Strangers arriving and having late foreign papers, are respectfully invited to aid in keeping said room supplied with useful reading matter.

Donations are respectfully solicited for the support of the Chaplaincy, and the publication of the Friend. An annual report of all donations is made to the Am. Seamen's Friend Society in New York. Any person contributing $50 is entitled to become a Life Director of the Society, and $20 to become an Honorary Life Member.

ADVERSITY'S CHILD.

Written on board the U. S. ship Falmouth.

BY JACK SEADRIFT.

Envelop'd in clouds, rode the chaste queen of night,
And Autumn's keen blast whistled rude o'er the plain;
When to gaze on his home, once the scene of delight,
Life's tempest tos'd Child of Adversity came.

His time furrowed cheek and his storm beaten brow
Told the heart's desolation deep festering there.
Hope had fled from his breast, and alas, even now
In his lone bosom writh'd the dark serpent of care.

On his daisy deck'd plain, now with brambles grown wild,
Half phrensy'd he gazed on the home of his youth.
"Oh, where are those friends," cried Adversity's Child,
"That pillowed my head 'neath yon moss cover'd roof.

And where the fond fair one, whose confiding heart
Throb'd true and responsive, to welcome me home—
Whose angelic soul never failed to impart
Some charm from the sorrows and joys of our own.

My dear little cherubs that skip'd with delight,
As I came from the fields at the close of the day,
When toil worn and weary, my cares put to flight,
With their innocent sallies, alas, where are the?

Gone where curs'd oppression can ravage no more,
Nor dvarice plunder Adversity's Child.
Their passports are signed, and their sorrows are o'er.
The home of their youth now with brambles grown wild.

'Neath yon forest crown'd hill, fraught with scenes ever dear;
Their moss covered tombs meet the wayfarer's eye,
While the hoarse raven pours forth her symphony drear,
From the dark waving pines, where my dear cherubs lie.

And this thy work, O vain glorious man.
In haste from thy presence well may the brutes flee.
Thou hast ravaged my cottage and plundered my clan
'Till the last tie is sever'd that bound me to thee.

Farewell, blighted mansion, once proudly my own,
Where the days of my childhood stole swiftly away.
Thy groves are now silent, thy songsters have flown,
Thy radiance gone, with thy charms to decay.

Farewell, I now leave thee, forever farewell,
A home and a country remain not for me.
May the blight of the mildew on thee ever dwell,
The wolf and the raven are welcome to thee.

O Child of Adversity, nursling of woe,
Thy wrongs and thy injuries, deeply I feel
Taught early the heart of a stranger to know,
To weep o'er the wounds I've not power to heal."

Lights and Shadows of Missionary Life, at Tahiti.

Temperance—New Governor—Attempt to promote Industry and Education—The Bible—Native Pastors—Bethel Chapel, &c.

We have received an interesting letter from one of the English Missionaries at Tahiti, from which we take the liberty to make the following extracts. For the reader to appreciate the writer's remarks, in regard to the introduction of wines and spirits among the native population, it must be borne in mind, that the native authorities entirely prohibited the sale of intoxicating liquors among the islanders. One of the French Governors insisted that the law should be strictly inforced. This law it appears has been abrogated by the French authorities, and the sale of intoxicating liquors is allowed, although, remarks our correspondent, "the law which permits their use, is guarded with as much care as possible, to prevent the abuse of them." It surely is to be deplored that the French authorities, could not have been persuaded to let the law prohibiting the sale of intoxicating liquors remain, certainly so far as the native population was concerned.

PAPEETE, Oct. 24, 1850.

We are just now recovering from a severe shock, which the introduction of wines and spirits has given to the people generally, during the last six months. The law which permits the use is guarded with as much care as possible, to prevent the abuse of them, especially to the natives; but these have been of comparative little use, as those who are inclined to have them, find many modes of accomplishing their desire. Many of the church members have fallen, but very many more have successfully withstood the trial, and have stood firm. Many too, who were carried away at the commencement of the affair, are now returning, and seeking readmission into the various churches. It is gratifying to be able to state, that, notwithstanding the number who have fallen by the above temptation, the number of church members is very much greater than it was at any previous period of the mission, prior to the drinking fit. I conceive too that the churches never were in a purer state, taken as a whole, than they are now. Motives of a temporal nature which might formerly operate upon some, and lead them to make a profession, have now no more existence, so that those who come forward to join the churches, can have no traceable cause of doing so, but the conviction that it is a duty. This is a matter of thanksgiving to the head of the church, as it makes our course the plainer.

The new Governor is doing all in his power to excite the people to habits of industry. He has induced them to make a large public fence in every district, and to plant them with the sweet potatoe, yam, &c, with which to supply the shipping that may put in here to refresh. One third of the proceeds goes to the proprietor of the land, one third to the constable of the district, and one third is laid up, as a fund out of which to give prizes to those who keep their own lands in the best condition, as well, also, for rearing the best cattle, horses, hogs, and poultry. He has also announced his intention of giving prizes to the best writers, and arithmeticians in the schools, and to reward the teachers of such schools as excel in these departments.

The Bible has been purchased up by the people with great avidity; we have not more than 500 copies of the edition of 5000, which the John Williams brought from England on her last trip out. This is to us most gratifying, and a source of much thankfulness to the Giver of all good. In it we see that our labor has not been in vain in the Lord, but that he has crowned it by his blessing in giving to the people to delight in his Holy word. While the Bible is so extensively in their hands there is little fear that any pernicious error will work its way among them.

We have an institute for training native pastors, with ten students. Two have been already located, and we have every reason to be satisfied with them; and a third who spent some little time in the institution, is the best native teacher on the island, the former as well as the present Governor, have noticed the superior state of his school, and have made presents to him to encourage him.

Our press is at present employed in working off a Tahitian and English dictionary, which we hope will be completed in about three months time.

We have a small Bethel Chapel in the bay, in which we have our service every Lord's day, and a prayer meeting in connection with it, in the evening. Four months ago, we formed a small church in the Bethel, consisting of seven members, in fact it is a little evangelical alliance. It is composed of one Wesleyan, one Baptist, one Lutheran, one Episcopalian, and three congregationalists; but I believe we all feel that we are one in Christ, and we can therefore afford to lay by, for the time being, our denominational differences, until we may have occasion for them again, in some more civilized portion of the world.

The press, the institution, and a large district in which are three churches, consisting of 664 members, are in my charge, as well as the Bethel Chapel, so that you will perceive I have not much time for letter writing. Yours, truly, W. H.

HAWAIIAN THANKSGIVING.—By the appointment of His Majesty, the 31st of the current month will be observed as a day of public thanksgiving.

THE FRIEND.

HONOLULU, DECEMBER 5, 1850.

Late News from the United States.

By a late arrival, we have received regular files of the Tribune, Herald, Observer and Shipping List.

The most prominent topic in all the papers is the wonderful eclât which attends the progress of Jenny Lind, the Sweedish Nightengale. Having sung at several concerts in New York city, to crowded houses, she passed on to Boston, where the excitement was still greater to listen to her wonderful vocal powers. Over $600 was paid for one ticket of admission. She had distributed $10,000 among various benevolent societies in New York. Mr. Barnum the gentlemen who has engaged her services while in the United States, has intimated to the good people of Portland, Maine, that Miss Lind might sing there one night for $8000 !

The following synopsis of votes in Congress, upon several important bills, will be interesting to Americans abroad.

The Texas Boundary Bill passed the Senate by a vote of 30 to 20. The New Mexico Territorial Bill passed the Senate without a count. These two bills combined passed the House by yeas 108, nays 97, the Senate concurring with the House on the united bill, by 39 to 10.

The bill for the Admission of California received in the Senate 34 votes to 18, and in the House, 150 to 56.

The Utah Territorial Bill, in the Senate, stood yeas 32, nays 18 ; in the House, 79 to 86.

The Fugitive Slave Bill, Senate, yeas 27, nays 12 ; House, yeas 109, nays 75.

The Slave Trade Bill, (in D. C.,) Senate 32 to 19 ; House 124 to 47.—N. Y. Observer.

New Bedford Oil Market.—For the week ending September 23, 1850. Sperm—With a good demand and moderate receipts, continue to advance. We notice sales since our last of 1250 bbls in Westport 121 cts; 350 bbls here, refilled at 124 cts, and 500 bbls head matter at 133 cts per gallon.

Whale—Continues firm with a steady fair demand, and prices tend upward. We notice sales of 400 bbls NWCoast at 52 cts; 900 bbls do at 53 cts; 200 bbls do at 53½ cts; and 230 bbls do at 54 cts, cash.

Whalebone.—There is more inquiry, and sales have been made of 1200 lbs NWCoast at 34 cts; 4000 lbs do at 35 cts, 15,000 lbs superior do at 35½ cts; 3800 lbs Polar at 36 cts, and 10,000 lbs superior do at 37¾ cts.

End of Volume VIII.

This number closes the 8th volume of the Friend. On the last page will be found a general index to this volume. We regret that any of our Honolulu subscribers should have had so much occasion to complain of the irregularity which has attended the delivery of their papers. We shall try to obviate the evil in time to come, and will furnish a bound volume *gratuitously* to any subscriber who makes this complaint ! That our efforts, to furnish a monthly sheet for seamen, are appreciated, we infer from the increased demand for back volumes, and a large additional number of subscribers for the United States. Divine Providence permitting, No. I. Vol. IX, will appear on the first of January, 1851.

Notice to our Subscribers and Readers.—All persons knowing themselves indebted for the past year's subscription to the Friend, will confer a great favor upon the publisher by making immediate payment. It is not our practice to ask for subscription money, in advance, only for papers forwarded overland. Honolulu subscribers enjoy the reading of our paper for "a 12 month," before they are presented with their bills. In commencing a new volume, on the first of January, it will be highly gratifying to receive a large accession to our subscription list.

A News Room and Library.—The prospects are quite encouraging that a news room and library will be started in Honolulu, under the most favorable auspices. More than one hundred annual subscribers at $10 each, have already become enrolled.

☞ Weather permitting, a meeting will be held this Thursday evening, Dec. 5th, at Mauna Kilika, for the choice of officers, to hear report of committees &c. It is highly desirable that there should be a full attendance of subscribers.

Generous.—"The Pope has ordered a universal jubilee, in commemoration of his restoration. It is to last fifteen days, and to carry plenary indulgence of one hundred years to those who observe it."

Agricultural Premiums.—The Royal Hawaiian Agricultural Society, desirous of improving the character, and the amount of the production of the Islands, and of stimulating the producers to greater zeal in their vocation, will at their Annual Meeting in August next, award Premiums upon the following productions, viz:—

The most productive acre of Sugar Cane, 1st and 2nd premium.

The most productive half acre of Coffee, 1st and 2nd premium.

The most productive half acre of Wheat, 1st and 2nd premium.

The most productive half acre of Indian Corn, 1st and 2nd premium.

The most productive half acre of Oats, 1st and 2nd premium.

The most productive quarter acre of Irish Potatoes, 1st and 2nd premium.

The most productive quarter acre of Sweet Potatoes, 1st and 2nd premium.

(As it will be impracticable for a committee to visit the several Islands, to ascertain the relative productiveness of different fields, decisions upon the above subjects, will be made from the statements rendered by the producers, each amount attested by a disinterested witness.)

The best Cwt. of Sugar, 1st and 2nd premium.

The best 20 galls. Syrup, 1st and 2nd premium.

The best cwt. of Coffee, (in parchment), 1st and 2nd premium.

The best cwt. ditto, (cleaned), 1st and 2nd premium.

The best 20 heads of Upland Kalo, 1st and 2nd premium.

The best 20 heads of Lowland ditto, 1st and 2nd premium.

The best bushel of Wheat, 1st premium.

The best bushel of Indian Corn, 1st ditto.

The best bushel of Oats, 1st ditto.

The best bushel of Irish Potatoes, 1st ditto.

The best bushel of Sweet ditto, 1st ditto.

The best cwt. of Onions, 1st and 2nd ditto.

The best 25 lbs. Table Salt, 1st ditto.

The best 25lbs. of coarse Salt, 1st and 2d ditto.

The best 20lbs. Arrow-root, 1st and 2nd ditto.

The best 10lbs. of Butter, 1st and 2nd ditto.

The best Cheese, weighing not less than 10lb. 1st and 2nd premium.

The best specimen of Leather, 1st premium.

The best 100 Mat Bags, 1st and 2nd ditto.

The best 20 yds. Woven Cloth, 1st ditto.

The best Native Mats, 1st ditto.

The best Saddle, 1st ditto.

The best Floral Ornament, 1st ditto,

The best two bunches of Bananas, 1st ditto.

The best six Pine Apples, 1st ditto.

The best fifty Oranges, 1st ditto.

STOCK.

The best Stallion, 1st premium.

The best Breeding Mare, 1st and 2nd ditto.

The best Gelding, 1st and 2nd ditto.

The best Mule, 1st ditto.

The best pair of Working Cattle, 1st and 2nd ditto.

The best Bull, 1st ditto.

The best Cow and Calf, 1st and 2nd ditto.

The best Beef for slaughter, 1st ditto.

The best Ram, 1st ditto.

The best Ewe, 1st ditto.

The best Cock and Hen, 1st ditto.

The best pair of Turkeys, 1st ditto.

The best pair of Geese, 1st ditto.

The best pair of Ducks, 1st ditto.

The best Hive of Bees, 1st ditto.

All the above should be Native productions, and must be presented at the Annual Meeting, at which time Committees upon the various subjects will examine and decide upon their merits.

The Premiums will consist of Silver Cups and Goblets, Books, Silver Medals, and Diplomas. Besides those above named, the Committees will award discretionary premiums upon such articles as may be presented and deemed worthy, such as Specimens of Mechanical Skill, Fruits, Vegetables, etc, etc.

They will also award premiums to those who shall introduce new and valuable varieties of Plants, Animals, and Labor-saving Implements.

A premium is likewise offered for an effectual method of preventing the ravages of the Cutworm.

It is desired that as many, both Natives and Foreigners as feel any interest in the subject, should become competitors for the premiums, that we may have at our next Annual Meeting an exhibition of Agricultural and Horticultural productions, Domestic Manufactures and Stock, as shall be highly creditable to the country.

GEO. A. LATHROP,
EDWARD P. BOND,
RICHARD ARMSTRONG,
Honolulu, Nov. 20th, 1850. Committee.

☞ The Hawaiian Chamber of Commerce have fixed upon the following rates of Commission on foreign business:—

On the sale of merchandise,	5	per ct.
On the sale or purchase of estates,	5	do
On the sale or purchase of specie,	1	no
On the purchase and shipment of merchandise, with funds in hand, on the aggregate amount of cost and charges,	2½	do
Ditto, without funds in hand, with liberty to draw,	5	do
On drawing and endorsing bills, in all cases,	2½	do
On selling or purchasing vessels,	5	do
On procuring freight,	5	do

On collecting freight, on general average,	5	do
On outfits or disbursements, with funds in hand,	2½	do
On effecting Insurance,	½	do
On collecting rents;	5	do
On collecting delayed or litigated accounts,	5	do
On adjusting and collecting Insurance losses,	5	do
On receiving and paying monies from which no other commission is derived,	2	do
On remittances on account of sales, in all cases,	2½	do
On landing and re-shipping goods from vessels in distress, *on the value*,	2½	do
On responsibilities incurred by receiving and forwarding goods entered at the Custom House,	5	do

The above commissions to be exclusive of the guarantee of debt for sales on credit, storage, brokerage, and every other charge actually incurred. The risk of loss by fire, unless insurance be ordered, and of robbery, theft, and other unavoidable occurrences, if the usual care be taken to secure the property, is in all cases to be borne by the proprietor of the goods.

When bills are remitted for collection, and are returned under protest for non-acceptance, or non-payment, the same commission to be charged as though they were duly honored.

On consignment of merchandize withdrawn or reshipped, full commission to be charged, to the extent of advance or responsibilities incurred, and half commission on the residue of the value.

Guarantee of sales,	2½	per ct.
Storage on goods consigned for sale, (say silk piece-goods, jewelry, or treasure), on gross sales,	1	do
All other descriptions,	2	do
For entering and clearing vessels when the consignment does not exceed $1,000 in value,		$15
On all cash advanced, per month,	1	per ct.

No interest allowed on money on deposit.

For surveying stowage or the hatches of a ship, each survey,	$8
Surveying a ship for repairs, for each survey,	$16
Surveying damaged goods where the whole amount of damage does not exceed ten packages, to be embodied in one report,	$5
For every additional ten packages,	$5
For surveying ship after repairs, and giving certificate of sea-worthiness,	$16
Giving certificate for sea-worthiness for Insurance,	$16

JUDGE LYNCH IN LONDON.—Yesterday and to-day, Sept 8th, everybody is in high glee at the very opportune visit of the illustrious western Judge of London. Everybody knows that one of the towns in London is Barclay & Co.'s enormous brewery. This town is composed of enormous buidings, resting upon enormous substructures: beneath are millions of porter barrels; above are tuns as big as the dome of St. Paul's. Elephantine horses fill ranges of stables, and hundreds of porter-swollen brewers and porters, and clerks and managers without end, from the teeming population. Everybody goes to see the lions kept here, foreigners especially; and Americans, who are not foreigners, go to wonder and to guess, and write tales of tubs. On the afternoon of the 4th, there was a party of foreigners visited the place, and according to custom, the chief of them wrote his name in the visitor's book. He wrote HAYNAU! As if by electric communication, it became known throughout the establishment that the woman-flogging Austrian, the slaughterer of the Hungarians, was within the walls. Judge Lynch, whose presence was unknown and unexpected, was suddenly developed, assumed the judicial functions, and pronounced with his customary promptitude. In a word, Haynau, on emerging from viewing the great vat, was very roughly handled: grains and brewers' refuse were freely bestowed, and the lusty porters and draymen flourished besoms about his beard, and shouted, Down with the Austrian Butcher! This within a court of the brewery. Leaving it, the gallant Marshal was literally hunted by a crowd of rough and ready coalheavers and others, the denizens of Bankside, Southwark. He took refuge in a public house, with a whole skin, but with tattered garments and a damaged moustache. Thence he was rescued by a body of police, put into a police galley, and rowed towards the opposite shores, near Somerset House, in the Strand. Wending his way towards the civilized regions of the west end of London, the butcherly Marshal would doubtless be comforted, and hear the inhospitable barbarities of the mob denounced in emphatic and silken lispings.—Independent.

THE CHOLERA IN CALIFORNIA.—Late intelligence from California confirms previous reports that the cholera in its ravages, has reached that part of the world. It is quite impossible to determine the extent of the decease, and the number of deaths daily, but there are quite enough to create alarm. The disease appears to have assumed the most fatal form at Sacramento city. The total number of deaths, in one week, was 158, and of these 130 were cases of cholera. Deaths by cholera have also occurred at Stockton, Marysville, and in various parts of the mines. At San Francisco the disease does not appear so fatal as elsewhere.

DIED.

On board ship Milton, Oct 12, N. L 35° W 17° 5', Mr. Job Winslow, cooper. He was a native of New Bedford, and aged 35 years.

On board Wm. Rotch, July 18, William Dixen, ship keeper, belonging to Baltimore.

In Honolulu, Nov. 30, Capt. Hays, belonging to Adalaide, N S. W. He commanded a vessel to California, and there left her on account of sickness. He leaves a wife and two children to mourn his death.

In Honolulu, Dec. 1, Mr. Osgood, belonging to Manchester, Ontario Co., N. Y where his father. Mr Elihu Osgood now lives. He has a brother in San Francisco

In Hospital at Lahaina. Manuel Crispin, Spainard, from Guame. Left a whale ship here, about 6 weeks since.

DONATIONS.

	For Chaplaincy.	*For Friend.*
Capt ship Helespont,		$5.00
" West, ship Liverpool,	$5,00	5,00
" Smith, ship Alice,	5,00	5,00
Master ship Milton.	5.00	
Capt Leek, ship Tuscarora,	5,00	
Seamen U. S. S. Falmouth,	9,50	9,25
Owners ship Mechanic,	2,50	2,50
Mr. Drew,		5,00
Mr. Heustis,		2,00
Mrs Penhallow,	10,00	

P. S.—Donations for the "Chaplaincy" are very acceptable at this time, to aid in defraying the expenses of repairs upon the buildings of the Chaplaincy. Donations for the "Friend," are always acceptable to enable the publisher to meet the monthly expense of between 60 and $70.

Hilo Chaplaincy.

HILO, Nov. 15, 1850.

DEAR SIR:—Please report in the Friend the following donations for Seamen's Chapel at Hilo

May 11, 1850.—Capt. Timond, ship Caravan	-	$4 50
Sept. 16.—Capt Smalley, Minerva	-	5 00
29.—Capt. Smith, Jas. Allen	-	5 00
Oct. 16.—Capt. Harding, Saratoga	-	3 00
Capt. Plaskett Caroline	-	3 00
17.—L. G. McDonald, Esq., San Francisco	-	3 00
18.—Capt. Evans, Warren	-	5 00
21.—Capt. Coffin, Almira	-	4 00
Capt. Swift, Enterprise	-	3 00
24.—Capt. Whilden, Jas. Murray	-	3 00
Nov. 1.—Capt. Jeffrey, Brookline	-	5 00
" " " for Chaplaincy	-	5 00
" Graham. Bayard	-	3 00
" Doval, Marengo	-	5 00
" Nickerson, Mass., for Chaplaincy	-	10 00

Also, by B. Pitman, Esq., for Library—
"Buck's Theo. Dictionary."
"Dick's Works"
"Revelations, &c., by Davis the Clairvoyant."
"Rollins' Ancient History." 8 volumes.

Our Seamen's Library now numbers 133 volumes, besides numerous periodicals, paintings, &c.

In the name of all our sea-faring friends, allow me to express unfeigned thanks to all who have so generously, and without solicitation, aided our little Bethel Enterprise at Hilo.

We have had 16 whale ships this season, up to the present date; but as most or all of them visit your port, they report themselves there Yours truly, T. COAN.

P. S. The Richard Mitchell, now here, lost a boat and 6 men during the past season, supposed to have been taken down by a whale—disappeared marvellously—no trace left of the boat or crew.

MARINE JOURNAL.

PORT OF HONOLULU.

Arrived.

Nov. 1—Am shp Irondinack, Gellespie, from San Francisco, bound to Sydney. The vessel has been undergoing repairs.
Haw sch Eclair, Peppercorn, coastwise.
Am sch Dart, Porter, 24 ds fm Fort Victoria.
Am brigan Sarah M'Farland, Tallot, fm Lahaina.
Am sch Laura Bevan, Pierce, fm San Francisco.
do Emperor, Wheeler, 14 ds fm do
18—Br bg Portenia, Cresswell, 223 ts, 18 ds fm San Francisco.
Am shp Rose Standish, Pearson, 940 ts, 14 ds fm San Francisco.
Am sch Avon, Hallet, 84 ts, 16 ds fm San Francisco
Am bg Eagle, Davis, 142 ts, sold, registered under Haw colors.
Br sch Lightning, Nance, 169 ts, fm San F.
21—Br bg Corsair, Neal, 133 ts, fm Tahiti.

WHALERS.

Nov. 12—Am shp Marengo, Devol, 26 mos, 140 sp. 4100 wh.
21—Brem shp Alex Barclay, Hein, 11 mos, 1200 wh, 13.0 bone.
Fr shp Ville de Rennes, Bellot, 15 mos, 500 wh 97 undles bone.
Nov. 22—Br sch. Post Boy, Nation, 19 ds fm San Francisco, sold to a Hawaiian
27—Br sch Harriet Atwood, 18 ds fm "
25—Am bk Bramin, Butts, 16 mos, 180 sp, 1220 wh, 18000 bone.

Cleared.

Nov. 16—Am wh sh Marengo, Devol, N Bedford.
Fr wh sh Cosmopolite, Cambrire, cruise.
do Gustave, Hardoy, Havre.
Am wh sh Hellespont, Manwaring, Mystic.
Br shp Harmony Papps, Sydney.
Hano brigan Rena, Minners, San Francisco.

18—Am shp Herald, Macomber, USA.
do Milton Smith, cruise.
19—Am brig Fawn, Bradbury, San Francisco.
Am ship Massachusetts, Nickerson, USA.

MARINE INTELLIGENCE.

Bark J. E. Donnell, Honolulu Harbor, Nov. 18, 1850.

Mr. Damon:—It may not be generally known that our charts are not altogether correct in regard to the Japanese Islands especially that part which delineates the small islands off the mouth of the bay of Jeddo and the coast of Niphon immediately to eastward of the Cape Soukaki as far as Cape King. Broughton's Rock's are laid down on the charts in the latitude of 33° 30' while at noon May 6, 1850, in the latitude of 34° 04' they were distinctly visible from our vessel's deck. The highest of these rocks (six in number) is not higher than the hull of a common sized ship, and could not be discerned from a ship's deck more than twelve miles. It may be safely concluded that they are twenty miles farther north than the charts place them. The same may be said of Vulcan's and Princes' Islands. Cape King is not only out of the way in latitude, but in longitude also. At 3 o'clock P. M., May 7, last, our latitude was 34° 55' and longitude by two good chronometers confirmed by three sets of lunar observations was 140° 42' 45". This would place us directly to eastward of Cape Awa thirty miles. By our course we passed within ten miles of the place assigned to that Cape, yet no lands could be seen less than forty miles distant. The conclusion therefore is that all these islands are laid down too far to eastward by twenty five or thirty miles, and to southward at least twenty miles. Our Chronometers a few days subsequent to this, were proven by comparison with Cape Vires, east end of Itouroup or Staten Island, when we found them correct.

I cannot close this without speaking more fully of Broughton's Rocks. The cluster extends in an E. S. E. and W. N. W, line. There are six of them, and are not over one mile and a half from one extremity to the other. We first saw them at four o'clock in the morning. The lookout first saw them, or rather only two of them and supposed they were dead whales; he showed them to one of the boat steerers who reported them to me as Chinese Junks, but they were rolling about terribly; they were then off the lee beam, with the sea washing over them. I saw they were rocks and ran forward to see if there were any more ahead. I saw two off the lee bow about four points, not over a quarter of a mile distant. Stopping a moment to see the drift of the ship and that the sails were full, for we were steering E. by N. with the wind N. by E., I ran and called the Captain. By the time he came on deck we had a full sense of the danger we had just passed through. There were two more rocks off our weather quarter making six in all. We had drifted in an east course through a passage not over a half mile in width, between two rocks bearing E. S. E. and W. N. W. from each other. While we were yet in doubt how the ship would get out of her troubles, a sudden shift of wind struck the sails aback. This with a heavy shower of rain rendering it impossible to distinguish any object more than three ship's length distant, gave us great anxiety until day light came and cleared away, when we found ourselves clear of all danger. While we were enveloped in the fog and the ship going ahead some three or four knots, one of the sailors said it would not do for the old ship to run a foul of one of them rocks for it would not stow well in the fore peak. These rocks are laid down thirty miles too far to eastward and twenty too far to southward. therefore they may be placed in latitude 34° 50' N. and longitude 139° 20' E. They are small and low. The longest is not over three ship's length in extent; they are dangerous for they may be approached in a light wind of a night without being able to hear the breakers for the strong current continually setting to E. N. E. forms a noisy tide rip near them. We could scarcely wear after being aware of their proximity. Yours respectfully, W. E.

To Seamen and Strangers.—The Seamen's Chapel is open for Public Worship every Sabbath, at 11 a. m., and 7 1-2 p. m. Seats Free.

The Seamen's Concert for Prayer is held at the Room the 3d Monday evening in each month.

Seamen belonging to vessels (of all nations) visiting this port are invited to call at the Chaplain's Study, where they will be gratuitously supplied with copies of the Friend and other rending matter. It will be most convenient for the Chaplain to receive calls from Seamen between 2 and 4 p. m.

Public services at the Native Churches, on the Sabbath, commence at 9 1-2 a. m. and 2 1-2 p. m.

The Seamen's Reading Room is open at all hours of the day. Strangers arriving and having late foreign papers, are respectfully invited to aid in keeping said room supplied with useful reading matter.

Donations are respectfully solicited for the support of the Chaplaincy, and the publication of the Friend. An annual report of all donations is made to the Am. Seamen's Friend Society in New York. Any person contributing $50 is entitled to become a Life Director of the Society, and $20 to become an Honorary Life Member.

SAM'L C. DAMON, Seamen's Chaplain.

POET'S CORNER.

THE SAILOR'S APPEAL.

From the Sailor's Magazine.

Ho! dwellers on the stable land,
Of dangers what know ye,
Like us, who brave the thundering blast,
Upon the boisterous sea?

The green trees shade you from the sun,
You see the harvest grow,
And breath the fragrance of the gale,
Where the first roses blow.

You slumber long on beds of down,
In custained chambers warm,
Lulled only to a deeper dream
By the descending storm

While high amid the slippery shroud
We find our midnight path,
Where'er the strongest mast is bowed
Before the tempest's wrath.

There is deadly peril in our path,
Beyond the wrecking blast,
A peril that may reach the soul
When life's short voyage is past.

Send us your Bibles when we go
To dare the whelming wave,
Your men of prayer to teach us how
To meet a watery grave.

L. H. S.

OLD VOYAGERS.

Visit of Vancouver, 1792.

Having perused with much interest certain old books of voyages to this group of Islands, during the close of the last century and the commencement of the present. We propose publishing extracts, in several successive numbers of the Friend. Some may think that we ought, of course, to commence with the narrative of Cook, their discoverer, the prince of modern navigators, but as his narrative is so voluminous and has moreover been so frequently published, we shall commence with Vancouver, and follow with extracts from the narratives of succeeding voyagers, so far as we are able to obtain copies of their works.

The following extracts we make from the first edition of Vancouver's voyages, published in London, 1798. The title page of the work, will be a good index of its character and the contents of the volumes:

A voyage of discovery to the North Pacific Ocean, and round the world; in which the coast of North West America has been carefully examined and accurately surveyed—Undertaken by His Majasty's command, principally with a view to ascertain the existence of any navigable communication between the North Pacific and North Atlantic Oceans; and performed in the years 1790, 1791, 1792, 1793, 1794, and 1795, in the Discovery sloop of war, and armed tender Chatham, under the command of Captain George Vancouver, in three volumes—vol. I. London; printed for G. G. and J. Robinson, Paternoster-Row; and S. Edwards, Pall-Mall—1798.

At noon on Saturday, March 3d, with very pleasant weather and light breezes, generally from off the land Karakakooa bore about five miles distant.

The steep precipice which forms the north side of Karakakooa bay, renders it too remarkable to be easily mistaken, especially as the interior country rises thence more abruptly from the coast to the north or south of the bay; which, although presenting both wood-land and cultivated country above the barren rocky shores where the habitations of the natives are chiefly situated, is, nevertheless, in a great degree destitute of that diversity of prospect which might have been expected here, and which is also the general character of all this side of the island.

Several canoes having stood to sea after us in the morning, we now brought to, for the purpose of trading with them; and were soon honored with a visit from Tianna, the person mentioned in Mr. Mear's voyage. He was received in a manner agreeable to the distinguished character he had been represented to support, and which, from his grateful inquiries after his patron, he appeared to deserve. This complimentary conversation he seemed desirous of speedily putting an end to, being very anxious to acquaint us, that since his return from China, he had resided on this island, where many severe conflicts had taken place; in which he had taken part with Tam-ma-ha-ma-ha, against Teamawaheere, who, it seemed, had, since the death of Terecoboo, shared the goverement with Tamahamaha. In one of these battles Tianna having shot Teamawheere, a complete victory was gained, and these two chiefs agreed to divide the island between them. Tamamahamaha became the sovereign over the three northern, and Tianna of the three southern districts.

Understanding that I proposed going directly to the leeward islands, Tianna requested he might be permitted to accompany us, and, with his wives and retinue, to sleep on board, with which request I thought proper to comply.

Tianna viewed every transaction on board with attentive admiration, whilst our numbers seemed to create in his mind a degree of surprise he was unable to subdue. In the course of the evening he held frequent conversation with Towereroo, and during the night he was several times on deck, endeavoing to ascertain the number of men on duty in the different parts of the ship.

The retinue of Tianna on the present occasion was to consist of a considerable number; part were to attend him on board the Discovery, and the remainder was to procced in the Chatham. His residence was a little to the north of Karakakooa; and as it was proposed his suit should be taken on board the next afternoon, we kept off that station.

As Tianna had several goats, I did not present him with any of these animals, but made him very happy by giving him some vine and orange plants, some almonds, and an assortment of garden seeds, to all of which he promised the most particular care and attention. After receiving some acceptable valuables in return for ten small hogs, he took his leave of us with Towereroo about five in the afternoon; and though he affected to be pretty well satisfied with his reception, and flattered with being saluted with four guns on his departure, yet it was very evident he was extremely disappointed and chagrined in not having been able to procure any fire arms or ammunition; which were anxiously solicited, not only by himself but by all his countrymen, and by us as uniformly refused.

As we stood along shore with a light breeze, we were in the evening greatly surprised on being hailed, from a large canoe which was meeting us, in broken English; demanding, who we were, and to what country we belonged, and very civilly requesting to be admitted on board. This being granted, the speaker proved to be a young man named Tarehooa, a native of Attowai, who had accompanied a Mr. John Ingram commanding an American ship laden with furs, from North West America, bound to Boston in New England by the way of China. Tarehooa had been with Mr. Ingram in North America about seven months, and had returned in a brig with him some months before.

A light breeze, chiefly from the south, advanced us slowly towards the northern point of Owhyhee, until the trade wind at E.N.E. no longer intercepted by the high mountains which compose the island, met us: when we directed our course towards Woahoo. Early in the morning of the 6th, being well in with the island of Tahoorowa, the Chatham's signal was made to denote our situation in bearing up along the south side of that island; but as neither this nor some previous signals had been acknowledged, I concluded the Chatham had remained becalmed under the high land of Owhyhee; whilst we had benefited by a very fine gale, owing to our being a little further advanced; and Woahoo being our next appointed rendezvous, a long separation could not be apprehended.

During the afternoon we proceeded to the north along the west side of Ranai; and to-

wards sun set again met the trade wind, which about midnight brought us in sight of Woahoo, bearing by compass west 6 or 7 miles distant.

Continuing our course, about nine we hauled round the reef which lies about a quarter of a mile from that point, and had soundings from 22 to 10 fathoms; in which latter depth of water we anchored about ten o'clock, the bottom sand and pieces of small coral, This promontory, which is the south point of the island, has also on its top the appearance of a crater, formed by volcanic eruptions.

As our quarter deck required caulking, the carpenters were immediately employed on this business. Some few of the natives visited us from the shore, who brought in their canoes a very sparing supply of refreshments, amongst which, the musk and water melons made no inconsiderable part, and were very excellent of their kinds. The situation occupied by us in this bay, which the natives call Whyteete, seemed nearly as eligible as most of the anchoring places these islands are generally found to afford. The inhabitants were excessively orderly and docile, although there was not a chief or any person of distinction amongst them to enforce their good behavior; neither man nor woman attempted to come on board, without first obtaining permission; and when this was refused, they remained perfectly quiet in their canoes alongside.

The information obtained at Owhyhee, that Titeere and Taia, with most of the principal chiefs and warriors of this island, and those to leeward, were on a hostile expedition at Morotoi and Mowee, was here confirmed; but differed as to the immediate cause of their absence, which was now represented to be for the purpose of repelling an invasion likely to take place from Owhyhee, by Tammahamaha, Kahowmotoo, and Tianna. This, in a great measure, seemed to account for the small number of inhabitants who visited us, the wretched condition of their conors, and the scanty supply of their country's produce which they brought to market. On the shores, the villages appeared numerous, large and in good repair; and the surrounding country pleasingly interspersed with deep, though not extensive valleys; which, with the plains near the sea side, presented a high degree of cultivation and fertility. The apparent docility of these people, who have been represented by former visitors as the most daring and unmanageable of any who belong to the Sandwich Islands, might, probably, be attributed in a great measure to the absence of their fighting men, and to our manifest superiority in numbers, regularity in point of order, and military government, which seemed to make a wonderful impression on all who were permitted to come on board, and who, to a man appeared very much afraid of fire arms. This was evinced, on our mounting guard to post the sentinels round the ship. On this occasion they all hastily paddled towards the shore, and it was not without much persuasion that they were induced to return.

In this excursion we found the land in a high state of cultivation, mostly under immediate crops of taro; and abounding with a variety of wild fowl, chiefly of the duck kind, some of which our sportsmen shot, and they were fine eating. The sides of the hills which were at some distance, seemed rocky and barren; the intermediate valleys, which were all inhabited, produced some large trees, and made a pleasing appearance. The plains, however, if we may judge from the labor bestowed on their cultivation, seem to afford the principal proportion of the different vegetable productions on which the inhabitants depend for their subsistence. The soil though tolerably rich, and producing rather a luxuriant abundance, differs very materially from that of Matavia, or the other parts of Otaheite. At Woahoo, nature seems only to have acted a common part in her dispensations of vegetable food for the service of man; and to have almost confined them to the taro plant, the raising of which is attended with much care, ingenuity, and manual labor. In the several parts of its culture, the inhabitants, whether planting, weeding, or gathering, must, during the whole of these operations, be up to their middle in mud, and exposed to the rays of a vertical sun; whereas,on the plains of Otaheite, the surface seems, as it were, spontaneously with the most abundant produce of esculent vegetables, without the help of industry to sow, plant, or rear them or the assistance of the aqueducts which these people construct with great labor and ingenuity to insure them a crop. There the continued groves of the lofty and umbrageous bread fruit, apple, palm and other trees, afford a delightful cool retreat to those savored islanders; here, the inhabitants know not the luxury of such retirement. Nor did it appear in the vegetable kingdom alone that nature here had been more favorable; the human species, though without doubt originally of the same nation, differ excessively; and it would seem the comparative benevolence of the Otaheiteans and these people was about equal to the natural fertility of the soil on which they respectively lived. It may however appear rather uncharitable to form any decided opinion on so short an acquaintance; yet first impressions will ever have their influence on visiting different countries under circumstances similar, or nearly so. On such occasions it is scarcely possible to avoid comparisons, in which one must necessarily suffer. On our landing at Otaheite, the effusion of friendship and hospitality were evident in the countenances of every one he met. Each endeavored to anticipate our wants or our wishes by the most fascinating attention, and by sedulously striving to be first in performing any little service we required; inviting us to take refreshments at every house we approached, and manifesting a degree of kindness that would justly be extolled amongst the most polished nations. At Woahoo we were regarded with an unwelcome austerity, and our wants treated by the generality with a negligent indifference. In the course of our walk they exhibited no assiduity to please, nor did they appear apprehensive lest offence should be given; no refreshments were offered, nor had we any invitation to their houses. Their general behavior was distantly civil, apparently directed by a desire to establish a peaceable intercourse with strangers, from whom there was a prospect of deriving many valuable acquisitions, which would be unattainable by any other mode of conduct; as they must have been convinced immediately on our landing, that we were too powerful to be conquered, and too much upon our guard to suffer the least indignity by surprise. I must, however, do justice to the hospitality of our two guides, who on our reaching the shore took upon them the office of constables; and who had also caused a hog and a quantity of vegetable to be prepared for our entertainment.

Whyteete bay is formed, by the land falling a little back round the south point of Woahoo; and although open above half the compass in the southern quarter, it is unquestionably the most eligible anchoring place in the island.

At eight in the evening, the west point of Woahoo bore N. ½ E. 3 leages distant. The Chatham being under the land becalmed, we soon lost sight of her. We continued our course under all sail, and to our great surprise came with sight of Attowai, by half past four the next morning.

At day break, we bore away along the south side of Attowai for Whymea bay, where about nine o'clock we anchored, and moored a cable each way.

The London Times and Pacific Affairs.

The people of Europe have been long indifferent to affairs in this part of the world, but the following extract from the Times, of September last, would indicate that editors, at least, were beginuing to open their eyes to the real magnitude of that vast westward tendency of the American population. The writer, after making some general remarks about the mines of California, closes with the following significent paragraph:—

"The momenteous fact, which nothing can now do away with, is, that 300,000 or 400,000 Anglo Saxons are settling themselves on the shores of the Pacific. A new world is before them. They look across to China, Japan, and all the riches of the Indian Seas, and the use they will make of their opportunities may be best inferred from what they have already accomplished, and from the known aspirations which the people of the United States have so long directed towards that region. Already the presence of a large number of Chinese is a distinctive feature of the population of San Francisco, and already the Sandwich Islands, Australia, and Southern and Central America have been called into a new life from the traffic that has been established. The prophecy of Humboldt, that the activity of commerce would be carried progressively from east to west, is rapidly in process of fulfilment. At present, however, there are few signs that even this fact is appreciated in Europe, and the thing to be apprehended is, that when, in the course of a few years, the successes arising from it shall have led to excitement, our people, who are regardless of it now, will then rush furiously to overdo what should have been done moderately and deliberately from the first. It is to prevent foolish extremes of this sort, that every endeavor should be made to familiarize the public with the contemplation of the change that is coming on, and to induce the spirit of enterprise to adjust itself to the new order of things, while it can rationally and profitably do so, instead of waiting to regain, by a sudden and desperate rush, the opportunities that have been lost through inattention."

MISCELLANY.

A New England Thanksgiving.

Some of our readers may be surprised that we should think it necessary to spread before the public, even a few paragraphs, touching upon the history and observance, of a New England Thanksgiving. Many of our readers have been brought up under institutions vastly different from those of the Puritans of New England, and in as much as a 'Thanksgiving Day" seems likely to be enrolled among the festivals of the Hawaiian calendar, we have thought a few remarks upon this subject would not be ill-timed.

The original observance of a Thanksgiving Festival, dates with the very first settlement of New England. In "Young's Chronicles of the Pilgrims" we find a deeply interesting letter of "Edward Winslow" who was one of the first settlers of Plymouth, addressed to a "Loving and old Friend" in England and written December 11, 1621. At this time the settlement was but of one year's standing, yet in this letter we find the following paragraphs; undoubtedly referring to the "First New England Thanksgiving."

"Our harvest being gotten in, our Governor [Bradford] sent four men on fowling, that so we might, after a special manner rejoice together after we had gathered the fruit of our labors. They four in one day killed as much fowl as, with a little help beside, served the company almost a week. At which time, amongst other recreations we exercised our arms, many of the Indians coming amongst us, and amongst the rest, their great King, Massasoyt, with some ninety men, whom for three days we entertained and feasted; and they went out and killed five deer, which they brought to the plantation, and bestowed on our Governor, and upon the Captain and others. And although it be not always so plentiful as it was at this time with us, yet by the goodness of God we are so far from want that we often wish you partakers of our plenty."

Very soon, it became the standing custom for the Governor of the Colony, at the end of harvest to appoint a day for public Thanksgiving. With very few interruptions, the day has not failed to be observed down to the present time.

The following sketch of the mode of observing the day in modern times, was written by the author of "New England, and her Institutions," who styles himself "One of Her Sons."

THANKSGIVING.—A custom has been transmitted to us from our Puritan fathers, of setting apart a day at the close of the harvest for thanksgiving and praise. It was originally intended as a purely religious festival, and as such it was most solemnly observed. In modern times, it has lost a little of the solemnity with which it was regarded by our ancestors, and has assumed a more social, and we fear a gayer and more thoughtless aspect. Still the day is generally observed with much external propriety.

Late in autumn, when all the fruits of the field have been gathered in, the governor of the state, with the advice of his council, issues a proclamation, recommending to the inhabitants the observance of a stated day for thanksgiving and praise to God for the blessings of the season. The day appointed is generally about the middle of November. The week before its arrival, all the families of the state begin to collect the various good things at their command, in preparation for the thanksgiving feast. The art of cookery is tasked to its utmost. The oven groans with puddings and pies, and there is universal rejoicing, save in the poultry-yard.

It is customary upon these occasions for those who are in comfortable circumstances to remember the poor. Those who are unable to provide a thanksgiving feast for themselves, receive supplies from the benevolence of their neighbors. We well remember the feelings of delight and gratified pride which swelled our young bosoms, while carrying to the poor and solitary widow, or to the unfortunate and needy family in our neignborhood, the basket filled by our mother's kindness with all the dainties appropriated to that joyious season.

At length the happy morning is ushered in. It will not do to mar the appetite for the dinner, by indulging in a bountiful breakfast. The morning repast is frugal, and yet the appetite is excited by some little foretaste of what is to come. The shops are all closed, and the general appearance of the city and of the village is nearly that of the Sabbath. In the distant fields, not a few are found who desecrated the day by entire devotion to amusements. The bowling alley is thronged by dissolute loungers. The idle and dissipated congregate for field sports and shooting matches, and pass the day in deeds of cruelty and sin. But the more orderly and reputable part of the community remain at their homes, endeavoring to improve the hours in sincere and heartfelt thanksgiving to their Maker.

At eleven o'clock the bell rings for public worship. The people then, in accordance with the recommendation of the governor and his council, assemble in their churches. By much previous exercise the choir are generally prepared with the best music they are able to furnish. The officiating clergyman commonly takes this opportunity to present some topic of a national character, and to enforce upon his congregation attention to their political duties. Those subjects which he would hardly feel at liberty to discuss in the pulpit on the Sabbath, he avails himself of this opportunity to present.

About one o'clock, the congregation are seen leaving the churches and repairing to their homes, to meet around the festal board. There they all meet; for the absent members of every family, on this day of rejoicing come back again, if possible, under the paternal roof. The son who is absent at school or at college, the apprentice and the clerk, come home to pass thanksgiving with their parents. The daughter who is married, and has removed from her native town, returns with her husband and her little ones, to sit down once more at her father's table. Relatives and friends endeavor on that day to meet and renew past friendship, and tell their tales of weal or woe. The silent tear is not unfrequently seen in the eye, as memory points to one who a year before was seated at the table and enjoying the precious interview, but who now is among the dead. It is a kind of record-day, in which the past is revived, and in which the heart is refreshed by new tokens of friendship. Assembled at the table and partaking of its bountiful provisions, the heart of the worldly man is elated with pleasure, and that of the Christian glows with gratitude The one sits down at the table and rises from it without any expression of gratitude to his Maker; the other offers to God the incense of a grateful heart.

At the close of the dinner, the formal religionist, who thinks he has done his duty by attending church, goes out for amusement, by riding or walking. The Christian, mindful that it is a day for thanksgiving to God, assembled in the parlor the circle of domestics and of friends for devotion. The thanksgiving hymn is read, and the voices of the family are heard in the sweet cadences of the hymn, as they melt away in the consecrated dwelling. As the sun goes down the evening prayer is offered, and grateful hearts beat happily, in anticipation of an eternal scene of thanksgiving, in the heavenly world. The evening is passed by the old members of the family in conversation, and by the children in those animating sports which diffuse such joy around the evening fireside. Such is a New England thanksgiving; perverted by many, but a blessing and a comfort to not a few.

THE WAVES OF THE ATLANTIC.—At the late meeting of the British Association an important paper was read by Rev. Dr. Scoresby, on the subject of the magnitude of Atlantic waves, their velocity and phenomena. In this paper Dr. Scoresby, who is a veteran sailor as well as a sound divine, gave a vivid description of a storm which he had witnessed on the Atlantic, and stated that the result of his observations on that occasion was, that he had discovered that the height of the waves from the trough to the crest was 43 feet, and that their average velocity was 32 and a fraction miles per hour. This, it was stated, confirmed the observations made on the velocity of waves reported to the Association in 1845, by Mr. Scott Russell, who set down their velocity at from 30 to 31 miles an hour.

JENNY-FLEXIONS.—The In-jenny-ous editors of the New-York Organ got off the following puff of Jenny Lind:

New stores and saloons and hotels are christened "Jenny Lind;" steamboats, locomotives, stages, and all vehicles are "Jennys;" on 'Change they sell "Jenny"-see wheat; the spinning "Jenny" is eclipsed by the singing "Jenny," at least for this "Jenny"-ration, people delight in tracing their "Jenny"-alogy back into Sweeden; all men seem to be studying verbs in the "Jenny"-tive case; "Jenny"-rosity is a virtue no longer neglected; even our only militia Major-"Jenny"-ral has surrendered to the queen; fond mothers call their babies, sportsmen their dogs and horses, farmers their cows and pigs, "Jennys;" in short, Jenny is the "Jenny"-ric term for all these things, and for how many more, "*Jenny*" *sais quoi*.

THE FRIEND.

HONOLULU, JANUARY 9, 1851.

Expedition to Japan.

Japan seems to be the terra incognita that now the busy world desires to know more about, and any thing relating to that country is interesting. Shipwrecked Japanese have, from time to time, found their way to the Sandwich Islands. A few weeks since the whale ship Copia took several to China; but some remained at Honolulu. Three of these have since sailed in the Sarah Boyd, bound to Shanghai, China. Captain Whitmore promised that, on his route, to Shanghai, he would pass near the Loochoo Islands, and there leave these three Japanese, whose neams are, John Mung, Denzo and Goeman. According to a statement made by Mung, before the United States Consul, they have been about ten years from their native land. Their statement was to this effect. We left the S. E. part of the island of Niphon, in a fishing vessel, and were wrecked. After remaining on an uninhabited island for about six months we were taken off by Capt. Whitfield master of the ship "John Howland," and brought to the Sandwich Islands. Denzo and Geoman remained here. Mung went to the United States and was there taken care of and educated by Capt. Whitfield. After being absent several years, Mung returned to the Islands and here found his former companions.

On learning that Captain Whitmore would land them at the Loochoo Islands, Mung with the assistance of a few friends, purchased a good whale boat, oars and sails. Having learned the science of navigation, sufficient for all practical purposes, he supplied himself with quadrant, compass, charts, &c. It is not expected that the Sarah Boyd will come to anchor, at the Loochoo, but launch the whale boat off the islands, and leave the three Japaneese to make the best of their way to land. Although when at the Loochoo, they may be far from their native shores, yet, Mung, (whom we shall now call Capt. Mung,) thinks that he knows enough of the relative situation of the Loochoo and Japansee Islands to find his way across. He says that annually a large Japanese Junk, visits the Loochoo Islands, for the purpose of receiving tribute money, and that the junk leaves Japan in February and returns in June. He supposed that they might get passage in her; at any rate they would make the trial!

We shall anxiously wait to learn the success of Capt. Mung's expedition. He is a smart and intelligent young man, and has made good use of his opportunities, being able to speak and write the English language with tolerable accuracy. Should he succeed in reaching his native land, in safety, his services may be of importance in opening an intercourse between his own and other countries. He would make an excellent interpreter between the Japanese and the English or Americans.

Success to Capt. John Mung, commanding the whale boat "Adventurer!"

The Homestead and Household Property Exempt.

We are glad to learn from the New York Tribune and other leading papers that public sentiment, in the United States, is rapidly becoming settled upon the principle that the homestead and household property, to a certain reasonable amount, shall be exempt from the Sheriff's attachment. In some States laws to this effect have already been passed, and in others public sentiment calls for their enactment. This principle seems so purely founded upon right, justice and the Bible, that we wonder it has not become universal in all lands professedly christian; this law being unquestionably in harmony with our Saviour's golden rule. "Therefore all all things whatsoever ye would that others should do to you, do ye even so to them." The law exempting the homestead and household property, seems to be one of those salutary, and alas necessary checks, upon men in the transactions of life. Most strenously would we advocate the principle that men should pay their honest debts, for the existence of well regulated society depends upon doing right between man and man, but it is wrong to make the wife and children suffer for debts which they have had no share or responsibility in constructing.

P. S. Since writing the above, we have noticed in a late number of the Tribune, that a law has passed the Legislature of Maine, exempting the homestead, valued at $500 or under, and the various provisions of the Act show a leaning towards the family of the debtor. The tendency of legislation in the United States inclines to favor the debtor's family, in case the father has been unfortunate in business. Common sense aud common justice approve of this course.

Anti-Swearing in France.

A petition is being signed at Marseilles, praying the national assembly to pass a law against cursing and swearing. It has already received uwards of three hundred signatures. "You have protected animals from ill treatment," says the petition, "and can you permit the name of the Lord to be outraged with impunity in France?

☞ We should be glad to see a petition of this description circulated at the Islands.

Fugitive Slave Law in the United States.

By a late arrival we have received our files of American papers, including the New York Herald, Tribune, Observer, Bible Record, National Era, and Boston Journal.

No topic during the month of October was so fully discussed in the American papers, as that of the Fugitive Slave Law. As some of our readers may not be informed in regard to said law, we would briefly remark, that at the last session of Congress a law was passed allowing the arrest of fugitive slaves who were living in the Northern States, and after a summary trial, they could be remanded back to slavery. No sooner does the law go into operation than commence scenes of the most turbulent excitement. In some instances slaves have been taken South, in others, the officers refuse to execute the law, declaring it unconstitutional. Public meetings had been called in all the principal cities, at which the law was denounced. The law was passed, in hopes, that it would quiet the slavery question throughout the country, but it appears to have had just the contrary effect. It would seem, as if, persons acquainted with the state of feeling in the free states might have known, that it would be utterly imposible to carry this law into effect, as well might the people of old England be expected to submit to such a law, as those of New England.

It is well known that Mr. D. Webster was a strenous advocate for the law. The following item of gossip will show that if color'd gentlemen may not vote against the Honorable Senator, at Washington, they can decline serving him in Marshfield.

"Good Grit.—Hon. Daniel Webster, expecting some distinguished visitors at his house in Marshfield, sent to Mr. J. B. Smith, a colored gentleman of Boston, who makes a business of assisting entertainers on such occasions, and desired to engage Mr. Smith's professional services. Mr. Smith having a decided opinion of his own respecting the Fugitive Slave Law and some other acts that Mr. Webster has had a hand in, sent word to Mr W. that he would not go to his house for $100 per day, and that there was not a colored man in Boston mean enough to enter the service for one day of the enemy of the human race. Mr. Webster tried to get other colored men, but failed. So says the Boston Free Soiler. So it would seem that that the North has hardships to bear in the African line as well as the South. Mustn't there be a new section added to the Fugitive Slave Law?"—Tribune.

The Friend Bound.

At the Study of the Chaplain will be found the Friend bound, in single volumes, or the whole series of VIII volumes, in one, and for sale at reasonable terms.

☞ There will always be made a deduction to seamen from the subscription price.

Warning to Young Ladies in the U. S. and Elsewhere.

If any midshipman, or acting midshipman, shall be married previous to his final examination, such marriage shall be considered equivalent to resignation, and his name shall be dropped from the Navy list.

No more Flogging in the Merchant Service of the U. S.

According to the first report that reached us, we did not imagine that the law abolishing flogging, extended only to the Naval service, but more recent news makes it appear that "vessels of commerce" (not of course except whale ships,) are also included. The following is the clause in the Naval Appropriation bill which abolishes flogging in the naval aud merchant service of the United States ;

Provided, That flogging in the navy and on board vessels of commerce be and the same is hereby abolished from and after the passage of this act.

Honolulu Subscribers.

To avoid complaints, in future, that our subscribers are not supplied with papers, we shall employ for the current year a foreigner as carrier, Mr. Bolster. He will be directed to leave the Friend at the stores and dwellings of our old subscribers, and this number at the residence of all strangers who have become located in Honolulu during the past year. Our terms remain the same, as follows.

One copy per annum,	$2 00
Two " " "	3 00
Five " " "	6 00
Ten " " "	10 00

We hope to add many to our Honolulu subscription list.

Honolulu Athenæum.

There is a reasonable prospect that a Reading Room and Libary will be established in Honolulu. Every reading and intelligent person must wish the Athenæum success, and be ready to lend a helping hand.

The President of the Association, His Excellency, R. C. Wyllie, delivered an opening address, at the Seamen's Chapel, on New Year's evening. The audience was highly respectable, and embraced the elite of Honolulu society. The address was peculiary characterstic of the the known versatility of the speaker's mind, showing that His Majesty's Foreign Secretary might be burdened with ihe affairs of state, yet he could find time for the study of history and science, and was inclined to harmonize the discoveries of science with the truths of revelation. The speaker's theme, expressed in his own language was, "MAN, in his wanderings from Paradise to Honolulu !"

The idea has been suggested, and we hope will be carried out, of a monthly lecture before the Athenæum Association.

☞ The Rev. Addison Searle, Chaplain of the U. S. frigate Cumberland, died on the passage to Alexandria, and was buried at sea. Mr. Searle was formerly stationed at this port.—Boston paper.

Hawaiian Thanksgiving.

In accordance with His Majesty's proclamation, the last day of the year 1850, was observed as a day of public Thanksgiving. Religious rervices were held in the native churches, and also at the Seamen's Chapel. The audience at the latter was much larger than was anticipated, and the singing uncommonly good. The choir, observed the New England practice of singing rather "extra" on Thanksgiving day. The day was generally observed by the community—most of the stores were closed and mechanics suspended their work.

Anti-Alcohol in Connecticut.

The friends of Total Abstinence and adversaries of drunkenness, tippling and the moderate use of poisonous beverages in Connecticut, recently held a state Convention. They united upon twelve propositions, relating to the sale of intoxicating liquors. Our limits will not allow us to copy them entire, but some of them are so undeniable and sound that we gladly place them before our readers, as the basis upon which we advocate the temperance reform.

TEMPERANCE PLATFORM.

PROPOSITION 1. The People of the State of Connecticut have a perfect right to protect themselves, and are in duty bound to secure prosterity by law, form the evils of intemperance.

PROP 2. The common evils of Intemperance are not merely the incidental results of the traffic in intoxicating drinks, when improperly conducted, but they are the legitimate fruits of the business itself, and are so inherent in it, that they cannot be prevented by the best intentions of the venders, while they continue in that business.
